FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 29, 1886.

VOL. XXVII.—No. 1. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE BOYCOTT IN THE WOODS.

MENTION was recently made in these columns of the organization of some of the Keene Valley, Adirondacks, guides into a club for the enforcement of the game laws. The club proposed to bring to justice one of the local nabobs who was reported to be engaged in unlawful pursuit of deer. The landlords of hotels in the neighborhood, who should be found among the staunchest upholders of the law, were incensed at the attitude of the guides' club, and as a method of retaliation proposed to prevent its members from obtaining employment in their usual occupation. Late reports advise us that the deer floater was not caught, though it is to be presumed that the guides still incur the enmity of the boycotting hotel men.

The methods of the boycott are admirably adapted to serve the ends of lawless Adirondack landlords and visitors. By combining their forces they can bring a terrible pressure to bear upon any guide who because of his regard for law and decency happens to incur their displeasure. They can by simply letting him alone and compelling other folks to let him alone deprive him of his earnings and drive him out of business. The tactics successfully adopted by the Bohemians in the lower quarters of New York in their campaign against obnoxious bakers are found to work well in the woods.

The principles of the boycott have been accepted by some of the advocates of deer hounding, who see in it a possible means of venting their spleen against the guides and landlords who opposed their behests at Albany last winter. It has just come to our knowledge that there is a movement on foot among the hounders to injure so far as they may the business of Mr. Charles Fenton, proprietor of the well-known house at Number Four, in the Adirondacks. Mr. Fenton was among the first who recognized the necessity of doing away with the dogs, and for years he has been a persistent and determined opponent of hounding. Because he discouraged the practice in former years, and because last year he, his guests and the guides combined in an organized and faithful enforcement of the law, the deer in the vicinity of Number Four have been more abundant than in almost any other part of the North Woods. This visible evidence of the wisdom of abolishing hounding has naturally confirmed Mr. Fenton's views, and there is to-day in the Adirondacks no more determined advocate of a non-hounding law than he. That such a man, whose hard facts demolished their misleading statements before the Legislature, should excite the ire of the clubbers is not to be wondered at; but they predicate of themselves too much importance in their day and generation if they think to boycott Mr. Fenton or any body else.

RETURN OF THE COOT.

THE long single-hand cruise of the catboat Coot was brought to a successful close last Sunday, when she dropped anchor off West Brighton, Staten Island. The voyage of the Coot is probably the longest of the kind of which there is any record, and the weather through which she passed was more severe than that experienced by yachtsmen in general, unless engaged in Arctic exploration. The distance gone over was sixteen hundred miles. With the exception of the ordinary vicissitudes of hard weather and extreme cold, the trip was accomplished without serious mishap or loss. It demonstrates what can be done in a small boat only twenty-one feet long, providing the master be sufficiently expert in her handling and exercises good judgment. For it was by no means all fair sailing for the Coot, as will appear from the detailed log of her experience, published from time to time in this journal. Upon several occasions the risks forced upon the master of the Coot involved situations which were not only trying but actually critical. It would not be advisable to recommend to every one a similar undertaking, unless equally as well prepared as Mr. Kunhardt to face and overcome the dangers to which a small boat sailed by one man is of necessity exposed, particularly during an inclement season.

A notable fact, however, is, that despite the hardships and exposure of the voyage, the best of health was enjoyed through the eight months of life on board the catboat. A somewhat larger boat, with an additional hand or two, would mitigate the difficulties of a similar cruise greatly, and the Coot having opened the way, it is likely that winter voyages to southern waters, in pursuit of health, pastime and game will rapidly become popular among the many who are given to sailing small yachts, not suited to work upon the open sea, with the West India Isles as their objective goal.

A BUFFALO MAN was arrested last week for having killed some robins. He put in the plea that he was out of work, his family was starving, and he wanted the robins as food to sustain life. Investigation showed his story to be true. It was surely an extraordinary way of going about getting something to eat. Such a plea of absolute necessity in mitigation of offenses against the game laws has rarely been heard outside of the woods, where the residents depend largely upon the game supply for their subsistence, and where anglers and campers place themselves in a position to starve unless they secure some June venison.

BLUEFISH.—The fish are still scarce in New York market, a few coming in from scattering localities, but there is no good fishing at Barnegat nor off Fire Island. Occasionally a few are taken at these places, and one boat made a fair catch off Montauk Point, on Monday last, but had sailed a week previous with poor success. A few have been taken on the north shore of Long Island, at Cold Spring Harbor, Oyster Bay and Port Jefferson. These were small fish of about two pounds weight, and as of late years the fish have avoided the north shore this is remarkable.

THERE IS AN IRREPRESSIBLE CONFLICT between the shotgun fox hunters and the riders to hounds. Neither can find anything to praise in the practice of the other. The men on horseback are, however, rapidly gaining recruits; and fox hunting with hounds and without guns is growing every year.

THE FIRST SEA SERPENT STORY OF THE SEASON was telegraphed over the country last Monday. The creature, seen by a party in camp on Gully Point, Rockport, Mass., was 100ft. in length and as big around as a barrel.

A LARGE PROPORTION of the accidents with firearms reported in the papers happen by reason of the stupidity of individuals who have no business with such weapons.

PRAIRIE FIRES AND THE GROUSE.

WITH the approach of the pinnated grouse shooting season we are in receipt of the familiar complaint that the supply of this favorite game bird is sadly lessened by the practice of burning over the prairie lands. In many sections of the West where, if left to their natural course of development, the wheat crop and the hay crop would mature at the same time, each demanding the attention of the farmer, it is a common practice to burn over the fields in the spring to kill the new grass. The growth being thus retarded, the hay crop ripens after the wheat has been gathered, and is cut at the convenience of the farmer.

As the pinnated grouse have nested before the burning of the grass, it follows that their eggs are destroyed in the conflagration. By this destruction, repeated year after year, the number of the birds is sadly diminished, and in many localities once famous for their excellent pinnated grouse shooting the sportsman now finds fields barren of winged game. This is an agency of game depletion that appears to be without remedy. A farmer cannot reasonably be asked to crowd together the work of wheat harvesting and haying that the gunner may enjoy the sport of chicken shooting. The only recourse of the sportsman is to seek new fields of pleasure; and thus it is that there is a constant demand for information about good pinnated grouse shooting grounds.

TO PROSECUTE LAWBREAKERS.—The proposition, made last week by our correspondent "Ajax," that some of those interested in game protection should contribute a dollar each toward the prosecution of certain violators of the game laws of New Jersey, seems to have met with favor. We have received a number of dollars for this purpose, and are told that others will be forthcoming. Should the contributions reach a respectable sum, matters will at once be put in trim, and strong efforts will be made to put the law in force in these particular cases. If a considerable number of sportsmen are sufficiently interested in this matter to give the trifling sum suggested by "Ajax," the FOREST AND STREAM will be glad to contribute to this good effort a substantial donation as well as to give time and effort toward making the prosecution sucessful. "Ajax" has assured us that he has abundant proof of the violation to which his letter referred and, he has no donbt of the conviction of the offenders, in case the funds necessary for lawyers' fees and other expenses shall be raised.

A MUCH NEEDED REFORM.—Why is it that such tournaments as the late one at Cincinnati are so poorly attended by amateur shooters? It is because they know they have no chance against professional shooters like Teipel, Stice and a few such men, who carry off 99 per cent. of the purses and prizes, and who are permitted to enter without any handicap whatsoever. Why should an amateur shoot against a man like Teipel, who makes his living now attending such tournaments? It would be more advantageous for the amateur to play at a "square" game of faro. Any amateur who will enter against such men proves himself a "sucker" (to use a vulgarism) of the weakest type. But these amateurs outnumber the professionals 1,000 to 1. Let them rise in their might and insist on barring such pot-shooters, and thus exterminate the injustice which prevents trap-shooting becoming a most popular outdoor amusement.

OUT OF THE DEPTHS.—Last Monday, July 26, there was received at this office the March number of the English journal *Forestry*. On the rumpled, water-stained and still damp wrapper was this note: "P. O., New York, N. Y., July 6, 1886.—This piece is a portion of the mail forwarded from Queenstown, Ireland, per steamer Oregon on March 7, and damaged by the sinking of that vessel off Fire Island on March 14. Recovered from the wreck July 1-4.—HENRY G. PEARSON, Postmaster." It is to be sincerely regretted that since the publication of the March number of *Forestry* the waves of financial misfortune should have engulfed this useful magazine itself.

GAME PRESERVING IN BRITAIN.—Publication of the promised series of papers on this topic is begun to-day. The author—"Moorman"—is well known as a writer on such topics, and his descriptions of the game preserving methods adopted abroad may contain some useful suggestions for like undertakings in this country.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

AMONG THE KEYS.

IT was a model tropical evening, that on which the sharpie left her anchorage and glided smoothly up the coast for the wharf at Yellow Bluff. For the skipper had planned to spend the night there with his friend, Jim C., leaving the for'ard hands to cool his heels on board under an awning, formed by stretching the dandy lug over the after house. Had he lifted the anchor an hour sooner the plan would have worked all right. As it was, it proved a failure. At first the vessel slipped over the glassy surface like grease, with just enough breeze to hold the sails steadily, but the tide turned and the breeze went down with the sun, until the vessel, though still pointing her course, made no headway whatever. Then the skipper sadly lowered jib and mainsail, made them snug for the night, and lastly took a longing, lingering, wistful look at the 20ft. setting pole that lay lightly and innocently along the port rail. But darkness was settling down on the face of the waters, it was two long miles to Yellow Bluff, the tide was running down strongly, and the sharpie is 33ft. over all with 8½ft. beam. Also the day had been hot as a blister, let alone that every one would be abed, and his friend lived a mile out of town. He gave it up and unshipped the dandy, rigged it as an awning over the house, and subsided in silence and a cloud of tobacco smoke, to the regret of the for'ard hands, who liked to see the skipper work the setting pole or "hump himself" with his shoulder under the bowsprit, when the sharpie came up all standing with her nose in the mud. For it was in the shipping articles that the strongest muscle should work the setting pole—the longest legs do the wading, and the for'ard hands was not the man to go back on a solemn compact. Whence it happened that he derived a deal of innocent pleasure dodging under the shadow of the mainsail and watching the skipper as he performed his part of the contract honestly, if not cheerfully.

What a quiet and peaceful night that was on board the sharpie. Anchored a mile from the mainland and three miles from the nearest key, she was beyond the reach of mosquitoes, the air was cool and had the scent of the ocean in it withal; the night was a dark, starlight affair, the sort of night when you seem to see an unusual number of stars and lie on the deck lazily trying to count them under the impression that you are coaxing a nap, which as a rule is a traditional humbug. Again, and for the thousandth time perhaps. The voices of the night rose on the still air and came over the water, mellowed by distance to a jangle of sweet sounds, to which the crew listened with drowsy satisfaction, albeit the voices were strange to northern ears. But there was one clear, musical note that rose like a *campanero* from time to time over the soft confusion of sounds, and it seemed to him the note had a familiar sound. "I wonder does the bell-bird inhabit these forests?" he asked, but the skipper was in the land of dreams, and presently, as the sounds came nearer and mose distinct he had no need to ask. For he had recognized in the clear clanging notes the *ignis fatuus* which, when a barefoot boy, had drawn him, sorely against his will, "through swamp and bog and cold morass" to round up the family cow.

With a sligh sense of disillusion and disgust he filled his pipe, spread a blanket on deck and lay down to smoke and count stars, only to waken after what seemed a short catnap, and find the unsmoked pipe resting on his shirt front and a rosy glow in the east. Morning had come and night had been "fore-shortened beneath the chin," even as the previous one had been unconscionably drawn out. N. B.—When in outing you can lie down on a hard deck at four bells in the first watch, forget all your cares in about two minutes and open your eyes after a fifteen minutes nap to find it broad daylight, mark that nights' rest with a white star. You have been doubling on the pale horse.

Yawning, stretching and twisting to get his muscles in working order, the for'ard hands got on to an even keel, folded his blanket, resolved himself into the character of cook and tackled the sand-box. The sun was shining broadly over orange groves, live oaks and pines when he wakened and wound up the skipper for the day with a cup of hot, black coffee; and the latter after a dazed, sleepy look to windward, to leeward and aloft, seemed to get his bearings; and, in less time than it takes to tell it, had the sails hoisted, the anchor up, and the sharpie gliding over the glassy bay like a wraith. In little more than half an hour she turned gracefully to look at her anchor within a furlong of the wharf at Yellow Bluff. Then the canoes were hauled alongside and the entire ship's company went ashore to see what might be seen and learn what might be learned in the drowsy little coast town.

Here the skipper, who was acquainted with the Bluff people, introduced the cook to Mr. Futrell, the one merchant of the place, and then went off to seek his friend, Jim C. Mr. F. proved to be a desirable and useful acquaintance. He had only been a resident of the place for four or five years, but had succeeded in making a delightful home, and had an orange grove of some 600 trees, 250 of which were large, bearing trees, the balance being from four to six years from the setting, and many of them beginning to fruit. Until within a few years a man with ready money could easily find in Florida an old run-down estate with from 100 to 300 bearing orange trees, which could be bought cheap for cash of the impecunious and debt-oppressed owner; and Mr. F. had been fortunate to buy a decayed farm and grove for $800, which is now worth as many thousands. But this includes a large outlay for fencing, cultivation and fertilizers. The fact that the cook had been an enthusiastic fruit culturist and was something of an expert on grapes and strawberries, made the visit with Mr. F. an interesting one, and it was long after noon when the former crept into the Rushton and paddled off to the sharpie.

It was later still when the skipper came down to the beach, gingerly holding at a safe distance from his legs a prize which he had captured. The prize was a soft-shelled turtle, which is very common on the coast; and for speed, wickedness and biting qualities he makes the most vicious snapper seem mild. He has two strong, sharp chisels at the end of his upper jaw, which shut down over the lower, and he can nip slivers of hard wood from ash oars or boat gunwales as though they were cheese rind. His shell flares out handsomely from his midship aft, and is soft and pliable like harness leather; when cooked the creature is edible, and he has an excellent reputation for soup. And this was why the skipper had captured him, and, cutting a hole in the soft shell, strung him on an old cotton handkerchief and toted him more them a mile at arm's length. He was lively and handsome—if a turtle can be handsome, and, like Mrs. Gummidge's lobsters, was actuated by an intense desire to "pinch the world in general." When anchored in the stem of the canoe for a trip to the sharpie, he broke the peace by nipping splinters from the light elm ribs, and it was found necessary to nipper him to the water breaker, tail up, and give him the nobbley stick to bite. When passed on board he made vindictive snaps at the skipper's long legs; took a piece out of the sharpie's rail, and, as the cook trailed him ignominiously aft, tail foremost, he relieved his feelings by nipping chunks out of the setting pole. The disgusted cook tumbled him down the companionway and remarked to the skipper that the impending supper would hinge on the safe stowage of that soft-shelled, sprawling, biting demon.

The skipper dived below and for ten minutes there was a sound of scuttling, the rattle of loose ballast, and some energetic remarks. Then he came on deck and announced "All snug for'ard. I've walled him in safely. You go ahead with the supper and I'll run the sharpie out a couple of miles to a good anchorage." So the trusting cook went below, started a fire in the sand-box and was intent on slicing bacon, when a hideous clatter among the tinware brought him to his feet just in time to clear his counter from a snap like a bear trap. The demon had broken jail, and only for fouling the tail of the frying-pan with the bight of his handkerchief it would have gone hard with the balloon part of the cook's trousers. The cook reported at once.

"Cap'n, I don't want to mutiny nor destroy the ship's stores; but if you don't take care of that turtle I'll pitch him overboard." The skipper grinned diabolically. He seemed to think it funny; the cook didn't. Nevertheless he resigned the helm to the latter, went below, and there was a sound of revelry as the sprawling, biting rascal was dragged forward to the eyes and nippered to a hand-spike with a bit of seizing stuff. He came aft no more, but days afterward put in a very creditable appearance in the character of soup—the only creditable thing he ever did.

There was a wholesail breeze, and the big mainsail of the sharpie heeled her over, rail under, as she stood off from the land on the starboard tack, with a taut bowline; but only for a short half hour, when she came to anchor some three miles from the nearest key and half as far from the mainland.

Even the skipper, a man not much given to flattery, admitted the supper to be a success. It was not an elaborate affair, nor was there much variety. But the bacon was sweet and crisp, the sliced hominy browned to a turn, while the frying-pan full of fat, juicy beach birds was something to remember, and the tea was the sort that takes you by the throat and moistens the roots of the hair.

The sun went behind the gnarled oaks of Hog Island as the cook finished clearing up the supper dishes, and the skipper stretched the dandy over the main boom for an awning. And again the old monotone of cruising inside the keys; monotonous, but not unpleasant. The calm, quiet bay; the murmurous music of night voices from mainland and key; the deep blue of the midnight sky and the profusion of stars on moonless night, or the bright, placid nights when there is moonlight; the intense heat of midday, broken and cooled by occasional showers; the rush and splash of countless fish at low tide, as they seek their prey or flee from their enemies; the calm, warm sunrises and sunsets—all these become regularly recurring events, and grow a trifle monotonous, but not wearisome.

The trial cruise of the sharpie covered the week and demonstrated several points that, to the lubberly cook, seemed worthy of consideration. In the first place the vessel was in no wise fitted for a cruise. She was without ceiling, seats, or lockers below, and her deck leaked like a seine. Her large mainsail had no reef in it, nor any lazy jacks, and when a sudden flaw caught her and it was necessary to let go peak and throat halliards to keep her from turtling, why the sail was sure to blow overboard; and as it took a full minute for the cook to get in line as "for'ard hands,' why the new white sail got wet and the skipper would snarl.

July is notably the month of thunder showers on the Gulf coast. I think there was not an hour during the week in which the muttering of thunder might not be heard, and there was nearly always one or more local showers in plain, well-defined view. Usually these looked dangerous, but in nine cases out of ten were rather tame affairs, and they were very limited in extent. They would make up in the most unlooked for places at a few minutes notice, and come sweeping and swirling down on the sharpie, black, thunderous and threatening, in a manner to startle a landsman; but it was only to scare. There would be a puff of wind for a couple of minutes, a smart dash of rain, incessant thunder and lightning for perhaps five minutes, and the squall would sweep by and off to the northward, the muttering thunder growing more and more distant, while very likely a fresh shower would be rapidly coming down from the windward. And yet the vessel was nine-tenths of the time in bright, pleasant weather; and in spite of the frequent showers there was much complaint on the coast of drouth.

These frequent squalls are not always so harmless. Nine of them may be of a mild, rather pleasant type, "but," as Byron says of his countrywomen—

> "The tenth one may be a tornado;
> For there's no telling what they will or may do."

The tenth one struck the sharpie on the afternoon of the last day of the cruise, and when she was within a mile of the river's mouth on her way home. The run up the coast had been made in fine weather with a five-knot breeze, and the skipper thought to reach moorings at the Anclote bridge before dark, when the for'ard hands noticed a dark, swirling mass of blue and dark green cloud dead ahead and sweeping down rapidly on the little vessel. There seemed to be plenty of wind with it, and it was all the while lightened and streaked by incessant flashes of lightning, while the thunder was a constant quantity.

The for'ard hands got uneasy. "Cap," he remarked, "there's a hard looking squall coming down on us."

"Let 'em come," said the skipper serenely.

A minute more and the dark, swirling mass was within a hundred rods of the vessel. The for'ard hands said again, "Cap'n, that fellow is bound to get here."

"All right, we got here first," said the captain, who enjoyed seeing the crew a little scared; but the fun was all knocked out of him the next minute, as the squall struck like a runaway locomotive, knocking the sharpie down to her coamings and giving all hands enough to do to hold on by the eyelids. This disturbed the skipper's equanimity to a marked extent. He dropped the helm, scrambled frantically forward, let go jib and main halliards, and the sails came down by the run. Meantime the for'ard hands, who never loses his presence of mind, dumped himself down at the foot of the mainmast, took a death grip on the boom, and hung on in the most resolute manner.

"There goes mainsail overboard. Catch 'em by the leach, you—no-sailor-man," yelled the skipper.

"Catch your granny by the leach, I think I see myself," muttered the for'ard hands, as he tightened his grip on the boom.

But the squall passed as quickly as it came, and went off to the southward, reeling, whirling, flashing and thundering itself out of sight, while the sharpie righted herself and nodded gracefully to the light breeze that followed the brief storm.

She was got back into the main channel and headed for the wharf at Anclote, the for'ard hands at the helm, while the skipper gave the care and trimmed the sails to meet the constantly changing course.

It is only two miles from the outer pier head to the wharf; and to know every turn of the tortuous course a man must be very familiar with the river and bay; also, he must know at a glance the significance of red sign boards, black crosses, and tripods with a leaning barrel on top. A red board marks a shallow point on the starboard bank of the channel; a black cross ditto on the port bank. The barrel should lean toward the main channel, but it sometimes leans all wrong. A white tripod is a mark only understood by the men of the coast survey, who placed these signals for purposes of their own. Single stakes mark oyster-bars, channels used by the fishermen, or anything else that the natives choose. On the whole, it may be said that the wilderness of signs and signals that dot the flats from Cedar Keys to Sarasota are a muddle that no fellow can understand; and old coasters are continually getting aground through taking the wrong side of a tripod. Wherefore the for'ard hands took credit to himself as he steered the sharpie alongside the wharf, having only knocked down one black cross and run over one red signal, that stood in the way.

As the wind had fallen off and the tide was running out strong, the vessel was moored to the wharf to wait for the flood, and the for'ard hands donned the cook's apron once more, made a pot of ninety-six per cent. green tea and got a final supper in the scorched and blackened sandbox. After supper the skipper suggested that the cook get into the Rushton, paddle up to the Springs for mail and then go on to camp. "I'll work the sharpie up when the tide turns," he said.

"It's going to be dark as Erebus," hinted the cook.

"Never you mind," said the skipper, "I can work her up to her berth the darkest night you ever saw. I'll get there."

The obedient cook got into the little canoe, went for the mail, got it and berthed the Rushton below the Anclote bridge just as it was getting dusk. Everything at the ranch was just as it had been left one week before, nothing taken nor molested, although Kendall's well is a noted stopping place for the thirsty, irrespective of race or previous condition. The cook put the ranch in order and late in the evening made a fire in the stove, which he kept up for two mortal hours with the mercury at 88, that the skipper, who likes a little posseting and coddling on the heel of a hard pull, might have his favorite "infusion" of strong tea.

But 10 o'clock came, then 11 and no arrival. At half past 11 the cook let the fire die out and turned in.

About midnight there came a loud hail from the landing, and the cook hastily lighted a lantern, answered the hail, and went down to the landing, barefooted, for the skipper is a man who doesn't like to wait for any one to fool with shoes while he is holding a 33-ft. sharpie against the tide with a setting-pole, and his upper works in a psychological snarl. The vessel was quickly moored, and the crew wearily plodded up to the ranch, each with a heavy load of duffle. The skipper dumped his load on the porch, poked his head into the kitchen, and exclaimed in pretended astonishment: "No tea? Well, I did hope I might have a cup of hot tea, after such a trip."

"I'll make some in fifteen minutes," said the cook, good-naturedly.

"Oh, no, no; you needn't mind now." And he got out the molasses, made a pot of "switchell," munched a handful of dry crackers, and rolled into his bunk. The cook also turned in, quoting softly to himself,

> * * * "and that tongue of his * * *
> Alas! it cried, 'give me some drink, Titinius,'
> As a sick girl."

The trial cruise of the sharpie was done. To the mind of the cook it was demonstrated that the little ship was about the correct thing in hull and rig for cruising on the Gulf coast. True, she was in a crude, unfinished state, and her mainsail set badly, having about eight inches of loose leach at the best. But she worked under her jib and dandy lug like a top; or under mainsail alone she was handy as a catboat. And although she was a trifle tender with all her canvas spread, she was speedy and fairly stiff under reduced sail. Her mainsail could be rigged to work something like a storm trysail by a deep reef and a button from throat to leach, by which the peak could be dropped in a blow, giving her some steadying canvas amidships and also something under which to run in a gale or heave-to by. She was 33ft. over all, 26ft. on waterline and 8½ft. beam, drawing, with crew and stores on board, 16in. Having a clean run below from stem to stern, with an ample after-house, she was roomy and comfortable for a party of say four persons and their duffle. One week's work by a capable man would have fitted her for a winter cruise; but it was not to be. The long, hot days went by, the days lengthened to weeks, and still she lay at her moorings, just as she came off her trial trip.

Later in the season she changed hands, and her new owners took her down to the Springs and moored her in a bayou, where she still swung to her lines on the 25th of the following April, never having been out of the river since the previous July. *Requiescat in pace.* NESSMUK.

A LAME SHOULDER.

RETROSPECTION is like greatness in that it is sometimes thrust upon us. In romance it is generally a faded flower, a silken tress, the strain of an old love song, or a package of ink-faded letters tied with a ribbon that is the starting post for a long journey into the past. In every day life retrospection may be caused by finding the cash side of the ledger to be *nil*, the termination of a horse race, a package of unpaid bills tied with a string, the discovery that one's hat is too small the morning after a picnic, and many other things quite unlike the "starter" of the rosy-hued review of the past that some novelists delight in.

It was not sentiment that started me on the back track this morning; but, instead, a serious problem that confronted me at an early hour. I did not know but I should have to wear my *robe de nuit* all day: simply because I could not get out of it. The sinews, muscles, tendons, nerves, *et cætera*, that operated my right shoulder were decidedly rusty and the synorial fluid had petered out, or, I had lost the combination. Whatever it was, I was stalled; but with considerable assistance and an occasional ejaculation in United States frontier language I managed to get dressed. Then came an armistice between the warring muscles and my thinking machinery started. Does this mean that my fishing is all up for the season? Why was I not born ambidextrous, or at least left-handed? Why is it always my right shoulder that is waiting until November when the fishing is over? Why disabled? Why must it peg out early in May instead of —but I will tamper with personal history and I may get a bit of sympathy from some reader of FOREST AND STREAM; if not, the marks I make by anchoring my right forearm on my desk and moving the paper back and forth with my left will cause the printer to swear and I will at least have one companion in misery.

The autobiography of a right shoulder is a delicate thing to handle. A right shoulder in writing the biography of a left shoulder would not have to "watch out" for the eye, and smooth over early shortcomings. I shall assist as much as possible an old but unfortunate friend that has stuck to me closer than a brother these many years. A quarter of a century (that sounds more than twenty-five years) ago I rode horseback far more than I used my legs and feet for locomotion. I remember that I used to feel that my legs looked like the letter O, and when I used my feet to walk, that I was as graceful as a duck on a turnpike. However, I did walk at times, for my father has said that if he asked me, when a boy, to go to the post-office I would walk first to the stable for my pony, and the stable was further than the office. When I had outgrown ponies, and such small cattle, I formed an alliance with a Kentucky horse fresh from a racing stable, and one that had been educated over timber. The partnership gave mutual satisfaction until one beautiful morning when old Blue Grass made a miscalculation and he and I went down in one heap, from which it was difficult to distinguish horse from rider. I knew little about the few succeeding hours, which was, perhaps, fortunate, for the doctors were sewing and patching me up as best they could; and later, the doctor and a friend, aided by two horses and a carriage, delivered me at home much as a butcher boy would deliver a roast of beef from market, and make excuses for the manner in which it was cut and trimmed.

It was many moons ere I saw more sunlight than came in my bed-room windows. My right shoulder and left ankle were so totally smashed that I could not use crutches because of my shoulder, nor ride a bicycle because of my ankle; and my head looked as though I had been used for bait. When at last I crawled out I was not particularly handsome, but I knew that when a horse had jumped three stone posts in succession with only room between to land, that he might jump on to the next, particularly as it was situated just right for the purpose. I had a glimmer of this when the crash was inevitable, but after thinking it all over for some weeks it became a fixed fact. The truth is I had sense enough at the start to think it could not be done without a spill, but the horse knew better. I argued with him until I nearly pulled my arms out and had broken a stirrup leather in the discussion, but he insisted and it cost him his life, and the doctor said if my spur had not caught in the saddle cloth and turned me over and a little out of the thick of it, it would have cost me mine. I have always been grateful to that spur and saddle cloth.

My system required years in which to manufacture blood to replace what I lost on the above occasion, and then I was in Utah Territory. The ankle had been good enough to get well, but the shoulder complained at times and seemed to expect a pension. Another beautiful morning and I was riding another horse, one to the manor or rather prairie born, when he made a mess of it by stepping into a gopher hole, throwing me over his head and rolling over me, which was like hitting a man when he was down. When I found my neck was not broken, I was rather glad that the horse's was, for he was brought up in the country and knew more about gopher holes than I did, at least it was so supposed. My right shoulder was in the way again, as though it had not already more than it could bear without complaining. After the last capsize the shoulder was of no use to throw anything or I might have joined a baseball club. I could not even throw a stone at a dog unless I used my left shoulder, and that was never properly sighted. This accounts for the fact that from the first of my fly-casting I used only my forearm; it is no particular credit to me that this is so, for it had to be, otherwise I might have used my shoulder, my body and my legs, as I have seen other fly-casters.

After the gopher hole episode my shoulder led a quiet uneventful life for a few years until I attempted to save a lady from falling in a skating rink (mind this was ice, for I was never blamed fool enough to strap little wagons on my feet); but I did not plan the rescue with any system, and when the ambulance was sent for the lady was on me, I was on my shoulder and the shoulder was on the ice. Of course it was the right shoulder. For some time after the last fracas I was like the soldiers who drew the highest pension; it required someone to dress and feed me or I had to go undressed and unfed.

I must not give the entire history of that unfortunate shoulder, but very recently I was fishing a trout stream, and always on such occasions I have less sense than at other times and imagine that I can climb over, under and around boulders, tree trunks and things like a squirrel, when my avoirdupois should remind me to copy the agility of the snail.

In one place I jumped from one hoary and moss-covered rock to another ditto—and you should no more put faith in moss-covered boulders than in princes—and struck the rock all right, but the moss was not glued on, and I went head first to the bottom of the brook in the deepest part, and I think I had a good start for the bowels of the earth, but I put out my right hand as a fender. When I got ashore I thought, this time my arm is broken, but it was the same old shoulder as usual. When it was convalescent a friend asked me to try his new fly-rod, which I did, and it proved to be one of the kind that requires trunk limbs and a stationary engine to cast with. From that day the shoulder has visibly weakened, but I do not know whether from mortification of spirit or from being overtaxed, but I incline to think the former. If it could enter a complaint in proper form, I presume it would say: "I have killed two horses, put you forcibly to bed a number of times, in spite of your two hundred pounds weight, and made you howl with pain and rage, but that rod was the weaver's beam that broke my back, and I am in a decline. Why did you ask me to handle a fly-rod with the butt on the wrong end?"

If there is a moral lurking around in this screed I am not responsible for it. A. N. CHENEY.

GLENS FALLS, N. Y.

STORIES OF "NED BUNTLINE."

THE death of Colonel E. Z. C. Judson, whose vividly drawn descriptions of sea life, under the *nom de plume* of "Ned Buntline," first turned my inclinations, as undoubtedly they did those of many other boys of thirty years ago, toward the sea, seems to be a fitting opportunity for some of us who still live and remember to place on record such little items as we personally know of him, and thus contribute to a very large volume, should any ever undertake to write his life, and group the many individual acts of bravery, nobility and true manliness, of which he was full.

Knowing him from childhood through his works, and having time after time, when passing through some of the vicissitudes of sea life, recalled by a flash of memory, as though I myself had been there before, some of his descriptions which fitted; having thought and recalled, in gales at sea, in the rivers and jungles of Africa, of Central and South America, and when cruising in the Caribbean Sea, along the Isle of Pines, Tortugas and other buccaneering resorts made famous by him, the adventures of his creations, I feel that I owe to his memory the slight tribute I now give.

A few years ago I first met him in Washington and then began a friendship which has lasted until his death with him, my part still lives. I passed a most delightful hour in his company. He was accompanied by his wife, his sister and his son, a noble boy of 5 or 6, already under his father's healthy teaching, a little man and gentleman, an adept with fly and gun, and truthful. The party were returning from Virginia to their New York home, in their carriage, which, drawn by a splendid pair of Hambletonians, made traveling a pleasure. A few weeks ago he wrote me from his death bed. I answered, and again, June 19, he wrote me a long letter, from which I make extracts:

HEADQUARTERS "NED BUNTLINE," EAGLE'S NEST, STAMFORD, N. Y., July 19, 1886. *Dear Old Pisco:* Your flattering comparison of the hulk propped up on shores to do this writing, and the gallant, yet at last used-up Powhatan received and read with a soul full of appreciation. The seamanship which brought her safely through her last terrible battle with ocean's might and the tempest's will, can only be appreciated by a sailor. If I live I will try to work it up. I am helpless—so weak I can hardly keep up to write a few lines, yet my brain, thank heaven, seems clear. If I were only able to make a visit from you a pleasure, how glad I would be to see you here. My horses stand idle in their stalls, my wife is by my bedside night and day, and I could do nothing to give you joy but to put rod and flies in your hand and tell you where to go.

Previous to Col. Judson's retirement to the Wilderness for a congenial home, he spent a portion of his life in this village; and his late death recalls many anecdotes as to his peculiarities—all to his praise, for he was much liked and respected, and exercised great influence over the young men, in whom he inculcated the most manly ideas. Among things spoken of are his organizing and drilling a military company, and his peculiarly chivalrous treatment of ladies, whom he never passed without raising his hat. I was then in China, and did not meet him, but the boys—some of them old ones now—remember him most kindly.

After he had built his home, "Eagle's Nest," on the banks of the Uttawana River (between Blue Mountain and Raquette Lakes,) he became a very noted character in the woods. His cabin door was open to every one, and his hospitality unbounded to all who would comply with two or three simple rules.

No drinking of liquor was allowed on the premises.

No killing of any kind of bird or animal, and in season or out no hounds.

As I was lying on the boughs at Ned Bennett's Hunter's Camp, on the Raquette, one evening not long ago, "Ned Buntline" became the topic of conversation, and nearly every one of a dozen guides present had an anecdote; even old Alvah Dunning, a Long Lake guide, who bore him no love, was inclined to chip in, which he did with a song of his own composition, in which Ned and his peculiarities were most graphically described. One of the guides had before Alvah came in told the story of the origin of the feud between them. As I recollect it was this: One day Alvah, in defiance of Judson's decree against hounds, undertook to cross his premises with a couple, with which he intended running a deer. Ned spied him, came out with his rifle and ordered him off the grounds. Alvah refused to go. Ned gave him five minutes, at the end of which he would shoot the dogs. Alvah, still defiant, called them in to heel and interposed his bulky body between. At the end of the allotted time the Colonel fired, apparently at Alvah, really at a dog, but the ball went between his legs, which were a little bowed, and there was one hound less. Alvah jumped at the shot and the other hound was at once sent to join his mate. Both balls had passed by their own width of Alvah's legs; and when told that the next ball was for him if in sight at the end of another five minutes, it is said that Alvah made some very lively tramping; and as he still lives, it is probable that he was out of sight on time.

It is but fair that the other side of this story should be given. It is short. Alvah says, "It's all a lie."

Another anecdote illustrative of the peculiar nerve of Col. Judson I remember. There pulled into his wharf one rainy evening a couple of boats, each with two guides (or boatmen), and in each a most becomingly attired sportsman. Depending upon Ned's well-known hospitality, the paraphernalia of rods, guns, etc., were being landed, when Ned came down and welcomed them. As he stood talking, from the bow of each boat were landed or exposed the saddles of a deer. These caught Ned's eye. He asked about them (it was in season); and the young men informed him with conscious pride as to where and how they got them; and told further of three more they had killed within forty-eight hours, all by floating. "Where are they?" asked Ned. "Oh, they were does and a fawn, and we left them on the bank." Ned called a halt in the story; and directing the guides to reload the boats, gave the party a very limited time to get off from his premises; and while they were going he delivered a lecture to the young men, which they doubtless well remember to this day. No argument or entreaty prevailed, and they went their way to shanty out further on.

"Ned Buntline" was a noble man; and I am one of the thousands who lament his loss. PISECO.

AN HOUR WITH THE BIRDS.

I HAD been ill, and, feeling too miserable to either work or read, I made my way to a rustic seat under some trees on the lawn, thinking to pass a weary hour. Presently I became aware of a low sweet melody like the strain of an æolian harp, or the music of Ariel, which seemed to be in the air all about me. On glancing upward I found that the music came from the throat of a little golden warbler directly over my head. I felt very grateful, and even somewhat flattered, by his efforts to cheer me, till I chanced to perceive that I was not the only listener, and in fact I began to doubt if he was singing for my gratification at all, or was even aware of my presence, as his whole soul seemed absorbed in the little brown lady who sat near him, and who to all appearances was completely entranced by the delicious solo. I felt decidedly *de trop* and turned my attention to the other bird voices around me.

"*Look at me! see! see! see!*" came a clear voice, and balancing himself on the telephone wire I perceived the black-throated bunting, a handsome little fellow he is, and well worth looking at. His vanity is very pardonable and I think I shall look at him to his heart's content. But now that my ears are opened I am conscious that a grand concert of sweet bird voices is being held in the trees around me and I cannot devote my attention to one voice when there are so many to be heard, but must give each a hearing if I would judge of their respective merits.

"*Whee tooral, whee tooral, whee tooral, whee toora, toora, toora, whee tooral whee,*" sings the Baltimore oriole in his rich melodious voice, then away he goes in hot pursuit of a rival, and as they flit hither and thither their golden breasts gleam like balls of fire, while the demure little lady for whom they are contesting quietly looks on, and will no doubt dutifully reward the victor with herself, be it which it may.

"*Hallo, look out, it's me, d'ye see?*" chimes in a sweet clear voice, and the orchard oriole dexterously swings by his feet from the twig of an apple tree, and snips the insects from the under side of the leaves.

"*Cah-yah-ha*" screams a shrill voice, and there is a flutter among the birds as a rascally bluejay drops down among them. Audacious fellow! but then he is so handsome! He is a soldier bird, you know, and is elegantly dressed in a suit of navy blue with white trimmings and black velvet collar, and, mischievous rollicking fellow that he is, he enjoys nothing more that to scare the wits out some of the smaller birds. His black eyes sparkle with merriment at the flutter he creates. But we must not be too hard upon him, and if he plunders a few eggs occasionally we must conclude that he but deems it a soldier's right and privilege. He is thoroughly military and goes away shouting "Yankee-doodle, Yankee-doodle," in a deep rich voice.

"*Mary, Mary,*" with startling clearness, a sweet voice calls, and a slender graceful bird in modest gray attire alights in a branch near by. Why this bird should ever have been called the catbird we never could imagine. "*Mary, Mary.*" Ah! I never can hear that plaintive call without a feeling of sadness and a vision of a fair young girl with great dark eyes and raven curls who died when I was a little child, sister Mary. I remember that afterward, when visiting our old haunts I heard these birds, I fancied they missed her and were calling her name, and would go home in tears.

On the ground the purple grackle are running hither and thither, hunting for and carrying away timber for building, their bronze and rainbow-hued plumage flashing in the sunlight. The robin redbreast is tugging away at the angle-worms, and the little brown wren is scolding and chattering here and there, busy housewife that she is; and no wonder, for had they not taken possession of the nicest little brown cottage imaginable and had everything to their taste when the bluebirds came and drove them away? And there on the verandah of that same little brown cottage, in his blue cloth coat and russet vest, the saucy gentleman is enjoying their discomfiture and warbling in his glee.

From the deep woods across the river come the mournful notes of the dove, the sweet medley of the brown thrush, and many other voices. But we are reminded that the air is damp and chill, and reluctantly we return to the house, feeling refreshed in mind and body, and resolving that hereafter if we are troubled with melancholy we will spend an hour among the birds.

VIOLET S. WILLIAMS.

CORALVILLE, Ia.

ALBINO RED SQUIRREL.—While Mr. F. Satterthwaite was driving near Allamuchy, N. J., July 11, a white red squirrel sprang on to the rail fence and ran along for a considerable distance, perhaps forty panels of the fence, and then went into a chestnut tree by the road. The animal was all white except just back of the neck and on the shoulders where it was cream color. The fence on which it was seen is on the property of Mr. Rutherfurd Stuyvesant.

BIRD PROTECTION.

THE act of the New York Legislature passed May 20, 1886, entitled "An Act for the Preservation of Song and Wild Birds," provides that—

§ 3. Section one and two of this act shall not apply to any person holding a certificate giving the right to take birds, and their nest and eggs, for scientific purposes, as provided for in section four of this act.

§ 4. Certificates may be granted by any incorporated society of natural history in the State, through such persons or officers as said society may designate, to any properly accredited person of the age of eighteen years or upward, permitting the holder thereof to collect birds, their nests or eggs, for scientific purposes only. In order to obtain such certificate, the applicant for the same must present to the person or persons having the power to grant said certificates, written testimonials from two well known scientific men, certifying to the good character and fitness of said applicant to be intrusted to such privilege; must pay to said persons or officers one dollar to defray the necessary expenses attending the granting of such certificates; and must file with such persons or officers a properly executed bond, in the sum of two hundred dollars, signed by two well known citizens of the State as sureties. This bond shall be forfeited to the State, and the certificate become void upon proof that the holder of such certificate has killed any bird, or taken the nest or eggs of any bird from other than the purposes named in section three and four of this act, and will be further subject for each such offense to the penalties provided therefor in sections one and two of this act.

§ 5. The certificate authorized by this act shall be in force one year only from the date of their issue, and shall not be transferable.

In accordance with these provisions, preparations have been made by the American Museum of Natural History to issue certificates to qualified persons, which shall authorize them to collect birds, their nest or eggs, for strictly scientific purposes only. To facilitate this, a series of blanks have been prepared by Mr. Allen, and as these may well serve as models of their kind, we give them in full to aid other institutions in preparing similar forms. A number of our readers who have made inquiry on this subject will find their questions answered here.

[A] *American Museum of Natural History,*
Central Park (77th St. & 8th Ave.),

New York City,.....188

SIR:

In answer to your request for a certificate permitting you to take birds and their nests and their eggs for scientific purposes under the Laws of the State of New York, I inclose an obligation, in signing which you promise to take specimens only for scientific purposes and to strictly observe the letter and spirit of the laws of this State for the preservation of birds.

This obligation must be accompanied by a properly executed bond, in the sum of two hundred dollars, and by the indorsement herewith sent, signed by two responsible scientific men to whom the President of the American Museum of Natural History can refer.

No notice will be taken of any application which does not conform to the requirements here prescribed.

If the certificate is granted, a fee of one dollar will be charged, to cover the expenses attending the granting of such certificates.

.....*President.*

N. B.—The bond must be executed strictly in accordance with Section 4 of Chapter 427 of the Laws of the State of New York, a copy of which Act is herewith inclosed.

[B]

Application for a permit to collect birds for scientific purposes under the provisions of Chapter 427 of the Laws of the State of New York.

.....188

I, THE UNDERSIGNED, a resident of .....and.....years of age, do hereby apply to the President of the American Museum of Natural History of New York City, for a cerificate granting me permission to collect birds, their nests and eggs, for strictly scientific purposes only, in accordance with Chapter 427 of the Laws of the State of New York, being an Act passed May 20, 1886, entitled "An Act for the preservation of Song and Wild Birds." I do hereby agree and promise that in availing myself of this privilege, I will strictly comply with the spirit and letter of the Act above cited.

I herewith inclose my bond, duly executed in accordance with said Act, and the required indorsement of two scientific men, certifying to my good character and fitness to be intrusted with such a privilege.

[*Signed,*].....

Witnessed,.....

FORM OF INDORSEMENT.

.....188

WE, THE UNDERSIGNED, personally know .....and believe him to be a person of good character, and fit to be intrusted with the privilege of collecting wild birds and their nests and eggs, in accordance with the provisions of Section 4 of Chapter 427 of the Laws of the State of New York, which Act we have carefully examined and fully comprehend.

[*Sign with name and address in full.*].....

.....

[C] *American Museum of Natural History,*
Central Park (77th St. & 8th Ave.),

New York City.....188

DEAR SIR:

The President of the American Museum of Natural History has decided to grant your application for a permit "to collect birds, their nests or eggs, for strictly scientific purposes only," in accordance with Sections 3 and 4 of Chapter 427 of the Laws of the State of New York for 1886, entitled "An Act for the preservation of Song and Wild Birds."

To cover expenses incurred for postage, printing, etc., you will be charged $1.00, on receipt of which said certificate will be mailed to your address. .....*President.*

[D.]

[THIS PERMIT EXPIRES JULY 1, 188.., AND IS NOT TRANSFERABLE.]

American Museum of Natural History,
Central Park (77th St. & 8th Ave.),

New York City,.....188

No......

The President of the American Museum of Natural History, having received satisfactory evidence that Mr..... of.....is engaged in the scientific study of Ornithology and in the collection of wild birds, bird's nests and eggs for scientific purposes, does hereby, in accordance with Chapter 427 of the Laws of the State of New York, grant him a permit on the condition that he will faithfully observe his written promise to the President to obey the letter and spirit of the Act for the "Preservation of Song and Wild Birds"; and in case of wanton destruction of birds or bird's eggs, or killing birds for merely ornamental purposes, or for any other breach of said promise, by the said.....this certificate shall be revoked, and notice of such revocation given in any manner the President may think best.

The holder of this certificate shall not take nor kill any game bird, nor take nor destroy their eggs, contrary to the Laws of New York, enacted for the protection or preservation of game birds.

This certificate expires July 1, 188.., and is not transferable. The holder thereof is not authorized to collect specimens in defiance of local laws or regulations, nor in violation of laws against trespass on private property.

.....*President.*

[E] KNOW ALL MEN BY THESE PRESENTS, THAT WE

.....Principal, and.....

.....Surety, and.....Surety,

of the.....of.....State

of.....are held and firmly bound unto the PRESIDENT OF THE AMERICAN MUSEUM OF NATURAL HISTORY, of the City of New York, in the just and full sum of TWO HUNDRED DOLLARS lawful money of the United States, to be paid to the TREASURER OF THE STATE OF NEW YORK, for which payment well and truly to be made, we bind ourselves, our heirs, executors, or administrators, jointly and severally, firmly by these presents—sealed with our seals, and dated the.....day of.....in the year one thousand eight hundred and eighty.....

Whereas, the above bounden.....

.....has been given a Permit, dated the.....day of.....in the year one thousand eight hundred and eighty.....by the PRESIDENT OF THE AMERICAN MUSEUM OF NATURAL HISTORY, of the City of New York, to collect birds, their nests or eggs, for strictly scientific purposes only, under the provisions of Chapter 427 of the Laws of the State of New York, which Chapter is "An Act for the Preservation of Song and Wild Birds," passed May 20, 1886; now the conditions of the foregoing obligation are such, that if the said.....shall abstain from any infringement of said Act, then this obligation to be void, otherwise to be and remain in full force and virtue.

Sealed and delivered

THE BOBOLINK.—Utica, N. Y., July 26, *Editor Forest and Stream:* The letter of E. H. Lathrop of Springfield, Mass., published in the last number of FOREST AND STREAM, is very timely, and his plea for the bobolink should receive attention. But the meadows of Massachusetts are not the only ones that miss the sweet notes of the bobolink, for in this State the bird is a rare sight in many quarters where in years gone by he had his favorite haunt. A friend of mine, an ornothologist, who has spent the past three months in the fields and forests of central New York, informs me that the bobolinks are disappearing rapidly, and now not more than one is to be seen where there were fifty a year or two ago. Most other small birds are becoming scarce in this locality, noticeably the wren, and my friend says that he has seen but one in all his travels. Until within a year or so they have been very numerous. A few years since, before the decrease in the small birds became apparent, fruit trees hereabout were healthy and vigorous, now it is almost impossible to save young trees from the ravages of insects, and a thrifty tree in a new orchard is the exception rather than the rule. Apple, pear, plum and cherry trees, all fall victims to the blight. But the fruit trees are not the only sufferers, for nearly every specie of vegetation has its enemy, and new forms of insect life are constantly developing. When men come to realize the fact that the destruction of our birds is sure to entail serious financial losses through the failure of crops, then, and not until then, will they fully awaken to the gravity of the situation.—PORTSA.

THE TOLEDO EAGLET.—East Toledo, O., July 19.—*Editor Forest and Stream:* When my young eagle was four weeks old it was as large as a full grown chicken. It then showed no signs of feathers and did not stand on its feet, but sat up on its rump when feeding, and when in that position was about fourteen inches high. Its head and beak began at that time to turn black. It was the most helpless, awkward and homely specimen of a young bird that I ever saw. It is twelve weeks old to-day. It left the nest July 3, and on the following day measured from tip to tip across the wings 6ft. 1in. July 11 it measured 6ft. 5in., having grown 4in. in one week. We have named it George Washington, but I think it should be Martha, for, from various indications, I am satisfied that it is a female bird. In our grand procession on the 5th of July, the eagles were a prominent feature, the old birds in a large cage and the young one sitting on the seat by the side of the driver. We are taking the very best of care of the eaglet, which promises to be a much larger bird than either of the old ones.—HENRY HULCE.

A MANUAL OF NORTH AMERICAN BIRDS.—We learn that Messrs. J. B. Lippincott & Co. have in press a "Manual of North American Birds," by the eminent ornithologist, Mr. Robert Ridgway, Curator Department of Birds, Smithsonian Institution, Washington, D. C. The author has had unrivalled advantages for the preparation of a treatise of this character, arising from his own field experience as well as his connection with the National Museum, and the free access which has been granted him to various other public and private collections of birds, both in this country and Europe. The work is to contain some 425 illustrations, suitably executed, and will conform to the geographical limits, classification, numeration and nomenclature adopted by the American Ornithological Union. We doubt not it will be one of the most important, thorough and original contributions to the literature of the subject which has ever appeared, and presume that naturalist and sportsman alike will find in it an invaluable aid.

CONCERNING HYBRIDS.—Philippi, W. Va., July 11.—*Editor Forest and Stream:* Visiting a friend in a neighboring county a few days since I made a discovery which was new to me. My friend's house is quite near a dense thicket of considerable extent, in which there is a plenty of ruffed grouse. Last summer three or four of his hens, of a breed somewhat resembling the dunghill, brought off a brood each of hybrids. The head and neck were of the grouse, while the tail and feet more resembled the barnyard fowl. They would roost high up in the forest trees and were indifferent to your presence, provided you were 100yds., or more, distant. I only saw one, a hen, as my friend succeeded in capturing only a few alive. Have you ever heard of anything like this before?—J. E. H. [We have heard of hybrids of many sorts and descriptions, but when investigated most of these turn out not to be hybrids at all. We should like to see one of the birds spoken of by our correspondent.]

AN ALBINO CROW.—Friendship, N. Y., July 20.—A white crow was shot here recently by Mr. Levi Webb and mounted by our local taxidermist, Will Flint. The exact color is a very light slate, shading to white on the under parts. Mr. Webb watched it daily from the time it first sat on the edge of the nest, and tried to secure it alive, but was obliged to shoot it. It can now be seen at the billard parlors of D. C. Chadwick.—A STUBBE PENN.

BUFFALO ON THE MUSSELSHELL.—The *Yellowstone Journal* reports that recently Col. Scheets, a surveyor, saw a bunch of fifty-two buffaloes on the Musselshell in Montana. Most all the animals were old bulls, but there were one or two calves in the bunch.

Game Bag and Gun.

GAME PRESERVING IN BRITAIN.—I.

GAME preserving, as practiced in Great Britain, is the nucleus upon which most of our true sports center, and has now almost attained to the level of a science, so earnestly and so thoroughly is it studied in all its bearings; but without going into a long dissertation upon the many curious points for discussion, which its nearly national character suggests, I could not well tell your readers of the unique position it holds as an institution in these islands. More to their taste, probably, will be some information upon the practical portion of the subject, and I cannot, with that end in view, do better than describe to them the course of procedure which would be adopted in order to bring an erstwhile productive and successful game preserve back from a state of neglect and inefficiency to its former excellence.

Game preserves in England are of several kinds, according to the part of the country they are in, to the nature of the particular locality, and often to the taste of the preserver himself. Personally I affect mixed shooting, and I think the best and truest sportsmen this side will thoroughly back me up; and with this fact before me, I propose to address myself to the task of describing a mixed game preserve. Let us take as an example an estate say in Dorset or Hampshire, southern counties. The estate will consist of one or more farms, with the usual proportion of new and old woodland and some extent of coarse upland down or moor. A well-built modern house, or a picturesque rambling old manor house, provides the owner with a dwelling; large gardens, for flowers and vegetables, numberless buildings constituting the "home farm;" a carriage drive through high old rook-tenanted trees leads up to it, and probably a wood of fine old trees backs the picture. In these several details you have the most prominent characteristics of an English country house, such as would adorn a large game preserve.

Let us now look at the estate itself. In size it may vary. Some are but a few hundred acres, others extend to three or four thousand. In the lower grounds near where the silvery trout stream meanders through the valley, will be rich, smiling meadows of luxurious pasturage. In summer time the cows will stand knee deep in the long grass, and in the morning you may stand and watch the partridges as they feed in the meadows. Long straggling hedges of black and white thorn divide these fields one from another, while near the stream short stretches of irregular fencing will complete the division where the ground is too damp to admit of the thorns prospering. Upon the higher ground large fields and plantations will alternate. The former change from year to year at the instance of the farmer. One season the root crops of turnip, mangel or smede will hold sway, while the next sees them waving cornfields, to be followed in due rotation by heavy, thick mantles of clover and young grass.

The plantations or woods may be of recent growth or otherwise. Of late years much land has been planted in England, and all through the country you may see large areas of young saplings springing up to form in years to come deep timbered woods, such as several upon this estate of which I try to tell you. The old woods are mostly oak, well grown, shapely trees. Ash comes next in point of numbers, and then beech, larch and fir, with an occasional plane, birch and sycamore. Beneath these there is an undergrowth of hazel bushes, of bramble and thorn. High nodding bracken ferns everywhere abound, while the ground is carpeted with bluebells, primrose violet and wood anemone, which at different seasons spread their delicate hues over the whole expanse. Where the ground is unusually dry beneath the larger trees there is but little verdure to clothe it, often nothing suggestive of undergrowth beyond the dry brown stalks of a dead brier. Rabbits will be fairly plentiful in these woods and in the summer mornings you can see them scuttling about under the ferns and similar cover. A few pheasants, remnants of a past numerous race, will still maintain a precarious existence despite the many furred and feathered marauders, to whose attack they are forever exposed. Somehow or other pheasants will often, more often than not, manage to avoid actual extinction from an erstwhile preserve and two or three couple will continue to run along and reproduce their numbers year after year in spite of all adversities.

In the autumn and winter the woods and plantations will doubtless come in for their share of the woodcock, which no scheme of preserving can retain and which the closest preservation and freedom from molestation alone will encourage. They are curious birds enough in form, but far more curious in their habits, and it will often puzzle you to account for their idiosyncracies, not the least curious of which their apparent affecting of presently unpreserved, though formerly closely preserved woods. Wood pigeons (*Columbus torquatus*) will spend a high old time in the plantations when the keepers are no longer upon their several tracks, and but for the occasional occurrence of a tragedy in animal life, in which one of the cushats is the victim and the hawk the aggressor, nothing happens to mar the even tenor of their ways.

When the woods, and the fields, too, for all that, are surrendered by the departing keeper to the free run of the vermin, the latter soon increase at a rapid rate and occupy an important position in the community of the unpreserved woodland. Stoats and weasels in great numbers will hold high revel over the bodies of many slain rabbits, both old and young; will levy for supplies upon the nests of the countless birds, small and large, which people the coverts, and will prevent those few pheasants from increasing their numbers, and will steal out into the fields and down into the meadows to prey upon the few partridges and hares which are left upon the estate. Cats that have forsaken the joys and comfort of the cotter's hearth for the excitement of a semi-wild existence, will lurk in the fastnesses of the rocks, which here and there break the even surface of the land, or will oust some furtive, fearsome conies from their snug but ramified dwellings, and therein hold high revel, like the hawk and the owl in the leafy canopy above. Sometimes one almost comes to wish that the gamekeepers may never return, that the delightful disorder of the unpreserved woodland may continue, that nature alone hold sway while we human beings look on and learn, and learning, love, for

the untrammeled woodland and its many-natured peoples is of itself most lovable.

And now let us journey out and upward to the limits of the cultivated land, let us thread our way through the belt of young fir plantation which divides the fields from the moorland, and perhaps we may in our journey put a fox on the move, and send him trotting off through the thick sedge grass, furze, heather and shambles, which here thickly clothe the ground and hide the nimble rabbits as they go scampering away, but for the most part unseen. Come to the moor, we shall find a large, undulating sweep of peaty land. Heather-clad throughout, only here and there is the darker green and the bright yellow of the gorse visible. Thick sedge grasses, closely growing and crinkly to the tread, short, close-growing heaths, mosses and many minute but distinctly beautiful little moorland wild flowers, occasional patches of spret and rush provide the verdure which decks this bleak and weather-swept expanse. But still it is beautiful, as you will see, whether in your morning, noon or evening visits to it. Not much apparent life about it now, but if you walk across and reach up to that rising ground, which forms the top of the moor, you will send a few black game whirring across in their heavy, noisy fashion of flight. Or you may put up a moorland hare, some sturdy, well-conditioned one that has run for his life before the hounds and is ready to do it again.

But it is in autumn time and in winter, if it be mild, that the moor has its merriest time, for then the moorfowl "come in," as we call it. Plover, snipe, and perhaps a duck or two in the bog which fills the valley, will put in their appearance on this unpreserved land and favor it as they will none over which the keeper may hold sway. Moorfowl are the "Heathen Chinee" of birds of sport. Their ways are to the furthest extent peculiar. Uncertainty is their ruling feature; they are eccentric in their habits as they are peculiar in their flight, and as wary as they are eccentric and peculiar. But still year after year they return to the moor, and year after year they afford to many sport and healthful exercise in their pursuit. We could ill spare our wildfowl, and must respect them because they are not amenable to the persuasions of the preserver and yet do patronize our moorlands.

And here we have reached the boundary of our land. We have seen how a small head of game manages to just maintain itself against the attack of vermin innumerable; how, despite the non-preservation of the game, a few pheasants, a sprinkling of partridges, a modicum of rabbits and an occasional hare or two will still eke out a precarious existence upon the farm lands; and how the moorfowl and the black game in ones and twos will find a congenial haunt upon the unwatered woodland adjacent, while over the whole land the rabbits thrive and multiply. Sometimes an estate like this will lie idle for a year or two, both as a farm and as a preserve. The fields uncultivated will throw up a luxuriant crop of weeds, the grass lands produce a rank and fulsome pasturage, the hedge acquire an irregular, unkempt appearance, the gateways fall abroad from sheer ruin. Then has the non-preserved estate a truly woebegone aspect and but poor chance of maintaining the small head of game upon it. Poachers from the village hard by will have a free run of the place and by their persevering pot-hunting destroy every pheasant and partridge and hare upon the estate, leaving but the conies as prey for the numberless vermin, furred and otherwise, which will soon accumulate and ravage this mournful waste.

I have in the foregoing tried to picture to you a typical English estate as it would be when left to deteriorate from being a well-worked preserve to a mere farm, perhaps not even that. I have sought to show what sort of a basis one would have to work on if seeking to institute or reinstate a game preserve here. Of course there are many places which would exhibit but a few details of these I have set down. That, however, is inconsequent. You may take it that such as I have endeavored is typical, and that is, I assume, what we want. With this before us, we can go into the practical portion of the matter and learn of the habits and haunts of the birds and animals to be preserved, fostered and increased; both those in the fields, in the woods, and upon the moors; of the sport they afford, of the vermin which prey upon them, and of the men who would poach them. This is the scheme of a task I have set myself, and it is to the due fulfillment of that task that I hope from time to time to address myself in these columns. MOORMAN.

ENGLAND.

[TO BE CONTINUED IN ISSUE OF AUG. 12.]

ABOLISH SPRING SHOOTING.

Editor Forest and Stream:

In your last issue I notice under the head of "Spring Snipe Shooting," a letter from my friend, Hon. Robert B. Roosevelt, who seems to be so much occupied with his new novel that he has failed to look at the Laws of 1885 Chap. 485—when he says it is provided that snipe cannot be shot on Long Island before the 15th of July. This law really makes the close season end July 10, and was discussed by the New York Association for the Preservation of Game, of which he is the honored president, was approved by that association and by Mr. Roosevelt himself and became a law by the earnest efforts of that society.

A large number of our bay birds, if not disturbed in the spring, will nest on our shores, and it was thought best to protect these birds by closing the season until July 10.

I am sorry to say I have no shooting box in New Jersey to which to invite Mr. Roosevelt, if I had I should ask him to come and help me to protect the shore birds there by allowing them to mate and breed in the spring unmolested.

I am sure Mr. Roosevelt is too good a sportsman and friend of our game and fish, to allow himself even thoughtlessly to give one argument to the many pot-hunters who are now trying to do away with the law in question and all laws that help preserve for the many our birds and fish. ALFRED WAGSTAFF.

NEW YORK.

Editor Forest and Stream:

In his article on spring snipe shooting in FOREST AND STREAM, July 15, Mr. Roosevelt illustrates the point I sought to make in a short communication some months ago, viz., that State regulation is inadequate to prevent spring shooting. Mr. Roosevelt makes a point on Senator Wagstaff for prohibiting shooting in New York bays when the New Jersey gunner is allowed to kill all the snipe. The plaint of Mr. Roosevelt is evidently humbrously aimed; but it hits the point. There is so much jealousy over State lines and State rights in this country, that nothing but national legislation will be of any avail in stopping the spring slaughter of birds, and especially those of a migratory character.

Will those who affirm that there is no power in Congress to regulate these matters, please give their authorities or facts relied upon? The scope of legislation by Congress has been wonderfully enlarged in the last quarter of a century, and if there is no power to regulate this matter of vital importance to the sportsmen of the next if not the present generation, it is time such power were being conferred. JAP.

NEW ALBANY, Ind., July 17, 1886.

FOXES AND FOXHOUNDS.

Editor Forest and Stream:

It is not an uncommon occurrence here in Northwestern Vermont for our hounds to catch a fox; and I think that our foxes are as long-legged as any of their variety. The veteran fox hunter of this section, E. W. Geer, Esq., Sheldon, Vt., some years ago owned a hound a cross between the otter hound and English foxhound, that in his younger days would even on dry leaves in the fall catch nearly every fox started within twenty minutes or half hour's run unless the fox escaped by holing in the rocks or sandbanks. This hound, Old Hunter, had a most acute nose, and was seldom bothered by the fox taking to naked ledges or dry ploughed fields in freezing weather. Old Hunter lived to the ripe age of thirteen; after he was eight years old he began to run slower, and then an old fox would sometimes bother him for a time by taking to the glare ice in a cold windy day.

Our foxes here seldom play around when started, but lead off out of the town and it is rarely that a slow dog will follow them longer than twelve or fourteen hours at a time; and a fast dog, if the running is fair, will catch or earth his game within a few hours run, and if the running is bad, such as a light snow crust, they will use themselves up within six or eight hours. The surface of the country about Sheldon and Fairfield, Vt., is of a broken character, steep ledges and high hills fairly well wooded, just the place to try both a dog's and a fox's mettle and staying power. PARKER LEACH.

HIGHGATE, Vt., July 17.

Editor Forest and Stream:

Thanks to Mr. R. E. Robinson for his "Notes Concerning an Outlaw" in last week's issue. He has seen fox hunting as a genuine lover of the sport always sees it. As for Mr. Steck's experience, I want none of it. He tells how after a two hours run the fox, at considerable labor, was dug out and killed. Now he tells of the exquisite pleasure of lugging home a gun on one shoulder and the mutilated remains of the fox on the other. Well, when I go hunting I always bring my gun home, and if I am lucky enough to kill a fox I take his handsome jacket carefully off and put it in my pocket and leave his mutilated remains in some tree for the jay birds to feast on. Of course there is not so much exquisite pleasure as may be had with iron bars and shovels digging out and murdering, not shooting, the fox. We have plenty of that kind of fox hunters in these parts. I know of parties in adjoining towns that commence their hunting by September 1 and hunt till the middle of April, killing three-fourths of their foxes in September when the young ones are still hanging round the old burrow, and it is no more trouble to kill them than rabbits. These are near relatives of the trout hog.

But to go back to the dog question. No real fox hunter wants a slow, pottering dog; it takes them too long to get a fox started, and though perhaps more foxes can be killed with them, still all the sport of fox hunting is not killing the fox; and there is little excitement in one of those dogs which, as Mr. Steck says, analyze each step. A dog that will rattle the track right along, with head up, suits me, and the same dog that would never catch an old fox here would, if taken to Virginia with a dozen more of the same kind, catch his fox as well as their dogs do. I have tried them from all parts of the country, and I know we have as good breeds of foxhounds as any.

"Hounding," of Pine View, has just sent me what he calls a choice pup, and says if he equals his sire and dam he will clean up anything in Massachusetts. I shall give him a good chance, and when he does it will let it be known through the FOREST AND STREAM.

H. C. NEWELL.

ASHBURNHAM, Mass.

Editor Forest and Stream:

I have been much interested in reading the articles about fox hunting that have recently appeared in FOREST AND STREAM. For more than half a century I have spent most of the time each winter in following the sly varmints with dog and gun among the hills of New England. I have not been so very successful in taking pelts, but then I have had more real fun than I fairly knew how to manage, although I would not swap one iota of it for the handsomest skin that ever escaped me.

There appears to be some misunderstanding as to how long and how far foxes and dogs can run. Now, there are dogs and dogs and the same may be said of foxes—perhaps more so. When you have the right kind of day and get the right dog after one of these "more so" foxes, look out for a long road, quick time, and lots of fun if you are smart enough to keep in the hunt. I have known scores of dogs that would stay with their fox from "early morn to dewy eve," and on many occasions I have witnessed runs of more than twenty-four hours duration. My old Loud (alas! he has long been dead) was a wonderful stayer. I well remember his first long race when he was scarcely more than a puppy. The ground for several days had been covered with an inch or two of solid ice. Finally, the longed-for snow came to the depth of several inches; and at daylight the next morning Loud and I were on a fresh track, and in fifteen minutes Loud jumped his fox and was "arter" him in full cry. Although they went down wind to the south and were soon out of hearing, I followed the back track, thinking that the fox belonged on a range of hills about four miles to the north, and that he would soon make for them. Arriving on the ground, I selected a likely looking stand, and had not long to wait before I heard Loud screaming about a mile to the east; and a few minutes later I heard two other dogs that had joined him. As they were going straight north I also moved in that direction to the top of a hill about a mile distant. When I arrived there I could just hear the dogs in the distance still going north. I then made for the road, a short distance away, where I was lucky in finding a friend in his cutter going my way. Jumping in we were soon rattling along at a fine rate. With occasional halts upon the hilltops to listen for the dogs, we kept on until nearly noon, when we reached my friend's destination, twenty-three miles from home, with the dogs gone out of hearing still north. Accepting an invitation to dinner, I was about to start in the direction the dogs had taken when a man came along and told me that the fox was playing on Buck's hill, which was a good six miles away, and that if I would wait five minutes he would carry me right there. Thankfully accepting his offer we were soon under way, and in little more than a half hour were at the hill, where we could hear the dogs in full cry. The pack had increased to about a dozen, and as each one appeared to be trying to outvoice the others, the music was indeed glorious. Evidently this was the home of the fox, as he had been playing here for some time. Leaving my companion I made for the top of the hill, where I arrived just in time to see the dogs cross an opening below me, and was much pleased to see my puppy well up with the foremost. I remained at my stand until after sundown listening to the dogs, and then I went to a house near by and made arrangements for passing the night. After supper I went out and feasted my fill of the glorious music until past midnight.

In the morning I was up at daybreak and hastily devoured a cold bite that had been set out for me the night before, and putting the fragments in my pockets I again went to the top of the hill. There was not nearly so much music in the air as there had been the previous evening, as all but Loud and two others had dropped out, and all of these appeared to be used up, nevertheless they were going at a fair pace and keeping up the music fairly well. I stuck to my post until nearly noon and then crossed to a ridge a half mile south, over which the chase had led several time. Just as I reached the top I spied the fox coming nearly toward me with Loud not more than three rods behind him. Both had their tongues out and they looked decidedly the worse for wear. Waiting until the fox had got out of range with the dog I pointed the old flint-lock well ahead and pulled the trigger, but the old gun only flashed in the pan. This turned the fox, but at about his second jump he landed on a steep slope where the wind had blown off the snow and he lost his footing and slid and rolled down the slope. Loud saw him tumble and with renewed life he made a few prodigious leaps and landed on the bare ice, and so much advantage had he in send off that he got there as soon as the fox, and before he could gather, Loud closed his jaws on his ribs and the long chase was over.

A few minutes later, while I was picking my way down, one of the other dogs came up and striking the ice pitchpoled to the bottom. Although he appeared to be greatly astonished he gamely grabbed the fox and gave him a shake or two and then lay down beside Loud who had curled himself up in the snow. How long this dog had run I had no means of knowing, but Loud had been going more than thirty hours and undoubtedly had covered more than one hundred and fifty miles. Take it all around this was the stoutest and gamest run that I have ever seen, but I remember several others that very nearly approach it, although none of them could boast so fine a finish.

O. M.

THE PRAIRIE CHICKENS.

Editor Forest and Stream:

Now is the time to put in your valuable work to prevent the slaughter by market hunters of prairie chickens. This prevention will have to be done in a great measure by sportsmen and farmers in the various sections of the States affording in great numbers this very pleasant game bird. Please urge these men to drive out the market hunters in every proper way, and thus allow a charming game bird to remain with us "yet a little longer;" true sportsmen will never exterminate any game. I intended to have written an article on this subject, but have not had the time, and you can do it so much better. I hope you will get in a broadside quick and keep it up. A.

CHICAGO, Ill., July 20.

SOUTHWESTERN KANSAS, JULY.—This locality is about twenty-five miles south of the Arkansas River, in Hamilton county, on the western border of the State. Less than a year ago there was no one living in this region between Bear Creek and the North Fork of the Cimarron; now scores of shanties, houses and dugouts are seen, dotting the undulating prairie in every direction. Here the buffalo, wild horse, wolf and antelope roamed in undisturbed security a year or so ago, and their bones lie bleaching in the sun by the wagon load. They have not wholly deserted us yet, for only last winter a party of hunters from Garden City near here killed seven or eight buffaloes out of a good-sized band. The buffaloes go through here on their way to New Mexico from the north. Wild horses have left us altogether, I think. Antelope are fairly plenty yet, but not as they were last fall. In less than a day's drive then we counted seventy-five or eighty, and were not hunting them, either. One can sometimes see ten or fifteen at a time now, but it is more usual to see from one to a half dozen. We settlers, having nothing but salt meat to eat, are apt to look with longing upon the fat, sleek bucks, and if by any chance or strategy we manage to get within rifle range, we will have fresh meat. But on this almost level prairie that is a difficult matter to accomplish. I discovered that they have a regular pass near my east line, so one evening I took a spade and dug a pit four feet deep. Hiding in this, I seldom fail to get a shot when the wind is in the right quarter. There is a hound in this neighborhood which kills antelope just for the pleasure he finds in it; that is, he is actuated by the same spirit as a sheep-killing dog, and goes out hunting alone. He attacks the young kids; when the doe rushes in on him, then he attacks and kills her. I saw the performance last week. In the way of birds we have numbers of curlew (almost impossible to get within range of them), some plover, and that's about all at this time of the year. In the fall we have teal and other small ducks in the ponds, some geese on the river, and also flocks of sandhill cranes and brant. Prairie chickens and quail have not yet come so far out in the "Great American Desert." —AL. FALFA.

AN IMPROMPTU HUNT.

ONE day last fall I found myself at 10 o'clock in the morning at a small cattle ranche, five miles from the North Wood Creek, in northwestern Wyoming, with nothing to do for the remainder of a long day. Having a dislike to lying around a camp or ranche, I proposed to take horses and go over to the North Wood and see what game was to be found there. This was at once agreed to, and three horses were caught up and saddled, a hurried lunch partaken of, and we were soon in motion. George carried a little old-fashioned breechloader, the barrel of which tilted up to load, and using a Winchester cartridge, .44-40-200. Before we set out George started to clean the gun, but John told him not to do it as it shot better when dirty, as the burnt powder evened up the inside surface where it was eaten out by rust, and also made the ball fit the barrel better. Ade was armed with a breechloading shotgun and a .45 6-pistol, as the cowboys call them. I carried an "old reliable" Sharps chambered for 110 grains powder, with a Beach front sight and a Lyman rear sight.

Soon after starting out we saw a large, sleek coyote slinking off through the grass. I dismounted, whistled to him, and he stopped just long enough to get a ball back of the foreleg; he ran however fully one hundred yards, when he fell dead. We soon had him skinned and the hide tied behind the saddle. The ball had passed directly through the heart. My experience has been that a coyote is the hardest animal that runs this range to hit with a rifle ball, or to get when hit unless a vital spot is struck.

The horse I was riding was afraid of a gun, and the boys told me that if I fired from his back he would surely buck me off. We crossed the North Wood and were proceeding up a little valley inclosed with steep rocky sides, with a few scattering juniper trees growing amid the rocks. George was ahead and I next to him. Suddenly he stopped, and threw up his little pea-shooter. I looked in the direction in which it was pointed and saw two blacktail or mule deer, a buck and a doe, springing from their beds in the shade of a big boulder, about fifty yards from us. I dropped the reins and was just drawing a bead on the buck nearest to me, when George fired and my horse changed ends so quick that I found myself aiming in the opposite direction and came very near firing out in the open country. I sprang from the horse and turned toward the deer in time to see the buck disappear over the brow of the hill. The doe was struggling up the incline, but before I could get an aim upon her she fell over backward and rolled some distance down toward us. She was dead when we reached her, shot like the coyote, through the heart, and the ball had not sufficient force to go through her, but was found lodged against the skin. The pea-shooter had scored first blood, as coyotes don't count. We dressed the doe, which was young and fat, hung her up in a tree and struck back in the direction the buck had taken. A few minutes after as I was riding along the edge of a little cañon, I jumped him out from under a big rock, but before I could dismount he was so far away and running so irregularly up among the big rocks, that although I sent a couple of balls after him he escaped without injury, and we watched him for several minutes until he disappeared around a point.

Near the place we discovered the fresh trail of a small band of elk, evidently scared out by our shooting. We followed them and in half an hour caught sight of them standing under some junipers across a deep cañon from us. Leaving our horses we crossed the cañon, having a hard climb out of it, and cautiously crept up to the place where we had seen the game, only to find them gone, and from the appearance of the trail they were evidently scared, and must have scented us, as they were going fast and away from camp. We abandoned the chase, returned to our horses, lighted our pipes and started homeward. When we reached our deer we cut it up and tied it upon our saddles, Indian fashion, and moved on. Where we crossed the North Wood it runs through a narrow valley, the second bottom being a bench some ten feet above the creek bottom, which was here filled with clumps of willows. There were quite a number of cattle in this bottom which were almost as wild as deer. After we had crossed the creek and reached the bench above mentioned, I heard a clatter of hoofs and looking back saw a bunch of cattle running out of the willows and along the bottom to our left, and in the midst of them an old bull elk, with his nose high in the air, and as fair a pair of antlers as I ever saw thrown back almost upon his withers. He ran in close under the bank at the foot of our bench, and was hid from our view in an instant. Thinking he would keep along the creek bottom and from his course come out upon the flat ahead of us, I spurred my horse forward to intercept him, rode to the edge of the bank, sprang off and could see nothing of him. A shout from George called my attention back up the creek just in time to see him disappear in the willows. As soon as the old rascal had gotten out of sight under the bank he had stopped, confounded, I suppose, by the cattle around him, and the scent of three hunters right ahead of him, and had stood there until I rode into view two hundred yards down the creek, when he struck for the willows. If I had ridden straight down to the bank, or remained with George, I would have had a good shot. George did not shoot as he is too much of a sportsmen to wound such large game with a gun that he felt sure would not kill it. We watched him come out on the other side of the creek, and trot off into the hills. I fired a shot or two after him at long range, on the principle that there's no luck unless there is lead flying, and we proceeded on our way, discussing the incident and saying how easily we might have killed him if we had known just what his intentions were.

Ade soon after made a sneak on a coyote and peppered him with buckshot, without any visible effect except to accelerate his speed to about fifty miles an hour. We also saw a couple of bands of antelope but did not molest them. We arrived in camp before dark, and were soon seated at a good supper, the principal delicacy of which was some fine trout, caught by John during our absence. After this came the inevitable pipe, as we sat before an old-fashioned fireplace filled with roaring pitch pine, and rehearsed the incidents of the afternoon, all agreeing that for an impromptu hunt of only seven hours duration, it was eminently successful, although we got but one deer and missed getting the finest elk we had ever seen. WARD.

COLORADO SPRINGS, Col.

CONNECTICUT.—The prospects for the coming fall are very good; partridges and gray s quirrels are plenty, though woodcock are hard to find.—J. S. H.

"HERE WE ARE AGAIN."—*Harper's Weekly* of last week had in it a full page picture titled "Summer Woodcock Shooting." The artist employed to illustrate Mr. Satterthwaite's article (which is excellent barring that he calls the woodcock a "gastronomic gem") was Mr. J. M. Tracy. Sportsmen who have looked at this remarkable picture are overcome with delight, for the shooter, who is portrayed in the attitude of the clown in the pantomime when he shouts "Here we are again," is "the same old coon," and his flint-lock "is the same old gun" that has figured in other of Mr. Tracy's excellent pictures of sport. Our esteemed contemporary the *Sunday Call* of Newark, remarks as follows on the picture: "Very old New Jersey gunners will enjoy the picture, because it will certainly carry them back to the days when all kinds of birds were shot with ponderous flint-lock guns such as the sportsman in the picture is straining under the weight of and vainly trying to raise to the level of the pigeon that appears in the right foreground flying away with a clothespin in its mouth. Will the man shoot the bird? No, he will not shoot it, unless his ancient weapon is a scattergun of the most pronounced type. His aim is not to kill the bird but to scare it to death by knocking the bark from the white birch tree in the background. It is a good thing for the pigeon that the aim is far below and behind it, for if the man should hit it at that short range he would certainly knock it into next week's number of the paper. When the man picks himself up, and fully recovers from the fall he is sure to get when his goose-gun goes off, he should promptly lash the unruly pointer that evidently flushed the pigeon with the clothespin in its mouth." The *Call*, however, is mistaken. The gun is pointed a little ahead of and below the bird. By the time the gunner "lets her go" the range will be all right.

THE EYE AND THE BEAR.—Fredericton, N. B., July 20.—*Editor Forest and Stream:* Mr. Braithwaite, a noted hunter here, when out in the woods a few days ago, went into a cedar swamp to look for railway sleepers. He came directly on a bear with her two cubs. The cubs on seeing him gave a squeal, and the mother immediately made toward him with a growl, showing her teeth for all they were worth. Mr. Braithwaite not having any weapon with him, stood still and fixed his eyes on the she bear. He then commenced backing out, feeling his way carefully with one foot at a time. At times she would try to get behind him, when he would swing his body around, keeping his eyes all the time steadily on her, never for an instant removing them. She held him in this way for nearly two hours, and did not leave him until he backed out to the brow of a hill adjoining the swamp, when she left him and went to her cubs. He says that in all his experience he never put in such a frightful time, and hopes never to be placed in such a position again. He was completely done out, and nearly fainted as soon as the bear left him. He feels quite certain it would have been all day with him had he stumbled or taken his eyes off from her.—BLUENOSE.

MASSACHUSETTS.—Agawam, July 19.—*Editor Forest and Stream:* Savoy is a town on the Hoosac Mountain, Mass. A bear was shot near there last year and another was said to have been shot near North Adams, Mass. Two bears have been seen here this summer, or else the same bear has been seen twice. Ruffed grouse were unusually plenty around here up to April 1; have had no opportunity to look them up since. One flock of about twenty quail were alive and undisturbed up to Jan. 1, not three miles from Court Square, Springfield; I think they survived the cold weather, as they had good cover on southern exposures near a never freezing spring, and I hear one whistling occasionally now. Speak a good word for Game Commissioner Anderson of the Greenfield district. He is making it hot for the bird killers.—PINE TREE.

DEER IN VIRGINIA.—*Editor Forest and Stream:* I see you are greatly interested in the preservation of deer in the Adirondacks. Why don't the still-hunters there do as the still-hunters do in the mountains of Virginia and West Virginia, kill all the bad dogs? That soon puts a stop to hounding. In tidewater, Virginia, deer hunting is done for the sake of the chase and not for the meat, but they are not so much hunted as to be run out of the country. Indeed, in several counties on either side of James River, deer are more abundant than sheep. In Charles City county they begin to hunt deer (always by chase) about the first of November and stop the first of January by common consent, and it is all done for sport. —W.

TEXAS DEER SEASON.—Marshall, Tex., July 12.—*Editor Forest and Stream:* In your issue of July 8, 1886, you give the open season for deer in Texas as being from June 1 to Dec. 1, having been misled by the law as it existed prior to April 11, 1883, when it was amended. See General Laws of the State of Texas, Chapter LXXVIII., Section 1, page 79, which provides that the open season shall be from the 1st day of August to the 20th day of the January following. Our laws, however, do not apply to the whole State, but only to certain counties, which will appear in the Acts of the Regular Session of the Eighteenth Legislature, page 115.—AMORY R. STARR.

FLIGHT OF GRASSPLOVER.—On Sunday, July 18, there was a flight of grassplover (*Bartramia longicauda*) which passed over Staten Island and Newark, N. J., about 9 o'clock P. M., going west. They were heard by Mr. W. S. R. Ogilvie of New Brighton, Staten Island, and by Messrs. F. Satterthwaite and S. Pennington of Newark. The birds were distinctly heard and there must have been a considerable number of them, for they were within hearing for quite a little while.

STUFFED GRASSPLOVER WANTED.—Mr. F. Satterthwaite, of Newark, N. J., desires to obtain for a few days the loan of a stuffed grassplover for the purpose of obtaining a photograph of it. The specimen will be carefully looked after and promptly returned.

NON-RESIDENTS IN ONTARIO REQUIRE NO LICENSE TO SHOOT. Come along Brother Jonathan with your best shooting-iron and burn some powder with us in a friendly way, not as in 1812 or '37.—R. H. T. (Picton, Ont.).

THE WOODCOCK FUND.—Jersey City.—*Editor Forest and Stream:* I notice a communication in last issue of FOREST AND STREAM by "Ajax," in regard to the slaughter of woodcock. I do hope all the sportsmen in New Jersey and New York will come to the front and give "Ajax" the necessary assistance. Let every one send the dollar to your paper, it will be a dollar well spent. At the next meeting of the New Jersey Kennel Club I will ask the club to appropriate $25 to the woodcock fund.—C. J. PESHALL, President New Jersey Kennel Club.

NEW JERSEY.—Manchester, N. J., July 19.—*Editor Forest and Stream:* Woodcock are very scarce here this season. Bob White wintered well and I think we will have some sport with him next season. Ruffed grouse are scarce in this vicinity. I think "Fair Play" is right. A law to protect the dove would be of great service both in increasing their number and for the benefit of sportsmen.—G. G. W.

A DESTRUCTIVE STORM.—The Cedars, Oakdale, L. I., July 20.—The heavy storm of Sunday night has destroyed about all the young quail. I flushed six pairs on my preserve, but not any young ones; there was a covey of young ones found, all dead but one, in Sayville on Monday morning. They must have been drowned, as the rain was so heavy as to completely cover the ground.—A. A. F.

MR. GRIFFIN SMITH, of Longmont, Col., claims to have shot a mountain lion on the Little Thompson, which measured nine feet from the end of its nose to the tip of its tail.

MASSACHUSETTS GAME LAW.—In communication on this subject last week read thick covers for "strict covers," Aug. 31 to Jan. 1 for "Aug. 31 to June 1."

NEW YORK DEER LAW.

SECTION 1. Section one of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as follows:

§ 1. No person shall hunt, kill, chase or take alive any wild deer in any part of the State save only from the fifteenth day of August to the first day of November in any year, nor shall any one person during such time kill or take alive more than three deer. No person, corporation, association or company shall transport or have in its or his possession in this State, after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the fifteenth day of November in each year. No person, corporation, association or company shall sell, or expose for sale after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the first day of November in each year. No person shall at any time, in this State, kill any fawn or have in possession the carcass or skin of any such fawn after the same shall have been killed. No person shall, in any part of this State, set any trap, spring-gun or other device at any artificial salt lick or other place for the purpose of trapping or killing wild deer. It shall not be lawful to hunt or pursue deer with dogs in any county of this State, except from the first day of September to the fifth day of October in each year. It shall not be lawful to pursue deer with dogs in the counties of St. Lawrence and Delaware at any time. It shall be lawful for any person to shoot or kill any dog while in the actual pursuit of any deer in violation of the provisions of this act. It shall not be lawful for any person to kill or cause to be killed any wild deer in counties of Suffolk and Queens at any time within five years from the passage of this act. No person, common carrier, corporation, association or company shall at any time carry or transport in this State, or have in possession for the purpose of transportation, any wild deer, or venison, taken, caught, killed or captured in the counties of this State, or in either of them, except the counties of Queens and Suffolk, and any person, common carrier, corporation, association or company which has in its possession any such wild deer or venison, taken, caught, killed or captured in any of the said counties of this State as aforesaid, or in either of them, except the counties of Queens and Suffolk, shall be deemed to have them in possession in violation of this act except, however, that they may transport or have in possession for the purpose or transportation, from the fifteenth day of August to the fifteenth day of November, not more than one carcass of wild deer or venison, taken, caught, killed or captured in said counties as aforesaid, or in either of them, for each owner of said carcass as aforesaid, provided that such carcass be accompanied by the owner. This section shall not apply to the head or feet of wild deer when severed from the carcass. Any person offending against any of the preceding provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer or fawn so killed, hunted, pursued or trapped, or for each carcass or part thereof transported or had in possession for transportation in violation of this act, and for every spring-gun so set, or wild deer or fawn skin or venison had in possession, and may be proceeded against therefore in any county of this State in which the offense was committed or in which the offender or prosecutor may reside or have an office for the transaction of business.

§ 2. Section three of said act is hereby amended so as to read as follows:

§ 3. No person shall hunt, kill or take alive any wild deer by the process or mode commonly known as crusting, or enter any place where the wild deer are yarded with intent to kill, take alive or destroy the same at any time. Any person offending against any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer so hunted, killed, taken alive or destroyed.

§ 3. Section thirty-six of said act is hereby amended so as to read as follows:

§ 36. Any person may sell or have in possession any hare or rabbit or any woodcock, any ruffed grouse commonly called partridge, any pinnated grouse commonly called prairie chicken, and any black or gray squirrel during the month of December, and any quail from the first day of January to the first day of February, and any fresh venison from the fifteenth day of November to the fifteenth day of December, and shall not be liable for any penalty under this act, provided he proves that such game was lawfully killed during the periods allowed by this act and not transported contrary to the provisions thereof.

§ 4. Chapter five hundred and fifty-seven of the laws of eighteen hundred and eighty-five, entitled "An act for the better preservation of wild deer," is hereby repealed, and all other acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

§ 5. This act shall take effect immediately.—*Chap. 194, Laws of 1886.*

Camp-Fire Flickerings.

"That reminds me."

185.

IN the year 1842 Hezekiah Northwest, a farmer living in Orwell township, Bradford county, Pa., started two deer on what is known as the Sugar Loaf in Orwell township. He killed both deer with one bullet. After killing the first one the same bullet went twice around the hill and killed the other deer. Some may doubt this, but it is true. Now, I will tell you how it was done. Hezekiah had only one bullet when he started, and after killing the first deer, he stopped and dressed it and found the bullet, which he loaded up again; and then he followed the other deer twice around the hill and killed it. DOBSONS.

THE most likely places to find dobsons are in brooks and rivers below dams and factories, where the water is low a part of the time. I believe they are to be found in nearly all natural trout streams. Provide yourself with a net such as is used to catch minnows; it should be of good strong twine, 2 or 3ft. across, with an iron hoop, the hoop made oblong, so it will cover more space on the bottom of the stream. A net made of mosquito netting will do for a few times, but it soon wears out and the water does not pass through as readily. Take also an iron-toothed rake, or, what is better, a potato digger. Set your net in some narrow part of the stream where the current will pass through it; keep it upright with a forked stick shaped like a hay fork, placing the handle end of your stick before your net and let the net fall back against the forked ends. If you have some one with you to care for the net you will not need the stick. Now, go above the net and with your rake stir the coarse gravel and small stones, so that the rile will pass through the net; and lift the large rocks with the hands and let them back again nearly as you found them, for some other dobsons may want to live there, and they prefer flat stones for a hiding place. When you start them out from their hiding places the current carries them against the net, and they immediately catch on and will remain for a few minutes; but you had better examine your net often.

More dobsons are lost by improper care than are used for bait. They are natural fighters and they cannot bear high temperature in the sun if kept out of the water. Get a good sized box (an old boot or shoe box will do, a box of this kind will accommodate a hundred with ease), bore some holes in the end near the bottom and cover them with wire netting. Put some coarse gravel from the bottom of a brook spread about ¼in. thick evenly on the bottom; place some small flat stones on the gravel with some pieces of rotten wood if you have them; next get some moss from the bottom of a brook; this known as rock moss, it grows on stones and is about 1ft. long and contains insects on which the dobsons feed. If you cannot get it you can use the moss used by florists and nurserymen to pack their goods in. Place the moss on the stones 2 or 3in. deep. Place your box in some cool place where it will be out of the sun, on the north side of a building or in a cellar. Now get an old paint keg or something that will hold water and place it on or over your box and fill it with water and fix it so that it will run a very slow stream or just drip. A pail of water will do for twenty-four hours. Place your dobsons in the box and they will soon find hiding places. If you should have any trouble with their crawling over the top of the box make a screen to keep them in. You can keep them in this way all the season.

MASS.

JUNE TROUT FISHING IN MICHIGAN.

WE have just returned from a four weeks trip to northern Michigan. We camped three days on the Boardman River trout fishing with good success, going from there to Follet's landing on Elm Lake—Follet's Creek was fairly alive with trout, and a couple of hours fishing each day secured us all we wanted to eat. One of the catches was seven trout weighing 5lbs., another of six trout weighing 4lbs. Henry Mack caught the largest, weight 20oz. Battle Creek, which empties into Elm Lake one mile from Follets, is a first-rate trout stream, the water is clear and cold, is easily fished and is packed with trout.

From Follet's we went to Southerland's on Round Lake. During the five days we were there, no less than seven wagon-loads of men and boys came with boats, spears, gigs, jacks and pine knots, for the purpose of taking fish at night. It was not good weather for spearing, but they took away over four hundred fish. I asked one of the men if he did not know it was against the law to spear fish? He says yes, "but they all do it." At the narrows, between Round and Elk lakes, is a favorite feeding place for bass and Mackinaw trout, and almost any still night jack-lights can be seen off Skegeemaugh Point. One man told us he only went fishing occasionally; the last time he had speared eleven lake trout weighing 127lbs., these he salted down, and when they were used up would try his hand again. This sort of fishing with a ten-foot pole is fast making away with the bass and lake trout in this chain of lakes. I notice "Kelpie" is doing some good work for the protection of fish against spearing. That he may be successful is the wish of many.

The largest fish we caught here, were two 4lbs. small-mouths, one 4½lbs. large-mouth, and a 1lb. brook trout. One morning Harry was fishing in the lower end of the lake, and hooked a fish which played peek-a-boo with him for a few minutes, and then said "good-by," taking his hook and six inches of line with him. Twelve hours after, another party fishing in that part of the lake, boated a 4lbs. small-mouth, which had Harry's hook and line fastened to him. Frogs were used for bait, with the aid of a landing net we could catch as many as we wanted in a few minutes. I see that "Kingfisher" has added another to the list of "speckled beauties." At home, ladies who wear square and three-cornered patches of black court plaster on their faces, are called "speckled beauties."

On a bright sunny morning we broke camp and crossing Round Lake pulled up Torch River to the mouth of Rapid River, and up this for about two miles where we came to a good camping place. From the mouth of the river to a point about a half mile above camp, the river is quite free of logs and overhanging trees, and affords fine fly-fishing. We fished near the camp most of the time as enough trout to supply the table could be got without going far. The first evening, in an hour's fishing, and within fifty yards of camp, Harvey took eleven and I nine trout weighing from 4oz. to 12oz. each. One day we walked two miles up the river where the stream is quite rapid, and among the logs, roots and mossy banks we got some big fellows, but we enjoyed the fishing most near the camp where we could use a fly, even if we did not get such large fish. After enjoying ourselves here for a few days, we put our traps aboard one evening and floated quickly down stream; turning up Torch River we were soon heading across Torch Lake to Spencer Creek, where we arrived just at dark. Putting up our tents was short work, and then sitting around a big fire, we had a jolly time talking, smoking and singing. A whip-poor-will and a loon threw in their notes at times, in an "Amen" and "God bless you" sort of a way, that reminded us of a camp meeting. We were at Spencer's four days, fishing in the mill ponds and the two creeks. One evening while standing in two feet of water, a school of about forty trout came and ran their noses against my rubber boots, they meandered around me for a moment and then struck out for deeper water. I threw a gang of flies after them and it seemed to me that the whole school went for them at once, such a rushing and flapping of tails and fins I never saw; one of the largest caught on to the leader, and while he was sailing off to the right, another took the tail, and such fun for me. In five minutes the two little fighters came up and let me unhook them without making the least fuss. They only weighed 14 oz. both together, but they were game to they backbone, the fought manfully and gave up like gentlemen.

Now a good word for camping-out life. In Michigan especially I never knew of any sickness whatever in camp. I think if the cork-and-bottle arrangements were left at home and only pure water drank, there would be little use for a medicine chest.

From Spencer's we went back to Follet's, and from there overland to Traverse City. While the boys were making preparations for the trip home, I hunted up Meade the guide. It was like old times to see him again, and we had a pleasant chat while waiting for the train. We found plenty to talk about, as we had taken many trips together. All being ready we jumped aboard the train and were soon on the way home. Our trip had been a success in every way, and we were well pleased.

J. O. S.

COLUMBUS, Ohio, July 8, 1886.

A CAST WITH "PISECO."

THE daily papers had told that the famous old warship Powhatan had arrived in New York harbor and had been put out of commission, therefore I knew that "Piseco" would spend some time on shore, and a few days later a letter came from him announcing this event, saying that time was a burden upon his hands and asking if it would not be possible to wet a line with him. A few days before an invitation to join a friend on Lake Superior had been declined and another from one of your well known correspondents to beguile the black bass in Back Bay, Lake Champlain, had been regretfully acknowledged, and I had written "Piseco" that while my heart was with him, that portion of my anatomy would be all I could spare at present. The ink had not yet dried upon this answer when a letter came from Mr. Stimson, manager of the Mountain Home, saying that the trout were plentiful, and that in order to "meet them on the June rise" I would have to be on the ground within a few days. This coming on the top of "Piseco's" letter broke me all up. The allusion to meeting them on the June rise assumed at once the form of an invitation and of a challenge. A postscript was added to the letter already written to "Piseco" saying that I would meet him at Remsen, on the Utica and Black River road, within forty-eight hours, and we met. I had left New York at 9:15 the evening before, breakfasted with him at Remsen, after which we drove thirty miles in time for dinner at the Mountain Home, on the east branch of the West Canada Creek. A challenge by the dogs warned the household of our approach and we received a greeting that astonished my nautical comrade, who soon paced up and down the piazza as though it was as familiar as his own quarterdeck.

In the afternoon we tried the creek, fishing some two miles of still water, but it was late in June and the trout were on the riffs and only to be had by wading, a practice formerly indulged in with great pleasure, but abandoned on account of certain protests from a sciatic nerve, for which I entertained profound respect. This nerve and I get on very well together as long as it is treated fairly, but it has become quite independent of late, and it is given to strikes, boycotts and locking out. We have submitted the differences to arbitration, and the terms of our compact are these: So long as I refrain from wading cold trout streams and chilling the aforesaid nerve while its fellows, the spinal column and brain, are enjoying the heat of a June sun, there are to be no pangs, pains or penalties, and as I prefer low shoes to rubbers for wading, we have compromised and do not wade at all, hence "Piseco" and I fished from a boat. The result of this boat fishing was a plentiful yield of little fishes termed chubs, dace and shiners in the vernacular, terms which like charity, cover a multitude, not only of sins, but fishes. A faithful whipping of some two miles of still water brought us but three trout which we considered fit to take home, and these three would hardly equal a pound in weight. The fingerlings which rose to our flies were returned.

In the morning we climbed the mountain at the back of the house to Wilmurt Lake which nestles on the mountain top, and after an hour's hard work had succeeded in lifting ourselves some 850 feet above the creek below, when we found that a drizzling rain had set in, and rubber coats were brought forth from the creel before the rods were put together. It was evident that a cold northeasterly storm had set in, and some one has said:

> When the wind is in the north
> The skillful fisher goes not forth;
> When the wind is in the east
> It's good for neither man nor beast.

and as this storm came from between the two points our plain duty was to go across the lake to the lodge and stay there; we did not do our duty, we cast our flies around the lake and took some very fine trout, but whether this was worse for the trout or for the adage is an open question. At noon I introduced the Captain to Catherine, the colored cook at the lodge; the fact that I had never met Catherine before did not at all interfere with this ceremonious performance, nor did the dusky Catherine appear to realize that there was any informality in the proceedings.

We fished the lake three days in rubber coats in weather which varied from a pelting rain, which I cannot distinguish from a Scotch mist, into what might be called a drizzle. At times a fog hung upon the mountain tops and again it hung upon us. Being in company with a naval officer who is supposed to be familiar with this sort of thing, I asked him if he had a fog horn. He said he had, and I took one. After that the fog lifted a little; the curtain did not seem to be up before it was rung down again, and with these variations the same scenes were enacted over again day after day, but, like Mark Tapley, we were always jolly. The trout rose fairly, however, and during this time we killed all that we and our boatmen needed at the lodge, and sent down some to the Mountain Home below. How many did we kill? We do not know; we did not count them any more than we counted how many times we smoked that afternoon, or how many times the fog lifted, and we enjoyed the scenery. Trout should not be reduced to mathematics, although there are persons who like to do it. Men have measured Niagara in order to know how much pleasure they may have enjoyed while looking at it, and men have counted how many fish they have taken in a week and have weighed them; but when I look at Niagara there are no thanks for the man who tells how many feet and how many inches it is from the crest of the falls to the foam below. And one who has his mind on mathematics when fishing may possibly enjoy fishing, but I never enjoy mathematics. The fish taken were not weighed. Some of them would probably have tipped the scales at a pound, but none were killed which weighed less than three ounces.

It is the fashion here about Wilmurt Lake to use larger hooks than either Captain Beardslee or myself are accustomed to cast for trout of from one to two pounds, and while Mrs. Stimson dresses her brown-hackles upon Nos. 1, 2 or 3 sproat hooks, which are very killing, I prefer a 6 to 8 when expecting fish of from ¼ to 1lb. in weight, but a 9 to 11 for smaller. A brown-hackle seems to be the favorite fly with most anglers in Wilmurt Lake, and "Piseco" and I kept a sort of a running record of our catches, and we found that on these waters, in this easterly drizzle with a leaden sky overhead, the most killing flies were the coachman, the professor, the royal-coachman, the Parmachene-belle and the oak-fly.

The time for leaving approached and found us on the lake, each in his boat with his boatman; we rowed up in the direction of "Piseco," and on rounding a point saw him get a good strike; it was soon evident that our seafaring friend had hold of something which made his reel sing, and that he was highly elated thereat. I suggested mildly that he haul his sheet aft and lay her up close to the wind, but he replied "avast there," whatever that means. The run of the fish was soon checked and the Captain began to reel in; the strain bent his supple rod in a beautiful arch, while with his right hand on what in a moment of excitement he might have called the capstan, he reeled in slowly. The fish approached the surface until I could see that it was a huge one. A sudden leap in the air, the rod straightened, and the fish was gone. The snell had parted at the head of the fly where it probably had been slightly chafed by some previous capture. I imagined that the Captain would use all of those naughty nautical terms, such as, "avast there," "splice the main brace," etc., but he did not; his eyelids drooped, and he merely said, "Let us go home."

"Captain," said I, "that fish weighed fully 4lbs." He glanced in my direction, and said in a wavering tone of voice, "He weighed 5¼lbs., but I want to go home."

FRED MATHER.

TROUT EAT TROUT.

I RECENTLY visited friends where there is a magnificent ever-flowing spring of clear, cold, soft water, which forms a small pond or pool some 25ft. in diameter, densely shaded by a large, low-branching beech tree, thus forming a most delightful retreat for the family and visitors during the hot hours of our heated summer days. So charming is the place that a portion of the pool and bank has been floored and comfortable seats arranged thereon, and from the number of names and dates recorded with a knife in the smooth bark of the trunk and wide-spreading arms of the grand old beech, it is quite certain that visitors have not been like "angels' visits."

While enjoying the quiet and coolness of this lovely retreat, I was greatly interested in the movements and habits of a dozen or two of brook trout, from eight to twelve inches in length, that have their home in the pool. A slight movement on my part, and like a flash they fled to the cover of the wooden floor whereon I was standing. But if no noise was made they would soon make their appearance one by one, till all were in the open water; and woe to any insect that touched the surface.

So much by way of introduction. Trout have inhabited this pool for many years, and some have grown to nearly double the size of any there at present. But there are no fingerlings nor fish of any other kind. These trout must have been bred in this place, and if so, then many others must have been spawned with them. But if trout do not eat trout, where are the remainder of the spawn?

Now for a fact that came under my observation while watching the habits of these particular trout, and I will leave the further discussion of the question to those who may have made trout life a study. While sitting, with others, on the platform, a violent splashing was heard in the water beneath, and soon the cause of the commotion was discovered by the appearance of two trout in a death struggle; one, having seized the other athwart and just back of the gills, was persistently holding his grip, while the other was doing his best to escape it. After several violent struggles, in the open water, both passed again out of sight under the floor and the commotion ceased, so that the result of the contest was not known. The captor was from 10 to 12in. long, and the victim not less than six or seven, and my impression is that the latter escaped, for it would have been impossible for the captor to have gorged him as he held him when last seen.

J. H. D.

POUGHKEEPSIE, N. Y., July 19.

[It is well known among trout culturists that when big trout are short of rations they take to gobbling up little trout; and when once this cannibalistic habit is by dire necessity acquired, it sticks, even in the midst of plenty. When trout once discover how delicious trout are, they will never turn from their evil ways.]

SEA FISHING.—If any of your friends want fun and big fish, either drum in the surf or 1,000 good-sized blackfish a day, Anglesea, N. J., is the place. Accessible from Philadelphia via West Jersey R. R., 9 A. M., 4 P. M., every day. Week's Hotel, Anglesea, from $1.50 to $2 a day, and plenty of luck.—J. M. S.

THE MASTIGOUCHE LAKES.

IT was growing dark as we finished our railroading and stepped out on the platform at the little hamlet of St. Felix de Valouis, some fifty miles from Montreal. Our party had a small beginning up in the mountains of central Pennsylvania; at New York it was increased by the addition of four gentlemen, and at Montreal three more were taken on, so that we had but little spare room in the four buckboards that were waiting to take us to St. Gabriel de Brandon. We were soon filing through the village for our ride of eighteen miles to the club house at the Mastigouche Lakes. A long, weary climb brought us to the summit, and as we sat down to blow, from away down the mountain side came up the roar of the swift river. In a few minutes, as we rested there, the clouds lifted, and through the birches we saw the lake as it flashed in the sunshine, and our journey was ended.

I shall not undertake to tell of all the merry times we had as after our day's tramping we gathered in front of the great stone fireplace that took up one end of the parlor; how the Colonel and B. and E. with their jokes would hardly give us time to catch our breath; nor can I repeat the pleasant stories of each day's experience that went into the common fund. In a former article I told of the beauties of this wilderness. The few months that had passed seemed, if possible, to have added to them; the waters of Lac la Clere seemed brighter than in the warm weeks of the summer before; in Lac la Roche down in its depths I could see among the rocks the hiding place of some of the beautiful trout that came into my landing-net those days. On this lake one afternoon I had made a long cast, and had about retrieved my line when I saw a number of feet from the boat the fin of a large trout cutting the water as he rushed for my fly. I was afraid to strike with my light bamboo in that position. Catching my line above the reel with my left hand, a quick jerk and I had him hooked; a beauty he was, as I landed him in the canoe after a ten minutes' fight. There was another fisherman that was having good sport too. We saw several trout break from the water a few rods down the lake. A large otter soon made his appearance, but quickly dove out of sight. In a few hours' fishing I took thirty-five trout that weighed 16½lbs. From a pool in the river we took over seventy. It was a sight worth seeing to watch my partner, whose long legs and whose experience in these Canadian waters often took him where others dare not tread, as he stood on a rock in the middle of the rapids and pulled them in until his pockets were filled, then waded ashore to unload. I sat on a great boulder quite unmindful of my flies, after which the trout were rushing, only as they gave a signal that they wanted to come in out of the wet. I am sure I had an equal share in his pleasure.

On our return as we slowly floated down the river into lake No. 2, I miscalculated the length of the cast and got my stretcher fly tightly fastened on a dead tree that had fallen into the stream; a few inches above the water dangled my dropper; from his roost in the treetop a fine trout spied the tempting hackle, and breaking from the water hooked himself and hung there high and dry until the canoe paddled up.

What a merry song our reels often sang as a strong and gamy trout would run off almost the last coil; how the springy bamboo, ever ready to give and take, held taut the slender line as some angry one would try and shake out the stinging hook. Nearly all of my catch was taken with the fly; sometimes in the very deep holes we dropped a worm, but slowly paddling our canoe around the shore we rarely failed to get a rise as we cast our flies in the riffle off the mouth of the little streams that here and there come down through the mountain gorges. Near the outlet, from out of the shadows of the driftwood, some strong fish with a swirl like the dip of an oar would carry among the logs the tempting fly that we had thrown close beside an old pine that some great storm had uprooted and the winds and the current had fastened there. As we drifted quietly over the sunken ledges, casting to the right and left, sometimes steering between the rocky islands as the gentle wind now and then came down the lake and put out the clear reflection of the tall birches with its ripple, out of the clear waters would spring these beautiful fish; sometimes they missed and would try again, and were soon in our creels; sometimes they seemed to mistrust that the feather and the tinsel was but a cheat, and would not make another attempt. We marked the spot and consoled ourselves with the thought that they would be larger and would have forgotten all this when we came for them in the September days. In this week's outing were many of these incidents that go to make up the full measure of one's enjoyment in these too short resting spells, and make doubly bright the anticipations of those days that are to come. Soon our party began to break up, business calling some of them long before they were ready; others leaving with but half their plans carried out, promising that when the mosquitoes and black flies were gone we would meet again; one started for the lakes further away, to explore an unknown land; we all wished him a glorious time, as he had taken great pains to see that all the new comers were allotted to desirable places and had good guides. As I write these lines I seem to hear the roar of the rapids and get the sweet scent from the pines, but the ringing of my telephone bell breaks the reverie and tells me that the bright waters of the beautiful Mastigouche Lakes are far away.

SPICEWOOD.

NEW BRUNSWICK.—Joe Jefferson, of Rip Van Winkle fame, and J. A. Wood, of Boston, with their families, and Mr. W. Magee, of St. John, recently returned from a twenty-two days fishing tour on the Southwest Miramichi. They report good sport, and would have remained longer had not the extremely low water compelled them to leave. Mr. Jefferson owns a summer residence at the mouth of the Clearwater, a famous fishing stream and one of the chief tributaries of the Southwest Miramichi. The nearest building to him is the Salmon club house, at the mouth of Burnthill. Mr. Magee reports poachers very destructive on the river, and wonders why better protection is not afforded.

THE BARMECIDE CLUB.—Utica, N. Y., July 20.—*Editor Forest and Stream:* I was very much interested in Mr. Millard's stories and experiences given in the Barmecide Club, especially his reasons given (July 18) for allowing the fish rest on Sunday. It all came about from being lost on G Lake in Morehouseville, Hamilton Co., N. Y. I take the liberty to explain to him, through this communication, where he was and about the lake they came to in their effort to get back to Pine Lake camp, only one and a quarter miles. I don't believe you could catch Millard in that way now. The lake that he mentions finding was a very nice little sheet of water, situated a quarter of a mile east of the trail from Pine to G Lake, up on top of the mountain, half a mile from G and three-quarters of a mile from Pine, with its water running into Pine. It has no name, and contains no fish—at least there have never been any caugat nor seen there. I visited it myself this spring, but could start nothing or see anything. Let us all, when we are in the woods, give the fish a rest on Sunday and keep the day as sacred as possible. It will make better men of us. I hope Millard will never "get left" again.—D. C. M. H.

RESTIGOUCHE SALMON.—July 26.—*Editor Forest and Stream:* Please find herewith the salmon score at Indian House camp, River Restigouche, 18 days, 6 rods: Total number of fish 264; weight, 6,220lbs.; average, 23½lbs. per fish. The rods stood in numerical order, 107, 74, 30, 30, 12, 10. One lady in the party killed 30. Heaviest fish, 36lbs.; several from 30 to 35lbs.—AN OLD HAND.

The St. John (N. B.) *Globe*, July 21, reports: Dr. F. W. Campbell, Mr. H. R. Ives, Mr. T. H. Stearns, of Montreal, and Mr. W. M. MacPherson, of Quebec, members of the Upsalquitch Salmon Club, have returned from their fishing grounds on the Restigouche, and report the fishing good. Dr. Campbell and Mr. T. H. Stearns had nine days fishing, Mr. MacPherson eight days, and Mr. Ives (who had to return home ill) three days. The following was the catch: Dr. F. W. Campbell killed 19 salmon weighing 22lbs., 18lbs., 25lbs., 21lbs., 20lbs., 24lbs., 20lbs., 22lbs., 21lbs., 22lbs., 12lbs., 27lbs., 12lbs., 22lbs., 26lbs., 28lbs., 24lbs., 26lbs., 12lbs. Mr. Stearns killed 14 salmon, weighing 23lbs., 24lbs., 20lbs., 22lbs., 25lbs., 23lbs., 27lbs., 28lbs., 19lbs., 26lbs., 20lbs., 25lbs., 20lbs., 18lbs. Mr. MacPherson killed 11 salmon, weighing 22lbs., 24lbs., 25lbs., 12lbs., 11lbs., 24lbs., 26lbs., 22lbs., 28lbs., 12lbs., 26lbs. Mr. Ives killed 4 salmon, weighing 21lbs., 24lbs., 24lbs., 25lbs.

[We should like to have other salmon scores.]

A BIG SHARK IN NEW YORK HARBOR.—In that part of the lower harbor of New York called Gravesend Bay a big monster shark was captured on Saturday last. The beast was 15ft. long and weighed 450lbs. and was on exhibition at Blackford's in Fulton Market all day. It was taken by Capt. John Morris who had gone out with nets to fish for market. The nets were hardly in the water when Capt. Martin Hinds, one of the fishermen, spied several big sharks following the boat. The men baited their long shark hooks with mossbunkers and then threw them overboard. That quickened the pursuit of the sharks and presently their leader was hooked. The shark at once became belligerent and plunged toward the smack furiously. Two of the men stuck it with harpoons and another banged it between the eyes with an iron bar. Quickly turning the monster made off in an opposite direction, and it took the strength of the five men in the boat to check its flight, which was not done until nearly all the line was paid out. After about a half hour the shark was dragged into the boat, gashed with harpoon wounds and badly bruised from the blows of the iron bar on its head.

THE SUNFISH OF THE OCEAN.—*Editor Forest and Stream:* In one of your last issues an article states that the flesh of the sunfish is not edible. I must hasten to dispute this with my own experience. In 1870, near the island of Corvo, one of the western islands off Portugal, when on the brig Surprise, Capt. Elisha Brown, of Boston, we captured a large sunfish, such as you describe and figure. He was so large that a tackle had to be rigged to the end of the main yard to bring him to the cook's galley. We saved the liver oil, and fed cabin and steerage as well as crew with the meat. The outer skin of the fish was black and quite thin; then came the 2in. or 3in. layer of white hard blubber, like rubber; then the meat, having a fiber and look of lobster when boiled, only somewhat redder; the taste was also like boiled fresh lobster. It was easily digested by all who used it. If my word is not enough, I will look up witnesses to prove these facts willingly.—SAWBONES (Boston).

TRANSPORTING FISH IN THE BRITISH ISLES.

[Read before the American Fisheries Society.]

BY W. V. COX.

THE improved methods of refrigeration so extensively practiced in the meat and fish carrying trade of the United States, were not applied to those industries in England at the time of the International Fisheries Exhibition, London, 1883.

Even the old method of packing fish in boxes with ice for transporting purposes, was very defective, if we may judge by the condition of the fish when they arrived and the boxes were opened.

In the markets of London, I frequently saw whole boxes of fish that came from a comparatively short distance "packed in ice," that were spoiled and totally unfit for food. Very often the fish were discolored, and seldom were they very inviting in appearance. If it had not been that a fugitive piece of ice was occasionally discovered in the box with wet straw, there would scarcely have been a suspicion that there had been an attempt made to carry the fish in ice. It seems strange that there was such a lack of application of the well-known discoveries of preservation, not only in inland and local water transportation, but in the markets themselves, when these methods are in such common use in ocean transit, whole cargoes of frozen meats being daily brought to London from all quarters of the globe, even from New Zealand. Of the fish coming to London from adjoining waters, I found those that came by railway in a worse condition than those that came by water.

Aside from the more frequent handlings of railway borne fish, the unwholesome condition of unsuitable cars had, doubtless, considerable to do with their deterioration. No objection could be made against many of the cars run on the special fish trains to London, for they were as good, perhaps, as any of an old and obsolete style; but there were others for sanitary reasons that would have not been permitted to run were it not for a blunted and indifferent public sentiment. I shall not speak of these myself, but state the case through the words of others.

A witness before the corporation said: "You all think we load our fish in proper fish trucks. That is a great mistake. We load it nearly all in bullock trucks not cleaned out. Seven out of ten come in ordinary bullock trucks."

Another witness stated that "most of the fish comes in old cattle trucks, lime trucks, manure trucks, or any kind of truck that happens to be handy at the station. I have had plenty of barrels which had contracted so much filth that my man had to wash them before taking them on his back."

"Were you ever on the platform when a return Grimsby fish van was being shunted?" asks an English editor. "If you were, you are not likely to forget it." Having stood on the platform, candor, a love of truth, and an olfactory not over-sensitive either, will not permit us to disagree with this gentleman, for truly, as he says, "the stench is abominable, and there is little wonder that fish are condemned when they arrive at the markets."

Such a nauseating condition of things seems almost incredible to us Americans familiar with the cleanly-kept refrigerator cars fitted up by Chase, Ridgway and others, thousands of which bear fresh meat and fish to and from inland points hundreds of miles distant, yea, even from ocean to ocean. But still more incredible is it that railways in the British Isles have not long since found it to their selfish interests, if not the public welfare, to adopt some modern methods of transporting perishable objects.

How far behind the age and how short-sighted it proves them to be when we find an English paper asking, "Cannot science persuade the railway companies or large smack owners, or merchants, to have suitable fish vans, refrigerating or ice vans?"

The exhibition did much to educate the English people on this subject, and toward its close, in October, 1883, the Fish League (limited), of London, placed refrigerator cars (Knott's patent) on the London & Northwestern Railway. The trial trip proved successful, when sixty baskets of fresh herring were brought from Wyck, in North Scotland, to London. They were sixty hours *en route*, the shipment moving at the rate of nine miles an hour.

From an English standpoint it seemed wonderful that the fish came 550 miles inland in good condition, one of the papers stating that "they were as dry and sweet, and clear about the eyes, as though they had only been drawn up from the North Sea a short half hour or so before." These fresh herring, the first ever brought from North Scotland to London, retailed in market at from four to six cents a dozen.

The Fish League contemplated extending the system from various important fishing ports to the chief centers of population. Extortionate rates of the railways were found to be the chief obstacle the League had to encounter. It was plain that if the companies would not make concessions that the era of the refrigerator car was almost as remote as before, and the problem of cheap fish would not be solved in this way. Since 1883 I am informed there have been some concessions by the railway companies, but with true proverbial conservatism there has been but little progress made in adopting that which has proven such a boon to all classes in all parts of America.

FIXTURES.

DOG SHOWS.

July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavesley, Supt., 436 Montgomery street, San Francisco.

Aug. 24 to 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. Geo. H. Hill, Manager, P. O. Box 76, Cincinnati, O.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Edward Kelly, Secretary, 45 Exchange place, New York.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, Bergen Point, N. J.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **3893.**

MASTIFF MEASUREMENTS.

Editor Forest and Stream:

Last spring some mastiff owners insisted that their dogs stood 34 and others 35in. high at the shoulders. A careful measurement of one of these dogs made him but 31in., when his owner claimed that the dog should have been measured with a tape measure from the ground up and over between the shoulders, giving as his authority a well-known judge, who is one of the members of the American Mastiff Club. I was satisfied the judge was wrong, and having occasion to write the Hon. Secretary of the Old English Mastiff Club, Mr. Richard Cook, I asked him about it. His reply reads as follows: "For height, as you say, place a flat piece across his shoulder and measure from the ground to the under side of the horizontal piece, and when you find a mastiff more than 33in. high, please let me know."

I have just learned from your paper that an American mastiff club has been formed and officers elected.

I should have supposed the gentlemen would have wished the co-operation of all those interested in the breed, and to that end have given public notice before organizing. Was it because they might not get offices that the promoters practiced such secrecy? It looks very much that way, particularly so in the absence of the well-known names of the gentlemen who have made the breed familiar to American readers. Now that everything has been arranged to the satisfaction of the "disappointed exhibitors" of the late Westminster Kennel Club show, will the general public be asked to contribute to this "close corporation?"

What is the use now of an American Mastiff Club when we have the Old English Mastiff Club voting money to be competed for in this country? Besides, all prominent American exhibitors and lovers of the breed have joined or are joining the English club, which makes the American mutual admiration club unnecessary excepting to further private schemes.

In conclusion, I would humbly ask, why call it the American Mastiff Club? Is it to distinguish their breed from the German and English mastiffs? V. M. HALDEMAN

ENGLISH KENNEL CLUB'S DOG SHOW.

[From a Special Correspondent.]

THE English Kennel Club held their twenty-seventh exhibition of sporting and other dogs in the Royal Aquarium, Westminster, on June 29 and 30, and July 1 and 2. The total entry (including double entries) amounted to 1,234. The benching and feeding of the exhibits was as usual intrusted to Spratts Patent, while the general management of the show was very satisfactorily carried out by Mr. Edwards, with a well disciplined staff of keepers. Taken altogether, the arrangements were all that could be wished for. The weather was intensely hot, and as the exhibits were all under glass, the heat was very trying upon the dogs, and we were informed the number of applications by exhibitors to have their dogs removed exceeded those upon any other occasion. We were also informed that one or two animals died during the show.

Bloodhounds were rather better in quality than quantity. Nestor, well known, won again in the challenge class, the small but typical Cromwell holding the leading position in open dogs, with first and second in bitches going to Jaff and Progress, two sisters.

In the challenge class for mastiffs, King Canute won with Maximilian second, both looking well. Prince of Wales, that was so successful at the last Crystal Palace show, coming he. He is smaller than those placed over him and not so good in head, although better on his legs and looking better now than at the Crystal Palace. In the challenge class for bitches Lady Clare, he., is of good type, but falls off behind the shoulders and in quarters. Cambrian Princess won well, being the largest and of the proper type, second going to that good typical brindle Zulu Empress. In open dogs, Prussian Prince, he., has a good typical head but is rather small. His body and bone are good, quarters just moderate. Ilford Chancellor, third, reported upon previously, is small and throaty, but typical, with good bone and legs and feet. Heimdal, he., is plain. Admiral, c., is a light brindle and very plain in head. Beaufort, the Warwick winner, was second here, and we think might have been first. We look upon Victor Hugo, first, as best in size and Beaufort best in type. Boatswain, vhc., is of good size and a fair good dog, showing age about his muzzle. Minting, also vhc., is young and wants to be furnished, being short of wrinkle. He also might be better before the eye. Lady Isabel, first in bitches, was correctly placed. She is good in head, but not so good as her kennel companion, Lady Clare; however, of the two we prefer Lady Isabel as being larger, better made and possessing the best quarters. Lady Blanche, second, is not so large as some, but is of good type and has good body, feet and legs. Toosie was looking well and got third. Zillah, vhc., is a brindle of good length and size; she wants wrinkle and squareness of muzzle. Mr. Lee showed a very nice stamp of bitch with no name given in the catalogue; we noticed the same animal at Warwick. She is bad in color of face, large in ear and small. There were two classes of puppies and only one entry, Mr. Hutching's Anticlea. The prize was withheld.

In St. Bernards, Plinlimmon had the challenge class for dogs all to himself, and he was looking remarkably well. We find in the catalogue a very long and extended list of his winnings, which if his stud fee had been added to it, we would have considered the entry a very complete advertisement. Mr. Chapman came second in the challenge class for bitches with Lady Eva, the brindle and white La Mascotte gaining the coveted card; but we preferred either Elfrida, vhc., or Lady Eva to the winner. In open dogs, the brindle and white Sir Charles won second. He is a very large specimen and was shown in wonderful condition. He might be better in head, quarters and tail. Pouf, third prize, is much smaller than the winner, but remarkably good in type. His body color is light, but his markings are good. King Saurus, reserve, is smaller than some of the others, rather large in ear and with tail carried high. Pliny, fourth prize, is brindle and white, with not enough of body; but he is young and will improve. Hesper, winner of first, is equally as large as Plinlimmon, and is better in head and ears, and we think may turn the tables on the champion before long. At present his quarters are not strong enough, but with age they may develop and improve. Plevna, a daughter of Plinlimmon, won easy in rough bitches, and we consider her about the best young bitch we have seen, the well-known Crevasse if. only winning vhc. reserve to her. Crown Princess of Orange, second prize, is another good bitch. She might be squarer in muzzle. Third went to Lucilla, of good stamp, her body is all white; but we consider her a good way behind the winners. In smooth dogs, we liked Benedict, second, equally as well as the winner, Victor Emanuel. In bitches, Hilda Josepha, third, is good in type, but small. First and second are both good ones, the winner a very light orange in color. Rough and smooth puppies were shown together. In dog puppies, Bombastes, the winner, is a good smooth. Alpine Jack, second, wants time. In bitches, the winner is of good size. Her head is long and narrow, and she is light in bone. Belgarde, second, we like much; she is of good stamp. Third prize was withheld.

Newfoundlands were a good collection and the winners full of quality. The breed has made wonderful strides in the right direction the last few years.

In the challenge class for deerhounds old Bevis I. won over Clansman. In open dogs Angus, the winner, is a very fine specimen. Ashbourne, third prize, is another good one in size and quality, his color is a wheaten or red. In the open dog class Donald II., vhc., is rather small and thick in skull. Robin Adair, second prize, a light liver, possesses great quality but is weak at present in quarters. Jock, reserve, was about the best in the class, bar his quarters which may yet improve, but at present he moves badly. Luath Barry, vhc., is a good dog shown in the rough. Buscar II., also vhc., is plain in shoulders, not deep enough in chest and a trifle heavy in ear. In bitches Spey III., reserve, wants more condition. Brona, third prize, is small but well made and seems a very compact little bitch. Spencer, second prize, was out of form and showed age. Cherie (late Lady) won well, she is a grand bitch but wants more quality in head, being rather strong in skull.

In greyhound dogs, the winner, Happy Claydon, was about the best and well placed. Balkis, second, is well known, and as there were no challenge classes Lancashire Witch and Telegram III. won first and second in the bitches.

Pointers as a collection were among the best we have seen, Milton Bang winning in the challenge class for dogs, and Glee with no opponent held the same position in bitches. Mr. Beck's dogs were absent. In open dogs, large size, Rathmore Rex, c., is a very nice made dog, just strong enough in shoulders but weak behind. Bang's Boy, first, is good in shoulders, feet, stern and general character. Gladstone, a good second, was beaten by the winner in style. Jack's Baby, third, is another good dog not in the best condition, and just heavy enough in head. In large-sized bitches, the lemon and white Aldine Bell won easy. She is a good one all through; she is blind of one eye. Climax made a good second. Third was withheld, but we think Flora V. should have had third awarded to her. There were only three in the class. Small-size dogs were a remarkably good class, the winner, Don of Cornwall, is one of the best we have seen, and we think he will yet improve when another six months older. He was claimed by several at his catalogue price, 52 guineas, and eventually purchased by his owner back again for £75. Kite, third prize, is another good little dog, but not so good as the winner in legs. Molton Baron, he., has about the best pointer head in the class, but is deficient in body, legs and tail. Naso of Frinstead made a good second, being a dog all round above the average. In small bitches the winner, Milton Ringlet, is a very handsome liver and white. Third prize went to Gift II., and in the opinion of some she ought to have been about first, but she was shy. Village Star was absent. We understand that Mr. Bulled was unfortunate in having her accidentally poisoned. Duchess of Cornwall, second prize, is of good stamp. She is particularly good in body and bone.

English setters were a very moderate collection, Count Howard winning easily over young Rock III. in the challenge class, Bonnie Bell winning in bitches, having nothing against her. In the open classes the winners are well known and often reported on. In bitches Madame Rachel, a very handsome bitch with good head, ears and style, but just small enough and light in eye. Her color is a dark belton with a black patch on body. Milton Rhoda, reserve, is a nice liver ticked one. Second went to Empress Meg, lemon and white. She has a good head, but her quarters are rather weak. Third went to Eva, another lemon and white. Taken altogether, we must say we were disappointed in the English setters, expecting to see much better classes at the Kennel Club show.

Black and tan setters, as a lot, were better than usual. Beaumont won in the challenge class, but we much preferred Czarina. In open dogs the winner, Jock, is dark in color. His head is long, but rather coarse. Duke of Devonshire, reserve, is short in head and throaty. Merkland Don, second prize, is a good dog, possessing good coat and feather. Third went to Heather Ben, another good dog, just strong enough in chest and large in feet. In bitches Bellmont, the winner, is rather leggy, and her feather is light in color behind. Teddy, third prize, is light in body and out of coat. Heather Bloom, winner of second, we fancied was about best in the class.

In Irish setters Mr. Wilson had a walk over with Nellie, who was looking very well. In open dogs Frisco won. He holds his age well, but we never fancied him of the correct type of Irish setter, considering his color and expression of face against him. Carrowdore, third, is rather lighter than first and second. Second went to Kildare, a good level made dog. He wants peak, and is not as full of style as we would wish for in an Irish setter. Lalla Rookh won first in bitches. She was looking wonderfully well. The Irish setters were behind, owing, no doubt, to the Irish exhibitors not turning up, the Dublin show being the previous week, and we believe Cork comes next week.

In the collie challenge class Dublin Scot won somewhat easy from Captain. We understood Mr. Dockrell, the owner of Dublin Scot, is going to the States and intends taking a few of his collies over with him. Wild Daisy had a walk over in bitches. Mr. Megson won in open dogs with a very nice collie, Vulcan, a nice dark tawny sable. His face is of good length, but deficient in character. Bescot, vhc., we thought as good as any, bar his tail, which was carried too high. Flockmaster was absent. Paramont, fourth, we thought above the average. He is getting away from the leggy appearance he had when younger. Flock, fifth prize, is a good dog, plain in head. Sydney, out of form, won second. Flurry II. won well in bitches, with a very nice bitch, Precious, second, and Miss Penelope a good third; the class was very poor for a Kennel Club show. The dog puppies were a very poor lot, including the winners. In bitch puppies Pitch Dark won. We admired her very much and understand there were several buyers for her. She afterward won the Collie Club Derby and we believe she will win more yet before long. The others were fair, but a good way behind the winners. The show of collies was not up to usual Kennel Club form

In Basset hounds Bourbon and Fino V. again met; both were shown in good form, and we agree with the decision which placed Bourbon first. In open dogs, Zeus III., winner of second, has a fine long head and gook peak. Chassepot, first, is a large size lemon-marked dog, with great length of head and large ears; this dog was shown thin. We expect him to turn out a good dog when furnished. Le Fanfaron, third, is a nice hound, not so good in ear as some. Barrister is plain and has a bad skull. In bitches second went to Bertelo, a good colored hound and a good-bodied one. Sandal, the winner, is a very nice hound, full of quality; her body is mostly white. Fury, third prize, was not looking well; she was suffering from skin disease. In puppies, Wazir won well. The class was a small one; four competed, including the second prize winner in the open dog class. There was only one entry in bitch puppies and it was absent.

There were only three entries in Dalmatians, and Mr. Fawdry was again first and second.

Pomeranians had only two entries, the white Charlie and the moderate black Noir.

Mr. Lawrence once more won easily with Lyris in the challenge class for poodles. In the open class we fancied Doctor and Peck, the latter a good dog, not clipped or tampered with, but shown naturally, and we noticed several others also. Peck carries his coat most over the loins, and it is rather short on shoulders; he also carries his tail too much over his back. There was a good white one shown, Tricotrin, which got vhc. along with another white, Belle, equal in prize list, but we cannot see in what other way. In bitches, we thought the second prize, Kiss, should have won.

In bulldogs Rustic King was first, beating Black Prince. Grabber was absent, Queen Mab having no opponent in the corresponding bitch class. In large-sized dogs and bitches there were only two, Jem Mace winning easy. In the next class the winner, Jumbo VIII., is good in head and ears; he is straight in barrel, weak in pasterns, and open in feet. Oswego, second prize, is a good bodied brindle and white, a bit pinched in face. Claudian, vhc., is good in chop and wrinkle. In bitches Scissors was first with Dolorus second, Miss Sancho making a good third, being good in bone and body, a bit short of wrinkle. The next class contained good quality and the winners were correctly placed. Dona Sol was a good first. Amy, second, is only moderate. There were only three in the class. A puppy above the average won in puppies.

Cairo won in the challenge class for bull-terriers, not looking so well as usual, he is growing worse with age and was in bad coat here. In large-sized dogs and bitches first went to King of Hearts, a large, young dog not furnished, second going to Young Paradox, who, we understand, has been sold to go to the U. S; he is of good type of the medium size; he might be better in shoulders and back. Khedive, third, is thick in skull and snipy. In the next class we think the winners well placed. In the small ones under 20lbs. weight, Cribben was sold and gone from the show when we looked for him, he also won at Dublin, yet we certainly prefer his kennel companion Florence and think she ought to have beaten him here.

Airedales were just about in their usual form, the winners are well known.

In the challenge class for Irish water spaniels there was only one, Young Hilda. In the open class for dogs and bitches there were only two entries, both very moderate.

Clumber spaniels seem not to make much headway, old Psycho is about the best Clumber of the lot.

In the challenge class for Sussex or liver-colored spaniels, Tinkle won easy; we consider this a good specimen with her appearance much damaged owing to having lost one eye. In the open class Mr. Woolland had it all his own way and his specimens deserved their position. Mr. Woolland won the special prize offered for the best team of this variety.

In the challenge for blacks Squaw properly won over Negro, although M. Shirley seemed to study much over the matter before he gave his decision. In open dogs Newton Abbot Darkie, first, is short and coarse in head. We prefer the third prize, Victor, from the same kennel, and would have placed Beverley Rex first. In bitches Beverley Domino won well, she is a wonderfully well made bitch with the best of legs, which are short and straight, good quarters and a good level spaniel, as good as any going, her coat is also straight and good; we understand that there was a long price offered for the young bitch and refused. The second prize winner is another good one and was well placed. In the next class Fanciful won over Newton Abbot Beau and Easten's Bruce. The next class had only two entries, the winner looking well. Counsellor was not in form. Only two were entered in the next class and one was absent. Clifton Ruby got the prize, which we don't expect to see her do when there is any competition.

Obo had the champion class for cockers to himself, but we find the classification is for cocker and other small field spaniels; so, speaking correctly, there was no cocker class. Bob Obo won in the open dog class. We think he was close on the weight, although in low condition. Little Smut is more our idea of a cocker, but possesses a topknot and is much out at elbows. In the corresponding bitch class we fancied the commended Beverley Fan as best in the class, and, from a cocker point of view, we believe our opinion was pretty well indorsed. She is long, low, good in color and coat, with a cocker head and movements. In puppies, first and second was divided between the Sussex Bridford Victor and the black Beverley Domino, both good ones and difficult to beat.

In fox-terriers Result won, with his kennel companion Regent, second. We fancied The Belgravian for second, with Regent third. Brokenhurst Sting, reserve, is weedy, and was outclassed. The bitches were placed about right, but they are all fine and too small to our way of thinking. In open dogs, the winner, Beggarman, has a good terrier face, but too small, ears not carried close to head, he is high on the leg and too much arched in back. Rollicker, second prize, is a bit 'cheeky, but well built. We think the white Lucifer as in Prescenti should have been first. He is a perfect picture in size, bone and style, but not so long or so punishing in head as Result. We next to him thought Veni, fourth prize, should have been second. Veni is a good terrier all over, a workman, and has a good head, and we think his skull would be better if a little flatter. In bitches, Rachel, the winner, is in our opinion about the best bitch we know. She has a good head, with the best of feet and legs and shoulders. Her general style is as good as could be wished for. We could see nothing in the class to come near her. Venilia, fifth prize, was the winner at Warwick. She has gone off greatly and is now a very moderate animal. Diamond Spark, the winner in the puppy class, is a very promising young one, white with lemon mark on one cheek. Raby Baffler, second, is not improving in head.

Wire-hairs as a lot were good, Burton Wildbriar winning in the champion class, but closely pressed by Carlisle Tack, who does not improve with age. In open dogs the winner turned up in Brittle, who won here at the terrier show during the winter; he has improved since then, and is one of the best, bar his chest being a bit wide. Foiler, second, is a real good dog, plain in skull and coat not quite straight, but feet, legs, shoulders and quarters are all that could be wished for. Mr. Carrick won in bitches with a good one, but was closely pressed by Stockton Blossom, a very good coated bitch, with the best of legs, feet and shoulders; her ears are not as well up on the head as wanted and her eye is rather light. Wire-haired puppies, bar the winners, were poor.

Bedlingtons were only a moderate lot, not what we see at some north country shows.

Irish terriers did not turn out in as good form as at Dublin the previous week. Bachelor we think was correctly placed over Playboy, who was shown rather heavy of flesh. Poppy was placed over Extreme Careless in the next class. Some parties thought they should have changed places. In open dogs the winner has gone coarse since he won in the puppy class at Warwick, and we think Blue Peter lucky to come second. We would have placed his kennel companion Begum first, and let Jaques's Blue Peter and Glenavey come next. In bitches, Poppy II. won, but we believe was objected to as having won four first prizes previously. She was looking well and no doubt is a very pretty bitch, but to our mind too large and weedy. The second prize winner is also too large. Third went to a very nice little bitch, and from a terrier point of view equally as good as those placed over her. In puppies, first and second were a good way the best. There was little to choose between them. The winner is rather high on leg and short in quarters, coat short, but as he is young we could find no fault with him in that respect.

Leading Star won quite easily in white English terriers. Black and tan terriers were a very moderate collection, but well placed. Kenwood Queen was about the best in the lot, yet we think her not flat enough in skull. Skyes were moderately good classes. We thought the winners well placed, but did not see them off their benches. There was also a good collection of Dandies, and we heard some dissatisfaction over the awards. However, the judge seeme to go a good deal for feet and legs, which, we think, should be more valued, as a rule, in Dandies, as a great many are really weak in pasterns and bad in feet, and some judges don't mind much so long as they are low on the leg. After all we could not see that there was much room for exhibitors being dissatisfied on the present occasion.

In Scotch terriers we found Dundee and Dudley Luck meeting, the latter winning and the former looking upon this occasion coarser. We thought his ears larger than before, and his head also seems coarser. Dudley Luck is finer in head, has a little white on his chest, and his tail is rather gaily carried; but he is better in size than Dundee. In bitches, we preferred the second to the first, having more coat and looked finer and more terrier-like. The winning puppy promises well. Captain Mackie's team look well together, being level in color and all good ones; but the bitches are much finer than the dog Dundee.

In the pug challenge classes, Stingo Sniffles won easily in dogs and Darcy in bitches over Belle of the Ball, who is rather high behind, owing to being out at elbows. In the open dog class we could not agree with the awards. Master Bird, he., is a really nice pug and should have been further up, and Little Duke, unnoticed, should have also been in the winning. We heard that this dog changed hands during the show at a good figure. The winner is good in skull, but very bad in carriage of ear. Vedette, vhc., is only moderate and has a bad tail. King of Diamonds, third prize, is a good dog but coarse. Second went to Wilby, a very nice little pug blind of one eye, the other is too small in size. The winner in bitches is good in eye but too dark. The third prize, Dulcie II., is a very nice specimen, and Ducie, c., that won at Warwick, should have been further up. Sometimes she does not carry her ears properly. Puppies were moderate, with nothing very striking in them.

Maltese were not so good as we have seen but Lady Clifford's lot were absent, which we also noticed at the last Crystal Palace show. Flossie II. won easily in the Blenheim challenge class. In the open class the winner, Flo II., is good in skull but too large. Dandy, third, is also too large. Pompey, third prize, is only an average specimen. In the King Charles challenge class Olivette won, having the class to herself. In the open class Mr. Buggs won first and second with two good specimens, the winner is darkest in tan but best in skull and face. Only two tri-colored ones were shown and there were only two in the ruby colored class. Toy terriers were two very large and good classes, the winner pretty well placed. We preferred Mr. Troughear's Perfection for second place in rough toys. MAHARG.

[A full list of the awards will be found in the *American Kennel Register*.]

THE MILWAUKEE DOG SHOW.

[From a Special Correspondent.]

Editor Forest and Stream:

The dog show held here this week was advertised to close last night, but the managers, after obtaining the consent of a large majority of the exhibitors, decided at noon yesterday to continue the show through to-day and this evening.

The attendance has been better than was anticipated, and it is thought a comfortable balance will remain after paying all expenses. The show was held in the riding arena of the armory of the Light Horse Squadron, a building well adapted for the purpose. There were 230 entries, nearly all of which were present. All classes were represented, although none of them were remarkably well filled. The largest classes were the English setters and pointers, 24 of the former and 23 of the latter. Many well-known prize winners were present, and taken as a whole the exhibit was a very creditable one. The judging, so far as I could learn, was generally satisfactory. Inclosed you will find a list of the awards. WAUKEE.

MILWAUKEE, July 22.

AWARDS.

MASTIFFS.—*Dogs:* 1st, Waconta Kennels' Corsair; 2d, Coughcura Medicine Co.'s Ilford Cromwell II. Very high com., A. Uhlion's Kaiser, Otto Kitzinger's Reno and Dr. A. J. Richter's Dash McD. *Bitches:* 1st, Dr. A. J. Richter's Rene; 2d, O. Kitzinger's Flora. Very high com., Coughcura Medicine Co.'s Dolly Varden II. *Puppies:* 1st, withheld; 2d, C. Schreiber's Flora.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—Mohawk Kennels' Noma.—OPEN—*Dogs:* 1st, Coughcura Medicine Co.'s Otto II.; 2d, Mohawk Kennels' Jumbo. Very high com., W. Kirchner's Barry. *Bitches:* 1st, Coughcura Medicine Co.'s Bonnie Duchess; 2d, Mohawk Kennels' Clio. *Puppies:* 1st, Mohawk Kennels' Jumbo; 2d, R. Bush's Blanche.—SMOOTH-COATED—*Dogs:* 1st, Mohawk Kennels' Rector II.; 2d, Dr. J. Senti's Bella.

NEWFOUNDLANDS.—1st, J. J. Kirchner's Alex; 2d, C. Thomas's Baron. Very high com., V. Schiller's Turk.

GREAT DANES.—1st and 2d, W. Elser's Tyras and Diana. Very high com., A. Gfrorner's Krao.

ULMERS.—1st, Osceola Kennel Club's Don Cæsar; 2d, Dr. Nicolai's Cæsar. Very high com., Dr. Nicolai's Nero and Paul Merker's Pluto. *Puppies:* 1st, Dr. Nicolai's Juno.

GREYHOUNDS.—CHAMPION—Terra Cotta Kennels' Memnon. OPEN—*Dogs:* 1st, H. R. King's Gellert; 2d, H. Voss' Hector. *Bitches:* 1st, F. B. Rice's Daisy.

ENGLISH SETTERS.—EXTRA CHAMPION—E. E. Pray's Bessie A. CHAMPION—R. B. Morgan's Mandan. OPEN—*Dogs:* 1st, T. Donoghue's Consul; 2d, Reserve Kennels' Pendragon. *Bitches:* 1st, Mrs. W. A. Collins' Pickles; 2d, T. Donoghue's Blue Cubas. Very high com., T. Donoghue's Blue Sparks. PUPPIES—*Dogs:* 1st, W. G. Barker's King's Dan; 2d, F. Zirney's Gyp. *Bitches:* 1st, J. Welsch's Lulu; 2d, T. Donoghue's Dart Gladstone. Very high com., J. J. Dapper's Pond Lilly.

BLACK AND TAN SETTERS.—*Dogs:* 1st, withheld; 2d, G. H. Joachim's Dan. *Bitches:* 1st, G. Poppert's Belle Brandon; 2d, withheld. Very high com., J. B. Wickery's Patti. *Puppies:* 1st, E. G. Asmus' Bang; 2d, G. Poppert's Capt. Jack.

IRISH SETTERS.—EXTRA CHAMPION—J. A. J. Sprague's Brush. CHAMPION—H. E. Chubb's Zella Glenduff. OPEN—*Dogs:* 1st, J. H. Naylor's Frank; 2d, Mrs. F. B. Rice's Larry Thorn. Very high com, G. T. Steele's Watts, Jr. *Bitches:* 1st, T. Donoghue's Irish Maid; 2d, H. Schubert's Wells.

POINTERS.—EXTRA CHAMPION—Detroit Kennel Club's King Bow.—CHAMPION—J. H. Kraft's Robin Adair.—OPEN—*Dogs:* 1st, Mrs. C. I. Engel's Young Meteor; 2d, S. B. Dilley's Ranger Croxteth. *Bitches:* 1st, Reserve Kennels' Patti; 2d, D. Storr, Jr.'s Juno S. Very high com., C. Fricke's Flora. *Puppies:* 1st, withheld; 2d, L. Auer's Sport. Very high com., D. Storr's Count and Mrs. Charles Engel's Noble Duke.

IRISH WATER SPANIELS.—CHAMPION—T. Donoghue's Count Bendigo.—OPEN—*Dogs:* 1st and 2d, Excelsior Irish Water Spaniel Kennels' The O'Donoghue and Mack. *Bitches:* 1st, T. Donoghue's Little Sioux; 2d and very high com., Excelsior Irish Water Spaniel Kennels' Judy and Chippewa Belle. *Puppies:* 2st, J. Delehanty's Barney O'Donoghue.

CHESAPEAKE BAY DOGS.—1st, Osceola Kennel Club's Drake.

COCKER SPANIELS.—*Dogs:* 1st, American Cocker Kennels' Doc. *Bitches:* 1st, Osceola Kennel Club's Topsy; 2d, L. Kuhn's Nellie. Very high com., C. Shinn's Miss Lotta.

FOXHOUNDS.—*Dogs:* 1st, W. A. Van Brunt's Driver; 2d, J. Swan's Bruiser. *Bitches:* 1st, J. H. Naylor's Lady Stewart.

BEAGLES.—*Dogs:* 1st, Mrs. H. Krause's King Pat. *Bitches:* 1st, 2d and very high com., Mrs. C. E. White's Bonnie, Fairy and Bon Bon. Very high com., C. Wiles's Flavia. *Puppies:* 1st, W. C. Fish's Music o' the Woodlands; 2d, Mrs. C. E. White's Busy.

DACHSHUNDE.—*Dogs:* 1st, 2d and very high com., George Poppert's Romeo, Jumbo and Waldmann III. *Bitches:* 1st, Geo. Poppert's Juliette.

FOX-TERRIERS.—*Dogs:* 1st, W. A. Lacey's Rattler. *Bitches:* 1st, W. A. Lacey's Nettie.

COLLIES.—*Dogs:* 1st, Mitchell Harrison's Nullamore; 2d, J. A. Long's Clifton Hero. Very high com., M. Harrison's Blue Jacket. *Bitches:* 1st, M. Harrison's Dot; 2d withheld. Very high com., C. H. Kartel's Nellie.

BOBTAILED SHEEPDOGS.—*Dogs:* 1st and 2d, and 1st in bitches, Glencoe Collie Kennels' Sir Lucifer, Maverick and Dame Hester.

BULLDOGS.—*Dogs:* 1st withheld; 2d, E. Jones' Keno.

BULL-TERRIERS.—*Dogs:* 1st, F. F. Dole's Count; 2d, C. E. Feller's Joker. Very high com., W. Mariner's Nimble. *Bitches:* 1st, F. F. Dole's Young Venom; 2d, W. Mariner's Kit. Very high com., C. E. Feller's Kit.—UNDER 25LBS.—1st, J. Callahan's Jumbo. *Bitches:* 1st, F. F. Dole's Lady in White; 2d, W. Mariner's Flirt. *Puppies:* 1st, C. E. Feller's Patsey; 2d, W. Mariner's Flirt. Very high com., G. F. Dore's Pincher and J. E. Shaughnessy's Trix.

BLACK AND TAN TERRIERS.—1st and 2d, Henry Muss' Mahomet and Lady. UNDER 7LBS.—Mrs. C. E. White's Dandy; 2d, Mrs. K. Hassig's Winnie.

YORKSHIRE TERRIERS.—1st and 2d, withheld. Very high com., C. Sanger's Flossy.

KING CHARLES SPANIELS.—1st, Fred Collinge's Mollie; 2d, H. Jansen's Lista.

SKYE TERRIERS.—1st, withheld; 2d, C. A. Shinn's Lady K.

Mariner's Nimble; best light-weight, same owner's Flirt; best kennel, same owner. For largest dog, Dr. G. Nicolai's Cæsar.

THE WAVERLY DOG SHOW.—The premium list of the first fall dog show of the New Jersey Kennel Club, to be held at Waverly, N. J., Sept. 14 to 17, is the same as that for their show last March, except that champion classes are added for mastiff, rough-coated St. Bernard, smooth-coated St. Bernard, and collie bitches, a class for deerhound puppies and two more classes for bull-terriers (over and under 25lbs.). There is only one open class for foxhounds, and the Irish water spaniels and Chesapeake Bay dog classes are omitted. Kennel prizes to consist of three each, dogs and bitches, are offered for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, pointers, English setters, Irish setters and spaniels. Some of the puppy classes have $7 and $8 instead of $10 as last year. The following named gentlemen have been requested to act as judges: Mr. J. O. Donner, English setters; Mr. John Davidson, pointers, Irish and black and tan setters; Mr. A. S. Apgar, collies; Messrs. Jas. Mortimer and Chas. H. Mason the remaining classes.

CHAMPION THUNDER.—The well-known English setter champion Thunder, owned by Mr. A. H. Moore, Philadelphia, Pa., died July 23, from disease of the lungs. He was whelped May 7, 1877, and was by Pride of the Border out of Fairy II. He was bred by the late C. S. Westcott (Homo). His first appearance was at Pittsburgh, in 1878, where he won first in the puppy class. He was hc. at New York in the aged class the same year. In 1879 he won second at Pittsburgh and Philadelphia. In 1881 he won first at Pittsburgh, and the special for the best English setter at New York. In 1882 he won the champion prize at Pittsburgh, New York, Boston and Cleveland.

THE TOLEDO DOG SHOW.—A dog show will be held at Toledo, O., Sept. 7, 8, 9 and 10, under the auspices of the Tri-State Fair Association. Classes are provided for mastiffs, St. Bernards, Newfoundlands, deerhounds, English, Irish and Gordon setters, pointers, spaniels, foxhounds, collies, Yorkshire, Scotch, Skye, bull and black and tan terriers, pugs and miscellaneous. Entries close Sept. 1. Blanks can be obtained by addressing the Secretary, Chas. Reed, Toledo, Ohio.

THE ST. LOUIS PRIZES.—We received a letter from Mr. J. P. Barnard, Jr., of Boston, stating that the check sent him in payment of prizes won at the recent St. Louis dog show had been dishonored. Since then he informs us that the treasurer, Mr. John H. Holmes, has sent him the amount of the worthless check.

THE IRISH SETTER CLUB.—*Editor Forest and Stream:* It would no doubt be of interest to some of the public to know how the Red Irish Setter Club is progressing and its plans if any for holding a field trial this fall. Will Mr. Dunphy kindly furnish any information that man be of interest and oblige—RED IRISH.

AMATEUR PHOTOGRAPHER.—Will the gentleman who, on the Thursday of the last New York dog show, photographed a number of dogs and was assisted by Mr. James Watson for some time, kindly send his address to K. E. at this office.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Thunder. Blue belton English setter dog, whelped May 7, 1877 (Pride of the Border—Fairy II.), owned by A. H. Moore, Philadelphia, Pa., July 23, from disease of the lungs.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. E. T., New York.—1. I have a greyhound bitch between three and four months old; please inform me as to what food would be best to feed her. 2. Is the Persian insect powder the best thing for fleas? 3. In the same yard I keep a male greyhound about two years old, and I would like to know how long they can be safely kept together before there is danger of breeding. Ans. 1. Milk, well-cooked oatmeal, vegetables and meat. 2. It is very good, but must be applied thoroughly to be effective. 3. There will be danger after the bitch is eight or nine months old; probably none up to that time.

BRANT, Salt Lake City.—A setter dog is very thin, and it seems impossible to get him fat. Will eat but one meal a day, and this in the evening. He eats cooked meat and sometimes will take vegetables; but very seldom. I have been giving him raw meat about once or twice a week. Has been constipated a great deal lately. Have given him castor oil; but after a short while is in same condition as before. He is lively enough. Ans. Give the dog a dessertspoonful of syrup of buckthorn in the morning for three days. Give Fowler's solution of arsenic in four drop doses three times daily in food. Increase the dose a drop a day until you are giving twenty drops, then diminish the dose in the same way.

A. W. T., Dorchester, Mass.—Around the inside edge of my pointer's ear is a thick coating of greasy matter like dandruff. Have removed it once with the hair, which has now grown again, with the dandruff worse than before. The hair comes out easily and the edges seem slightly swollen. The inner corners of the eyes show dry and scaly and a little filmy in the morning. Have washed them with cold water, and applied sulphur and oil around the eyes, but can see no improvement; have also given sulphur and milk internally. The dog is six years old and apparently in good health. Will you kindly inform me through your columns what to do for him. I inclose some hair as taken from under side edge of ear. Ans. Your dog has a skin disease affecting the hair follicles. Get two ounces of the oleate of mercury and rub it into the skin where affected once daily. Give Fowler's solution of arsenic in five drop doses three times daily. If he develops canker use the following: of bromo-chloral and of laudanum each one dram, of water six drams; mix. Drop in ear twice daily.

J. W. B., Louisiana, Mo.—An English setter pup, seven months old, two months ago could not use his hind parts, acted as though paralyzed, was doctored for worms and got well. Four weeks ago I had him out hunting, part of the time in water, which I think brought on a cough. In treating for laryngitis, discovered that his second set of teeth were all more or less decayed, especially the tushes—the first case I have ever seen in a young dog, and I have bred them for years. Ans. It is very difficult to give a cause for the early decay of teeth in puppies. It is generally a dyscrasia or vice of constitution handed down from the parents, although it may depend on certain foods or the lack of certain foods. Bones should always be fed in moderate quantity as sustaining phosphorus and earthy matters. Certain poisons, like mercury and arsenic, cause decay of the teeth. Give the officinal pill of phosphorus three times daily hidden in a bit of raw meat, and give easily broken bones. See that the teeth are clean always.

MEN IN "SAFE EMPLOYMENTS" were paid a quarter of a million dollars last year by the Travelers, of Hartford, Conn., for accidental death and injuries.—*Adv*

BOSTON, July 24.—The weather was all that could be desired, and a fair number of riflemen attended the matches to-day. Mr. Chase scored a clean 100 in the rest match, and Mr. Charles made a 49 in the 500yds. military match. C. C. Foster won the silver medal in the 500yds. match, and Lieut. Henry White, of the Roxbury City Guards, won the gold badge, and Capt. F. W. Reynolds the silver in the State militia match. Following are the best scores finished during the day:

Decimal Match, 200yds.

WILMINGTON, Del., July 19.—At the Schuetzen Park this afternoon, Massachusetts target, 200 yards off-hand, prizes divided by score classes. After deciding ties the prizes were awarded as follows: First, W. F. Seeds; second, Charles Heinel, Sr.; third, Robert Miller; fourth, Charles Heinel, Jr. The full score is as follows, out of possible 60 points:

W F Seeds	10	8	12	11	9—50	H B Seeds	8	8	6	10	8—40
J E Newman	10	11	12	11	6—50	J B Bell	7	8	6	10	8—39
C Heinel, Sr.	11	11	10	10	6—48	T Jones	4	10	9	8	8—39
R Miller	7	11	6	12	11—47	E M Clark	10	7	3	3	7—31
C Heinel, Jr.	7	10	7	11	11—46	W A Bacon	4	5	10	4	6—29
S J Newman	8	11	8	11	8—46	H Simpson	2	4	4	4	6—20

At the second match the club was divided into two competing teams. Bacon's team won by 14 points. Massachusetts target, 200 yards off-hand. The following is the full score out of individual possible 120 points and team possible 720 points:

W A Bacon	7	5	4	12	2	8	2	10	9—61	
C Heinel, Sr.	11	11	10	7	10	11	11	9	7	10—97
H B Seeds	7	9	9	8	5	9	5	9	11	8—80
R Miller	9	6	8	8	9	10	9	7	9	9—84
S Jones	11	8	7	9	8	11	9	7	8	9—87
J B Bell	10	9	12	6	4	9	8	12	11	11—92—501
H Simpson	7	9	6	7	2	8	4	12	7	9—71
S J Newman	6	12	8	9	8	10	11	8	7	8—87
W F Seeds	9	8	8	7	7	9	12	9	10	9—88
J E Newman	6	10	9	7	9	4	9	8	11	10—83
C Heinel, Jr.	11	9	9	8	9	6	5	7	7	6—77
E M Clark	8	5	10	5	11	8	11	4	8	11—81—487

Massachusetts target, 200yds., off-hand, prizes divided among the highest scores. Ties decided, the prizes were awarded as follows: R. Miller first, J. B. Bell second, J. E. Newman third, H. B. Seeds fourth. The full score is as follows out of possible 36 points:

R Miller	11	9	12—32	E M Clark	9	11	3—23			
J B Bell	9	12	10—31	W F Seeds	9	7	5—21			
J E Newman	8	10	11—28	W A Bacon	2	6	12—20

W McKendrick	9	10	6—25	H Simpson	8	3	2—13			
S J Newman	5	10	9—24							

GARDNER, Mass., July 21.—Members of the Heyward Guards, Co. F, Second Regiment, M. V. M., went out to Hackmatack Range to-day. The shooting was off-hand, Creedmoor count, 200 yards:

C A Hinds	21	22—43	F H Kendall	17	20—37	
S T Chamberlin	20	21—41	W W Thompson	18	18—37	
C N Edgell	19	19—38	C O Well	16	17—33	
H J Black	20	18—38	C H Horton	10	11—21	
E B Taylor	19	19—38				

NEWARK, N. J., July 26.—At the rifle match of the Nimrod Club held on Saturday afternoon, July 17, for the club badge, 100 yds., 10 shots each, Mr. R. M. Williams, President of the club, won by a score of 90 points. This is the second time the badge has been won by the gentleman, to be won three times before becoming personal property. The next club shoot takes place Aug. 7.

WIMBLEDON, July 21.—The match for the Kolapore cup was shot at Wimbledon to-day. The first range was 200yds. The teams consisted of eight men each, and seven rounds each were fired. The totals at this range were: Jersey 242, Guernsey 235, England 231, Australia 229, Canada 222, and India 219. The individual Canadian scores were: Bell 29, King 27, Kimerley 31, Beatty 31, Russell 23, Armstrong 25, Maxwell 27, and Loggie 29. At the conclusion of the firing at the second range, 500yds., the total scores were: England 473, Jersey 447, Australia 430, Guernsey 437, Canada 432, and India 419. The Canadians scored as follows: Bell 32; King 24; Kimerley 21; Beatty 27, Russell 32, Armstrong 27, Maxwell 21, and Loggie 25. At the first range, 600yds., England was victorious, with a score of 666, Canada making 646, Guernsey 630, Australia 632, Jersey 626, and India 595. The Canadian scores were: Bell 27, King 25, Kimerley 25, Beatty 28, Russell 28, Armstrong 28, Maxwell 23, and Loggie, 25. When the match was ended the Canadian captain proposed three cheers for the English team, which were heartily accorded, the English marksmen returning the compliment. The Duke of Cambridge subsequently inspected the Canadian camp, and afterward the colonials were drawn up in three sides of a square in full uniform. The Commander-in-Chief congratulated them upon their splendid appearance and praised their love for the mother country.

July 22.—The weather was fine at Wimbledon to-day, but rather gusty. The Irish team won the Elcho Shield with an aggregate score of 1,471. The Scotch team scored 1,408 and the English team 1,385.

HAVERHILL, Mass., Rifle Club, July 24.—Club team match.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE CINCINNATI TOURNAMENT.

Editor Forest and Stream:

CINCINNATI, July 21.—The first day of the four days' live and clay pigeon tournament opened on the new Cincinnati Ball Park under rather unfavorable circumstances, a hard rain compelling the management to postpone match No. 3 until next morning. During the heavy rain and wind about fifty shooters sought shelter under the main tent, which collapsed and buried all under the canvas. This created much merriment. The attendance numbered, besides the seventy old shooters present, between 100 and 200. The shooting was of a nature rarely witnessed, many tieing for first, second and third places.

The shooting at live birds was, as one of the participants remarked, "simply grand." The live birds, taken as a whole, were superior to any ever shot at any previous tournament held here. The shooters present from other States, who number some 30 or 35, are all good ones, but owing to the strangeness of the ground, many appeared a little rusty. Outside of Kling, Teipel, Miller and Bandle, the local shots did not do much. Three of the matches appended below were shot during a drizzling rain, the shooter standing in the pavilion. Every one appeared to be good-natured, and when "shot out" of a tie took it for granted.

Mr. H. F. Robinson attended to the refereeing of the live-bird contest, and did it ably and satisfactorily to all. The applause on the making of good shots was liberal, too liberal for several.

Match No. 1.—Seven single Ligowsky clay-pigeon birds: Stice 6, Verges 4, Bandle 6, White 4, Moore 3, Evans 4, Mustin 6, DuBray 3, West 4, Teipel 6, Pink (Penrose) 6, Miller 4, Devore 6, Meaders 6, Parker 7, Ashley 3, Stevens 3, Wickersham 3, Goldrick 4, Strobel 3, M. Henry 1, Kimbell 4, McVey 4. Parker first. Ties on 6 and 5 divided.

Match No. 2.—Ten American clay birds: Strobel 5, Stice 9, Verges 7, Meaders 8, Bandle 8, Teipel 9, Pink 10, Shuler 7, Evans 8, Moore 9, West 8, Parker 4, McDuff 9, Kimball 9, Budd 8, Meerschaum 6, White 5, Goldrick 9, DuBray 6, Stevens 7, Graff 5, McVey 10, Johnson 7, Devore 9, Ferguson 7, Miller 8, Wickersham 7, Ashley 9. Pink and McVey divided first, Teipel second, Miller and Bandle third.

Match No. 3.—Seven live birds, 30 yds. rise: McDuff 4, McCartney 7, Strobel 6, Verges 6, Stevens 5, West 4, Stice 5, DuBray 5, Devore 6, Bandle 6, Teipel 6, Bob White 7, Goldrick 5, Parker 7, Ferguson 2, Johnson 5, Ashley 2, Comanche 4, Buddist 6; Bellamy 5, Mason 5, Evans 6, McNey 6, Pink 7, Shott 6, Chick 6, Miller 7, Meaders 6. McCartney, Bob White, Pink, Miller and Parker first money; Devore, Teipel, Budd and Evans divided second; DuBray and Bellamy divided third.

The shooting was now interrupted by a heavy rain storm; but several small matches with Peoria blackbirds were shot from the grand stand of the Baseball grounds, these traps having been planted nearest thereto.

Impromptu shot No. 1.—Seven Peoria blackbirds: Bandle 6, Verges 3, Meader 6, Stice 6, Miller 7, B. White 7, Pink7, Evans 5, West 4, Graff 2, McDuff 6, Comanche 6, McCartney 6, Bellamy 6, J. B. Forake 5, Doll 6, McHenry 3, McVey 5, Strobel 4, Teipel 5, DuBray 7, Devore 5, Johnson 4, Moore 6, Budd 6, Stevens 5, Ashley 6. Miller, White, Pink, DuBray first money; Bandle, McDuff and McCartney second, Teipel and Defore third.

July 22.—The second day was probably the best attended one as regards both spectators and shooters that ever took place in this city. The weather was fine with little or no wind to bother the shooters. The live birds were an exceptionally fine lot, and the shooting in those matches proved of great interest. Ben Teipel, of Covington, Ky., the celebrated Ligowsky clay-pigeon shot, carried off the major of the purses, by the other local shooters entered were compelled to play second fiddle to the visitors. There is but little doubt but that Mr. Budd, the champion of Iowa, in attendance, is without a question the best all-round shot present. He kills his live birds invariably stone dead, and in the clay and Peoria blackbird races he is and has proved himself a veritable cyclone. There are 36 representative shooters from other States and cities present competing. Appended are the scores and winners of yesterday:

Match No. 4.—Ten Ligowsky clay-pigeons. This match was the most interesting of the day. The traps threw the pigeons so that they were continually on a wavering rise while within gunshot distance—a new advantage claimed for this favorite target over new trap, possessed by no other target. This quality calls forth and tests the skill and judgment of the field-shooter, and renders useless the mere knack of those who wait until other cumbersome targets are on the top curve immediately before descending: Stice 8, Budd 9, Bandle 8, Teipel 10, West 4, Stevens 1, Meaders 5, McDuff 7, Verges 8, Devore 7, Harrison 8, Pink 8, Hoffman 5, Parker 8, Kimball 9, Early 8, Spross 9, Boone 7, Miller 1, McCartney 8, Whit 9, Meerschaum 9, Goldrick 9, Ferguson 4, Evans 8, McVey 7, Cider 8, Bellamy 9, Judge 5. Teipel first, Budd, Kimball, Spross, Whit, Meerschaum, Goldrick and Bellamy divided second, Stice, Pink, Parker and McCartney divided third.

Match No. 5.—Three pair American clay birds: Stice 5, Bandle 5, Miller 4, Devore 5, Teipel 3, McMurchy 3, Verges 4, Harrison 1, McVey 4, Judd 4, Boone 5, West 5, Goodloe 4, Meerschaum 4, Budd 5, Whit 5, Kimball 5, Early 5, Parker 6, McCartney 5, B. White 4, Boardman 2, Cider 4, Hand 3, Goldrick 4, Modoc 2, Stevens 2, Pink 3, Evans 3. Parker first, Bandle, Budd, Boone, Whit and Kimball second, Miller and White divided third.

Match No. 8.—Seven live pigeons, 26yds., use of one barrel only: McMurchy 6, McCartney 2, Bandle 4, Teipel 7, Verges 6, Miller 4, Hand 2, Modoc 5, Bellamy 6, Mason 7, West 4, Wallace 3, Duffy 3, McVey 6, Parker 5, B. White 5, Devore 6, George 3, Boardman 4, Hume 3, Meaders 5, Judd 3, Pink 6, Wilson 1, Stevens 2, West 5, Ferguson 3, Peters 4, Budd 5, Stice 7, Tucker 6, Harrison 3, Boone 3, Briggs 6, Hoffman 2, Goodloe 6, Cider 5, Du Bray 5, P. McAvoy 1, Whit 3. Teipel, Stice and Mason divided first, McDuff and Tucker second, Meaders, Du Bray and West third.

Impromptu Shoot.—Nine single bluerocks: McDuff 9, Verges 6, Cider 9, Kimbell 9, Devore 6, West 6, Teipel 6, Bandle 9, Stice 8, Budd 8, Mason 2, Goldrick 6, Meaders 7, Evans 8, Stevens 6, McVey 9. Cider, Kimbell, McDuff, Bandle and McVey divided first, Stice and Evans second, Meaders third, alone.

Impromptu Match, 5 Ligowsky clay pigeons: West 3, Boone 3, Bandle 4, Verges 4, Pink 4, Judd 2, Boardman 1, Spross 3, Harrison 3, Meaders 3, Parker 4, Stice 4, Goodloe 1, Devore 4, Early 4, Wickersham 5, McHenry 1, Evans 2, Hoffman 4, Kimbell 4. Wickersham won first money, Early second, winner of third unknown.

The visitors from a distance numbered between 50 and 60, and acknowledged themselves highly pleased with the courtesy and treatment extended to them personally and in the different matches throughout the tournament. The live birds, taken as a whole, were an excellent lot—very few "duffers." The shooting of Messrs. Teipel, Budd, Kimble, Bandle, McCartney, Penrose (Pink), Miller, "Parker," McVeigh, West and Stice was the feature. The weather, barring the first day, was simply delightful—not too warm, and clear—in fact, just the weather to please shooters desirous of a good record. Teipel, of Covington, Ky., won the special prize of a $100 ducking boat, donated by Mr. W. Slecht, of this city, for best averages in Matches Nos. 3, 8, 13 and 18; also, the silver water-pitcher, value $40; donated by Messrs. Duhme, of this city, for best average in Matches Nos. 4, 9, 14 and 16. Fred Kimble of Peoria, Ill., won the gun donated by L. C. Smith, of Syracuse, N. Y., and valued at $100, for the best average in Matches Nos. 2, 7, 12 and 17.

Match No. 16.—9 single bluerocks: Modock 6, Teipel 7, Bandle 8, Verges 8, Pink 7, Meaders 8, McVey 6, Stice 8, White 7, Wilson 4, Early 6, McCartney 7, West 6, Stone 5, Hill 7, Shott 6, Miller 7, Bailey 8, Bellamy 8, Goldrick 7, McMurchy 4, Evans 8, Bluerock 7, Cider 5. Bandle first, White, Budd and Hill second, Early third.

Match No. 17.—7 Ligowsky clay pigeons: Meaders 6, Hill 6 Bandle 6, Budd 7, McVey 6, Early 6, Miller 6, Joe H. 2, Cider 5 Goldrick 2, Baker 5, Verges, 4 West 5, Teipel 6, Stice 6, Modoc 3, McMurchy 6, McCartney 4, Pink 3, Evans 7, Shott 5, White 3. First Budd and Evans, Meaders, Hill and McMurchy second, Shott third.

Match No. 18.—Citizen's purse, 7 live birds, 30yds., both barrels: Teipel 7, Pink 6, Parker 5, Bob White 7, Bandle 6, Hill 6, Bemis 3, Eckert 4, Verges 6, McMurchy 6, Budd 6, Early 5, Meaders 7, Miller 7, McCartney 6, Jenkins 4, McVey 4, Evans 7, Tucker 7, Stice 7, DuBray 5, Mason 4, Birnbaum 4. First divided by Teipel, B. White, Meaders, Miller, Evans, Tucker, Stice; Pink, Bandle, Hill, Verges, McMurchy and Budd divided second; third, DuBray, Early and Parker; McVey and Eckert fourth.

Match No. 20.—Seven single American clay birds: Bandle 7, Modoc 4, DuBray 5, Evans 5, Teipel 6, Sam 5, Hunt 4, Goldrick 4, Smyers 2, Baker 3, Verges 6, Cider 4, McVey 7, McCartney 6, Miller 7, Paul 5, Davis 6, Hill 5, Early 6, Nose 4, Baker 3, Stice 7, Budd 5. Bandle, Stice, McVey and Miller first; Verges and Paul second, Budd third.

Impromptu Shoot.—Seven Ligowsky clay-pigeons: Budd 7, Bandle 6, Teipel 5, Goldrick 5, Miller 5, Baker 4, Hill 4, Modoc 5, Verges 6, Meaders 7, Evans 4, Blue Rock 5, Graffe 4, Parker 6, Tucker 5, McVey 6, McCartney 5, West 5, Stice 4, Shott 5, Early 4. First, Budd and Meaders; second, Bandle and Parker; third, Teipel and McCartney.

A marked feature of the shooting, as a whole, revealed that smaller scores were made at the Ligowsky clay-pigeon than any other target by the crack shots, thus giving the average shot a better show and demonstrating many of the following points which your correspondent heard while listening to a heated discussion between those favoring the different targets, and which will doubtless interest your many readers. The advantages claimed for the Ligowsky target over all others were minimum breakage in transportation; no breakage at the trap; no breakage upon striking the ground. The Ligowsky bird rarely breaks when it strikes the ground, on account of the great strength due to the in-turned edge. To test this strength place a clay-pigeon on a level floor, then stand upon same with one foot resting squarely on the center, bearing down with your full weight; the clay-pigeon will not break. Facility of being easily broken when fairly struck by shot. To test this take some other make of clay-bird with a straight edge, hold same lightly and chip at the edges with sharp blows of the heavy blade of a pen-knife, the result is that pieces of the bird will be chipped off without such a break of the whole as would be plainly seen if thus hit in the air by shot. On the other hand, the Ligowsky clay-pigeon, with inturned edge, will be plainly split in two or more parts by exactly similar sharp blows of the same penknife. Its irregular, waving, dipping, birdlike flight is possessed by no other target. All composition targets (on account of their excessive weight as compared to the very light Ligowsky clay pigeon) have a dull, heavy, sodden, regular uniformity of flight, exactly similar to the glass ball flight. The result is, that shooting at the same becomes very soon a uniform mechanical knack, requiring no change of judgment; in a word, monotonous, all contestants making about the same scores. The best sportsmen speedily drop the same, just as they have dropped glass ball shooting. The clays are absolutely unaffected by heat or cold, rain or shine (which cannot be truthfully said of any composition targets, which contract and crack from the cold of winter and expand and soften from the heat of summer; pellets of shots which would break them at 60° will fail to do so at 80° to 90° temperature).

The National Gun Association rules are used mostly; but the sensible feature of classifying shooters into Class A, B and C, and then handicapping them in their respective classes, as adopted at Springfield and New Orleans, is being totally disregarded. The result is that a few old timers are winning the bulk of the purses, and the amateurs, of whom there are hundreds in this vicinity, decline to take part in the tournament. These amateurs, however, have themselves only to blame; for they can only attain the enforcement of such rules by giving a cordial support to such worthy institutions as the National Gun Association. On the whole, however, as compared with others, this tournament is a decided success. Such enterprising managers as Bandle and Whetstone should be encouraged by all.

NEMESIS.

KNOXVILLE, Ten., July 16.—Knoxville Gun Club, medal match, 1 trap, 16yds. rise 3 angles. American clay birds:

F Armstrong	1111110111111011—13	J W Slocum	0011101111010100— 9

Walsh	01110101011011101101—13—102

NEW ORLEANS, July 22.—More than common interest was manifested in the meeting of the Fabian Gun Club this evening, owing to it being their initial shoot with five Marqua-Fisher traps, arranged according to the National Gun Club rules. Team match, 20 clay-pigeons each man: Captain Randolph 7, Jumel 11, G. R. Murrell 12, F. Scharff 7, J. S. Ware 3, Carver 2; total 42 Captain Owen 8, Feltus 13, Williams 4, J. D. Murrell 15, M. Scharff 6, Jas. A. Ware 9; total 55. Gold medal awarded to John D. Murrell for best score, to be worn as long as he can keep it. Mr. Carver was re-awarded the leather medal, to keep until he can get some one else to take it.

PLYMOUTH, Mass., July 24.—The Plympton Gun Club came here to-day by the invitation of the Plymouth Glass Ball Club for a shoot at 5 clay-pigeons and 5 clay birds at 18yds: Plymptons—A. M. Loring 9, G. W. Randall 7, H. R. Mayhall 4, C. A. Randall 5, W. Harris 6. E. B. Loring 5, P. H. Wright 4, L. E. Bradford 4, A. G. Churchill 7, G. H. Randall 5, George Wright 4, M. Mauter 6; total 66. Plymouths—W. C. Hathaway 6, W. D. Bent 8, J. C. Fuller 8, A. S. Rich 5, G. A. Burgess 6, John Holmes 4, I. M. Jackson 5, H. Wright 5, F. Manter 4, James Rogan 5, H. Beytes 8, C. Beytes 5; total 69.

WELLINGTON, Mass., July 24.—The regular shoot of the Wellington Gun Club occured at its grounds to-day. The first prize winners were: 1. Six pigeons—Adams. 2. Six pigeons—Swift. 3. Six balls—Adams and Swift. 4. Six bats—Schaefer. 5. Three pairs bats—Snow. 6. Three pairs pigeons—Wardwell and Wilson. 7. Five pigeons—Wilson and Wardwell. 8. Five pigeons—Carver. 9. Five pigeons—Wilson and Swift. 10. Six blue rocks—Carver and Schaefer. 11. Five pigeons—Wardwell. 12. Five pigeons—Oliver. 13. Five pigeons—Swift.

NEWARK, N. J., July 26.—The Nimrod Club of Newark and the East Orange Gun Club of East Orange shot on Saturday afternoon, July 24, the first of a series of three matches. Saturday's match was at 10 glass balls each, 18 yds. rise, on the grounds of the Nimrod Club, each club team of nine men. Won by the Nimrod Club by 7 balls. The next match will take place on the grounds of the East Orange Club, the early part of August.

ST. LOUIS, July 18.—A match took place to-day between the Diana and the Central Hunting Clubs at the grounds of the latter. 20 Peoria blackbirds, 10yds., losers to pay all expenses:

Diana Hunting Club.

PHILADELPHIA, July 23.—The crack shots of Philadelphia and surrounding towns mustered in force at Olympic Park, on the old Lamb Tavern road, to-day, to inaugurate the shooting tournament under the auspices of the Globe Shot Company. The principal event of the tournament is the contest between the teams representing the various gun clubs for prestige and prizes. The following named clubs entered teams of 10 men each: Baltimore, Delaware and Wawassett clubs, of Wilmington; Camden, Woodbury, Montgomery, of Norristown; Matsunk, of Conshohocken; Globe, South End and Item, of Philadelphia, and the North End, of Frankford, which enters two teams or 20 men. The match is at 10 clay-pigeons and 10 globe flights, 18 and 21yds. respectively. Six of the competing clubs shot to-day with the following result:

Delaware Gun Club.	Clays.	Globes.	T'l.	Montgomery Gun Club.	Clays.	Globes.	T'l.
G Huber	6	6	12	H C Felton	3	2	16

	49	50	108		74	48	122

While this contest occupied the attention of the competing teams and several hundred spectators, sweepstakes were in progress in other parts of the grounds. A. J. Rust, of Philadelphia, walked off with the first prize in that contest.

July 24.—The contest was concluded to-day, the Wingohocking Gun Club winning by a score of 145 hits to 55 misses. The best individual scores were made by W. Garvin and G. Minner, each making 18 hits to 2 misses. Following are the scores of to-day:

Wawasett Gun Club.	Clays.	Globes.	T'l.	Matsunk Gun Club.	Clays.	Globes.	T'l.

THE GOTHAM GUN CLUB has been organized with H. M. King, Pres.; H. T. Oxuard, Vice-Pres.; C. W. Cushier, Sec. and Treas.; J. Conner, Captain, and Dr. A. F. King, Lieut.

WORCESTER, Mass., July 21.—There was a goodly number of the Sportsmen's Club who went to Rutland yesterday. Friends were also present from other places, and a general good time followed. The long ride and the pure bracing air from off the hills of the town, which is the center of the State, gave all a good appetite. Over one hundred were present at dinner. During the day very many tried their hand with clay-pigeons, glass balls and bats. The day, as a whole, was a very enjoyable one.

W. F. CARVER is traveling with Cole's circus company in Dakota.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

Mohican Races every Thursday through the season.
7. New York, Sailing Trophy.
7. Brooklyn, Paddling.
13—27—A.C.A. Meet, Grindstone.
21. Lake St. Louis, Annual, Lachine.

11. New York, Sailing Trophy.
18. Brooklyn, Sailing Races.
25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

OCTOBER.

2. New York, Fall Regatta.

GRINDSTONE AGAIN, AUG. 13-27.

LOOKING backward it seems hardly possible that a whole year has elapsed since the big camp-fire went out on the hill, and the white tents disappeared from its foot in a few short hours; and that two weeks from to-day we shall be making again the journey that all look forward to with such pleasure. That from all points, north, south, east and west, from the Ohio and Alleghany, the broad lakes and the Canadian rivers, from the Hudson, the Delaware and the Connecticut, hurrying by rail or steamer, or more fortunate, idling along by canoe, comes a band of eager pilgrims to their great Mecca, the A. C. A. meet. Brief as it is, the time seems long until the little pier in Eel Bay will open into view, a cheer from the hill will greet the new arrivals, and the hurry and bustle of welcomes, inquiries, answers, tent pitching, introductions, unpacking, and launching for a run to Squaw Point, will begin. This year promises to be a notable one in the Association annals, as the general interest in canoeing and in the meet has grown greatly since last summer, while a special interest is added by the visit for the first time to this country of a party of English canoeists. The trophy race also will afford additional interest to canoeists and spectators.

A very large attendance is expected, but there are many who should be there who as yet do not intend to come. There are a very large number of clubs and individuals who even now do not fully understand the end and aims of the Association, and to them we can only give the advice to come once and see what it is and what it is doing for canoeing. In every club, even the smallest, there should be at least one member who can afford time and money for the trip, and it will be to the direct benefit of the club to send a representative to the camp, even if the expense has to be partly borne by the club. As will be seen by the following rates, the expense of transportation will vary from $10 to $20 for ordinary distances. While in camp the cost of living is $1 per day, or as low as 40 or 50 cts. if the canoeist camps and cooks for himself, as most do. No man who has not visited a camp can understand fully what canoeing is, nor can he, by reading or other means, gain so full a knowledge of modern canoes and their improvements. Boats of every kind may be seen and tried, sails and gear of all sorts may be examined, canoeing of all shades of opinion and from all localities may be met, and in no other place can such pleasant and lasting friendships be formed as among the members of the A. C. A., drawn together solely by a common love of their sport and a devotion to the elevating influences of an outdoor life.

It is desirable this year to make as large a turnout as possible in honor of our visitors and also to do credit before them to the National Association, of which its founders and members are so justly proud, and we urge every canoeist who can do so to be present, and every club to send one or more representatives. With its late rapid growth questions are constantly arising as to the policy and future course of the Association, which it is very desirable should be discussed and voted on by all sections in order to retain the national character, but this can only be done by the presence of a thoroughly representative body gathered from all points. Last season a very important change was made, looking to the establishment of other branches, and the canoeists of New England have already taken a step in the direction of a local branch. What form the matter will take is as yet uncertain, but it is highly desirable that all sections be represented in whatever action is taken, especially the West. Whatever the outcome of this movement may be there is no danger that it will imperil the interests in the present A. C. A., or that it will injure the meets. The probabilities are that it will greatly strengthen canoeing locally and provide meets at several points which can be reached with little time and at small expense by a large number. As we have frequently pointed out, such a plan, if carried out under the leadership of the A. C. A., can but strengthen it, bringing in more members and each division working up more thoroughly its local field, while no member will feel bound to attend his home meet. The presence of the officers at any meet will make it the main event of the year and draw together the same good friends from many places who now look at the A. C. A. camp as the pleasantest part of the year, when old friends and companions meet freely together. With some such plan as this in prospect we can invite all canoeists to join the camp at Grindstone and can assure them of a hearty welcome. How to get there may be learned from the following circular from Commodore Rathbun:

To the Members of the A. C. A.:

GENTLEMEN—I beg to advise that the following transportation arrangements have made, viz.:

New York Central & Hudson River R. R.—From the following points to Clayton and return, canoes and camp outfit free: New York $12.50, Yonkers $12.50, Sing Sing $12.50, Newburgh $11, Poughkeepsie $10.50, Rhinebeck $10, Albany $8, Troy $8, Schneectady $8, Amsterdam $7.50, Auburn $6, Rochester $7, Buffalo $9.50, Niagara Falls $9.50. Tickets on sale from Aug. 2 to 27, and good until Sept. 1. Membership certificates must be presented. For further information apply to Mr. M. C. Roach, 413 Broadway, New York.

West Shore R. R.—New York $12.50, Highland $10.50, Kingston $10, Albany $8, Port Jackson $7.50, Rochester $7, Buffalo $9.50, Niagara Falls $9.50. Tickets on sale from Aug. 2 to 27, and good until Sept. 1. Membership certificates must be presented. Canoes and camp outfit free. For further information, apply to Mr. Henry Monett, Gen. Pass. Agt., New York, N. Y.

Rome, Watertown & Ogdensburgh R. R.—Utica $5, Syracuse via Cape Vincent $5, Rochester via Charlotte $6.25, Niagara Falls via Lewiston $7.25, Canton $2.70, Oswego $4. Canoes and camp outfit free. Tickets on sale from Aug. 10 and good until Sept. 1; membership tickets must be presented. For further information apply to Theo. Butterfield, General Passenger Agent, Oswego, N. Y. Note—The Utica & Black River Railway is now operated by this company.

Boston & Albany R. R.—Fare to Albany from points on this line will be (2) two cents per mile each way. Apply to Mr. A. S. Hanson, General Passenger Agent, Boston, for orders for the special tickets.

New York, Ontario & Western R. R.—From New York to Clayton and return, $12.50. Canoes and camp outfit free. Tickets good until Oct. 1. For further information apply to Mr. J. C. Anderson, General Passenger Agent, 18 Exchange place, New York city.

New York, Chicago & St. Louis R. R.—Special rates will be given on application to Mr. B. F. Horner, General Passenger Agent at Cleveland, Ohio.

Central Vermont R. R.—No arrangements yet made. Address Mr. S. W. Cummings, General Passenger Agent, St. Albans, Vt.

Grand Trunk R. R.—From the following points to Gananoque and return, canoes and camp outfit free, 1½ single fares for round trip: Hamilton, Whitby, Lindsay, Montreal, Toronto, Peterboro, Deseronto, Cobourg, Lakefield, Brockville. Tickets on sale from Aug. 1 and good until Aug. 21.

Richelieu & Ontario Navigation Co.—From the following points to Clayton and return, canoes and camp outfit free, one single fare and a half, including meals and berths, except between Montreal and Quebec where meals and berths are extra: Toronto, Kingston, Brockville, Montreal and Quebec. Membership certificates must be presented. All canoe and camp equipage carried free will be at owner's risk against damage of any kind.

The railways are prepared to supply special baggage cars when the number of canoes to be shipped warrant it. I would suggest the advisability of members taking advantage of this offer when possible, the danger of boats being damaged in a special car being small.

All freight for the camp from the United States should be shipped to the care of Mr. I. Palen, Clayton, N. Y., Agent R. W. & O. R. R., and from Canada to the care of Mr. B. Barber, Gananoque, Ont., Agent The Thousand Islands R. R.

I shall be pleased to assist any member of the Association in securing further special rates on being advised.

DESERONTO, Ont., July 23. F. S. RATHBUN, Commodore.

CLUB AND OFFICERS' FLAGS.

Editor Forest and Stream:

I notice an item in the June *American Canoeist* in regard to officers' flags—alluding to those of the A. C. A. and the New York C. C. being similar—and suggesting that all clubs adopt similar ones. Our club, the Oakland, has adopted simple and efficient devices to distinguish the officers, without necessitating the use of a separate flag, viz., Commodore, a blue anchor; Vice-Commodore, a red anchor; Secretary, a red quill. The device is neatly painted or worked on the face of one white star. It seems to me nearly every club flag which I have seen could very easily have the same little anchor or quill tucked in somewhere without spoiling the symmetry of the design, and make a very neat general device for the officers' flags throughout the country.

OAKLAND, Cal., July 8. W. W. BLOW, Com. Oakland C. C.

[It was suggested at one time that in place of flying the A. C. A. and club flags, each club whose members belonged to the A. C. A. should incorporate in its flag the colors of the Association; for instance, a red and white triangle in the upper corner, like the Union Jack in our National ensign. Both this plan and that of our correspondent are good, in that they reduce the number of flags while denoting all that is necessary.

A NEW FOLDING CENTERBOARD.

WE have received from the inventor, Mr. T. Brough, of Gananoque, Can., a new centerboard for canoes and skiffs which, on examination, seems to possess some valuable features. In general plan it is a fanboard with five leaves or blades, but the lower one is double, forming a box about 5-16in. thick and beveled on its lower edge, in which the other leaves fold. It is claimed that the stiffness of the board is greatly increased and that it is the same on each tack. Another advantage is that the board when lowered forms a perfect sector of a circle, with no triangular space left open between the after end and keel, while there is no chance to foul with lines or weeds. The blades are pivoted at the fore end and raised and lowered by a separate lever inclosed in a compact casting soldered to the top of the box, and making a joint which is watertight. We have not had the opportunity to put the board to an actual sailing test, but after a careful examination there seems to be no reason why it should not work most satisfactorily. It is made in three sizes, 23×3½ box, 26×4 and 27×4½, the blades being 22×4, 25×4½ and 26×5. It is attached to a flat keel by cutting a slot and screwing the metal trunk down on the keel or keelson. The board is operated by a detached wrench used on either side.

THE COMING A. C. A. MEET.

Editor Forest and Stream:

Within two weeks of your next issue the sixth annual meet of the A. C. A. will be in progress. I wonder if each member has a realizing sense of this fact. To any who have not, or who are in doubt about attending, I would address myself most urgently, for this will be a most important year in the Association's history, and a very large attendance is to be desired.

The air recently has been full of a vague feeling of doubt which is gradually solidifying into the assertion "this year's will be the last general meet of the A. C. A." The only visible ground for such a belief is the action of the New England clubs in forming a "division." Why should we assume that the whole Association is to be split up into small branches? We still have Canada and the three States of New York, New Jersey and Pennsylvania, even if the West chooses to separate, which, so far as I have been informed, has not been determined upon as yet. If these hold together, as I for one sincerely hope they will, their future camps should carry sufficient interest to draw a larger or smaller attendance from other quarters, and so still retain something of national importance; whereas a smaller sub-division will result simply in a series of local meets, and nothing more than the name will be left of the A. C. A.

I have written some of my own opinions upon the present situation, whether others will agree with me can only be learned by the presence of a full representation at the annual meeting on Grindstone Island on the 27th of August. Let each individual make a special effort to be in camp. Let the strong clubs send each a full delegation. And let each man give some thought to the questions which must arise, and be prepared with his counsel and his vote to join in their determination. READE W. BAILEY.

ROYAL C. C.—A match was sailed on Saturday last, open to any description of canoe, under girth measurement rating, for two prizes, presented by Major Howland Roberts:

Nautilus	Mr. Baden Powell.	Sabrina	Mr. Rede Turner.
Pearl 1885	Mr. E. B. Tredwen.	Spindrift	Major Roberts.
Akaroa	Mr. A. B. Ingram.	Foamfleck	Mr. H. W. Roberts.
Pearl 1886	Mr. W. Stewart.	Catspaw	Mr. Langdon Down.
Anonyma	Mr. R. H. Harrison.		

All started except Spindrift and Foamfleck, who arrived too late. With such a good entry it was a pity that the wind was so paltry, and rendered anything like true sailing out of the question. Mr. Stewart, in the 1886 Pearl, took the lead from the first, and was never headed, finally winning by 150yds. The times of the rounds were as under:

	1st Round.	2d Round.	Finish.
Pearl 1886	4 48 00	5 14 00	5 39 30
Nautilus	4 52 00	5 19 30	5 44 30
Catspaw	4 50 00	5 20 00	5 50 00
Pearl 1885	4 53 00	5 31 30	5 55 00
Akaroa	5 02 00	5 34 00	6 03 00
Sabrina	5 04 30	5 37 00	6 01 00
Anonyma	Not timed.		

All were more or less hampered by the crowd of rowing boats passing up the reach, Saturday afternoon being a rather bad time for sailing on the Thames.—*Field, July* 17.

BROOKLYN C. C. CHALLENGE CUP.—The fifth race for this trophy came off on July 24, at 4 o'clock, at Bay Ridge, the holder, Mr. Whitlock, being challenged by Mr. C. V. R. Schuyler. Rigs limited to 75ft., course twice around a 1½m. triangular course. Mr. Whitlock in the Guenn was never headed, making the very quick time of 35m. 30s. Mr. Wilkin's wresting third place from Mr. Schuyler was a remarkable piece of handling, as his Canadian canoe carries but 35ft. in her two sails, and he won his place on the last two legs. We are all coming to smooth skins here. Give them a chance and they win every time. A paddling race followed, won by Mr. Schuyler:

Sailing Challenge Cup.

	Start.	1st Round.	Finish.	Time.
Guenn, W. Whitlock	4 49 00	5 06 30	5 24 30	35 30
Minx, M. V. Brokaw	4 49 00	5 09 30	5 29 45	39 45
Tip Top, R. J. Wilkin	4 49 00	5 10 15	5 30 30	41 30
Lone Star, C. V. R. Schuyler	4 49 30	5 10 00	5 32 00	42 30
Edna, C. Balmanno	4 49 30	5 12 30	5 33 00	43 30
Nettie, Mr. Ward	4 50 00	5 13 00	5 35 00	45 00

Paddling ½ Mile.

	Start.	Finish.	Time.
Lone Star, C. V. R. Schuyler	6 08 00	6 13 45	05 45
Tip Top, R. J. Wilkin	6 08 00	6 14 00	06 00
Minx, M. V. Brokaw	6 08 00	6 15 00	07 00

QUAKER CITY C. C.—The Q. C. C. held its regular semi-annual meeting on June 30, at which the following officers were elected to serve the ensuing six months; S. L. Leary, Com.; Jas. H. Barton, Vice-Com.; A. A. Jackson, Sec.-Treas. The club is in a flourishing condition, numbering twelve active members and nine canoes. Canoe house at Cooper's Point, N. J., adjoining the Phila. C. C. houses. Our sailing device is a red clover leaf, 12in. across, in peak of mainsail. Club signal is a pointed burgee 12×18in., field of blue, partly covered by a red triangle 9×12in. The date for the sailing and paddling races has not been definitely fixed.

HARRISBURG C. C. CRUISE.—The Harrisburg C. C. has just finished a cruise of 9 days down the Susquehanna, leaving Harrisburg on July 13 and reaching Baltimore on July 22. Six canoeists composed the party, Com. W. W. Sayford, Vice-Com. G. G. McFarland, and Messrs. Snyder, Flukinger, Pitcairn and Newby. The distance run was 116 miles and the canoes were of canvas. Some very rough weather was met with on the bay, but all arrived safely. They returned by rail to Harrisburg.

A. C. A. MEMBERSHIP.—The list of names is still growing at a greater rate than ever before. The new ones this week are Messrs. F. Perry Sherwood, Southport, Conn.; Wm. C. Sterling, Poughkeepsie, N. Y.; Clarence E. Wells, Canton, N. Y.; A. K. Strong, Ogdensburg, N. Y.; S. H. Kirkpatrick, Philadelphia, Pa. Schuylerville, N. Y., is now a money-order office, and remittances to Secretary Neidé may be made through it.

OSHKOSH C. C.—The officers lately elected are: Commodore, Otto Schloert; Vice-Commodore, W. A. Raiford; Secretary and Treasurer, Gus A. Timm. The club has lately completed a new boat house 22x40ft. On June 17 the annual regatta was held on Lake Winnebago. A high wind prevailed and only two canoes started, Rene, Will Sessions; and Meta, Gus A. Timm. After a very rough sail Meta won in 40m., with Rena 3m. 15s. astern.

PEQUOT C. C.—On June 19 the Pequot C. C., of New Haven, Conn., was organized with the following officers: Commodore, R. P. Wakeman; Vice-Commodore, F. P. Sherwood; Secretary and Treasurer, F. P. Lewis. The club desires to unite as far as possible the canoeists of the north shore of the Sound, and to that end invites correspondence with other canoeists and extends to them such aid as it can give. The burgee is a white field with red Greek cross with white center.

Yachting.

FIXTURES.

JULY.

30. L. Y. R. A., Belleville.
31. Sandy Bay, Ladies', Rockport
31. Beverly, Cham., Swampscott.
31. Hull, Cruise, Eastward.

AUGUST.

2. Sandy Bay, Open, Rockport.
2. L. R. A. Kingston.
4. N. Y. C., Annual Cruise.
6. L. Y. R. A., Oswego.

18. Great Head, Club, Winthrop.
19. Quaker City, Review, Cruise.
25. Buffalo, Club, Lake Erie.
28. Beverly, Club, Nahant.

BEVERLY Y. C.

THE following programme for the open regatta of the Beverly Y. C. to be held at Marblehead on Sept. 4, starting at 12:10 P. M., is given in full, as the race promises to be the largest ever held, and should invite many outside entries. There are plenty of fast yachts about New York which are eligible in the various classes and which are perfectly well able to make the trip, and once in New England waters they will find other races and prizes worth competing for. The full programme is as follows:

The prizes will be cash, and second, third, fourth and fifth prizes will be given only where three, four, five, six or more yachts, respectively, start. The prizes will be as follows: First class, C. B.—First $40, second $25, third $20. First class, keels—First, $40, second $25, third $20. Second class, C. B.—First $40, second $20, third $15. Second class, keels—First $40, second $20, third $15, fourth $10. Third class, C. B.—First $30, second $20, third $15, fourth $10. Third class, keels—First $30, second $20, third $15. Fourth class, C. B.—First $20, second $20, third $15, fourth $10, fifth $5. Fourth class, keels—First $30, second $20, third $15, fourth $10, fifth $5. Fifth class, keels—First $30, second $20, third $15, fourth $10, fifth $5. The prizes will be sailed for with the time allowance of the Beverly Yacht Club. The race will be flying, the yachts crossing a line between the judges' yacht and stakeboat moored off the Eastern Yacht Club House. Race will be sailed under the N. E. Y. R. Association and the time allowance of the Beverly Yacht Club. Time allowance will be based on waterline length and 1-5 overhang aft, but classification will be based on waterline length. The race, however, is open to any boat, whether belonging to any club or not, and with or without the N. E. Y. R. Association numbers on their sails.

As soon as the courses are decided on, white flags bearing their numbers will be displayed on the judges' yacht. Six whistles will be blown for the start, as follows, each class having ten minutes in which to cross the line: 12:10, first or preparatory signal, three sharp whistles five minutes before the start, when a blue flag will be hoisted; 12:15, second signal, a long whistle, when blue flag will be lowered; start for first class, centerboards and keels; ten minutes allowed to cross the line; 12:25, third signal, a long whistle, second class centerboards and keels to start; limit for first class, 12:35; fourth signal, a long whistle, third class centerboards and keels to start; limit for second class, 12:45; fifth signal, a long whistle, fourth class centerboards and keels to start; limit for third class, 12:55; sixth signal, a long whistle, fifth class to start, ten minutes being allowed in which to cross the line: limit for fourth class.

The first class shall include all yachts measuring over 30ft. and not over 40ft. waterline; all yachts measuring over 25ft. and not over 30ft. shall form the second class; those measuring over 21ft. and not over 25ft. shall form the third class; all yachts measuring over 17ft. and not over 21ft. shall form the fourth class, and those of 17ft. and under the fifth class. In the first, second, third and fourth classes separate prizes will be awarded to centerboards and keels.

Sails—Sails will be carried as follows in the fourth and fifth classes: Schooners and cutters, mainsail, foresail and jib; sloops, mainsail and jib; catboats, mainsail. No restrictions in regard to sails in the first, second and third classes.

Crews—The club rule requiring the yachts to be sailed by members of the club, will be waived for this regatta. Yachts to be allowed to carry men as follows: One for every 5ft. sailing length and fractional part thereof.

Ballast—No trimming by dead weight allowed during the race.

Entries—All yachts, whether belonging to the club or not, must enter in writing, giving name of yacht, owner, club or port, rig, C. B. or K., length on waterline and overhang aft. Entries must be sent to the secretary of the Regatta Committee on or before 2 o'clock P. M., Fridry, Sept. 3, addressed to W. Lloyd Jeffries, Swampscott, or 78 Devonshire street, Boston. No entrance fee will be charged.

Yachts having certificates of length on waterline from the measurer of any yacht club will report their length to the secretary of the Regatta Committe; all other should be at the starting point in time to be measured; the club reserving the right to remeasure any yacht, and in case of conflict of measurement to take its own.

Protests—All protests must be made to the judges' boat within half an hour after the race.

The courses are, for First Class—1. From starting point, leaving black buoys Nos. 5 and 7 on starboard, Half-Way Rock on starboard, Pig Rock stakes (three red buoys) on starboard, stakeboat off Spindle Rock at entrance to Swampscott Harbor, on port, Pig Rock stakes and Half-Way Rock on port, black buoys 3 and 5 on port, to judges' yacht—19 miles. 2. From starting point, leaving black buoys Nos. 5 and 3 on starboard, Tom Moore's Rock, Tinker's Island, Roaring Bull and Big Rock stakes on starboard, Whistling buoy off the Graves on port, Half-Way Rock on port, black buoys 3 and 5 on port to judges' yacht—20½ miles. 3. From starting point, leaving black buoys Nos. 5 and 3 on starboard. Half-Way Rock on starboard, Whistling buoy off the Graves on starboard, Pig Rock stakes, Roaring Bull, Tinker's Island, Tom Moore's Rock and black buoys No. 3 and 5 on port, to judges' yacht—20½ miles.

For Second Class—4. From starting point, leaving black buoys Nos. 5 and 3 on starboard, Tom Moore's Rock, Tinker's Island, Roaring Bull, and Pig Rock stakes on starboard, stake boat north of Egg Rock on port, Half-Way Rock on port, black buoys Nos. 3 and 5 on port, to judges' yacht—15¾ miles. 5. Leaving black buoys Nos. 5 and 3 on starboard, stakeboat north of Egg Rock on starboard, Pig Rock stakes, Roaring Bull, Tinker's Island, Tom Moore's Rock, and black buoys Nos. 3 and 5 on port, to judges' yacht—15¾ miles. 6. From starting point, leaving black buoys 5 and 3, Tom Moore's rock, Tinker's Island, Roaring Bull and Pig Rock stakes on starboard, stakeboat off Spindle Rock at entrance to Swampscott harbor on port, Pig Rock stakes, Roaring Bull, Tinker's Island, Tom Moore's Rock, and black buoys 3 and 5 on port, to judges' yacht—13¾ miles. 7. From starting point, leaving black buoys 5 and 3, Tom Moore's Rock, Tinker's Island, Roaring Bull, and Pig Rock stakes on starboard, stakeboat north of Egg Rock and stakeboat off Spindle Rock (Swampscott) on starboard, Pig Rock stakes, Roaring Bull, Tinker's Island, Tom Moore's rock and black buoys 3 and 5 on port to judges' yacht—13¼ miles. 8. Same as 10. 9. Same as 11.

For Third Class—10. Leaving red buoy No. 6 on starboard, Bowditch's ledge beacon on starboard, red buoy No. 2 on Gale's ledge on starboard, stakeboat anchored off southeast breakers on starboard, Half-Way rock on starboard, black buoys Nos. 3 and 5 on port, to judges' yacht; 10½ miles. 11. Leaving black buoys 5 and 3 on starboard, Half-Way Rock, stakeboat anchored off southeast breakers, red buoy No. 2 on Gale's ledge, Bowditch's ledge beacon and red buoy No. 6 on port, to judges' yacht; 10½ miles. 12. Leaving black buoys 5 and 3, Tom Moore's rock, Tinker's Island and Roaring Bull on starboard, buoy on other breaker off Pig rocks on port, Half-Way rock on port, buoys 3 and 5 on port, to judges' yacht; 10 miles. 13. Leaving buoys 6 and 3, Half-Way rock and buoy on outer Pig breaker on starboard, Roaring Bull, Tinker's Island, Tom Moore's rock and buoys 3 and 5 on port, to judges' yacht; 10 miles.

For Fourth and Fifth Classes—14. Leaving black buoys 5 and 3 on starboard, stakeboat one mile south of Marblehead rock on port, Satan buoy on port, Gooseberry ledge buoy on port, Martin's Rock buoy and black buoy No. 5 on port, to judges' yacht; 7¾ miles. 15. Leaving black buoy 5, Martin's rock buoy, Gooseberry ledge buoy, Satan buoy and stakeboat one mile south of Marblehead rock on starboard, black buoys 3 and 5 on port, to judges' yacht; 7¾ miles. 16. Leaving red buoy No. 6 on starboard, Bowditch's ledge beacon on port, stakeboat off Curtis Point on port, black buoys 7, 5 and 3 on starboard, black buoy on Selman's berth on starboard, to judges' yacht; 7½ miles. 17. Leaving black buoy on Selman's berth on port, black buoys Nos. 3, 5 and 7 on port, stakeboat off Curtis Point on starboard, Bowditch's ledge beacon on starboard, red buoy No. 6 on port, to judges' yacht; 7½ miles. Note to courses 16 and 17. Black buoys 3, 5 and 7 are the regular port buoys at entrance to Beverly harbor.

The following gentlemen have kindly consented to act as judges: E. V. R. Thayer, W. A. Jeffries, Daniel Appleton, Gouverneur Kortright, John Dane, George A. Goddard, W. Lloyd Jeffries. The Regatta Committee are Messrs. George A. Goddard, chairman; Charles Francis Adams, 3d; John Dane, George H. Lyman, Jr., W. Lloyd Jeffries, secretary.

The 110th regatta, the second for the Buzzard's Bay pennant, was sailed at Monument Beach July 24 in a very heavy S. W. wind. The race in each class was very exciting, all the boats having in three or four reefs. In first class Mattie and Surprise had it nip and tuck for pennant, but off the black buoy near the start the lacing on Mattie's gaff parted, letting the head of the sail go clear of the gaff except at the corners. This, of course, proved a serious handicap to windward. In second class Flirt at times took a good lead, but when three-quarters of the way to the windward mark shipped a heavy sea and lost several minutes pumping out, giving Beatrice time to catch her. From here in it was a very close race between Ramona, a new boat, properly in third class, but chose to start in second class. She was short-handed and dropped astern, so after going round the course went home to her moorings and did not cross finish line. In third class size told, and Fannie and Eleanor both overpowered Petrel, though the latter saved second place on allowance. Mystery in jibing around last buoy got her gaff caught over the masthead, and came in under a triangular sail. Courses as usual, 11 miles in first and second classes, 7½ in third. Judges' yacht, Maud, B. Y. C. Judge, W. Lloyd Jeffries.

	Length.	Actual.	Corrected.
FIRST CLASS CATS.			
Surprise	27.05	1 59 27	1 48 54
Mattie	28.10	1 59 53	1 50 59
SECOND CLASS CATS.			
Flirt	25.02	2 12 07	1 59 14
Beatrice	24.10	2 12 13	1 58 55
Lestris	24.02	2 17 08	2 03 01
Ramona	24.01	Withdrew.	
THIRD CLASS CATS.			
Fannie	23.10	1 37 37	1 27 42
Eleanor	23.08	1 38 27	1 28 23
Petrel	20.07	1 41 23	1 28 20
Mystery	21.11	1 45 32	1 33 51

Surprise, Beatrice and Fannie take firsts, Flirt and Petrel take seconds, Fannie takes and holds pennant, Surprise and Flirt take pennants, tieing Mattie and Lestris.

BLUE WITH A GOLD CASTLE.

INTERLAKE Y. A. CRUISE AND RACES.

THE first annual meet of the Interlake Yachting Association, held at Detroit and Put-in-Bay from July 5 to 11 inclusive, was without doubt the largest and most successful meeting of yachtsmen ever held on fresh water, and one that would have been a credit to many of the older clubs of the eastern coast. Organized only last season by the Cleveland, Toledo and Michigan yacht clubs, it has since added to its list the Ohio, Put-in-Bay and Monroe clubs, probably being the direct means of the formation of the last named two, and now has enrolled upon its membership register upward of 600 active members, and a fleet consisting of 12 steam yachts, 10 schooners, 56 sloops and 4 cutters. The object of this Association is to bring together annually, for one week at least, all the yacht clubs of the lakes, and by holding regattas, squadron sails, afternoon cruises, etc., not only create a more extended acquaintanceship among yachtsmen but also promote yachting interests in general.

The annual cruise of this season opened on Monday, July 5, with a regatta for the second, fourth and fifth classes, on Lake St. Clair, but owing to an extremely light breeze the yachts failed to make the course in the prescribed time, and the race had to be resailed on the following day. On some accounts this was a disappointment to many; but, taken upon the whole, perhaps the postponement was beneficial to the Interlake, for it enabled the judges to start the largest number of yachts in one regatta ever known on the lakes, the race for first and third classes having also been set for that day, thereby greatly increasing the number of starters. The course sailed was twenty-one miles in length, triangular shape, starting from a buoy off Grosse Point, Lake St. Clair, thence seven miles due east to and around a stakeboat, thence seven miles N.W. by N. ½ N. to second stakeboat, thence seven miles S.W. by S. ½ S. to and across the starting line. The fifth class, to and around only the first stakeboat and return. The wind at the start was about S.S.W. and at the rate of about six miles an hour. At 11:02 the first gun was fired and ten minutes later the starting gun announced that the time for the second, fourth and fifth classes cross the line was at hand and that only ten minutes would elapse before the last gun for those classes and the starting gun for the first and third classes would be given. At 11:32 the final gun was fired. The first leg was sailed with booms well over to port, but upon nearing the first stakeboat the wind flattened out almost to a dead calm. However, a few of the leaders managed to drift round that mark, when a light breeze from the southeast set in and sent them away for second stake with spinnakers set to starboard. The breeze continued to freshen, and, after turning this stake, hauled around to the southwest, requiring a beat home.

The following table gives a summary of the race, the initials indicating as follows: M.—Michigan Y. C., Detroit, Mich. O.—Ohio Y. C., Toledo, O. T.—Toledo Y. C., Toledo, O. C.—Cleveland Y. C., Cleveland, O. Mon.—Monroe Y. C., Monroe, Mich. P.—Put-in-Bay Y. C., Put-in-Bay, O.

Adelle M.	Not timed.			

On Monday evening there was a grand display of fireworks from the entire fleet at the anchorage of the Michigan Y. C., at Detroit, and refreshments were served at the club house. On Tuesday evening the yachtsmen assembled at the same place for the report of the judges and distribution of prizes. The affairs at Detroit were under the auspices of the Michigan Y. C., and great credit is due the officers and members of that organization for the competent way in which all arrangements were perfected and the courteous manner in which the yachtsmen were received and entertained during their stay at that port.

Wednesday, July 7, at 10:30 A. M., with the flagship Louise leading, the fleet started on their squadron cruise to the Lake Erie Islands, a distance of 56 miles, the orders down the river being "flagship will lead, other vessels follow," but on reaching Bar Point, or the mouth of Detroit River, the orders were changed to "sail direct for Put-in-Bay," and then commenced a grand race across the lake. The wind up to this time had been light from the northeast, but here it increased to a gale, the Signal Service reporting it as blowing at the rate of 35 to 40 miles per hour, and some of the smaller craft, thinking discretion the better part of valor, put back to Amherstburg for the night. However, about 25 of the boats ventured across, some scudding under staysails, some with peaks dropped and others under close-reefed canvas, the wind being well aft and sea very heavy.

The large sloop Cora was first to drop anchor in the bay, at 6:45 P. M., followed three minutes later by the new Cleveland sloop Marietta, and at 7:15 the balance of the fleet began to arrive, with the Alice Enright, of the Toledo Y. C., in the lead. As the Cora, by permission of the Commodore, had left Detroit River fully fifty minutes in advance of the squadron, it was a decided victory for the new boat on actual sailing time, although the Cora is 20ft. longer on the waterline, and the honors in first class were awarded accordingly. Among the second class yachts the Alice Enright, a new deep draft sloop built for Com. A. W. Machen, of the Toledo Y. C., showed the greatest speed and the best seagoing qualities, having fairly outsailed all yachts in her class, and her actual sailing time being close to that of the first class boats. The Jennie J., of Detroit, a deep keel sloop, and the Ida, of Cleveland, were the only third class yachts to attempt the long run across the lake, the remainder, together with all the fourth and fifth classes, having put in at the mouth of the river for the night.

In the evening a grand ball was given at Rehberg's, on Middle Bass Island. Thursday was ladies' day, the yachts cruising among the islands during the afternoon and closing with a complimentary hop and concert in the evening at the Toledo club house, also on Middle Bass.

Friday, the proverbial unlucky day among sailors, was the time set for a regatta for the second, fourth and fifth classes, but owing to lack of wind it met with the same fate as the first day's regatta at Lake St. Clair, and had to be sailed on the following day.

Saturday opened with a fine whole-sail breeze from the north, but gradually died out until some parts of the course were but a drifting match. However, to avoid any futher postponement, the committee waived the time limit (five hours and a quarter) and declared the race a finish, although the fastest time over the course was 6 hours and 50min. The course for first and second classes was from a stake boat off Gibraltar Island 7 miles N. N. W., thence 7 miles S. W. ½ S., thence 7 miles E. ¾ S. to and across the starting line. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS—35FT. W. L.				
Marietta, C.	9 43 30	5 12 00	7 29 30	7 13 24
Cora, C.	9 32 15	Not timed.		
SECOND CLASS—30FT. AND UNDER 35FT. W. L.				
Alice Enright, T.	9 45 55	4 39 27	6 53 32	6 50 44
Fanchon, O.	9 46 40	4 43 51	6 57 11	6 52 59
Scud, O.	9 45 14	4 49 08	7 03 54	7 01 06
Oberon, T.	9 44 10	4 56 20	7 12 10	7 09 22
Sylvia, M.	9 44 45	5 10 11	7 25 26	7 25 26
Kate Graham, O.	9 42 10	Not timed at finish.		
Osprey, T.	9 42 45	Not timed at finish.		
Cora V., P.	9 43 40	Not timed at finish.		
Lulu, T.	9 47 37	Not timed at finish.		
THIRD CLASS—25FT. AND UNDER 30FT. W. L.				
Jennie J., M.	9 58 25	3 44 00	5 47 35	5 47 35
Daisy, T.	9 59 02	4 26 30	6 27 28	6 25 46

Ida, C.	9 58 16	Not timed.		
FOURTH CLASS—20FT. AND UNDER 25FT. W. L.				
Madaline, M.	9 58 05	4 23 10	6 25 05	6 25 05
Eole, C.	10 01 44	4 32 32	6 30 48	6 29 52
Falcon, P.	9 57 37	Not timed.		
FIFTH CLASS—UNDER 20FT. W. L.				
Vixen, P.	9 58 50	5 16 41	7 17 51	7 17 51
Ripple, P.	9 58 50	5 23 57	7 25 17	7 24 49

At the finish the wind had become so light that the judges did not wait to take the time of many of the yachts.

On Friday evening the yachtsmen and their lady friends enjoyed a grand hop at Wehrle's, and on Saturday evening the annual meet closed with a ball and banquet at the Beebe House, given by the Put-in-Bay Y. C., on which occasion the prizes won in the regattas were awarded.

The arrangements at the Islands were under the auspices of the Put-in-Bay Y. C., and the manner in which their plans were carried out was certainly very creditable to them and showed they had been energetic in their efforts to make their part a success. During the week the annual meeting of the board of directors of the Inter-Lake Yachting Association was held and the following officers and committee were elected to serve for the following year, viz.: Commodore, Hon. G. W. Gardner, Cleveland; Vice-Commodore, Henry C. Hart, Detroit; Rear Commodore, A. W. Machen, Toledo; Secretary and Treasurer, J. S. Williams, Cleveland; Fleet Surgeon, Dr. A. E. Claypool, Toledo; Measurer, E. P. Day, Toledo; Assistant Measurer, A. L. Albertson, Detroit; Surveyor, M. T. Huntley, Toledo. Regatta Committee—Fred Fayram, Michigan Y. C.; W. Scott Robinson, Cleveland Y. C.; J. W. Hepburn, Toledo Y. C.; M. A. Quinn, Ohio Y. C.; G. H. Beebe, Put-in-Bay Y. C. The newly elected board of directors will meet at different periods during the winter and arrange for the annual cruise of 1887. Several other clubs on the lakes have already signified their intentions of joining the Association, and it is expected that next season will see a fleet twice the size of the one present this year.

A RACE OF LOBSTER MEN.—A race of lobster boats was sailed on July 24 off Hull, under the following conditions: Sails, regular lobstermen's working sails fore and main; crews, two men to each boat. No restrictions in regard to ballast. No oars allowed on board. The wind was S. E. at 3:30, when the race started over the following course: Across line between judges boat and flagboat to Black Brush buoy No. 1, leaving it on starboard; thence to Hull Y. C. barrel off Harry's rocks, leaving it on starboard; thence through Hull gut to black buoy on Wilson's ledge, leaving it on starboard; thence to Hunt's ledge buoy, leaving it on port; thence to George's Island buoy, leaving it on port; thence to Wilson's ledge buoy, leaving it on port; thence through Hull gut and across line between judges' boat and flag boats. The times were:

	Elapsed.	Corrected.
Holly, A. B. Mitchell	1 54 40	1 54 12
Emily, L. Galiano	1 51 39	not taken
Puritan, George L. Souther	1 58 21	1 24 10
Æolus, J. L. Mitchell	1 59 38	1 25 27
Cricket, A. Galiano	2 01 39	1 31 18
Clytie, F. L. James	2 05 39	1 31 35
Rose, H. W. Mitchell	2 05 55	1 39 51
Oregon, F. B. Mitchell	2 08 48	1 33 13
Priscilla, Joshua James	2 10 11	1 37 28

The prizes were: First, $25; second, $20; third, $15; fourth, $10; fifth, $5. The judges were: Francis McKann, Dr. W. H. Litchfield and S. H. Rhodes.

THE FOUR RACERS.—Puritan is still about Naushon and New Bedford, but will dock at Fairhaven on Friday. Mayflower is at Marblehead and Atlantic at Bay Ridge. Priscilla was on Lissenden's railway at Elm Park last week, where her bottom was thoroughly cleaned and painted with red lead, afterward being potlead, so that it is now in good condition for future finishing with more potlead. Her mast is a very handsome stick, perfectly clear from heel to hounds. The iron bail for jibstay has been replaced by a steel wire rope strap, and the boom traveler has also been removed to make way for a wire strap around boom and block. Her sails, gear and outfit are being improved in all possible details, and the way she is kept up is a credit to her owner and captain. She is now sailing about the bay daily from her moorings off Clifton.

GALATEA—90-TON CUTTER. LIEUTENANT WILLIAM HENN.

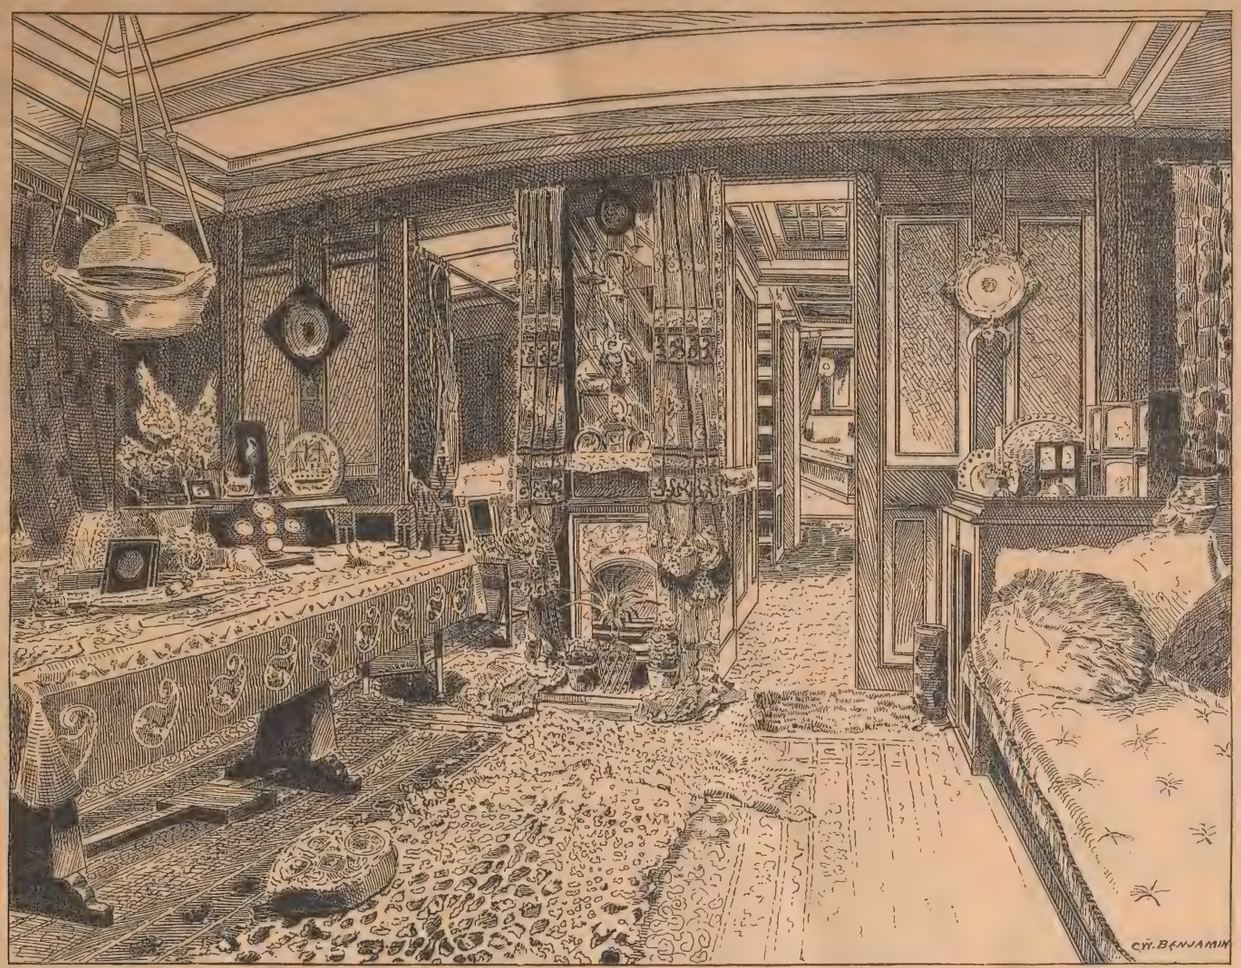
GALATEA.

While she cannot claim first place among the British fleet, and must yet settle with Genesta and Marjorie for second honors, no more fitting representative of the latest ideas in yacht designing could have been sent here to champion the cause of the British racing fleet than the cutter Galatea. Resembling closely in size and type Genesta, Irex, and others of their class, she is yet more extreme in her proportions and ballast. Longer than either by 5ft., she is no wider, her extreme beam being only 15ft. Her waterline length is 86.80ft.,which gives a ratio of length to beam of 5.76, extreme proportions for so large a yacht. Her full dimensions are:

Length on deck, over all	100.50
Length on deck, stem to sternpost	90.50
Length l. w. l.	86.80
Beam—extreme	14.99
Depth of hold	13.30
Draft—extreme	13.50
Ballast, all in keel	72 tons
Tonnage—Y. R. A.	90 tons

Her designer, Mr. J. Beavor-Webb, is a well-known English yachtsman, whose love of designing has led him into it, first as an amateur and later on has caused him to devote his time entirely to it, with the most successful results. Following after Freda, Tara and Genesta, Galatea resembles them somewhat, but is even more extreme, considering her size. She was built in the winter of 1884-5 by John Reid & Co., of Port Glasgow, Scotland, and is entirely of steel. Her keel is a deep trough, filled to a depth of 3ft. with lead, the weight being about 72 tons. Her deck is of white pine, with all fittings of teak, while steel is largely used for bitts, channels, coamings of hatches, etc. The rig, shown in the cut, is that of a full cutter in all its details, the laced mainsail and lighter boom shipped this spring having been discarded after trial. In appearance she is handsomer than Genesta, with a more pleasing sheer and rather more powerful model. Raced during last season, her record was far from satisfactory, and she met with much ill luck from the time that she stuck in launching, grounding several times and finally losing her mast in the Royal Ulster Y. C. matches. Matched against Irex, Majorie and Marguerite, she won only two second prizes and little money; but a glance at the times in all her races show that she was always very little astern of Irex, the fastest cutter afloat, only missing a win by a small margin.

In some respects she was a success, but her sailing was neither even nor satisfactory. It was at first arranged that she should follow Genesta here, and in the event of the latter's defeat was to race for the Cup, but this idea was finally abandoned for the season. When hauled up for the winter it was discovered that her builders, to save trouble, had packed loose pigs in her keel and poured melted lead over them, which instead of forming a solid mass had cooled on top. About 3 tons of water, occupying the space intended for 33 tons of lead, were pumped out of her; the lead, partly stowed in the ends, was all removed and recast in a solid mass 8ft. shorter and nearly a foot lower than before. Besides this change her spars were lightened in accordance with the original plans, her bottom, which was new and covered with steel scale, was thoroughly cleaned, and other minor improvements were made. Again, she has met Irex without being able to beat her, but has come dangerously close, notwithstanding the latter's able skipper, Oneill, and a very smart crew, who have raced the latter for three seasons. This season Lieut. Henn asked to renew his challenge of last year, and a second match was arranged, to consist of a series of three races between Galatea and some American yacht not yet named. On the whole, while her brief racing career has not been a success, she has shown herself a very fast and able vessel, and capable of more than has yet been done with her. Her owner, Lieut. Wm. Henn, R. N., is well-known among yachtsmen as the owner of the yawl Gertrude, in which he has cruised and raced for years, accompanied by his wife, whose love of yachting equals his own.



Last season Lieut. Henn built the Galatea for the avowed purpose of challenging for the America's Cup and also with the object of having a cruising yacht which would be a home for himself and wife. How far he has succeeded in the latter respect is shown in the accompanying view of Galatea's main saloon, taken from a photo by West. This view shows clearly what we have so long maintained, that the narrow yacht, above all other forms, affords the best space to the designer for interior arrangements. While a proportion of nearly 6 beams puts Galatea in the category of narrow beam "lead mines" and "planks on edge" of whose evil qualities so much has been written; it must be remembered that an absolute breadth of 15ft. on a deck entirely unobstructed, together with high bulwarks, gives a great deal of deck room, while the apartments below can only be equalled in a large steamer or schooner. The main saloon is nearly 15ft. wide, a large and elegant apartment as is seen from the drawing, with more than ample headroom. From it a long passage leads aft to the foot of the companion and to the ladies' or after cabin. On the starboard side is a large stateroom with another on the same side forward of the saloon, while under the floor is a large space for sails and stores. We hope shortly to illustrate her interior arrangements more fully by means of the plans. For a week past the fleet about Marblehead have been on the watch, but up to Wednesday noon Galatea had not been sighted. The steamer Westernland, however, reports having passed her on Sunday last under lower sails, and that she should arrive by Saturday. Mr. Beavor Webb reached New York on Tuesday by the steamer Wyoming.

SHREWSBURY RIVER RACES.—The first race of a series for the champion pennant and other prizes was sailed on July 24 in a good S.E. breeze. Maud I. and Mascotte won in first class and Fern and Pink in second. The judges were Messrs. Chadwick, Arch, Antonides and Hoffimire.

CARLETT AND TOMLIN RACES.—The first match between the James T. Carlett, sailed by Capt. Jake Schmidt, and the Phillip J. Tomlin, Capt. Frank McCarthy, was sailed on July 25, the course, 10 miles to windward and return, being from Tompkinsville, S. I., around Buoy 16, off Norton's Point. The wind was a wholesail breeze from southwest. On the return, the Carlett carried away her mast, a hollow one. The second race, off Guttenberg, N. J., will be sailed on Aug. 1.

ATLANTIC Y. C. CRUISE.—On Monday night the fleet anchored at Morris Cove, where the schooner Beatrice joined. Next morning Capt. Joe Ellsworth was obliged to return to New York. After an uneventful sail the fleet brought up at New London. Haze and Adelaide lost their topmasts during the day. Next day the fleet ran to Shelter Island, anchoring in Deering's Cove after a day of calms and light winds. Grayling joined the fleet at New London. A hop was given at the Prospect House in the evening. On July 22 the fleet had a good W. wind to Stonington, and the next day they made Newport, where it was disbanded. As none of the other yachts were in port the proposed race of the big four was abandoned. Atlantic sailed for New York, arriving on Sunday afternoon. On the cruise she has done better than formerly and is leaking less. Roamer has done particularly good work in the sailing, finding a place with the larger boats every night.

MIRANDA.—The "Mr. Johnston" who has purchased this famous schooner proves to be Mr. G. H. B. Hill, owner of Varuna, schooner, who has been in England for some time. Miranda has not yet been spoken, but is due here. She will probably join the New York cruise, if here in time to refit. Oneagh, schooner, is also on the way. One of her owners is Mr. James Moss White, lately elected a member of the N. Y. Y. C., the other being Mr. Harvey Spencer. Oneagh was built by C. Hansen, at Cowes, in 1876, and is 103.1ft., stem to sternpost on deck, 20.4ft. beam, and 11.4ft. depth.

MAIN SALOON OF GALATEA.

EMPIRE Y. C. 10TH ANNUAL REGATTA.

ON July 20, the Empire Y. C. started its fleet for the 10th annual regatta, but owing to the light wind the race was not made within the time limit of six hours, except by the smallest class, so that a re-sail is necessary. The course was from the club house, around Gangway Buoy, the smallest class turning Throgg's Neck Buoy. The starters were:

Class A—Cabin Sloops: Louise, Sorceress, Chas. Wilde, Favorita.
Class B—Emma B., Peerless, Eclipse, Alexander F.
Class C—Open Sloops: James T. Corlett.
Class D—Tip Top, Just Woke Up, Comet, W. J. Cooper, Sophie Emma, Cygnet.
Class E—Cats: Dan O'Brien, Gussie, Niantic, Jessie.
Class F—Ada, Captain, Dart, Golden, Little Dean, Adelaide, Jessie A., Goodenough, Traveler, Emily B.

At 11:36 the fleet was sent off with a flood tide and S. W. wind, which held very light until afternoon. The yachts drifted up with the tide and slack water, turning as follows at Gangway Buoy:

Alexander F.	3 54 30	Sorceress	4 11 27
Gussie	3 56 02	Dan O'Brien	4 15 32
Peerless	4 00 50	Eclipse	4 15 50
Charles Welde	4 00 50	Emma B.	4 16 25
Just Woke Up	4 02 00	Signet	4 16 26
Comet	4 07 47	Jessie	4 17 25
Louise	4 08 50	W. J. Cooper	4 19 48
James T. Corlett	4 10 00	Tip Top	4 19 50

The small ones were timed thus: Little Dean 2:04:30, Traveler, 2:06:30, Captain 2:07:10.

About 3 P. M. the wind increased, only to drop again later on, but the ebb tide helped them home. The times were as follows, no race resulting in the larger classes:

CLASS D—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Alexander F.	11 43 00	6 21 00	6 32 00	6 35 37½

CLASS C—CAT-RIGGED YACHTS.

Gussie	11 38 30	6 32 00	6 54 30	6 48 10

CLASS G—CAT-RIGGED YACHTS.

Traveller	11 38 30	4 02 30	4 24 00	4 21 50
Emily B.	11 43 00	5 41 30	5 58 30	5 54 00
Jessie A.	11 36 45	5 11 30	5 34 45	5 26 55
Goodenough	11 43 00	4 53 00	5 10 00	5 02 10
Little Dean	11 43 00	3 57 00	4 14 00	4 07 00
Captain	11 43 00	4 00 20	4 17 20	4 09 30
Golden	11 43 00	4 57 00	5 16 00	5 14 30
Adelaide	11 43 00	4 47 00	5 04 00	5 04 00
Dart	11 43 00	4 57 00	5 14 00	5 04 10

COLUMBIA Y. C. PENNANT REGATTA.—The Columbia Y. C. have inaugurated a series of pennant matches on the Hudson, the first of which was sailed on July 24, in a light wind from S. W., increasing later on. The triangular course was 10 miles with its apex on the west bank. The first round was timed: Emma & Alice 4:36:41, Troublesome 4:44:25, Daisy 4:45:28, Defiance 4:46:54, Unit 4:50:05, Bonnie 4:52:25, Minnie K. 4:56:10. The full times were:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Emma & Alice	3 15 00	5 18 30	2 03 30	2 03 30
Eldiva	3 14 35	Did not finish.		
Flirt	3 14 18	Did not finish.		

CLASS B—CATBOATS.

Troublesome	3 17 25	5 25 00	2 07 35	
Unit	3 40 10	Did not finish.		

CLASS C—CATBOATS.

Defiance	3 17 48	5 35 29	2 17 41	2 17 41
Daisy	3 18 00	Disabled.		
Minnie K.	3 19 11	5 46 40	2 37 29	2 37 24
Bonnie	3 18 37	Did not finish.		

Emma & Alice, Troublesome and Defiance, won, holding the pennants until the next race, two weeks hence.

GREENWICH Y. C.—A match was sailed on July 24 at Greenwich, Conn., for the pennant won by Alcedo in the annual regatta and a purse of $100. The starters were: Alcedo, holder; Volusia, challenger. A match for $25 was also sailed at the same time by Sirene and Brahmin. The course for the larger boats was to Matinnicock buoy, thence around Hog Island and home, and the small ones twice around Great and Little Captains' Islands. The wind was light S. Alcedo led over the course, finishing in 4:01:28, with Volusia 4:07:48, thus winning on elapsed and corrected time. Sirene also led her opponent, her time being 2:35:57, winning by 5:05 corrected time.

GENESTA.—Sir Richard Sutton's cutter is now in commission and will probably meet Irex and Marjorie at Falmouth, prior to the matches with the former for the Cape May and Brenton's Reef cups.

BOSTON Y. C. CHAMPION CUP RACES.—The second champion regatta of the B. Y. C. was sailed on July 22, but was a partial failure from lack of wind. Only Adrienne started in the schooner class, Gevalia not having returned from the E. Y. C. cruise. Violet and Shadow started in a flat calm and withdrew later on. A drifting race was made by the second class sloops, the times being as follows:

SECOND CLASS SLOOPS.

	Length.	Elapsed.	Corrected.
Eva, D. Sargent	26 .00	4 17 00	3 30 30
Echo, E. L. Burwell	25.02	4 18 10	3 40 21
Majel, N. H. Wilkinson	27.01½	4 27 22	3 42 26
Edna, George Lawley	28.10	4 35 00	3 52 47

Eva takes a second leg for the Pfaff cup, Edna now holding two and Kitty one. Kitty takes second prize of $10.

JAMAICA BAY RACES.—A third race was sailed on July 24 over a course off the Seaside wharf, at Rockaway, in a strong S.E. wind. The times were:

CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Lottie R.	4 10 00	5 27 10	1 17 10	1 17 10
Julita	4 10 00	5 31 45	1 21 45	1 21 40
Estelle	4 10 00	5 29 00	1 19 00	1 18 05
So So	4 10 00	5 29 20	1 19 20	1 17 55
Aurora	4 10 00	5 30 10	1 20 10	1 18 00
Blond	4 10 00	Disabled.		

CLASS B.

Florence	4 10 00	5 36 45	1 26 45	1 26 45
Kate	4 10 00	5 37 45	1 27 45	1 25 25

Lottie R. wins first prize and the So So second prize. In Class B Kate wins first prize and Florence second.

SANDY BAYY. C. 2d CHAMPIONSHIP.—On July 24 the Sandy Bay Y. C. sailed its second championship regatta, with a variable S.W. wind, puffs and calms alternating. The course was from near Pavilion Beach to flag buoy or flag boat near end of Eastern Point, leaving it on starboard, thence to flag buoy or flag boat, nearly on a line to Baker's Island, abreast Magnolia Point, leaving buoy on starboard, thence across judges' line, two rounds:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Louette, Haskins	21.08	2 39 00	1 55 42
Petrel, Paul	21.05	2 42 52	1 59 10
Osceola, Gifford	20.01	2 53 30	2 07 33
Adele, Haskell	16.11	3 01 10	2 17 19
White Wings, Perry	20.11	Withdrawn.	
Silver Cloud, McLaughlin	20.06	Withdrawn.	

SECOND CLASS.

Sassacus, Griffin	16.10	3 10 58	2 18 36
Alpine, Tarr	16.11	3 15 40	2 23 29
Spark, Gaffney	17.11	Withdrawn.	

Silver Cloud partly capsized and withdrew. Commodore Haskins protested against Petrel's measurement before the race and remeasuremet was ordered to follow the race. After the finish, however, her owner sailed her away without waiting for a remeasurement. Judges—Aaron F. Clark, Samuel L. Colby, Isaac N. Higgins, G. H. Parsons. The date of Aug. 3 has been set for the races for the Forbes prizes, which will be managed by Mr. Forbes himself.

QUINCY Y. C., JULY 24.—The Q. Y. C. sailed its second championship regatta on July 24 in a strong S. E. wind. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Erin, J. Cavanagh	27.02	1 44 25	1 27 34
Amy, E. W. Baxter	21.06	1 56 30	1 23 49

SECOND CLASS.

Tom Cat, C. G. Weld	19.02	1 29 00	0 59 15
Diadem, L. Hayward	18.06	1 38 40	1 09 15
Nereid, C. F. Colby	20.07	1 37 33	1 09 23
Tartar, F. L. Dunno	19.11	1 38 33	1 09 39
Mamie, H. T. Bowers	18.02	1 41 45	1 10 47
Crusader, A. Wilson	19.01	1 42 00	1 12 09
Wildfire, H. A. Keith	18.02	1 44 00	1 13 02
Pet, J. W. McFarland	20.01	1 44 24	1 15 46
Elf, W. P. Barker	20.03	1 45 10	1 16 40
Undine, H. French	18.11	1 48 00	1 17 57

THIRD CLASS.

Flora Lee, D. H. Lincoln	17.03	1 07 15	0 41 34
Rocket, H. M. Faxon	16.07	1 11 45	0 45 18
Elsie, C. F. Hardwick	16.10	1 13 28	0 47 17
Fury, J. H. Putnam	16.09	1 24 25	0 48 08
Elfin, J. F. Culley	16.08	1 21 00	0 54 38

Protests were made against Diadem, Crusader and Tartar, so second and third class winners are not yet known. The judges were Messrs. G. G. Saville, G. W. Morton and H. M. Federhen.

CORINTHIAN Y. C. RACES.—The postponed race for first and second classes of July 10 was resailed July 23. The wind was S.E., a good topsail breeze. The only accident was the carrying away of Bessie's topmast while shifting backstay. The times were:

FIRST CLASS CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Atalanta, I. R. Thomas	28.01	2 02 54	1 33 57

FIRST CLASS KEELS.

Bessie, C. P. Curtis, Jr.	28.02	2 22 56	1 54 04
Carmen, B. L. M. Tower	29.09	2 22 07	1 54 40

SECOND CLASS CENTERBOARDS

Louette, L. M. Haskins	21.03	2 25 33	1 49 23
Petrel, H. H. Paul	21.00	2 27 39	1 50 40

SECOND CLASS KEELS.

Kitty, E. H. Tarbell	23.05	2 15 13	1 41 20
Witch, Crowninshield	22.08	Not taken.	

The first ladies' race of this club was sailed July 24 and proved a very enjoyable time. Yachts of the first class were to carry at least three and not over four ladies, and of the second and third classes at least two and not over three ladies. The wind was west and just strong enough that the yachts could carry all their sail very easily. The prizes were a silver pin (being a copy of the club signal) for each one of the ladies on the winning yachts and a silver cup for each winning yacht.

Dione, George Lewis, Jr.	16.10	1 41 40	1 08 57

Mabel wins first prize, $12; Tom Cat second, $6. Nora also wins $10 and Nonpareil $5. The judges were Hartford Davenport, W. B. McClellan and E. R. Tilton.

L. Y. R. A.—The rendezvous this season will be at Belleville, Ont., on July 29, the first race being on July 30, for the following prizes: First class yachts—First, $150 and champion flag; second, $75; third, $30; entrance, $10. Second class yachts—First, $100 and champion flag; second, $50; third, $25; entrance $7. The course will be 30 miles for the first and 20 miles for the second class. The following is the programme for the regatta of the Kingston Y. C., which is to be sailed on Monday, Aug. 2: First class, $120, $60 and $30; entrance, $10. Second class, $80, $40 and $20; entrance, $7. Third class, $40, $20 and $10; entrance, $5. The courses are: First class—From moorings off Grand Trunk wharf, thence to buoy off George's Barn, thence to buoy off Four Mile Point, thence to place of starting; three times around; 30 miles. Second class—Twice around the same course; 20 miles. Third class—Once around the course, thence to George's Barn and return to starting point; 15 miles. All buoys to be kept on the starboard hand. Condor has already sailed from Toronto on a cruise to the St. Lawrence River,

SOUTH BOSTON Y. C. CHAMPIONSHIP.—The third championship regatta of the South Boston Y. C. was sailed on July 24, over the following course, in a strong wind: For first class, from judges' boat, leaving flag boat off Cow Pasture on the port, red spar buoy No. 2, northwest of Thompson's Island on port, red can buoy No. 6, Lower Middle, on port, judges' boat on port, red spar buoy No. 6, Cow Pasture, on port, red spar buoy No. 2, northwest of Thompson's Island on port, red spar buoy No. 6, Lower Middle, on port, passing between judges' boat and flag boat. Distance, 11 miles. For Second and Third Classes.—From judges' boat, leaving Cow Pasture red spar buoy No. 6 on port, red spar No. 2 northwest of Thompson's Island on port, black can buoy No. 7 off Fort Independence on port, judges' boat on port, Cow Pasture red spar buoy No. 6 on port, red spar buoy No. 2 northwest of Thompson's Island on port, passing between judges' boat and flag boat. Distance, 8 miles. For Fourth Class.—From judges' boat, leaving Cow Pasture red spar buoy No. 6 on port, red spar No. 2, northwest of Thompson's Island, on port, black spar No. 1, west of wharf on Thompson's Island, on port, red spar No. 2 on port, to judges' boat, passing between it and flag boat. Distance, 6 miles. At 3:30 the largest boats were started, with 5 minutes between each of the classes. The times were:

	Length.	Elapsed.	Corrected.

Charlotte, Thos. Cross	18.04	1 37 24	1 12 46
Vidette, P. F. Burke	19.05	1 28 15	1 04 41

Violet has taken the championship in first class and Maggie second prize. Breeze, Raven and Cygnet in second class keels have each two legs, so a sail off will be necessary. Lizzie Warner takes the cup in her class. Fearless, Venture and Cooper take first, second and third in their class. Em-Ell-Eye wins in her class subject to a protest for carrying a balloon jib. Tike is second in this class. Thisbe and Myth have each a leg in fourth class and will sail it off.

GREAT HEAD SECOND CHAMPIONSHIP.—On July 24 this race was sailed over a 6-mile course for classes one and two and a 4-mile course for third class, the wind being strong S. W. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Fancy, C. P. Flagg	20.03	0 57 38	0 54 26
Nellie D., E. Dixon	21.06	0 57 07	0 55 01

Cadet, H. M. Belcher	16.10	1 04 15	1 02 35
Idyl, Harry Hutchinson	16.09	1 04 50	1 03 09
Dora, E. B. Nevins	16.03	1 05 50	1 03 45
Mirage, S. E. Jordan	17.09	1 07 30	1 06 24
Thera, George Bryler	16.00	1 09 25	1 06 52
Kismet, C. C. Hutchinson	18.00	1 08 05	1 07 44
Mascot, H. J. Vinal	16.00	1 12 19	1 10 45
The Pair, Landy and Waggett	17.02	1 11 02	1 10 49
Fury, J. H. Putnam	16.09	Withdrawn.	
THIRD CLASS.			
Topsy, J. R. Mason	14.04	0 42 30	0 41 54
Annie, R. H. Mitchell	15.06	0 43 59	0 43 59
Ariel, C. B. Belcher	13.08	0 52 00	0 51 35
Pauline, W. M. Bacon	13.05	0 53 57	0 53 28
Elf, H. A. Joslin	15.09	Withdrawn.	

Fancy wins the cup in her class permanently. Zoe takes a leg in which Cadet has already one leg, and Topsy takes a leg in third class. The judges were Stephen S. Smith, H. A. Joslin, Harry Hutchinson, G. E. Josselyne. Lowell Mason timekeeper. Aug. 24, has been named for the next race.

JULIA.—PROGRESS.—These two boats sailed a match on July 23, over the East River Y. C. course, for $100 per side, in a good S.W. wind. Progress led over the course. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Progress	12 17 23	4 18 35	3 55 18	3 55 18
Julia	12 25 35	4 22 32	4 07 13	4 02 43

HULL Y. C., LADIES' DAY.—On July 21 over 150 ladies boarded the Hull Y. C. fleet for an afternoon sail, landing afterward at the club house for supper. Dancing followed in the evening. The fine weather and excellent arrangements of the committee made the occasion a great success.

SACHEM.—Messrs. Owens and Metcalf's new schooner has been sailing for the past week in company with Mayflower and America, and has, as in the cases of Atlantic and Priscilla in New York, given a fine chance for big headlines to the daily papers, announcing exciting races and thrilling victories. The sails have been purely informal, as the boats met about Marblehead and on the way to and from Boston, and like the imaginary matches in New York Bay, are individually of no importance. Taken together, they seem to show that Mayflower has been improved considerably by her alterations, and that America also is going better. Sachem is not yet in racing shape, but for a new vessel she is working well, and promises to be very fast.

SPANKADILLO.—This little 3 ton cruiser which we have before described, sailed her first race on July 10, in the Royal Plymouth Corinthian Y. C. under a "sail tons" rating, being now in C class, while Amy is in class A. The following account of the race is from the Plymouth *Morning Times:*

"Three boats competed in the Royal Plymouth Corinthian Yacht Club on Saturday. More than ordinary interest attached to the event in consequence of one of the starters being the Spankadillo, owned by Captain H. E. Bayly, a gentleman whose name has been long known and honored in yachting circles, and who has done not a little to establish good honest racing afloat in a foremost place in popular esteem. Capt. Bayly was the owner of the two well-known yachts, christened Buccaneer, which he appropriately sailed under the skull and cross bones. This whimsicality is perpetuated in the nomenclature of Capt. Bayly's new venture, which, like the pair of Buccaneers, still flies corsair's flag. The Spankadillo has her reputation to make, and her *debut* on Saturday was promising, as will be seen from the timing. She had only once previously crossed the line, and then merely to make a race. She is canvassed for the C class, and was designed by her owner. The officers of the day on Saturday were Staff Captain A. de G. Sutton and Staff-Commander Osborn, and the course was from the West Hoe Pier, round the Knapp, the East Tinker, the Mallard, and mark-boat, making twelve nautical miles twice around. The start was timed: Amy, cutter, 2.91, 1.5.15; Spankadillo, cutter, 5.08, Captain Bayly, 1.5.20; Dawn cutter, 1.95, Captain James, R. A., 1.5.50. The Amy, steered by her owner, and carrying a square-headed topsail, was the first to cross the line, but with a fresh westerly breeze the Spankadillo—which also had her topsail set—quickly assumed the lead, with the Amy second and Dawn last. In this order the round was completed: Spankadillo, 2.15.10; Amy, 2.26.40; Dawn, 2.41.52. During the last round the Spankadillo increased her advantage, and the Dawn failed to improve her relations with the Amy. The match concluded: Spankadillo, 3.30.14; Amy, 3.49.12; Dawn, 4.10.0. The 'Spank' thus collared the first prize, with over 14 minutes to spare, her time allowance to the Amy being 4m. 40s. The Amy had to allow the Dawn 3m. 52s., but as will be seen from the timing, there was no necessity for taking this into consideration."

HULL Y. C.—At a meeting on July 24, the question of increasing the dues to $10 was called up, but a motion to reconsider was lost. The classification was changed so that yachts under 25ft. should sail under the Corinthian rule, instead of 26ft., as previously. The rule of measurement was also changed to length on L. W. L., plus 1-5 overhang instead of ⅓. The club cruise will begin on July 30, with a rendezvous at Hull in the evening, starting next morning at 9 A. M. The programme issued by Com. Whitten is as follows: 1. First day. Marblehead, which is expected to be reached by noon and a stop made of three hours. The Corinthian Y. C. will here join the squadron. At 9 o'clock the combined fleet will then sail for Rockport. The Sandy Bay Club have appointed a Reception Committee to receive and entertain the Hull Y. C., and its fleet will meet the club and escort them. Saturday evening. Reception and lunch at club house. 2. Sunday afternoon. Drive around the cape. 3. Monday. Open regatta, for which liberal prizes are offered. Monday evening. Reception by the ladies of Rockport. For the accommodation of the small boat owners, sleeping quarters will be provided by the Sandy Bay Y. C., and should any of the yachts be unable to go further than Gloucester, barges will be in readiness at that port for yachtsmen to join their comrades at Rockport at the Saturday evening's festivities. The inside passage to Squam can be taken by all who may desire. 4. Tuesday. A start will be made for Newcastle, where the night will be spent. 5. Wednesday. Isle of Shoals. 6. Thursday. Biddeford Pool. 7. Friday. Portland. A conference of the captains may at any time be held to consider any change of programme after leaving Rockport, and any desire to continue further east. Rear-Com. Howe will have command of the small boats. The protests in the race of July 17 between Tartar and Mabel have been decided by ruling out both boats and giving first prize and a leg in the championship to Tom Cat.

KEEL SLOOPS VS. CENTERBOARDS.—In regard to an article I have just read, signed "Loyalty." Surely no one has ever questioned the ability of a boat with inside ballast to stand up to her canvas equally as well as if she had lead outside. Of course I do not mean to insinuate that she can do so with the same quantity, but if you give her a little more and stow it all inside I think that she will be equally stiff. Now while I am in favor of cutter principles I do not think that they embody everything of interest in a good boat should have. Beam, combined with weight low down, are what I consider essential requisites in every honest boat. I do not, however, in mentioning beam, refer to that class of boat which has become so common around Boston, they have lots of space, but it is in such a form that it cannot be utilized to best advantage, while in consequence of their immense displacement they require too much canvas to drive them. I was in Quebec at the time of their June races, and I see that they are gradually but surely evolving from the two types a boat which will be fast, and at the same time suited to all kinds of cruising. Their cruising is done in the stormy waters of the Gulf, and I may add that it is not done in shoal centerboarders but in good, safe, keel boats—not of excessive draft—and with moderate beam. Such boats are fit to cruise around the world. The boat I was out in the day of the Q. Y. C. race was a new keel sloop by La Pointe. Although we were not entered in the race we went over the course, but not having a spinnaker we were, of course, left behind off the wind, but after rounding the buoy we began to pick up and would undoubtedly have come in first had not the crew been so excited when we were nearing the leaders as to pull the head sheets up to windward, of course we missed stays, and as misfortunes never come single the sister hooks parted on the jib sheet blocks a few minutes later. As it was, however, we came in fourth, five minutes after the winner. That sloop was 40ft. on keel, and with 5 tons of inside ballast drew 5ft. of water. In a centerboard boat of like length the draft (with board down) would probably be 6 or 7ft., so where do these men get their objections to keels. In running free the keel boat would probably draw more than a centerboard, but in running free there is more choice of water, while in beating the keel boat would have the advantage. I have a centerboard sloop 29ft. over all, she is very fast, but is also reasonably deep, and with about two tons of iron inside of her, she is reasonably safe, she has 21ft. hoist and is cutter rigged, having her jib set flying; she is quite stiff. But there are pleasanter thoughts than when sailing a shallow sloop with an immense rig, as nearly every one with a reputation for speed to maintain has to wonder every time she heels to a fiercer squall, and the water comes tumbling aboard, whether she has yet reached the vanishing point, that point which is possessed by all boats of shallow draft and an insufficiency of ballast. But where is the Coot? I suppose that Mr. Kunhardt is by this time thoroughly converted by that classic rig of his, the celebrated "Grimalkin."—CANADIAN.

SIGNALS AT THE PEAK.—In the larger clubs the usage of carrying the racing signals at the peak, with no other colors shown, has become general, but many of the smaller clubs do no yet follow this important rule. Nothing looks more slovenly about a yacht than a lot of miscellaneous bunting, and it is worse in a race than on ordinary occasions. Leave particolored flags, champion pennants, huge flags with the name of the yacht to excursion barges and fishing boats and adhere to the custom of the yachting world, a private signal at the peak of the mainsail as long as the yacht is in the race, to be hauled down if she withdraws.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

GREENWING will oblige by sending address to this office.

J. S. H., Thomaston, Conn.—The open season in your State is Oct 1-Jan. 1.

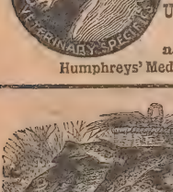
W. M. S., Emilie, Pa.—Write to the Portable House Co., 335 Broadway, N. Y.

W. C. T., Hyde Park, Mass.—Sharpies were described in FOREST AND STREAM of Sept. 13, 1883.

M. D. A., Ann Arbor, Mich.—The American Museum of Natural History of this city is an incorporated institution, and issues permits for the collection of birds' eggs. See the forms printed in another column.

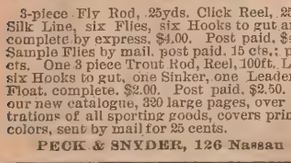
CARE OF FEET ON A TRAMP.—R. H. K., Norwich, Conn., inquires for treatment of feet for a pedestrian tour. Give inside of socks, woolen, a coating of common yellow bar soap, first softening the soap in warm water. This will prevent the tenderest part from blistering, and will make traveling easy even after blisters are formed. This method was used by the American army in Mexico, and is given in "Hallock's Gazetteer."—WARFIELD.

X., Virginia.—Please give the individual vote of the Virginia delegation in the House upon the bill to allow a railroad in the Yellowstone Park. Many of us wish to know how our delegates stood in this attempted violation of the rights of the people in forcing a railroad through their property without so much as "by your leave?" Ans. The bill has not passed the Senate yet, and so has not come before the House. When it is voted on we shall not fail to record the votes of all the members.



BASS, New York.—A claims that Bergen Point, N. J., and Hell Gate, New York city, are first-class bass fishing grounds and that bass are caught at these places now at present time. B says that neither place is good and that striped bass are not caught at this season of year in this vicinity. Also state which is best ground for bass fishing in this vicinity? Ans. Neither place is now a first-class place for striped bass as they once were. Bergen Point is now the best place of the two, and from there to the lower end of Staten Island is now the best ground about New York city.

AR LOOK, Hartford City, Ind.—Please tell me what the following bird is? Black beak, breast and tail, white crest running crosswise of its head, then extends clear down its back an inch wide; is about the size of a blackbird; chatters like a blackbird but has a beautiful song. Each wing has a white feather. This is the first one I ever saw. I was tempted at first to shoot it, but it lit on a twig near by and began its sweet song, which was too much for me. Ans. The bird was probably a bobolink, or as it is sometimes called from its markings, "shunk bird," one of our sweetest songsters. You did well to hold your hand.



INFORMATION WANTED.

BALTIMORE.—Will some reader of the FOREST AND STREAM kindly inform me where my wife and I can find accommodations for three weeks, at no great distance from here, where hunting or fishing, or both, are good? Plain fare wanted.—J. B. F.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

Made simply with boiling water or milk. Sold only in half-pound tins by Grocers, labelled thus:
JAMES EPPS & CO., Homœopathic Chemists, London, England.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

VICTORY WON

BY SHOOTERS USING THE

Chamberlin Cartridge

AT THE

Tournament of the Illinois State Sportsmen's Assoc'n,

JUNE, 1886.

First and Diamond Badge by GEO. KLEINMAN, killing 29 out of 30 live birds.

Second Prize by ABNER PRICE, killing 28 out of 30 live birds.

First by C. E. WILLARD, in the first event of the "Open to the World" contest. Eighty-two entries.

Also divided in nearly every other event of the great Tournament.

The Chamberlin Cartridges also winners of the Smith Cup, by C. M. HINSDALE, in the Iowa State Tournament at Burlington.

These Cartridges were from regular stock sold by dealers.

TATHAM & BROS., Eastern Agents,

82 Beekman Street, New York City.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL IMPORTED PRIZE PUG DOG

Silver Shoe.

Particulars, pedigree and references to FRANK QUINBY, P. O. Box 555, N. Y. City. Stud fee, $10. may20,tf

MEMNON,

Champion Greyhound of England and America, in the stud. Puppies for sale.
TERRA COTTA KENNELS, Box 345, Toronto, Can.

In the Stud.

The "Boss" in Stud.

Services limited to ten approved bitches, at $50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being very large and finely marked.

Boss' Record.—Vhc. at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class *and special prize as the best American bred mastiff* at the Westminster K. C., New York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—*Am. Field, April 8, 1886.*

In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—*Sporting Life, March 31, 1886.*

A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best of pedigree and markings.

Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair $50; others from $15 to $20 each.

J. L. WINCHELL,
jy1,tf. Fair Haven, Vermont.

Gus Bondhu

IN THE STUD.

Imported from Mr. Llewellin's kennels (he is bluest of the blue), by Dashing Bondhu ex Novel. He is also a grand field dog, as his record shows at the late trials of the N. F. T. Club at Grand Junction, beating such noted dogs as Gladstone Boy, Mainspring, Bessie A., Gath's Mark, Trinket's Bang and other fine ones. Fee $35. A. M. TUCKER, 85 Main street, Charlestown, Mass.

CHAMPION LAVERACK SETTER

ROCKINGHAM,

The acknowledged best English setter in America, and a grand field dog. Will be allowed to serve a limited number of approved bitches. Fee $50.

FRANK WINDHOLZ,
525 Sixth avenue, New York.

ANSWERS TO CORRESPONDENTS.

THE SCARCITY OF BLUEFISH.

IT is now the season when the bluefish should be abundant along the Atlantic coast from Cape Cod to Cape Hatteras, but they have not appeared in numbers sufficient to encourage either the market fishermen or the anglers to try for them. Occasionally a small school of small fish is struck, but the markets are bare of them and the anglers are disconsolate. These fish usually appear in Florida in March, and reach the coast of Massachusetts about the middle of June. A few are now taken about Long Island, but not in numbers to compare with an ordinary year. They have been gradually decreasing for some years, but this season it is a sudden falling off.

While it is a fact that the bluefish have occasionally been absent for a year since they first appeared on the Atlantic coast of North America some fifty-five years ago, it is not recorded that they steadily decreased in numbers year after year until some ten years ago. About this time there was an increase in the catch of menhaden, and steamers took the place of the sail vessels. Since then more steamers have been added to the fleet, and the menhaden, the principal food of the bluefish, have become more or less scarce.

Mr. N. E. Gould, of the U. S. Life Saving Station, Chatham, Mass., writes to Prof. Baird (Bulletin U. S. Fish Commission, Vol. V., p. 216) under date of June 20, 1885, as follows: "The first menhaden were caught on May 14, but no schools were seen during the season, although these fish were at a former time very numerous on this coast during the month of May; none have been seen schooling in large schools since the spring of 1875. Before that time they were probably the most numerous fish that passed along this coast."

In view of these facts it seems idle to assert that the captures by man do not affect the sea fishes. We do not wish to be understood as laying the absence of the bluefish this year entirely to the menhaden steamers, because the fish may return in some numbers next year, but we believe that these steamers are the cause of the decrease in the numbers of bluefish during the past decade. The question may soon arise, "Which is of the most value, food fish or menhaden oil?"

VACATIONISTS.

THE vacationist is abroad in full force. He has followed the sportsman as usual, and though it is not pleasant to contemplate, he has followed him to the trout waters and to the hunting grounds. He is there not for angling, and as for hunting, he is not there for that in a genuine sense. He is there out of season, and yet he will sap every source of enjoyment to its very source of dryness, and then lie about the rest. This vacationist is often a newspaper man; generally an attaché of the metropolitan daily, who gets paid by the amount of stuff he writes—by the amount of length in a column he covers. Or perhaps he may be a country editor or correspondent, with more time on his hands than brains to put in his paper, and he goes there to puff Mr. Everybody on the route and after he gets there; for it is this puffing—free advertising—which pays his bills. Otherwise he would not be there, and our much-loved trout lakes and streams would escape the affliction of being lied about and gushed about for the nonce. If these vacationists who write to lighten their expenses would stick to what they have some knowledge of, it would be less annoying; but their pens are garrulous and it is the number of words which tell in the exchequer, and the daily papers are loaded with columns of what it makes every true angler and sportsman mad to read.

A New York correspondent of the Boston papers is just now "doing the Rangeleys," as he terms it. He is full of advice to everybody. He assumes that all anglers are liars, and yet he stoops to tell the most barefaced falsehoods about his surroundings. He tells about 300 trout caught at Kenebago in one day, none less than half a pound, caught by one fisherman. Then he goes on to say that anybody can be sure of all the trout he wants at that lake of lakes any day in the year. Such stuff is written to please hotel keepers, but the public has not yet come to understand it. The patent medicine cure-alls the masses can understand, but these stories about trout and salmon waters only those who are familiar with the subject can see through. One of the most peculiar experiences the true angler is called upon to pass through is the taking of a friend to the trout waters who has never been there before—who is not familiar with the business. That friend has read the gush and the lies, and though he may not swallow the whole, yet he is likely to believe in at least a part. A case in point. The vacationist was a true and an honest soul. The trip to the lakes was an event to him. He had a class of boys in the Sabbath school of which he was a prominent member. It was his first experience with the rod and line, but he had read the papers. He was cautioned that his luck might not be all he expected, but the exuberance of getting his outfit and making ready was too much for him. He told his friends in the church of his plans and they lent their congratulations and spoke for a mess of trout. It would probably have taken a few hundred pounds to have supplied all these messes, but my friend was in for it. He even promised the boys in his Sabbath school class some glowing accounts of taking trout on his return. He reached the fishing grounds with the fishing only fairly good, and caught trout, some of very good size; but he did not come within a long distance of his expectations. The time began to draw near for our return. He had only one or two trout in his car. Alas! for all those Sunday school boys and those church friends. What should he say to them? The thought weighed upon his spirits and completely spoiled the last part of his stay. The trout would not come to his lure in sufficient quantities to supply a whole church and the better part of the Sabbath school. He went home disgusted. That was his first and his last trouting excursion. He reads about such things no more.

Another newspaper vacationist has been visiting the Yellowstone National Park, and if his writings concerning other matters, which he is presumed to cover when at home, are as full of attempts to tell all about that which he has no real knowledge of as he has shown himself to be ignorant of the first principles concerning the game in that region, then he is worthy of having his work taken from him and given to the office boy. In the first place he utterly ignores or is ignorant of the fact that there are only a few buffalo left on the continent, and he goes on to tell of the opportunities for buffalo shooting and of the buffalo he saw. He also fails to mention the fact of the very stringent laws for the protection of the large game in the Park, and indites a paragraph or two on the opportunities for the sportsman within the Park. He did not try this shooting himself; time did not permit.

Such writings are harmful, but what shall we do to counteract them? Managing editors, who alone have the power to bring such correspondents to their senses, are indifferent. They are not generally posted on such subjects themselves. These writers get into the widely-read daily papers, and the harm they do is hard to repair, even by all the force of the FOREST AND STREAM and other good journals devoted to telling the truth and giving real information upon subjects these self-sufficient scribblers presume to cover.

HE DOES NOT COURT NOTORIETY.

THE Rev. F. L. Fleer, Fond du Lac, Wis., has our sympathy. He is a modest, shrinking man, who when he performs a virtuous action with his right hand declines to permit his left hand to know of the occurrence. When he gives alms he gives them in secret, according to the teachings of the Master. He shrinks from publicity. To such a man the idea of getting his name in the newspapers seems horrible.

But misfortunes come to all of us as we journey through this vale of tears, and cruel fate has not spared the Rev. F. L. Fleer.

It happened that recently a small party of tourists were traveling through the Yellowstone Park. They were the Reverend F. L. Fleer, of Fond du Lac, Wis.; Mr. E. J. S. Adams, of Philadelphia; Mr. T. C. Camp and his son, H. H. Camp, bankers of Milwaukee, Wis. About the 24th of July they found themselves at the Grand Falls of the Yellowstone. Here they spent some time admiring the beauty and grandeur of the scene. The majesty of the falls, the depth of the cañon, the wonderful display of color, the fantastic shapes of the eroded rock walls, the curious play of light and shade over the scene as the slow clouds moved hither and thither in the sky above them, fascinated the beholders. They watched too, with interest the few evidences of animal life which were visible. Over the abyss of the cañon a few ospreys hung motionless on steady pinions, newly hatched young whistled from the nests on the rock towers, swallows darted hither and thither through the clear air, and far below them, over the apparently slow-moving, oily torrent, one could make out with a glass the form of a busy dipper hurrying up or down the stream. No one would have imagined that there was anything in so majestic and so peaceful a scene to suggest bloodshed or cruelty. But while they were there, and while contemplating the beauties of this scene, one of the party shot and killed an eagle (osprey) that had lately hatched her young on one of the rock towers which overhang the cañon.

Word of the occurrence was sent to the Superintendent's office at the Hot Springs, and on the morning of July 26, Assistants Wilson and Berry captured the party and brought them before Superintendent Wear. In Col. Wear's presence the Reverend F. L. Fleer confessed that he was the man who killed the bird, and this confession was confirmed by the statements of the other members of the party. The Reverend F. L. Fleer begged hard that his offense might be kept a secret. Notoriety was the only thing he had to fear, because there is no law in the Park by which a minister of the Gospel who kills the mother bird off the nest and leaves the young to starve can be punished.

We sympathize with the Reverend F. L. Fleer, and hope that his crime against the regulations of the Interior Department and the laws of God may not become generally known, but we recommend that some quiet Sunday afternoon, in the stillness of his study, just off the church, he devote an hour or two to a consideration of his slaughter of a mother bird over the Grand Cañon of the Yellowstone.

TRAP SHOOTING REFORM.—Trap shooting is too much in the hands of men who are to all intents and purposes professionals, who go into it solely to get what they can out of it, who hog the prize money, who mean to earn their living by it, who are not fit competitors for amateur shoot-for-the-fun-of-it trap shots to contest against. A great reform is needed in this. Has the time not come when that reform can be brought about, and a large tournament made to afford a fair chance to the average trap shot? The communication on this topic, in another column, comes from a member of a club numbering two hundred, nine-tenths of whom, the writer tells us, share his sentiments.

CONGRESS AND THE NATIONAL PARK.

THE session of Congress almost at an end will pass without any legislation favorable to the Yellowstone Park. Senator Vest's bill providing for the better government of this reservation, and for the administration of justice within its limits is pending in the Senate but will scarcely be reached during the present session, although it has been reported favorably by the Committee on Territories, and is now on the Senate calendar.

The House in the Sundry Civil bill appropriated $20,000 for the construction of roads in the Park, but failed to provide any funds for the salaries of the Superintendent and his assistants, or for contingent expenses. This was manifestly an attempt to turn over the reservation to the War Department. There being no funds for their payment, the Superintendent and the Park police would have been dismissed, there would have been no one to look after the reservation, and the Secretary of the Interior was to be authorized to call upon the Secretary of War for troops to do police duty. This would have been a grave misfortune, for such work can be done vastly better by a civil force than by soldiers, and the best interests of the Park require that it should be, so far as possible, kept under the control of one Department of the Government.

Senator Vest appeared before the Appropriation Committee of the Senate and secured an increase on the House appropriation of $20,000, which makes the sum equal to that heretofore appropriated annually for the pay of the Superintendent and his assistants, contingent expenses and the construction and improvement of roads. When this increased appropriation came up in the Senate it was objected to by Senator Plumb, and earnestly defended by Senator Vest, and was finally agreed to. In conference committee of the two houses the increase was objected to by the House committee, and is reported to have been thrown out.

The bill granting to the Cinnabar & Clark's Fork Railroad a right of way through the Park was, as we have noted, taken up some weeks ago in the Senate, and after discussion laid over. It will not come up again at this session, but in December a persistent effort will be made to force it through by the same lobby which has been at work for it during the present session. The measure is one of the worst that has ever been set on foot against the Park, and it should be resisted by the friends of the reservation by every legitimate means. During the present summer a full investigation of several routes to Cooke City will probably be made, and when Congress next meets a good deal of information about them will be available. The Third Cañon of the Yellowstone was last month examined by a competent person, who pronounced it impracticable for a railroad.

We regret to state that among two classes of persons there seems to be a desire to have the act by which the National Park was created repealed, and the reservation thrown open to setttlement. One of these classes is made up of greedy and unscrupulous adventurers and speculators, who see in this beautiful region only means for filling their pockets and care nothing about the interests and rights of the people. The other class consists of members of Congress, who ought to know better, but who regard the Park as a piece of "æsthetic" nonsense, and ridicule the idea of making any appropriation for its preservation and improvement. Upon men so densely ignorant and possessed of such narrow views, no impression can be made except by the threats of their constituents to throw them overboard at the next election unless they pay some regard to the public good.

It is insisted by such men as these that the Park is for the rich and not for the poor. A statement more untrue was never made. Those who have visited the region and seen passing through it the farmers who, in their own wagons, with their families, have traveled hundreds of miles to see the Park, know well that the proportion of wealthy people who go there is small by comparison with the many who visit it in the most inexpensive—and at the same time the pleasantest—way.

If the friends of the Park do not meet boldly and aggressively the gang of speculators who seek to have it turned over to them for their private ends, there is little question as to the final result. The money makers and land grabbers will muster in force in Washington next winter, and will make a desperate effort to force railroads through the Park, and this will be its destruction.

It is the plain duty of every citizen who appreciates what the Park is to-day and what it may be in the future, to take an active interest in this matter. Each man should endeavor to give expression to his views in such a way that his Congressman shall not be doubtful as to the feelings of those who have sent him to Washington to represent their interests.

The people must insist that their Park shall be reserved for them and not turned over to jobbers and speculators.

ROOM IN ALASKA.—From Labrador come most distressing reports of failure of fisheries and starvation of coast dwellers. The British authorities should in mercy transport the survivors, and give them a chance for their lives in more favored regions. In his forthcoming book, "Our New Alaska," Mr. Chas. Hallock suggests that there is room in Alaska for a large population of fishermen.

CAMPING FOR ITS OWN SAKE.

I HAVE just received a characteristic letter from the Professor, and as some portions of it may interest you, I send them herewith. I last year recommended him to get a copy of "Woodcraft," and received his heartfelt thanks for the favor. I see that he has it in camp this season.

The letter is dated from a certain island, "the 'Blueberry' of the early navigators" (we having given it that name when first we made its acquaintance twenty-six years ago):

"Whenever I come to this island I live over again the brief stay we made here so many years ago, and I revive the faith that you and I shall hold a reunion here some good day.

"I am now writing not more than two rods from the spot where we pitched our tent. I am more and more impressed and fascinated year by year with the beauty of this part of the lake, and with the cosy, convenient and picturesque character of the island itself. It is very small, but it has two excellent beaches, and is well wooded; and it commands superb views both of the lake and of the distant mountains.

"I have somewhat enlarged my outfit, and there are four of us here—my wife, two of the boys and myself. I decided that I could not do better by the boys than to initiate them into the art of camping out, and then leave it for them to follow up or not, according to their bent; for some are born to camp (you, for instance) and some are not.

"I have my old A tent, still in fair condition, for the boys to sleep in, and a new wall tent, 9ft. 6in. square, 8ft. high and 4ft. wall, which H. and I occupy, and which is the family dining and sitting room in rainy weather.

"And speaking of rainy weather reminds me to say that we are just emerging from two solid days of it. Everything is soaked, and my feet have been wet all the time for these two days.

"We get our stores mostly from C. (the boys have gone there now for supplies), and live as comfortably as we do in W. We have salt pork, salt codfish, condensed milk, split peas, potatoes, onions, Indian meal, rice, tea, coffee, etc., etc. H. is a first-rate camp cook, and reads her 'Nessmuk' religiously.

"I cannot help thinking that a good taste of this sort of thing every year is for sedentary people an excellent antidote for the slow poison of indoor life.

"L. wants to buy this island and make this a regular feature of our yearly vacation, but that is for the future and for the children. I shall probably take it out as a squatter.

"Have you made your new tent that you wrote about? I hope so, and that you are at this moment dodging the smoke and plying your axe over your outdoor supper on some of those Michigan lakes or rivers."

Perhaps the above extracts are too long for your columns; but they have a certain value, as being testimony in favor of camp life, from a man on the wrong side of fifty, who is no sportsman, never having, so far as I know, killed a single head of game nor caught fifty pounds of fish in his life. He camps that he and his may for a time live face to face with nature; and verily, they have their reward. KELPIE.

JULY 24, 1886.

SAM LOVEL'S CAMPS.—I.

BY THE AUTHOR OF "UNCLE LISHA'S SHOP."

BESIDE a low-banked waterway among the reddish gray trunks of great hemlocks, there stood, one day in the third month of a year half a long lifetime ago, a shanty of freshly riven slabs with the upper ends slanted together in the form of an A tent. In front of it a fire smouldered, the slow smoke climbing through the branches that waved their green spray and nodded their slender-stemmed cones in the rising current of warm vapor. A few muskrat skins, stretched on osier bows, hung drying near by on slim poles placed in the crotches of stakes, and two canoes, one a light birch, the other a dugout, lay bottom upward on the bank awaiting the day of use. The shanty was luxuriously bedded with marsh hay and fragrant twigs of hemlocks, overlaid with blankets and buffalo skins, and stretching out into the light were two pairs of feet, one clad in stout boots, the other in moccasins. Four legs faded away in the dusky interior, till, beyond the knees, the eye was puzzled to follow them.

Presently the boots began to stir and then the owner became dimly visible sitting up on his couch. When he had crawled out and scraped a coal from the ashes into his pipe, and having got it satisfactorily alight, stood up and looked at the cloud-flecked sky and out on the ice-bound stream, the tall, wiry form, and quiet, good-humored, bearded and weather-browned face of Sam Lovel were fully revealed. He half turned toward the shanty and lightly touched one of the moccasins with his foot. "Hello, Antwine!" he called, "be ye goin' to sleep all day?"

The moccasins moved a little and a sleepy voice in beyond said: "Hein? What was be de matter?"

"Git up an' light yer pipe, an' then le's go an' see ye spear a muskrat as you've ben tellin' on. Come!" and Sam vigorously poked the moccasins till they were drawn into shadow, then reappeared, and Antoine Bisette came hitching after them into the light and sat rubbing his eyes as he said: "Bah gosh! Sam, Ah dunno 'f Ah won't keel you, Ah dunno 'f Ah ain't! You spile 'em up de bes' dream Ah never smell all ma laf tam! Onion bilin' in keetly, patack roast in ashins, bull pawt fryin' in paan, moosrat toast on coal! Oh! bah gosh! jes' Ah tryin' mek off ma min' de fus' one Ah'll heat nex', you'll holleh 'Aantwine!' an' dey all gone off. Ah'll pooty mad, me!" and he shook his head and smote his fists above it, but the broad grin that followed gave the lie to these angry demonstrations.

"Wal, I swan, it *is* too bad, Antwine, seein' 't we hain't hed nothin' so fur but pork an' dry bread. But we'll make up fur 't bimeby. Lemme see; your onion smell must ha' ben the skunk 't ye ketched in yer mink trap las' night. The pertater smell I d'know where ye got, erless 't was a last year's one. The bull paout smell is in the futur', an' the mushrat smell is consid'able present, but not 's much 's I wish 'twas. But light yer pipe an' git yer mushrat prod, an' le's go an' see ye use it," and Sam sang from the ballad of "Brave Wolf" these encouraging lines:

"Chee-er up your hearts, young men,
Let naw-thing fright you;
Be a—w—v a galliant mind,
Let tha-a-at delight you!"

So the Canadian got his black pipe ablast, and taking a one-tined spear and an axe from the shanty, announced his readiness to start.

They went out through the sere rushes, flags and sedges that lay lapped by the winds and snows of many a winter storm, over the frozen marsh, to where the channel of the "Slang" wound clearly defined under the snow and ice, like the street of an aboriginal village, with here and there set beside it the hut of the muskrat. Away from the unwooded eastern bank stretched the wide, flat fields of the Champlain Valley, yet dazzling white with the slowly melting snows of the persistent northern winter, though in places the pall was rent where the knolls and southerly banks of the tawny earth had come to the surface again, and zigzag lines of fences cropped out above the drifts. A mile back the gray and dark green hills arose, and along the eastern horizon ran the hazy wall of the Green Mountains, topped with the shining towers of Mansfield and Camel's Hump. Westward from the standpoint of Sam and his companion an uninterrupted forest of hemlocks and tall pines seemed to reach to where the Adirondacks' scarred steeps gleamed through their veil of haze. Over the landscape bent a warm-tinted sky with fleeces of white cloud drifting slowly across it before a gentle southern breeze. The tempered air, a tinge of purple in the gray of the water maples' spray, the caw of returning crows, and the long resonant roll of the woodpeckers' drum beat gave unmistakable signs of the coming of spring—yet many days off, but surely coming.

The fall after Uncle Lisha's departure to his new home in the West, Sam had taken the old man's advice into serious consideration, and finally for various reasons concluding to follow it, he bargained for the making of a lot of traps and took Antoine as partner and instructor as well, for Sam had not much experience in trapping muskrats, those fur-bearers being not at all plenty in the rapid, weedless streams of the hill country, where all his hunting and trapping had until now been done. Long before sleighing gave any sign of failing they had their boats, traps and provisions hauled down to the trapping ground, built their rude but cozy shelter that was for some weeks to be their home, and were now waiting for the opening of small-craft navigation, when they would begin trapping in earnest. They had set a few traps in the muskrat houses, chopping out a small opening to the bed, whereon the trap was set, and the covering carefully replaced. From the houses so taken possession of rose the tally sticks, to which the trap chains were fastened, like miniature flagstaffs. To one not so marked Antoine now led the way. "Go steel naow, Sam," he said in a low voice as they they drew near it; "not mek it no more nowse as leetly mouses. Naow. Ah m's goin' stroke it raght in dar!" and carefully laying down his axe, he drove the spear into the center of the rough cone of flags, mud and sedges, a little below the top and on the south side.

"Dah, seh, Sam, ant Ah tol' you? Ah'll gat she! Ah'll feel of it heem weegle! Ant you'll see?" cried the delighted Frenchman, and when he quit his hold on the spear staff Sam saw that it was violently shaken. Antoine now chopped into the house and took out a muskrat writhing in agony and biting at the cruel spear that impaled him. The half-savage Canuck was in no haste to dispatch him, but Sam dealt the poor brute a kick in the head that ended his misery at once.

"What for you do dat, Sam? You wait mineet you see that leetly dev' faght lak a coss! Have it some funs!"

"There, Antwine," said Sam with an expression of strong disgust upon his face, "you need prod no more on 'em on my 'caount."

"Hein?" cried Antoine in astonishment, "what for Ah don't, Sam?"

"Wal, it's too dum savage. The's too much Injin 'baout that for me."

"Ant you want it moosrat? Don't dat goode way git heem, ain't it? Ah'll git forty, prob'ly twenty so, in one day! You s'pose he ain't lak it jus' well as be ketch in traap, hein? Pool off his laig all day, bambye heat him off, den 'goo' bye," Sam,' he say! He feel bad, you feel bad, ant do bose of it no good, ain't it? Bah gosh, Sam, you'll got foolish motion in you' head, seh!"

"Wal, I s'pose I hev, but I can't help it. I know trappin' is onhuman business the best way you c'n fix it, a ketchin' critters by the laigs an' lettin' on 'em suffer, but the' don't seem no other way o' gittin' some on 'em. A deadfall, 'at knocks the life aout on 'em fust dab, is the only human trap the' is, but they hain't wuth shucks for mushrat. But when you come to set for mushrat in the water, they draound quick an' I guess don't mind it much, bein' they're so uster the water. We'll wait a spell an' git 'em that way."

Further discussion was stopped by the shouts of a man who was coming toward them over the ice at the top of his speed.

"Hello there! What in thunder ye duin on?" and as he came up to them, breathless with unwonted haste, for he was short and fat, built, as Sam thought, more for sitting than running, he panted out gustily: "What in thunder an' guns be ye duin' on, ketchin' my mushrats? Clear aout, ye cussed thieves, an' le' my mushrats alone."

"*Is* this raly one of your mushrats?" Sam asked, picking up the animal and examining it closely, "I don't see no ear mark ner brand on 't, but if it's yourn, 'prove property, pay charges an' take it away."

"Wal," said the newcomer, seating himself on the muskrat house and wiping his hot face with his coat sleeve, "you don't *b'long* here; you ha' no *business* here! These is *aour* rats!"

"Oh, *aour* rats," said Sam quietly, "yes they *be aour* mushrats—when we git 'em, not afore. You take your sheer, an' I'll take mine, 'f we c'n git 'em. And I'm a goin' to git mine 'f I know haow."

"I tell ye," the man reiterated hotly, "ye don't *b'long* here; ye ha' no *business* here! Thunder an' guns! you're dev'lish putty fellers hain't ye?"

"Don't b'long here? I'm a V'monter, an' live in this caounty, an' was borned and raised in it. Who give ye these mushrats? D' you own this 'ere marsh?"

No, the visitor admitted that he did not own the marsh, but he lived near it, and he and two or three other residents had always trapped in Little Otter and the two Slangs, "and the trappin' here *b'longed* to' em."

"Haow many traps do the hull caboodle on ye set?" Sam asked; and after reckoning in his head and on his fingers, the man said, "'Baout hund'ed an' fifty."

"A hund'ed an' fifty traps on all these miles o' marsh! Wal, I guess what we've got won't make no great diffunce wi' ye, so don't fret yer gizzard, my friend. There's room 'nough for all on us, an' we'd like to live friendly wi' you fellers, but anyway, we're goin' to trap here a spell."

"Who give ye leave to camp over yunder?" the man asked, waving his hand toward the shanty.

"The man 'at owns it," Sam answered, shortly. "I do' know why in Sam Hill I never thought to ask you—but then, ye see, I hed not hed the pleasure o' your 'quaintaince till jes' naow. Be you willin'?"

"Humph!" grunted the aggrieved trapper. "Camp an' be cussed! Trap and be damned! Ye won't make much aouten on it, see 'f ye du!" and he went his way in no better humor than he had come.

When he was at a safe distance, Antoine, till now a very silent partner, shook his fists at his broad back, seized himself by the seat of his trousers and apparently lifted himself off the ice in a rapid series of short leaps, and cried in a tone that he was sure would not be heard by the retreating foe, "Hey! by damn ye! Ah wan' leck you, seh!" Then turning to Sam and throwing down his cap, "Ah dunno what for Ah ant tink for leck dat man when he here, bah gosh!"

"Wal, Antwine," said Sam with a quiet smile, "I du."

Then they went back to the camp, and Antoine skinned the rat from chin to tail, and stretched the pelt on a bow of "nanny bush," fastening it in place by upward cuts through the skin and into the wood at the nether ends of the bow. Then they made their tea, frizzled their slices of salt pork over the coals, and ate their rude but well-relished supper. After a long smoke they turned into their robes and blankets.

Once when Sam arose to replenish the fire and take a quiet midnight smoke, he thought he heard the sound of axe strokes out on the moonlight marsh, but he saw nothing and thought then no more of it. But next morning when they went abroad he and his comrade found every muskrat house chopped down and uninhabitable, and the few traps they had set were thrown out upon the ice. Their unpleasant acquaintance of the day before, and his partners, had done their night's work thoroughly. The muskrats had retreated to their burrows in the banks, and there could be no more trapping nor spearing in the ruined houses. Antoine pranced and tore his hair, and made threats of terrible vengeance. Sam said, "Wal, arter all, 't was kinder neighborly in 'em not to steal aour traps. We'll wait an' start 'long o' the rest on 'em when the ice goes aout."

Natural History.

WHAT WAS IT?

THE reported occurrence of a sea monster off the Massachusetts coast near Gully Point, July 24, had a basis of fact, though it is as yet uncertain what the creature was. We give below two newspaper accounts of the occurrence. The New York *World* says:

"ROCKPORT, Mass., July 26 (*Special*).—A sea serpent which is no imaginary creature but a veritable monster, has visited this place. This serpent is vouched for by men of undoubted veracity, Chas. A. Russell, Esq., of Gloucester; Edward Battis, of Salem; Sumner D. York, clerk of the Gloucester Police Court, and A. W. Tarr, teller in the Rockport National Bank, have been camping out at what is known as Gully Point. On Saturday evening Mr. Tarr sat with glass in hand and saw a large body not far from the shore. It was a monster. The attention of the rest of the party was called to the large body. Every one in the party were unbelievers in a sea serpant, but ocular proof dispelled their conflicting doubts. Gracefully his serpentship coiled toward shore, and before turning away from the rocky coast had ventured within 200yds. of the campers. So far as could be judged, the marine monster was 100ft. or over in length, and as large round as a barrel. The head was seen upright in the water and when under the surface the body floated on top of the waves. Sumner D. York, heretofore skeptical as to the sea serpent, is now a firm believer. He has seen it and no argument will change his belief. He saw the serpent with his own eyes. The serpent gracefully swam within 200yds. of the shore, and coming round the point made a grand sweep and headed toward the breakwater."

The Rockport *Review* of July 31 gives the following account: "The sea serpent has been seen off Rockport. Saturday evening, at about 7 o'clock, as Mr. A. W. Tarr, wife and daughter, sat together outside of Sans Souci Camp at Gully Point, enjoying the cool air and beautiful scenery and quietude of the locality, Mr. Tarr's attention was called by Mrs. T. to a strange fish or animal swimming very near the shore. At first he thought it might be a school of some kind of fish, a shark or horse mackerel, but such ideas rapidly left his mind as the monster became more prominent. They notified the occupants of L. E. Smith's cottage, Messrs. Sumner D. York and Chas. A. Russell, both lawyers of Gloucester, and Edward Battis, a law student of Salem, who at once became much interested to determine the nature of the object. They ran to the shore, a few hundred feet distant, so they were within a stone's throw of the strange animal as it gracefully curved in and around Gully Point Cove. It was plainly seen by them, its head rising and dipping out and in the water, which was as smooth as a millpond. Behind were the curves made by its huge body, similar to those made by an eel. A number of these sections were seen, and looked as large around as the body of a small-sized man and about two feet long. Once or twice it disappeared from the surface and then came up and wriggled off toward the salvages, being in sight fully ten or fifteen minutes, so that its observers could fully decide that it was a monster of the deep, and not an illusion or 'turtle with a seine in tow,' as some have supposed it might be. Were the parties who saw it less reliable, it might be passed by as a joke; but the word of either of these persons is perfectly reliable."

An inquiry as to the facts in the case was made of Mr. Albert W. Tarr, of the Rockport National Bank of Rockport, who writes to us as follows:

ROCKPORT NATIONAL BANK, Rockport, Mass., Aug. 2.—*Editor Forest and Stream:* Yours of the 29th ult. to hand. I forward you the Rockport *Review* containing an account of the subject of which you make inquiry, and I should say it was a fair account and nearer the right than any of the others I have seen. I should say the curves of the animal were more than two feet in length, and think they were some eight or ten in number. The account otherwise was as I saw it, and it certainly was no hoax. A. W. TARR.

IS THE GROUSE POLYGAMOUS?

ALL the authorities who treat of the ruffed grouse, allege that the male is polygamous. Is this a fact or is it only a tradition regarding a bird whose habits we have always had limited opportunities for observing, and about which we consequently would seem to know less than we know of almost any other of the game birds? As I have been watching the actions of a male grouse and two hens this spring and summer, their relations became such as to raise the question which heads this paragraph, and to lead to the belief that if the rule were as generally stated, there might nevertheless be exceptions.

In the winter and early spring these three birds seemed to be living together in entire harmony. About the 20th of April the male began strutting and drumming in the usual fashion. It was, however, only a short time till he began to exhibit a marked dislike to one of the hens, while he seemed to be always on (negatively) friendly terms with the other. This dislike soon took an aggressive form, so much so that he abused the obnoxious bird roundly whenever she came near, and she soon grew so much afraid of him that she seemed to keep as far away from him as possible. This abusive conduct on the part of the male continued all summer, and the male at such times became so savage, that he paid no attention to any human observer.

Now for the sequel. Both these hens laid a nest of eggs about the usual time in the spring. Those of the abused hen I have just described were barren, while those of the other hen were fertile. There was no apparent outward reason why the male should mate with one hen and quarrel with the other, and yet the eggs showed by indisputable evidence that such was the case. The theory that these birds pair, instead of practising polygamy, would seem to harmonize with these facts. JAY BEBE.

TOLEDO, Ohio, July, 1886.

AMERICAN ASSOCIATION MEETING.

THE following programme has been arranged by the local committee for the thirty-fifth meeting of the Association, to be held at Buffalo, N. Y., beginning Aug. 18:

Thursday.—Afternoon: Excursion down the Niagara River to Grand Island. Evening: The Botanical Club of Buffalo will receive the Botanical Club of the Association at the residence of Hon. David F. Day. The Entomological Club of Buffalo will receive the Entomological Club of the Association at the rooms of the Society of Natural Sciences.

Friday.—Afternoon: Mrs. Bronson C. Rumsey will receive the Association at a lawn party at her residence on Delaware avenue from 4 to 6 o'clock. Evening: Illustrated lecture by Prof. C. A. Ashburner, Geologist in Charge, Second Geological Survey of Pennsylvania, on "The Geology of Oil and Gas."

Saturday.—Two excursions will be given to the members of the Association on this day. One to Niagara Falls via New York Central Railroad. Dinner will be provided by the local committee at the International Hotel, Niagara Falls. Arrangements for reduced rates have been made with Mr. Alva Gluck, the proprietor of the International, so that members of the Association who desire to spend the Sunday at the State Park can have accommodations at $3 a day, or on the European plan, rooms from $1 a day and upward. The other excursion to Chautauqua Lake, via Buffalo, New York & Philadelphia Railroad to Mayville, from Mayville to Bemus Point by steamer, where dinner will be served. Members will please notify the local secretary of their choice by Friday noon at the latest, so that the necessary arrangements can be made.

Monday.—Afternoon: Excursion of the Botanical Club of the Association to Point Abino in company of the Botanical Club of Buffalo. Excursion of the Entomological Club of the Association to Ebenezer in company of the home club. Evening: Receptions at different places: The above programme will be changed or modified according to the state of the weather. Members of the Ladies' Reception Committee will be daily in attendance at the High School to receive the ladies of the Association as they arrive. As another large convention is held in Buffalo during the same week, it will add greatly to the comfort of the members to have the necessary rooms engaged prior to their arrival, and notices to that effect should be sent as soon as possible to the local secretary.

DO SNAKES POISON THEMSELVES?—*Editor Forest and Stream:* The above query appeared in your columns lately. I can say something to the point. When a lad I had charge one winter of a rattlesnake. It was fed once a week with a live mouse; a dead one was always refused. It would fasten upon the head, never releasing its grip except in advancing its hold. There came a time when it declined the accustomed meal, and the mouse in its fright jumped about and occasionally lit upon the snake. The latter after a while roused up and glided about the cage, apparently enraged. At length the mouse hit the snake, when the latter sounded its rattle and struck the mouse in a flash. Very soon the mouse began to swell and stagger about, and in a few minutes was dead. It was not deemed prudent to remove the mouse till the snake was quiet. On visiting the cage for that purpose the mouse had disappeared, but its bulk was plainly discernible in the form of the snake, which was already in distress, turning black and bloating. It was dead in half an hour, having apparently suffered exactly like the mouse.—WARFIELD (Smyrna, Me., July 28).

DOMESTICATION OF THE BUFFALO

Editor Forest and Stream:

The letter of Mr. Seton on the American bison in your issue of the 8th reminds me to inform you that this great animal is not yet totally gone in Texas. I am informed by reliable gentlemen that a herd of a dozen to twenty head were lately seen in Crockett county, and there they have been seen by several parties, off and on, for the past two years. He himself recently saw eight of them in a bunch. Crockett county lies southward of this place about 100 miles, embraces over 10,000 square miles of territory, and has no population, except a few scattering stockmen on the Pecos and the headwaters of the San Saba. It is for the most part a wild and shaggy country, high tablelands, low mountains, brushy thickets and here and there a beautiful and fertile valley. It contains also some districts covered with white sandhills of a very desolate and forbidding aspect, but full of pools of excellent water, around which grow very tall, sweet and nutritious grasses. Supports rattlesnakes by the million and any quantity of "Mexican hogs" or peccaries. Has lots of deer, antelope, wildcats and panthers. Such is the country that the last remnants of the myriads of buffaloes which used to roam over Texas have chosen for their permanent home. In the days of his greatness the buffalo never staid in Texas during spring and summer, but migrated northward as the warm weather came on, returning again in the fall. This last remnant of the mighty race don't migrate. It stays in Crockett county all the year. I am told that even the ungodly cowboy treats these remnants with respect and don't shoot them.

Also in the Panhandle, Mr. Charles Goodnight, a very great stockman, has on his Paladura Ranch on Red River, a herd of buffalo which he has domesticated. He is devoting much care to them, to perpetuate the race. Am told that he is having great success with them, but I do not remember the number of his herd. No doubt such as he may offer for sale will in time command very high prices. N. A. T.

ABILENE, Texas, July, 1886.

THE PINE MARTEN (*Mustela americanus*, Linn.).—*Editor Forest and Stream:* In your issue of July 22 a writer asks if the animal called "sable" by hunters is the fisher or marten. I have many years hunted the slopes of the Canada mountains, extending into Maine, for "sable" or pine marten. In the palmy days of the mink, between the years 1862 and 1866, when their little pelts commanded $10 each, they were called "sable" furs, and they may be to this day for aught I know. I never could see why a mink should ever be called a sable, unless to give it a prestige and make the goods sell better. But there is more congruity in calling a marten a sable, for there is considerable similarity in the looks of the animals, both in color and form. The martens of Canada and New England have been called sable by hunters of both sides of the line from time immemorial, just as a fisher is called by hunters a black cat, although it is not black nor a cat. Some writers think there may be two species of martens since there is such difference in color in subjects examined by different parties in different parts of the country. This can be easily accounted for, we think, by the sex, age and season of the pelt. The female is smaller and more plainly colored than the male. The male is more highly colored, more distinctly marked and beautiful in appearance when in a prime condition. In the autumn, before the cold weather commences, the fur on the upper part of the body is brownish rufous, almost indescribably mixed, and under the throat is a beautiful golden patch—the earlier in the season the more beautiful the color of the throat, and as the season advances the colors change gradually darker on the body, and lighter about the head. I think the change is made by the coarse hairs (or secondary fur) as they gradually grow out through the base or bottom fur, and so changes the whole appearance. I have one individual now at my elbow, which I caught and stuffed many years ago, caught in an open, settled farming country in Maine, where an old resident told me there had not been one caught in that vicinity for more than fifty years. Forty years ago these little animals were very abundant, but now hunters have to go far back into the wilderness to find them. The pine marten or sable live chiefly on mountains, in hard wood and mixed growth more than in black growth. They feed mostly on squirrels. Some hunters have supposed they eat the beechnut because they were more abundant in the beech woods, but the truth is, they are found there because the squirrel inhabits those woods and subsists on those nuts. I have caught hundreds of these little animals. The common way of hunting them is by deadfalls or log traps on spotted or blazed lines, following along the sides of mountains often many miles in length. It is a delightful pastime to camp on a sable line, following the axe marks for days through the unbroken forest.—J. G. R. (Bethel, Me.).

THE TREE ISLAND HAWKS.—A sunken island in Sebago Lake, Maine, is surmounted by a single dead pine tree, which has given it the name of Tree Island. In the top of this tree is a nest of the fishhawk (*P. carolinensis*) which has been in use for over thirty successive summers. Any one residing about the lake would as soon kill one of their best friends as one of the Tree Island hawks, but several times parties from abroad, not knowing the interest attached to these particular birds, have killed one of the pair, thinking, no doubt, that shooting the bird on its nest was an evidence of skill. Whenever this has taken place, I am informed by Abe Shaw, the veteran pilot of the Sebago Steamboat Company, the surviving bird would disappear for a few days, and then return, accompanied by half a dozen or more fishhawks, and for about a week high carnival would be held about the old tree, their screams and love songs making the echo ring again and again. When a mate has been selected to the liking of the resident bird, the others depart, and family life in the old tree goes on as before.—BLACK SPOT.

THE AUDUBON SOCIETY.—The members of the SOCIETY at Central Lake, Mich., gave a picnic last week, which was attended by one hundred and seventy-five persons. The Decorah, Iowa, *Republican* thinks that the AUDUBON SOCIETY certificate of membership, with the excellent portrait of the great naturalist, "is well worth framing as a picture."

DOMESTICATING WILDFOWL.—Cold Spring Harbor, N. Y., Aug. 2.—*Editor Forest and Stream:* In June one of my wood ducks laid three eggs and abandoned the nest. The eggs were placed under a hen, but were not fertile, although the whole flock, which consists of seventeen pairs and two odd drakes, mated in mid-winter, and no one who saw them daily would doubt but all eggs would be well impregnated. The mallards and pintails are not old enough to breed, but should do so next year. The mandarins were three years old this spring, and have bred. This, as some of your readers may not know, is the Chinese wood duck, having the same habit as our native bird, but differing in plumage. The female laid ten eggs in all. The two first were bad before they were placed under a hen (twenty-two days), and one had no shell. Of the seven eggs put under the hen on June 29, four hatched in twenty-eight days, and three had no birds in them. I do not know that these birds have ever been bred in America before, and in fact am not sure that there are any pairs of them here. The Cincinnati Zoo. had a drake which mated with a wood duck last year, but nothing came of it. My youngsters are well and growing. I have been unable to get a mate for the green-winged teal which has not laid, nor for the English widgeon drake. If any of your correspondents happen to know where such birds can be obtained I would like to hear from them. Next year the flock will be given a wider range over pond, swamp and meadow, and greater success in breeding may follow. By careful attention to their wants these beautiful birds may be bred in a state of semi-domestication that will repay the effort. This year at least a dozen pairs of wood ducks took possession of the nests, and fought over them as though they were about to begin house-keeping, but there it ended. It is possible that the confinement was too close or that the food was not just right, but next year I hope to report better results.—FRED MATHER.

HABITAT OF THE QUAIL.—Havana, Cuba.—*Editor Forest and Stream:* Will you please inform us as to the northern and southern limits of habitat of *Ortyx virginianus?* My own shooting of this species has ranged from the fourth to the forty-second parallel of north latitude, and I know of no physical reason why its habitat should not extend from Hudson's Bay to Patagonia.—NEMO. [What has been known as *Ortyx virginianus* is confined to temperate North America. To the southward the species changes gradually, becoming smaller and darker on the Atlantic seaboard (*floridana*), and smaller and grayer in the southwest (*texana*). In Arizona and Mexico a number of forms are found which differ markedly in coloration from our bird and yet have habits extremely like it. The *Odontiphorinæ* are most abundant in Central and South America, but the true *Ortyx virginianus*, or, as he is now known, *Colinus virginianus*, is not found south of the United States.]

THE FIRST TRACKING SNOW.

A WINTER'S TALE FOR SUMMER READING.

IT came near the end of December. All through the autumn, here in this far-off mountain land, we had waited impatiently for its coming, yet the clouds that drifted slowly up from the great Pacific and twined in misty wreaths around the mountain crags brought us only rain. For weary weeks the dripping vegetation protected the game as with a hedge of thorns. In vain had I on half a dozen occasions essayed to find a deer among the foothills of the mountains on the west of our little valley, only to return after an hour's tramp, dripping and disgusted, and more than ever before aware that in still air, with nothing to shake it off, a pine leaf can hold a string of rain drops suspended in the air longer than any other leaf that grows.

For six weeks I had not killed a single deer. Venison had disappeared from the cabin, and the seven little ones who daily gather around our table, and who love venison with a love passing the love of woman, began at last even to quiz the water-soaked hunter whom they had heretofore regarded as the peer of Daniel Boone himself. In vain did I refer to the eleven deer that I had already brought in during the season before the rainy weather had begun. The spell was broken. They were fast becoming a crowd of scoffers, and the oldest boy who had been studying woodcraft for the past two years, and who, during that time had killed three deer, sagely mentioned his ability to kill deer enough for the whole family. There was nothing for it but to abide my time—

Nursing my wrath to keep it warm.

At length one evening a mysterious chill crept down the mountain side, and slowly, gently, the beautiful flakes of the welcome snow hovered over all the land, and eddying slowly downward slept at last on cliff and crag, and in the gloomiest depths of the cañons that furrowed the mountain sides, turning all the hills and valleys into fairyland.

It was evident at nightfall that the morrow would be favorable; and when returning daylight showed four inches of snow, soft and light as down, with more still falling, I hastened to dress my feet in German socks and soft moccasins (the most perfect foot-dress for the still-hunter I have ever tried) and taking the Marlin .45-70, climbed the hill on the west of the valley, and gaining at length the bank of a little creek that ran into a mountain lake to the northwest, followed along its banks and searched the low hills near by, but no fresh sign appearing I turned southward and climbed to the top of a high plateau, and hunted carefully in that direction for two miles. Very slowly and carefully I crept on, making no noise and scanning carefully every object. About 9 o'clock the snow ceased falling, leaving a depth of six inches on the ground, with the sky cloudy and dark. It was an an almost perfect day for still-hunting, and as I was on my mettle and very reluctant to return empty-handed to that crowd of laughing children, all the acquired skill of thirty years of deer hunting was brought into play.

Both black and white-tailed deer are found here, although where I was hunting one was more apt to find the white-tails, the big blacktails or mule deer feeding commonly further up the mountain side. Still, there was a possibility of finding either of them.

Noon came and went and still no sign.

At length I reached the head of a ravine that ran eastward down through a break in the great basalt cliff that stands in a perpendicular wall a hundred feet high along the west side of that part of our valley, and here, while I was going across a brush-covered ridge, a deer track half full of snow caught my eye. A large deer, evidently with a long stride, and which put me for a time to no end of trouble by perversely climbing up into the most absurd places along the foot of the cliff and then creeping down again to the very bottom of the ravine. The track had evidently been made about daylight. After following it for half a mile down the ravine I came suddenly into a perfect wilderness of tracks, fresher than the one I was following. A careful search showed the trails of a band of six deer, and as they kept along the west bank of the ravine and the single trail turned down across it, I left the single trail and turned my attention to the crowd. In and out, back and forth, up and down zigzagged the confusing network of trails, gradually working down the ravine far past the great wall of basalt, where the ravine was flanked on the north by a bluff two hundred feet high, steep as it could hang, with occasional projecting spurs of the inevitable basalt, the angular fragments of which, crumbled from the mass above, strewed the narrow valley below. The timber here and on the adjoining hills was very scattering, with but little brush, making the ground quite favorable for hunting.

Finally the trails turned directly to the left, straight up the face of the bluff, so steep as to be almost impossible of ascent. Slowly and wearily I toiled upward, using the butt of my rifle as a cane, and when near the top I fell with a racket that seemed to make noise enough among the rocks and twigs to alarm all the deer in the hills. Arrived at the crest, the trail turned to the right, along the edge of the bluff, and after following it for a few hundred yards, just as I reached the crest of a knoll, two fresh deer beds and a world of tracks, evidently made within the last three minutes, instantly strung every nerve to concert pitch.

The first glance was fairly bewildering, for all the tracks pointed backward, and the deer were walking too.

I could hardly believe my eyes. A hurried look backward showed me that while I had been intently scanning the ground far in advance I had gone a few steps along their fresh trail without observing it, while back a few rods the fresh tracks left the old ones and turned off to the left, directly over the edge of the bluff, at a point steeper than where I had climbed it. Could I catch sight of them before they reached the dense jungle at the bottom of the ravine, was the question. A swift run to the edge of the bluff, a glance downward, and there, a hundred yards distant and two hundred feet below, stood a white-tailed doe half hidden by the drooping branches of a small fir. Only her hips were in sight, and taking a hurried aim I fired. At the crack of the rifle she staggered and then sprang behind some small trees, when instantly the steep hillside seemed alive with deer as the five others made a few frightened leaps and stopped, evidently bewildered and unable to locate the dreaded foe. Another crack of the rifle and a fine doe went sprawling down into the ravine, when a frightened fawn sprang into an opening, stopped for a final backward glance, and again the rapid repeater told its tale of death, sending the graceful creature whirling down the hillside out of sight behind a bush.

None of the others appearing, I crept carefully down the bluff to find the fawn already dead and the other two unable to escape. These were killed immediately, and the whole being dressed and made ready for the pack saddle. As night was coming on, I turned my weary steps homeward, ready to face the little crowd of eager questioners who met me at my door. UNCLE FULLER.

THETIS, Stevens County, Wash. Ter.

FOXES AND FOXHOUNDS.

Editor Forest and Stream:

Since writing the history of old Loud's famous run I have had a most enjoyable time reviewing events of long ago. I cannot better describe the effect produced upon me than to quote the words of "the dearest and best of her sex," who remarked to one of the children, "Father must be thinking over some of his fox hunts, he appears to be so happy." Not least among the pleasing reminiscences of the past was the sweet remembrance of her loving smile and willing ear as I recounted the tale of successful sport. Not least among the blessings remembered was the recollection of her look of sympathy and words of cheer when the trail was lost. As memory harks back to the good old times, in fancy I can hear the burst of glorious music and see the flying forms of long ago. Again with buoyant step I follow the exciting chase. Again I pause upon the breezy hilltop to listen with bated breath to the dearly loved music of the eager dogs.

Among the earliest recollections of my fox-hunting days is the wrinkled phiz and bent form of old Tom Lovell, better known as Old Grimes. How he came by this cognomen was an oft-told tale at our country store, which was a general resort for fox hunters far and near. Old Tom was at a favorite runway on top of a ledge waiting for the fox to come round, and by some mischance he lost his footing and tumbled to the bottom. Uncle Mose Baker, who was stationed on the opposite side of the valley, at once hastened to him and found him lying senseless, with his face covered with blood from an ugly-looking wound in his forehead. Uncle Mose, thinking him done for, carefully raised his head, when he feebly muttered, "I'm dead; I wish I had some cider." Just then old Sounder broke out at the head of the valley, when old Tom jumped to his feet, scrambled up the ledge, grabbed his gun, and five minutes later was skinning the fox. He was late at the store that evening, and Uncle Mose had told the story in his best style to a full house. The shouts of laughter had hardly subsided when old Tom's well-known footstep was heard on the porch. As he opened the door the crowd almost as one man broke out to the full extent of their lungs in the song "Old Grimes is dead," and ever after he was only known as Old Grimes. He and Uncle Mose were great cronies, and nothing pleased either of them better than to have a good story to tell of the other, and as both were adepts in practical joking and telling a story, there was generally lots of fun going on almost every evening at the old store.

There was one story, however, in which both of them figured that neither was ever heard to breathe a word about. Each of them fatted a pig and when it was time to kill them Uncle Mose went over to old Tom's and helped him butcher and hang up the pig; they then finished the day with a fox hunt. A few days later Uncle Mose's pig was to be killed and old Tom was on hand at daybreak. It was bitter cold and both dogs were put in the barn for safe keeping. This was a short-sighted piece of business, however, as the dogs were no sooner in there than they bolted through the stable window and were off for the big cedar swamp, a half mile or so from the house. Uncle Mose had been up for some time getting things ready, and the men had not long to wait before the water in the big set kettle was boiling. They then stuck the pig, and after emptying the water into the half hogshead tub hauled him there, and locking hands under him prepared to ease him down into the tub.

Just then there was a burst of heavenly music, and looking up they saw the open-mouthed dogs a few feet behind their fox, making straight for the runway a short distance below the house. The tense fingers relaxed their grip, the corpse slid into the tub and both grabbed their guns and put in their best licks for the runway. They were too late, however, but as the fox was sure to cross back to the swamp a little further down they still kept on. What befel them after this will ever remain a profound mystery, for, as I remarked before, they never mentioned the subject. All that is known leaked out through Uncle Mose's wife, who said that just at dusk she saw them come round the corner and cast a furtive glance at the tub where the pig was frozen in solid. O. M.

MOOSE CALLING.

TO-DAY I met "Gabe," well-known here as the best Indian hunter in the Province. I asked him to give me some information about moose calling. In the rutting season the Indians have a way of calling the bull moose by preparing a horn of birch bark from which they emit a sound similar to the low of the cow, and when the bull hears it he goes at once toward the call, thinking to find his mate, but oftener to meet his death warrant. Gabe advised me that the first moon in September is the time for calling. The best ground is Fox Stream, on a branch of Salmon River, about fifty miles from Fredericton, to reach which you take the steamer and go to Salmon River wharf, and then go up the river in canoes. Call from Lake Stream Lake. As the stream is generally very low at that season of the year, you must haul your canoes by horse power part of the way, so it generally takes from three to four days to get on the ground. And then, he says, you must not expect that there will be a moose all ready waiting for you to shoot. Perhaps you may have to wait a fortnight before you can get a shot; but you can occupy your time in shooting ducks, partridges and still-hunting caribou. The shooting, he said, does not seem to disturb the moose.

It requires a dead calm night to call. The horn is made of birch bark and the man who expects to kill must be a smart one, willing to work and put up with fatigue and have plenty of patience. You must go some distance from camp, out of range of camp-fire, and very often have to stay out all night before getting a shot. Moose are plenty there just now, as none have been killed in that locality for the last two years, for the snow was not deep enough to run them down, the way in which they are generally slaughtered. The moose are very strong at this season of the year and take "a power of killing." He has called a great many, and seen a great many fired at, but very few killed. Two gentlemen will require three canoes and three men. Gabe charges $2 per day for himself and canoe and looks after the whole party. The other Indians charge for themselves and canoes $1.50 per day. There are several other good grounds for calling but none as good as Lake Stream Lake, where you can use a canoe. To get to the other places you will have to pack your provisions.

The outfit taken consists of four tin kettles that will fit into each other, one for cooking, one for tea, one for clean water, and one to take with you when you want to go from camp; two frying-pans, tin cups and plates; a wire grilse to roast a fish or partridge; two blankets for each man (the Indians provide their own); pork, flour, codfish, tea, sugar, pepper, salt, onions, etc., and as many luxuries as you may think proper. MOOSE.

FREDERICTON, N. B., July 20.

THE PRAIRIE CHICKENS.

Editor Forest and Stream:

The very dry weather this season has been damaging to crops, but excellent for prairie chickens, and the shooting this fall will be unsurpassed. Prairie chickens are unusually abundant all through this section, and the outlook for plenty of sport is excellent. Later we will have geese and ducks in abundance. There is no better point for sportsmen seeking good fall shooting, than Bismarck.

J. G. R.

BISMARCK, Dakota.

THE PUGET SOUND BASIN.

THE Puget Sound Basin, and especially that particular portion contiguous to Bellingham Bay, in Whatcom county, certainly offers to sportsmen advantages that cannot be found elsewhere; game and fish in abundance, a climate that is unsurpassed, cool and refreshing in the summer months and mild and pleasant during the winter season. It is a section which, because of its remoteness from the larger cities, has been but little frequented in the past, but which, within the near future, must become the most popular resort for sportsmen on the American continent. Deer, bear, cougar and pheasants are abundant within five miles of the bay; in the eastern portion of the county, among the foothills, are found herds of elk; higher up, in the snow-covered Cascade Mountains, the more vigorous and daring may find the grizzly bear and occasionally mountain sheep. The numerous lakes and rivers abound in trout and salmon, while the halibut, sturgeon, cod and other deep-water fish may be obtained with very little effort. The disciples of the rod and gun will never be at a loss to fill both creel and bag with the choicest of nature's offerings.

But we have game laws here, and insist upon their enforcement. We want sportsmen to come to this new Northwest and help us "clam eaters" to enjoy the manifold advantages here offered. Letters of inquiry from genuine sportsmen will be cheerfully answered by me.

WILL D. JENKINS.

WHATCOM, Wash. Ter.

TARGET OF TEN CONSECUTIVE SHOTS AT 100YDS.

RIFLED CHOKEBORE GUNS.

A NOVEL gun barrel has recently been invented by Lt.-Col. George V. Fosbery, who writes of it as follows:

Editor Forest and Stream: The principle on which these barrels are constructed turns on the two facts (1) that a very short length of groove is all that is really required to give a ball its rotation, especially when that grooving is placed at or near the muzzle of the gun, and (2) that by means of forcing, a ball can always be made to enter and fill completely any system of grooving you choose to employ. These barrels, then, are choked at the muzzle end, and the choked portion is rifled in such a manner that the shot shall come under the influence of the choke and accept their new or modified direction before reaching the grooves; whereas the ball of the same diameter as the larger cylinder of the barrel is, by the same construction, forced and compelled to fill the grooves so soon as it reaches them, and accept whatever rotation is required for its length and caliber. Its speed and direction it has already acquired. Some surprise has been expressed that the barrel should be neither bulged nor burst in the process, but a moment's reflection will show that a ball already endowed with a velocity of some 1,200 feet per second in the smooth portion of the barrel cannot be checked sufficiently by the small extra effort of entering the grooves to allow of that accumulation of rapidly moving gases behind it which is generally supposed to cause the bursting of barrels. In fact, I have rifled some exceedingly thin and light barrels and have never forced them to swell, much less burst.

Both here and in London 12-bore barrels made on this principle have been found to beat barrels rifled throughout their whole length in the ordinary manner, and I need hardly point out that a gun which, while carrying small shot perfectly, will also shoot an elongated bullet with accuracy up to all ordinary sporting ranges, must be an acquisition to many hunters who have hitherto been obliged either to carry two weapons or content themselves with one class of game.

A 20-bore or even a 16 double on this principle makes an exceedingly handy all-round weapon, and needs no more care than an ordinary chokebore, leading at the muzzle being, when it does occur, no more in the rifle than in the ordinary chokebore, when it is sometimes found in exceptionally dry weather.

I send exact size target made July 3, 10 successive shots, 100yds., shotgun with Fosbery barrel.

ABOLISH SPRING SHOOTING.

Editor Forest and Stream:

In your issue of July 15 Mr. R. B. Roosevelt, under the head of "Spring Snipe Shooting," says, "Saw the marlins go past as many as thirty in a flock." My acquaintance with the birds of Long Island, which has been quite extensive, leads me to class both the godwits, commonly known as the brown and ring-tailed marlin, as rare.

Will Mr. Roosevelt kindly state which of the marlins he refers to, if either. I apprehend he saw flocks of Hudsonian curlew (*Numenius hudsonicus*) which is sometimes called crooked-bill marlin, but almost universally on long Island jack. WM. DUTCHER.

NEW YORK.

HARD LUCK IN McGEE'S POCKET.

WITH the thermometer at 90° the very thought of a duck hunt is in some degree refreshing and to read the articles on that subject, in FOREST AND STREAM gives the writer no little pleasure. Thinking there may be others who feel the same, I will give some of the possibilities of this section for duck shooters. We never have ducks in paying quantities before Dec. 10. On the 4th of January last four of us resolved to try a weeks hunting at a point, some eighteen miles north of Vicksburg, known as McGee's Pocket where ducks were reported as plenty. We left the wharf at about 5:30 A. M. in a large four-oared skiff. Our boat was pretty well loaded with "camp plunder," decoys, etc.; and as most of the way was against the current of the Mississippi, the eight hour trick at the oars was by no means a pleasure. We reached our destination at about 2 o'clock very much fatigued and moderately hungry.

McGee's Pocket is a bay in the north end of Old River, about two and a hrlf miles long and three-quarters of a mile wide; the depth is at no place greater than 8ft. We could see the ducks a mile before we got to the entrance of the Pocket. They were there by hundreds. Some immense flocks stretched in long lines almost from shore to shore across the bend. After considerable difficulty in making a landing, owing to a thick growth of willows, we at last got to shore, put up the tent, and had a good fire burning by 4 o'clock. As soon as each had swallowed a cup of coffee we determined to start the circus, as we were anxious to put in all the time possible in actual shooting. I took the skiff and decoys and pulled for the opposite shore, where the ducks seemed to be flying. The others skirted the willows on the side next to camp to get a shot at a very large flock of mallards which were feeding in the bight of the bend. I got within about two hundred yards of the bank, and found the water so shoal and the grass so deep that I could not get an inch nearer shore in the boat. I had to get out and wade to the bank, which was no easy job, as I had fifteen decoys, a 10½lbs. gun and a bag of cartridges to carry. The side on which I now found myself had no growth of any kind except a half dozen privet trees, which stood like sentinels on the shore within ten feet of the water's edge. With considerable trouble I at length reached the nearest tree, sinking at every step about eighteen inches in the toughest mud I ever saw. I found nothing from which I could construct a blind, and was compelled to pack limbs and branches from the side of a hill nearly a quarter of a mile in the rear. I had scarcely finished the blind, which was no blind—having previously set up the decoys—when the fun began. I killed two teal with the first barrel. The echo of my first shot was taken up by the guns from the other side, showing that the ball had opened in earnest. I was kept pretty busy for about half an hour, when the growing darkness warned me that it was time to start for camp. I found twenty-two teal among the decoys, one bird for every shot except two.

I left the decoys in the water, and with a lighter load had less trouble in getting to the boat. It was so dark before I reached camp that one of the boys had to hold a lantern to show me the landing. I found every man in camp grumbling after his own peculiar style, because they had fired fifty cartridges and had not killed a single duck. Knowing that two of them were excellent shots, I was very much surprised. None of us guessed the reason of the remarkable misses nor did we learn it until the next evening. After eating supper we at once turned in, being too tired to discuss anything but the campaign for the next day.

We were all up two hours before day. It was raining slowly but steadily, which meant that it had come to stay. This change in the weather was not unwelcome to us, we felt sure that it would be followed by a cold snap, besides we knew that the very best shooting was generally to be had in just such weather as now favored us. I found that I had only a few loaded cartridges left, and replenished my bag from the stock of Mr. A., who had brought three or four hundred loaded shells for general use. Breakfast was soon over and each started for his favorite stand. As on the evening before I decided on a point just opposite camp, where decoy shooting seemed most promising, though only for small ducks. Mallards, in my experience, never decoy well. I pulled E. across in the boat, while the two others started for the scene of their last night's exploits. It was still dark and we floundered around in the mud for half an hour before we could find my blind. I divided the decoys with E., who went on up the shore to the extreme point of the Pocket where he made a blind about a mile above me. Our several stands commanded the whole of the shooting ground.

I could hear the ducks on every side before it was light enough to see ten feet from where I stood. As soon as I was able to distinguish the decoys, I saw also a dozen or more teal among them, I killed four with two barrels. E. had already opened his battery with his 12-bore, and the deep bass from the two heavy guns on the opposite shore made the welkin ring. It was really exciting, for I consider no sport finer than duck shooting when there are plenty of birds. By 9 o'clock the weather had turned several degrees colder, though it still rained, and a stiff wind from the north blew directly in my face. I had killed only fifteen ducks in all, and thought this very poor work considering the number of shots. The teal were flying as well as I could possibly wish, and I was shooting as fast as I could load, but I did not kill one in five shots. I thought it possible that my gun needed cleaning, but this would not account for my missing shot after shot at from fifteen to twenty yards distant. However, I continued to shoot until nearly 12 o'clock when we had agreed to meet in camp. E. had already walked on around the bend, and I was about to gather up my ducks when a teal lit on the edge of the grass not fifteen feet from where I stood; generally I would not take a shot at such close range, but my frequent misses had made me desperate, so I let drive at the duck, and had the satisfaction of seeing it fly about twenty feet and fall in the water. I started for him, when he rose and flew a few yards and lit again. I fired the second barrel and missed, the duck again flying and lighting in range; I again shot with the same result and followed the duck about 200 yards in the water, firing in all thirteen times before I killed him. In turning to retrace my steps I stumbled in the mud and sat down in three feet of ice and water. This is what may be called tough. My boots held about a bucket full each and they were full. It is impossible for me to realize in this weather how very disagreeable my condition was. I got to the blind in some way and tried to dry myself. I believe the boots are still damp. In taking the shells from my gun I noticed the shot running from one of the barrels and found the wood had shaken out. I tried to close the gun after taking out the shells, but could not do it. Thoroughly disgusted, I gathere up 20 teal and pulled over to camp. I found every one there and the bags counted as follows: E., 26 teals and 15 mallards; Mr. A., 1 sprigtail. George (a crack shot), 2 mallards, 1 teal. They were expressing their opinions very forcibly of the value of their guns and seemed to have lost all interest in the hunt.

As soon as I got a little warmer I examined my gun carefully and found that two shot had fallen in the opening when I took out the shells, and were mashed as thin as paper. They kept the spring from catching. As soon as I removed them the gun worked all right again. I was casually examining the shell which caused all the trouble when I found that the powder wad was very near the top. This surprised me considerably, so I cut into the shell to see what was wrong, and found 4 wads and 1dr. powder. This caused me to examine a fresh shell, in which I found 12 buckshot; another had 2oz. No. 5 shot and 1dr. powder; another 1oz. shot, ¾dr. powder; still another had 12 buckshot. I called the boys and exhibited the shells and contents. I am quite sure I have never heard such a volley of "straight cussing." It seems that Mr. A. had intrusted the loading of the shells to a porter in his store, who was generally considered reliable. He must have used the same measure for both shot and powder; any variation was in favor of the shot. We spent the rest of the evening in unloading and reloading the shells. On the next day we killed in all 115 ducks; this sport continued throughout the rest of our stay. We had one rather eventful coon hunt on the second night we camped out, which I will relate at some future time. D. M. P.

VICKSBURG, Miss.

GAME LAWS OF NEW JERSEY.—*Editor Forest and Stream:* The following are the dates between which it is lawful to kill game. The dates named are exclusive: Deer, Oct. 15-Dec. 1. Squirrel, Sept. 30-Jan. 1. Rabbit or hare, Oct. 31-Dec. 31. Upland plover, Sept. 30-Jan. 2. Woodcock, July 4-Aug. 1 and Sept. 30-Dec. 16. Quail and grouse, Oct. 31-Dec. 31. Rail, Aug. 31-Jan. 2. Reed, Aug. 24-Dec. 2. Marsh hen, Aug. 24-Dec. 2. Wood-duck, Aug. 31-Jan. 2. Special laws: Barnegat and Manasquan—Geese, brant and ducks, Oct. 15-April 15. Brick Township, Ocean county—Waterfowl, Sept. 1-April 1. Atlantic county—Rabbit and hare, Oct. 1-Feb. 1. Killing of European pheasant, partridge or grouse prohibited for three years after March 22, 1886; after which time months of November and December will be open season, with consent of land owner.—F. S. J. C. (Bridgeton, N. J.).

THE MASSACHUSETTS GAME LAW, newly compiled for 1886, is issued by the Massachusetts Fish and Game Association (246 Washington street, Boston) and supplied free of cost upon application. This is an admirable piece of work, and the Association is deserving of much credit for the sensible methods it employs to make known the law.

NEW HAMPSHIRE NON-EXPORT LAW.—The law enacted June session, 1885, prohibiting the exportation of game from the State, meets the general approbation of the sportsmen of the State, and has been of great assistance in preventing the destruction of game by illegal snaring, which was largely encouraged by the dealers of game in Boston. Owing to the more stringent enforcement of the law, deer are rapidly increasing in the northerly and easterly parts of the State, and it is a common occurrence for them to be seen in the central portion of the State, which has not been known before for many years. The Commission during the year have made and caused thirty arrests; have secured as many convictions for snaring partridges, killing deer, catching fish in closed season, and having in possession short lobsters. These convictions have had a salutary effect throughout the State, which has very largely assisted the commissioners in sustaining the laws, although in some localities the commissioners have made quite a number of arrests from information kindly furnished them by citizens who favor the law of protection in the breeding season. Without this protection our waters and woods will become barren of fish and game. Our own citizens and the thousands of visitors who each summer frequent our borders to inhale its invigorating atmosphere, to view the beautiful scenery of our mountains, catching fish from the mountain streams and lakes, hunting the game from the woods, will seek these varied pleasures and pastimes of health and recreation in other portions of New England, where it is found in greater profusion, and is only maintained and fostered by the strict enforcement of the fish and game laws of those States.—*Report of Fish and Game Commissioners, June, 1886.*

THE MODOC RABBIT CURSE.—Fort Bidwell, Cal., July 20.—*Editor Forest and Stream:* Three months ago the supervisors of Modoc county offered a bounty of three cents per scalp for rabbits. At the last meeting of the board the sum of $826.77 was allowed on this account, representing 27,559 scalps. One of the supervisors told me that about 25,000 of these were killed on a tract of land six by eight miles in extent. Mr. Nelson brought water by ditches from the river six miles distant and reclaimed 2,000 acres of sage brush land, on which he sowed grain and alfalfa. The rabbits liked the change of diet and took the crop. Upon this representation to the board of supervisors they offered the above reward, and Mr. N. hired Indians, paying them five cents per scalp and furnishing them with ammunition at one-half cost price, one installment of which, it is said, cost him upward of $280. As enough rabbits are left for seed, this would be a good field for some of our Eastern friends, who are at a loss to know where to find good shooting. Bunnie's instinct of self-preservation is well developed, and when dodging between the sage bushes is no "sure thing" to the novice. Should any one accept this invitation, let him ship a car load of ammunition in advance, and we will guarantee that he will not be hindered by notices of "No Shooting Allowed on these Premises." In addition are to be found prairie chickens, sage hens, ducks and geese; deer, antelope and an occasional *Ursus horribilis.* All but the latter in goodly quantities.—A. C. LOWELL.

MAINE DEER.—*Editor Forest and Stream:* I send you an extract from a letter received to-day from a well-known guide and deer warden living near Eustis, Maine. It illustrates the benefit of the stringent game laws of that State: "Deer never were as plenty as this year. Lately one came into a neighbor's barnyard in the day time, and they are seen very often out in the fields and pastures." They don't seem to believe in Maine that dogs and clubs make deer tamer.—A. G. MCKEE.

MR. GRIFFIN SMITH, of Longmont, Col., claims to have shot a mountain lion on the Little Thompson, which measured 9ft. from the end of its nose to the tip of its tail.

ROBINS AND MEADOW LARKS are protected at all times in New York State by the new law. The full text of the statute was printed in our issue of July 8.

GREENE, N. Y.—The prospect for bird shooting is better this fall than for years.—L. C. SILVERNAIL.

MUZZLE VS. BREECH.

Editor Forest and Stream:

I notice in your issue of July 1 a letter from Mr. Napoleon Merrill, in which he makes some statements of a rather misleading character. I think that your report fails to show any such great advantage for the muzzleloaders as he claims. The Merrill rifle may be called a hunting rifle, and it did splendid shooting. It shot a charge of 98grs. of powder and 213 of lead, and made a curve of 1.306in. at 100 yards. It beat the Bland .024in., the Hepburn .32 cal. .497in., and the Ballard, .40-85, .755in. If it had been tested at 200 yards I doubt if it could have equalled the breechloader, as the lead was too light for the distance. It was loaded for the 100yd. test, and its owner took good care that it should not be tested further.

The Romer muzzleloader was a young cannon with a charge of 131grs. of powder and 267 of lead. It, of course, beat everything by virtue of its charge, but it was not a hunting rifle.

I have studied well the report of FOREST AND STREAM, as advised by Mr. Merrill, but fail to find that the breechloaders were beaten in regard to accuracy. The Merrill rifle made a string of .587in. in five shots; the Ballard .40-85, a string of .230in.; the Hepburn .32, a string of .108, and the Bland a string of .204in. without cleaning. These ought to be the wildest shooters among the breechloaders, for Mr. Merrill says that they do their worst when a flat trajectory is attempted. They all beat the Merrill rifle in accuracy, and it did not beat any of them an inch in trajectory.

The way I get my string is to take the average height on the 75yd. screen, and as a center, and then find the difference between it and each shot separately. By adding these differences I get the string for the five shots. The Merrill muzzleloader in the third and last shots put the bullet higher on the 75yd. screen than on the 50yd. one. None of the breechloaders mentioned above did that except the Bland, and that but once, so the gyration seemed to be on the side of the muzzleloader.

I cannot explain why the breechloader in Mr. Merrill's turkey shoot did not get more turkeys, but suspect that it was the fault of the shooters. C. L. S.

FORT CLARK, Texas.

Editor Forest and Stream:

I have taken a great deal of interest in the controversy "Muzzle vs. Breechloaders," which has been running for some time past in the FOREST AND STREAM. I have seen some turkey shooting myself, and I have noticed that the breechloaders generally got their share of the turkeys. In the year 1880 I attended a turkey shoot, where the birds were placed on a box on the ice, with the wind blowing a gale across the range at nearly right angles. The turkey man was getting rich. Shots were 25 cents each, and it took from 10 to 20 shots at 200yds. to hit a turkey. Three of the guns used were muzzleloaders, two of them fitted with globe and peep sights. The other guns were Winchester rifles, repeaters of .44-cal. The turkey man was feeling pretty good until along about noon, when two brothers named Best, who had been employed as hunters for the grading outfit, came to take a hand with their breechloaders. Two or three shots were fired by each to get about the right allowance for the wind, after which I saw one of them kill five turkeys in five consecutive shots, and the other kill five out of six shots, off-hand too.

I saw a turkey shoot at Kingman, Arizona, last January, in which a gentleman connected with the Pueblo Smelting and Refining Works used a .45-60 Winchester repeater and killed two turkeys in succession, shooting 200yds. off-hand. I think that he could have killed five out of six turkeys at that range. Nor is a Winchester rifle the best turkey gun in the world, either.

Mr. Merrill would have a hard time in this country were he to depend upon that muzzleloader as a practical weapon.

I have known a great many instances where a man's life was saved by nothing else than the fact that he had a breechloading and not a muzzleloading rifle at the time. I knew of a hunter in the San Francisco mountains who surprised a large cinnamon bear in a place where there was no chance for retreat nor escape. He killed the bear, but not until he had shot seven government bullets from a .45-70 Marlin repeater through him, and the hunting coat that the man wore was tore to shreds so close were the two combatants. Nor is this an isolated case. I knew of one man from the East who came out here with a large caliber muzzleloader. After staying around Kendrick's Peak a few days he went into Albuquerque for a new gun. He saw a card in one of the wholesale houses displaying samples of all the cartridges made by the U. M. C. Co., and pointing to one of them evidently intended for a Gatling gun, he said: "I want you to order me a repeater using that big shell."

The fact is, nearly all the standard makers are turning out breechloading rifles that are just exactly as accurate shooters as muzzleloaders, to say nothing at all of their superiority as a practical weapon.

The Ballard Union Hill, the Bullard single-shot and repeater, Marlin, Kennedy, Winchester, Remington and other guns of like make are sufficiently accurate for any turkey shooting, and are guns that were built for a practical purpose as well.

It may be a bitter pill for some to swallow, but it is nevertheless true that the day of the muzzleloader has passed; the rapid advance made in breechloading arms within the past ten years will justify this assertion. However, to convince an unbeliever of the general uselessness of the muzzleloader in this age, let him come West among the large game and see for himself. REYD.

NAVAJO SPRINGS, Arizona.

SOME POINTS OF LAW.*

THE Committee on the Judiciary, to whom have been referred House bill 4,690 and several petitions in favor of the passage of the same, have fully considered the same, and report as follows:

The proposed bill would give by act of Congress to the citizens of the several States of the Union equal right with the citizens of each State to fish for floating fish in the navigable waters and lakes of the latter. The question involved depends on the title to the waters and lakes referred to.

For purposes of navigation they are free to all the citizens of the several States alike, and the power of Congress to regulate commerce between the States includes the right to prevent any hostile legislation by any State against the equal rights with its own citizens of the citizens of all the other States; or it is forbidden by the clause of the Constitution which gives to the citizens of each State the privilege and immunities of citizens of the several States. (C. U. S., Art. 4, § 2.)

But it is right to inquire whether the citizens of a State acquire their right of fishing in its waters as a privilege derived from the grant of the State, or as vested in them by virtue of ownership as members of the body politic.

It has been settled by the highest authority in the English courts, the ever since Magna Charta, the Crown cannot grant to a subject a several fishery in an arm of the sea, or in navigable waters, but that all such waters and the beds thereof are vested in the Crown for the benefit of the subjects thereof, and not to be used in any manner to derogate from the right of navigation which belongs to the subjects of the realm. (Free Fishery, etc., vs. Gann, 115 E. C. L. R. 803 House of Lords Cases, per Lord Chancellor Westbury and Lord Wensleydale (Baron Parke); S. C. in Exch. Chamber, 106 E. C. L. R., 853; S. C., 103 E. C. L. R., 887 Common Pleas.)

This royal title held for the benefit of the subject of the Crown, which cannot be alienet to their detriment, has been thus recognized ever since Magna Charta.

In this country, by a series of decisions, the Supreme Court of the United States has settled the law in accordance with the English courts, that upon the Revolution the rights of the Crown in navigable waters and inclusive of arms of the sea developed upon each State as to all such waters within the territory of each of them. (Martin vs. Waddell, 16 Peters, 307.)

In Pollard vs. Hagan (3 Howard, 212), the same doctrine was maintained as to new States, as well as to the original States; and the right of the State fixed to all the beds of rivers below high-water mark.

In Smith vs. State of Maryland (18 How., 71) the right of the State of Maryland to the shellfish and floating fish in Chesapeake Bay, was established as the sovereign right of the Commonwealth devolved upon her from the Crown at the Revolution, a right which she could control without violation of the Constitution by such regulations as were needful to secure this public right without interfering with the navigation of the waters, Mr. Justice Curtis delivering the unanimous opinion of the court. (Accord Mumford vs. Wardwell, 6 Wall., 436; Weber vs. Harbor Commissioners, 18 Id., 66.)

In McCready vs. Virginia (94 U. S. Reports, 391) the unanimous judgment of the court was delivered by Mr. Chief Justice Waite, by which the right of Virginia to use and appropriate the navigable waters of Virgina for the benot of her own people for the taking and cultivation of fish as a property right, and not as a privilege or immunity of citizenship, is established, though thereby the citizens of other States are excluded from the same rights. The right is one of property in the citizens of Virginia, and not a privilege or immunity of citizenship.

It is true the last decision, though in the opinion made to apply as well to floating fish as to shellfish, only applied in fact to shellfish; but your committee see no reason why the principle of these decisions should not apply to both.

Fish are *ferœ naturæ*, and an absolute property in them can only be asserted when restrained of their liberty. This, it may be said, is the case with oysters which, when planted, have no capacity to move, and distinguishes them from floating fish, which may move out of the reach of the State in whose waters they may temporarily be.

But upon this distinction of nature no ground can be maintained for changing the decision applicable to the one when the case of the other is adjudicated.

In the case of Riggs vs. The Earl of Lonsdale (1 Hurlst & Norman, 923), it was decided in the Exchequer Chamber that the owner of land had a right of property in game killed on his land by a stranger. The fact that the game was *ferœ naturæ* did not take from the owner of the land the property therein, even in favor of a stranger who hunted and killed it there.

This case was considered very fully in Blades vs. Higgs (104 E. C. L. R., 50), where the decision of Justice Willes at *nisi prius*, overruling Riggs vs. Lonsdale, was reversed by the Court of Common Pleas; and on appeal to the Exchequer Chamber (106 E. C. L. R., 844), the Court of Common Pleas was unanimously sustained; and the judgment of the Exchequer Chamber was affirmed by the House of Lords in S. C., 106 E. C. L. R., 866. The judgment in the House of Lords was sustained by the high authority of Lord Chancellor Westbury, with Lords Cransworth and Chelmsford, both ex-Chancellors, concurring. That case decides clearly and distinctly that if A, a hunter, finds, kills and carries off in one continuous act, any game, *ferœ naturæ*, on the land of B, the dead game is the absolute property of B, *ratione soli*.

That the same doctrine is applicable to fish caught and taken from the waters of the owner cannot be questioned; and the cases referred to by the judges in the discussion of the cases above cited mention fish as of the same character as animals and birds.

Your committee, therefore, being of opinion that the navigable waters within each State belong to it, subject to the paramount right of navigation, for the benefit of its own people, it has the right to secure the exclusive right of fishing in them to it own citizens by virtue of their common property in said waters, and that the citizens of other States have no constitutional right, nor can Congress confer any, to participate in them.

Your committee recommend that the bill referred to lie on the table, and the prayer of the petitioners be denied. All of which is respectfully submitted.

*Report presented to the House of Representatives by Hon. J. R. Tucker, May 13, 1886.

THE SUNAPEE LAKE TROUT.

Editor Forest and Stream:

Business matters have prevented my replying to those who have made the claim that the trout which I brought to the notice of ichthyologists last fall are not natives of Sunapee Lake, New Hampshire, but are the result of a small plant of Rangeley blue-back trout fry made in 1881, by Mr. A. H. Powers, at that time one of the Fish Commissioners of the State. This claim is made by Col. Webber, Livingston Stone and Dr. J. D. Quackenbos. I shall endeavor to prove that this fish is a native of this lake and that I first brought it to the notice of ichthyologists.

This fish has been pronounced by Dr. T. S. Bean, of the National Museum at Washington, to be identical with the little blue-back trout of Maine. In this I must differ from Dr. Bean. He has also pronounced it a true *Salmo fontinalis.* If he made such a mistake as that with a fresh 6lb. specimen before him, may he not still be in the wrong when he says that this gigantic trout is identical with the little fingerlings caught in the Rangeley waters. This trout in form, color, size and habits, is so entirely different from the Rangeley blue-back that I do not believe any one who has seen them in their native waters in large numbers, and who has had an opportunity of watching them in confinement, can think that they are one and the same fish. In form they are much thicker set and deeper than the Maine trout, head very small and short, mouth much smaller than the brook trout. The males, after reaching 2lbs. and upward, are a very light olive on the back, and the larger the fish the lighter the color, until in October a male of 8 to 10lbs. would be almost cream color. The females have a uniform brownish back. The red spots are wanting. On this point I have examined several fresh specimens within a few days, and I am unable to detect the red spots. I have taken specimens of 7lbs. weight and have had them that would weigh 10lbs., swimming about my boat in from 1 to 3ft. of clear water, and so near that they could have been taken with a gaff.

It is a well known fact that there is a limit to the growth of every species. That is, an animal of a certain species may exceed his fellows 4 or 5lbs. in weight, but there the limit ends. Therefore, as the average weight of the Rangeley blue-back is 3 to 4oz., one of 2lbs. would be a monster, a giant among the brothers; while one of 8 or 10lbs., 40 times larger than the average, would be a physiological impossibility under any conditions of food and water. One writer on this subject has advanced the idea that Sunapee Lake is richer in the abundance and quality of food than other waters, and that is what has made the little fingerlings change into fish that taxes the skill of the sportsman to bring them to the net. Now it is a well known fact that the Rangeley waters are noted for the large brook trout they contain, and as the blue-back is a native of these same waters, having the same food, why should he remain so small as to be unworthy the notice of the angler while his brother the *fontinalis* reaches the enormous weight of 10 to 12lbs.? The same food that makes one grow should force the other.

In Sunapee Lake the brook trout and the so-called *oquassa*, reach about the same weight, specimens of from 4 to 8lbs. being taken every summer. In many respects this fish differs from the blue-back in its habits. The blue-back always seeks the brooks and rivers for spawning and they are not caught with fly or bait either in the rivers or lake to any extent. The Sunapee trout are lake spawners and are never known to enter the brooks with the brook trout. They take bait readily when on their spawning beds, also in the deep water of the lake in June, July and August, and I have no doubt but what they might be taken in May by trolling as at that time they follow the smelts up from the deep water. They take food readily from the bottom. A rough, rocky bottom is selected for a spawning bed instead of sand or gravel.

Now the question naturally arises, if these fish are natives of the lake, why have they never been brought to notice before? Previous to the introduction of the black bass in 1869 or '70 the lake was not known to any extent as a fishing resort, and only two or three old boats could be found on its waters. The fishing was done from certain points and rocks from the shore. Gill nets were used, and when the fish entered the brooks in the fall they were killed with clubs, guns and spears. No one thought of fishing for trout in the deep water where they are now caught. It was known to a few in the vicinity that large trout could be caught from certain points and rocks in May and June, and it is so to-day, but only the common brook trout are taken in these places. I give below the answers made to a few questions that I asked Mr. Moses Gould, a gentleman who has had a long acquaintance with the lake and its inhabitants.

PLYMOUTH, N. H., April, 1886.

Moses Gould Esq., Bradford, N. H.:

MY DEAR SIR—Will you have the kindness to answer for me the following questions in regard to Sunapee Lake and the trout that it contains? Yours very truly, E. B. HODGE.

How long have you been acquainted with and familiar with Sunapee Lake? Ans. About forty-three years.

How long since you first began to fish its waters? Ans. About forty years.

What was the weight of the largest trout caught in the lake that you have knowledge of previous to 1875? Ans. I had one in my possession, caught in 1852, weight 9¼lbs.

In what part of the lake was it customary to fish for trout? Ans. North Point, Pike's Shore, Rowe's Landing and Newbury Landing.

Previous to 1870 or '72 was it the custom to fish for trout in deep water, say from 70 to 90ft.? Ans. No.

Have you ever caught a trout in Sunapee Lake almost milk-white, or known of their being caught? Ans. I have caught them very light colored.

In what year did you first see any of the trout like those shown you by Mr. Powers and myself in November, 1885? Ans. I had two of them in 1873, weighing about 3lbs. each.

Have you seen them between these years. Ans. I have.

How large ones have you known of being taken previous to the year 1882? Ans. 5½lbs.

Have you ever known of any of these trout being taken in the places or ground where it was customary to fish for trout in the summer? Ans. I never have.

Have you ever known of these trout being taken in shoal water and did you ever know of their entering the brooks to spawn? Ans. I never did, except native trout [meaning brook trout].

Previous to my showing you the spawning bed last November, had you any knowledge of one in that part of the lake? Ans. No.

Are there many boats used on the lake in November? Ans. No, not for fishing purposes.

From the character of the bottom where this bed is, would persons crossing the lake be likely to pass over the place or avoid it? Ans. They would generally avoid it.

LUNENBURGH, April 20, 1886.

Col. Hodge:

Seeing notices of the new fish from Sunapee Lake, I would say in relation to them that I have examined two specimens and find the description given by you correct. One of the differences that appears marked is, that the fins are larger size, with wide white bands on front side, and the dark stripe is entirely wanting and no lines of color extend out to the end of the fin, as in a brook trout. Further, this fish is entirely devoid of mottling everywhere. The dark color is very uniform on the back of female; the male is light. The high color on sides is now gone, but there is not one of the usual markings found on brook trout. I believe it a new species brought to notice by yourself, and I think it will ultimately be so decided, as far as New Hampshire waters are concerned, though its counterpart may be known and described elsewhere. Yet of that even I am not certain, as it does not seem to be exactly identical with any other. Truly yours,

H. A. CUTTING, Fish Com., Vt.

PLYMOUTH, N. H., April 13, 1886.

Fred Gould, Esq., Concord, N. H.:

MY DEAR SIR—Will you kindly answer me one or two questions in regard to the trout you saw upon the spawning bed in Sunapee Lake last November. Yours truly, E. B. HODGE.

When you were there was the water clear enough so that you could see the fish plainly, and were you near enough to judge of their weight? Ans. The water was perfectly clear. I could see the fish plainly, and very many of them were within 4 or 5ft. of my eyes and not more than a foot under water. I saw a great many that would weigh over 6lbs. I saw one in particular that swam half way around my boat that would, without doubt, weigh 10lbs. I think that out of the hundreds I saw that November day, very many would tip the scales in the vicinity of 8lbs., perhaps more.

How much would the largest ones weigh that you saw? Ans. 10lbs., as above stated, in one instance. I have not the slightest doubt but what in that "school" there were many score weighing 8lbs. and more each. FRED H. GOULD.

In these answers I think any one can see why these fish have not been brought to notice before. At the points that Mr. Gould says it was customary to fish for trout, nothing but common brook trout were or are now taken; that is, they did not fish in deep water. And that he saw them in 1872, and that 5½lb. fish of this kind had been taken previous to the year 1882. This settles that part of the question beyond a doubt.

I can give other statements of the same character proving the same points, but I regard this as enough. He also says that he never knew of any of these trout being caught in places where it was customary to fish for trout in the summer, and although he had been acquainted with the lake for over forty years, he had no knowledge of the large spawning bed until last fall. From the above facts I think I am justified in calling this fish a native of this lake. How they came there or where from I do not know, but they are there of an enormous size and in large numbers.

A question was raised by one party in regard to weight—that 6lbs. was the largest of which there was any knowledge. Now upon this point only four persons, of which I was one, saw these fish on the spawning bed, and each of the three declare positively that there were trout on the spawning bed that would weigh 10lbs. I do not care to take the trouble to ask these gentlemen to furnish affidavits; but I will furnish any one with their address, and a letter to each or any of them will fully substantiate this point. I think that I have made my points clear, and to my brother anglers I submit the case. E. B. HODGE.

PLYMOUTH, N. H., July 12.

AT LAKE ONAWAY.

MESSRS. A. W. CHAPIN, of Monson, W. G. Briry, of Portland, and myself, last Tuesday went to Lake Onaway for landlocked salmon. We engaged the services of E. B. Hall, of this town, as guide.

A carriage ride of eight miles brought us to the shore of Greenwood Pond, a beautiful and irregular sheet of water under the brow of Greenwood Mountain. After a boat ride across this pond and a carry of one mile, we landed at Onaway Lake at about 11 o'clock A. M. As no one was occupying the Lane and Davis camps, we used them while there. They are built of framed lumber and boards, and are very comfortable, convenient, neat and clean. They are situated upon a high granite bluff, under the shade of spruce, white birch and maple trees, and are but a few rods from the salmon-fishing grounds. On the walls of the dining room in this primitive hotel are written the names of numerous anglers from various parts of the country who had preceded us in their pilgrimages to this retreat. Among them were those of E. S. Merrill, W. P. Clark, A. P. Bateman and G. S. Land, of Winchendon, Mass. Future visitors will also find inscribed there the record of our own party, as follows:

"ONAWAY LAKE, July 20, 1886.—Arrived here to-day safe and sound. Caught 6 salmon and 5 smelts. Second day, in the forenoon, 14 salmon, 1 smelt, 2 eels; in the afternoon, 9 salmon; evening, 7 smelts, 1 salmon. Third day, in the forenoon, 10 salmon, 10 smelts; afternoon, 9 salmon, 11 smelts. Fourth day, in the forenoon, 8 salmon, 2 smelts; afternoon, 6 salmon, 9 smelts. Fifth day, forenoon, 6 salmon, 2 smelts, 1 eel. Total, 69 salmon, 47 smelts, 3 eels."

We fished in about 60ft. of water with live bait and used light rods with reels. Besides the above we took quite a large number of small ones which were returned to the water. Those that we saved were from ¼lb. to 5lbs. in weight.

They are among the most gamy and active fish that I ever angled for. They will also take a fly and many fly-fishermen have rare sport there. The smelts are a trifle larger than the saltwater smelts and are a very sweet and finely flavored fish for the table. This lake is about 3½ or 4 miles in length, and at places it is one mile in width. It is surrounded by Boar, Stone, Greenwood, Barron and Bensen Mountains and is in the middle of a dense and grand forest. It has many quaint bays and coves and rocky and curiously shaped islands. The lover of nature cannot but admire the grandeur and beauty of all around him while there.

In the afternoon of the fifth day we packed our "dunnage" and bade adieu to this lovely spot, and we all unanimously voted it the most satisfactory fishing trip that we ever made. The cheerful evening camp-fire upon the lone shore of the crystal lake, the wild echoes from the hooting of the mountain owls, the excitement of taking in the pugnacious salmon, and the boat rides in the moonlight will all live as pleasant memories in the minds of each. J. F. S.

MONSON, Me., July 26.

BROWN TROUT IN AMERICA.

THE following letter relating to the growth of the brown trout, which is called "German trout" in western New York, was received by Mr. E. G. Blackford, Commissioner of Fisheries. The fish could not have been over three years old:

ROCHESTER, N. Y., July 27.—E. G. Blackford, Esq.—Dear Sir: I send this afternoon per National Express, a specimen of German trout which I caught in Spring Creek, Mumford, last evening. It weighed before dressing three pounds. He afforded me great sport; was taken with day flies, No. 10 hook, fine tackle, 6oz. spliced home-made rod and automatic reel. Without these two latter I doubt if I could have saved him. He immediately started on a dead run down the stream, taking all my line. Whenever he let up, the reel took up the slack, and the rod was so soft and active that the hook remained firm until he was in hand. I had no landing net handy, and was obliged to get the assistance of a young lad to land him. I had previously caught several of these new fish about a pound in weight. They are very gamy in some respects—little more so than the native trout. I think they take the fly more surely and break the water more. But the growth of these fish is the remarkable thing about them. Hoping it will reach you in good condition, I remain, yours truly, FRANK J. AMSDEN.

THE MEDICINE-MAN FLY.—Long Lake, Me.—Five years ago James Webb, Jr., of Portland, and John Mead, of North Bridgton, made a small plant of white perch in Long Lake. That the experiment was a success is proved by the capture of about forty specimens by a Harrison party one day recently. These perch are nice pan fish, and by those who like the simpler methods of angling are regarded as quite an addition to our fish fauna. The black bass fishing in the lake is very good this season. Just now they are settling into the deeper water off rocky points and sunken ledges; and while a few still rise to the fly, the majority respond best to still-fishing with a grasshopper. Of flies, one of my own tying, the medicine-man, I have found to be the most successful in our waters for all kinds of weather and all times in the day. Body blue silk, wings white, tail peacock herl, hackle or legs either yellow or blue, I prefer the blue. This fly resembles a blue-bodied dragonfly, upon which the bass in this section feed voraciously. This, I think, is why it is good on a bright day, white flies usually being reserved for night and cloudy-day fishing.—BLACK SPOT.

"CAMP FOREST AND STREAM."—Mouth of St. Francis, New Brunswick, July 9, 1886.—*Editor Forest and Stream:* I am just in from my trip to headquarters. On my trip I found at a camping place a copy of FOREST AND STREAM of date Aug. 28, 1884. It was almost perfect and I enjoyed it. It was like meeting an old friend. I inscribed my name on a cedar and named the place "Camp Forest and Stream." The paper was doubtless left by a party whose names were inscribed on the tree as follows: Silas W. Masters, Brooklyn, N. Y.; F. A. Phillips, New York city. I return them my hearty thanks for the paper. I had a glorious time. Saw moose and deer every day. Three of the former were jet black. Trouting not first-rate, but always got enough to eat and that was enough. The flies were not as bad this season as last.—MAINE.

WEAKFISHING ABOUT NEW YORK.—Many anglers are meeting with success in taking weakfish about Staten Island, Fort Hamilton and Prince's Bay. Numerous boats float with the tide and lie at anchor, as the fishermen prefer, while from the shores and docks the hand-line fisher casts his shedder-crab, clam or sand-worm into the water. On a recent trip down the harbor we counted nearly three hundred boats, mostly drifting with the ebb tide, all fishing for weakfish, and we saw one boat which had about twenty good fish in it. This is an inexpensive trip for a New York city angler who has a "day off," and it has the merit of being almost at his door.

IT WAS THE HEAD OF THE FISH.—Little Falls, N. Y., July 30.—*Editor Forest and Stream:* I regret to find myself compelled to call your attention to a most serious misstatement in a letter describing certain events assumed to have occurred recently on Wilmurt Lake. It is stated that while engaged in the struggle with a certain large trout "the head of my fly came off." This is not so. It was the head of the trout, and while I was endeavoring to get the hook clear the writer must remember how severely I was bitten by it.—PISECO.

SEBAGO LAKE SALMON.—Sam Witham killed a 10lbs. landlocked salmon between the mouth of Songo River and the Images, Sebago Lake, Me., on July 24 and lost one which he thinks would go a few pounds better. We are glad to see him begin to like the rod better than the spear; with that weapon he used to have the reputation of being the most skilled of any one who visited the spawning beds; but like many others he now sees the evil of it and we are always glad when we hear the salmon have taken his bait.—BLACK SPOT (Sebago Lake, Me.).

INTERMEDIATE LAKE CAMPERS are often put to inconvenience by having their mail addressed to "Intermediate" post office, which is north of Intermediate Lakes, in an out-of-the-way place. It will usually be better to have letters sent to Bellaire, or to Center Lake, from which points mails may be promptly forwarded when necessary. —F. H. THURSTON (Central Lake, Mich.).

GREENE, N. Y.—Our streams are full of black bass, but they are acting out their nature and do not take any bait or line we give them; perhaps they may later in the season. If you have any one who considers himself an expert on black bass send them along.—L. C. SILVERNAIL.

WEAKFISHING IS FAIR.—Seabright, N. J., Aug. 2.—*Editor Forest and Stream:* There have been some very fair catches of weakfish here, and this in sort compensates for the absence of the bluefish. Reports from Barnegat say that many weakfish were taken there last week. A friend took thirty on Saturday last, which averaged 1½lbs. each, using shedder crabs.—G. R.

THE LIMITED PAYMENT POLICIES of the Travelers, of Hartford, Conn., concentrate payments into the working years of a man's life, and leave him free from all worry in his later years even if helpless.—*Adv.*

THE MICHIGAN GRAYLING.

BY HERSCHEL WHITAKER.

[Read before the American Fisheries Society.]

ONE grayling (*Thymallus tricolor*) is found native to the waters of Michigan alone of all the States of the Union. Vague rumors from time to time have hinted at its presence in other waters, but the authenticity of such statements has never been verified. A few facts concerning the distribution of the grayling of Michigan, its habits and the experiments that have been made here looking to its artificial propagation, may not be devoid of interest to this Society.

The waters of Michigan in which it has its habitat may be generally described as within the territory bounded on the south by 43:30, extending as far north as 45:30. The streams included within this territory discharge their waters into Lake Huron and Lake Michigan. An imaginary line drawn from the mouth of the Muskegon on the western border of the State to the mouth of the Au Sable on the east, will perhaps better indicate the southern limit of the grayling. The waters most famous as grayling streams, owing to their magnitude, accessibility and their popularity with sportsmen, are the Au Sable and the Manistee. The Hersey, the Pere Marquette, the Maple, the Pigeon, with their tributaries, and numerous other streams of less importance included within the boundaries already mentioned, are also fairly stocked with this fish. The Boardman, the Boyne and the Jordan were once famous resorts for sportsmen who angled for the grayling, but their glory as grayling streams has long since departed, the grayling having given way to the predacious and combative trout, yet now and then an occasional grayling is taken.

Although the subject has often been discussed by writers upon game fishes, allow me briefly to refer to the general character of this fish. To the sportsman who has always angled for trout and is unfamiliar with the habits of grayling this fish will excite some surprise upon first acquaintance. Unlike the trout you are not likely to find him in pool and shady haunt, but on the swift ripple and shallow, hovering like the hawk in air. While you are adroitly seeking, with your trout fisherman's experience, to reach some shaded pool where you should expect to find him if he were a trout, you suddenly find your fly taken most unexpectedly in open water, and you are taken somewhat at a disadvantage. Once securely hooked comes the beauty of the fight, and here the grayling differs most radically from the trout. Instead of seeking shelter by retreating to the deep pool or beneath some root, he will perhaps leap clear of the water from two to three or more times, and with a vicious shake of the head seek to free himself from the hook. When landed you try in vain to determine which has the superiority, the grayling or the trout, but you finally conclude that you have forgotten exactly how the trout acts when hooked, and if you are a philosopher you inwardly argue that it is such a close question you will leave its determination to such time as you shall catch your next trout.

The large dorsal fin is the distinguishing characteristic of the grayling. In repose the fin lies folded upon its back, but in a state of activity or when excited the anterior portion becomes rigid, and the posterior portion waves like a banner in the air. When freshly taken from the water the dorsal fin is iridescent and its variegated coloring is gorgeously beautiful and vivid. The fish itself is covered with small light steely gray colored scales, and above the median line has a few faint brown mottlings about the size of a head of a pin. Its head is quite small and the general contour of its body is slim and graceful. A faint odor is discernible resembling the wild thyme, hence its name, *Thymallus*.

As early as the year 1854 or 1855, the grayling was first called to the attention of local scientists in Michigan by Mr. Wright L. Coffinbury, a gentleman in the employ of the general government, who was then making surveys of the wilderness lying adjacent to the Muskegon and Hersey rivers. At this time the grayling was plentiful in all these streams, and afforded the surveyor, explorer and hunter a grateful change from pork and hardtack, and the fish was known among them as "Michigan trout." Mr. Coffinbury had the grayling especially called to his attention, as he busied himself during his leisure hours in an attempted classification of the fish found in the Muskegon and tributary waters, and as I have before mentioned he was instrumental in calling local attention to the grayling. Later on and about the year 1855 or'56, Dr. Parker of Grand Rapids, Michigan, (now president of the Michigan Fish Commission), succeeded in procuring a specimen of the grayling, beautifully preserved in homely salt and wrapped carefully in a newspaper, minus a few fins and of course almost devoid of its natural color, and after a careful study of the specimen and a comparison with a cut of the English grayling and a description of the same, he pronounced it a true *Thymallus*, and in a paper read before the local scientific society of Grand Rapids, named it *Thymallus michigansis*, a patronymic by which it was known locally for some years; in fact up to the time that a speciman was sent by Prof. Miles to Prof. Cope in 1864. Specimens subsequently submitted to Prof. Agassiz through the efforts of Mr. D. H. Fitzhugh, of Bay City, Michigan, who is beyond question the greatest authority on grayling in the country, were classified by that eminent scientist, and determined beyond question to be the grayling.

During the period to which I have referred the streams embraced within the territory already indicated were swarming with this beautiful fish. So plentiful were they for many years that the settlers were accustomed during the spawning period to come to the dam at or near the site of the present village of Hersey and capture them with baskets, carrying them away by the wagon load. There are many people yet living in that vicinity who can vouch for the truth of this statement, were it necessary, but I think I can safely presume that the courtesy of gentlemen who are interested in the propagation of fish and the fishing industries and interests will scarcely require the fortification of this statement by affidavit.

It would seem unaccountable that this state of things having once existed, that in late years the grayling should have so rapidly disappeared from these streams; yet the fact remains that many of the streams that once knew them now know them no more. This is notably true of such noble streams as the Jordon, the Boyne and the Boardman. From those streams which flow to and discharge their waters on the extreme northern coast of the Lower Peninsula the grayling have entirely disappeared, although now and then an occasional straggler may be found. The cause of this depletion is, however, directly traceable to the lumberman and the trout. The grayling cannot successfully run the gauntlet of log-running and the vicious attacks of the trout, who loves the dainty and succulent fry and the youngster grayling, and overcomes them both. It is a fact that until within the last thirty or forty years brook trout were unknown in the northern streams of Michigan, while the streams of the Upper Peninsula, discharging their waters into Lake Michigan, are stocked almost exclusively with the trout. The theory advanced and generally accepted by those familiar with the facts, is that migration of the trout has taken place from the streams emptying their waters into Lakes Michigan and Huron to those grayling streams. There is much reason, it would seem, for this argument. It is a peculiar fact that the waters of the Maple

River, lying in the extreme northern portion of the Lower Peninsula, are well stocked with grayling. This stream flows in a southerly course, which is contrary to the direction of most of the streams in that portion of the State, discharging its waters into Burt Lake, one of the larger lakes of the "Inland Chain," which extends from Cheboygan to Petoskey, and is famous for its bass and pike fishing. To carry the argument to its seemingly just conclusion, it might be inferred with reason that the trout would be shy of entering upon waters in the possession of these voracious and predatory fish, and the probabilities are very strongly in favor of the theory that if they did enter upon such territory and lie down peaceably together, it would be that peaceful quietness of the trout lying down inside the bass or pike. On the other hand, the Maple is a swift, brawling, grayling stream; its waters are cold, a peculiarity of all grayling streams, offering no inducement to the bass or pike to take up their abode within its borders, and the consequence is that the grayling remain in full possession, having the advantage of the watchfulness of vigilant sentinels standing guard at the mouth of the river to prevent the entrance of the trout. The other streams I have mentioned discharge their waters either directly into the Great Lakes or into tributary waters which are not infested with bass or pike.

Upon the formation of the Michigan Fish Commission the merits of the grayling were recognized, and the fact that it was a fish peculiar to Michigan, appealed strongly to the Board to investigate its possibilities of artificial propagation. Lack of funds and the knowledge that the commercial fish of the State demanded its first attention compelled the Board to postpone attempts to solve this question. Not until the year 1877 was an attempt made to experiment in this direction and test the possibilities of success. In the spring of that year a camp was established upon the headwaters of the Manistee and an effort was made to secure a stock of eggs, to be transported from the camp to the hatching station. Owing to the lateness of the season, the spawning period having passed, this attempt failed of any result, and the expedition returned with no further light. This party reached the Manistee April 14. The following year an earlier start was made, the force arriving at Manistee March 30, but again found themselves too late, the fish having again passed the spawning period. A few fish were obtained which yielded a very small quantity of eggs and milt, but the eggs were imperfectly impregnated, the fry produced died early, and in the language of the superintendent, "much lamented." Before leaving the stream, however, it was decided to procure as many adult fish as possible, convey them to the station and make the attempt to handle the fish in the succeeding year when the proper period should arrive. A number of fish were procured, but for unexplained causes no success was obtained. Adult fish have been obtained at three different times with the same object in view, but up to this time with no satisfactory results. The difficulties surrounding the taking of the grayling during the spawning period are very great. The fish spawn in about February and March, perhaps even earlier. The rivers in which they abound are remote from civilization, the roads almost impassable and the streams filled with logs and ice, rendering it exceedingly difficult to procure the necessary fish. Experience has proven very clearly that the grayling will not stand domestication or confinement in ponds in which trout may be successfully carried. Two years ago a number of adult grayling were procured by the Michigan Commission and placed in the trout ponds of Paris. Out of the number not a single fish has ever spawned or showed the slightest inclination to do so. They have gradually died, and there are now but a very few remaining. The same care and attention has been given to grayling in these ponds that is ordinarily given to trout.

About the year 1878 Mr. Ira Metcalf, of Battle Creek, Mich., made some attempts at artificial propagation of the grayling, and claims to have been successful in raising a small amount of fry.

As an instance illustrating the prolific character of the grayling, Mr. George H. Jerome, formerly superintendent of the Commission, states in his report that in transporting the first grayling taken to the station from the Manistee, it was observed by the men having charge of the fish while in transitu that there was a fully ripe spawner in one of the cans; that she was removed and the eggs taken, but there being no milter with which to fertilize the ova, they were lost; that the eggs after being taken were counted by two reliable persons, and there were found to be 3,555 fully developed perfect eggs. The fish after being stripped weighed exactly 9oz. This shows beyond question that the grayling is much more prolific than the trout, and under favorable circumstances good results should certainly be obtained.

The Michigan Commission has within the last year acquired the ownership of a fine spring stream upon property adjoining its trout station, to which the grayling had been natural, one or two having been taken in the stream within a year. This property affords opportunity for extended experiments looking to the solution of the question of whether the grayling may be successfully propagated. Arrangements are now being made to secure an ample supply of stock fish, which will be held in this stream in such a manner that the confinement will be felt as little as possible consistent with control. As far as possible the natural conditions of the stream will be preserved; pool and shallow, light and shade. At the same time care will be taken to afford an opportunity for experiments which may from time to time suggest themselves, based on present knowledge and such information as may be obtained by a careful observation of their habits. The experiments will extend over a sufficient period of time and be followed up by earnest endeavor, until it shall be definitely determined whether successful propagation of the grayling can be carried out.

DETROIT, Mich.

MR. MAY—I notice that Mr. Whitaker credits Mr. Metcalf with hatching grayling in 1878. I have seen in Prof. Goode's "Epochs in Fishculture" that Fred Mather hatched the first grayling in 1874, just four years previous to Mr. Metcalf.

MR. CLARK—I think the grayling is the easiest fish to propagate and handle of any fish we had anything to do with, after we get the fish. Mr. Whitaker doesn't say this in his paper, but I will say that if a person can get the fish on the stream they can get five hundred thousand fish, which they can handle for one quarter of the cost of brook trout.

MR. FAIRBANK—How long are they in hatching?

MR. CLARK—From seventeen to twenty-five days. They are easy to handle. The fish are easy to take care of after they are hatched, and you can grow a greater per cent. of them than you can of trout.

A MEMBER—Don't they require much cooler water?

MR. CLARK—I think you can put trout in a natural stream of warmer water than you can the grayling. I haven't tried the experiments on that. I got about twenty-five thousand eggs last spring from six or eight fish. A fish that weighed one and a quarter pounds we took five thousand two hundred eggs from. All we had to do was to get the fish, and you give me a thousand graylings and if I don't take you over a million eggs I will miss my guess.

MR. FAIRBANK: It is difficult to get the fish at that season of the year.

MR. CLARK—It is difficult to get them, because the streams are fished out. The streams are not high, not at that time. You want to be on the ground on the first of March, and you may not get any eggs until the 15th of April. I am speaking of hatching in seventeen to twenty-five days, that is, in water that is fifty to fifty-eight degrees.

MR. FAIRBANK—The water in those streams would be cooler at that time.

MR. CLARK—Yes, the water is cooler, and I think that the driving of logs is cleaning the grayling streams out of those fish in the State of Michigan. I think it is more from that cause than it is from any other, either fish or fisherman.

MR. TOMLIN—Even granting what Mr. Clark says, notwithstanding the survival of the fittest, the grayling is being extinguished. In my mind there is no question about it. You take Sweden, Norway, Japan, Germany, Italy, France and England and you will find the trout and grayling side by side. You put the trout into any stream where the grayling is and in a little while the trout will clean them out. I have fished the streams that Mr. Whitaker has spoken of in his paper. Years ago I fished the Jordan, Pine River, the Pigeon, and the Sturgeon, and later years the Muskegon River. When I first went to the Jordan, way back in 1860, there used to be a considerable number of grayling. I got to paying frequent visits to Michigan, and I love it as much as my own State for its beauty. I found out that the history of the trout was a far more recent one than I had supposed. I had always imagined that trout was to be found in certain streams. There was an old man on the Jordan, long enough before Pine River was cleared out, who well remembers the coming in of the trout. He says when he first went there to fish—he was an old Methodist itinerant preacher I think—he used to catch one trout perhaps to ten graylings; in five years from that time they were equal. Well now, we know from the structural appearance of the fish, that the grayling doesn't stand the shadow of a chance beside our trout. You take for instance a body of water and put in trout and small black bass, and the trout will clean the bass out. They will chew him up, eat his tail and fins off, and by and by there isn't a bass there at all. This is the way the American trout are cleaning out our grayling. So far as the two fish are concerned, I say if we can't have but one, let us have the trout. I have fished for them both carefully, I have waded up to my waist when I have been so blinded with mosquito and fly bites that I have scarcely been able to see, yet I have kept on fishing, and my conscience never accused me of having caught them in large numbers. I don't think I ever caught over twenty at a time. Mr. Whitaker doesn't make any difference in his paper about the appearance of the grayling. You take the grayling found in the Sturgeon and Pigeon, and flowing through into the Cheboygan, you will find them very different in appearance from those on the west side of Michigan. You take the grayling found in Pine River flowing to the Manistee, and the Manistee itself, and compare them with rivers flowing into Lake Huron, and the western grayling are by far the smallest. The eastern trout, those in Pigeon River and Sturgeon River, sometimes weigh three pounds, whereas on the other side we have never got them weighing more than a pound and a half.

MR. MATHER—Trout and grayling have lived together in the streams of England and Germany for centuries. The trout were the brown trout, however, *S. fario*, and not our American trout or charr, *S. fontinalis*, but I cannot think the latter more predaceous than the former. Nor do I understand why certain grayling streams of Michigan were destitute of trout and were full of grayling, because the lakes into which these streams empty contain trout which go into neighboring brooks. If any one can account for this we would like to hear him. If there are no further remarks, however, it might be well for us to adjourn.

On motion, duly seconded, the Convention here adjourned to attend the Citrus Fair at Battery D Armory, to meet again at three o'clock P. M.

The Kennel.

FIXTURES.

DOG SHOWS.

July 27 to 31.—Dog Show of the California Bench Show and Field Trials Club. E. Leavesley, Supt., 436 Montgomery street, San Francisco.

Aug. 24 to 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. Geo. H. Hill, Manager, P. O. Box 76, Cincinnati, O.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Edward Kelly, Secretary, 45 Exchange place, New York.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, Bergen Point, N. J.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **3893.**

THE HORNELLSVILLE DOG SHOW.

THE premium list of the first show of the Hornell Kennel Club provides champion classes for English setters, Irish setters, pointers, field spaniels, cocker spaniels, beagles, mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, collies, fox-terriers and pugs. The prize in each class is $15; where there are four entries in a champion class it will be divided by sex if possible, or a second prize of $5 will be given. In the open classes the prizes will be $10 and $5. There are no puppy classes. Kennel prizes of $20 each for the best kennel of four are offered for English setters, Irish setters, pointers, spaniels, mastiffs, St. Bernards, collies and fox-terriers. The same prize will also be given to the best four of any other breed. A special prize of $100 is offered for the largest and best exhibit of dogs from any one village or city, Hornellsville excepted. The prize will be divided—$75 to first, and $25 to second. Prizes in the miscellaneous class are $12, $8 and $3. The show will be held in conjunction with the Hornellsville Farmers' Club Exposition at Hornellsville, Sept. 8, 9 and 10. The entries close Sept. 1. The judges appointed are Mr. John Davidson, Monroe, Mich., setters and pointers; Mr. A. C. Krueger, Wrightsville, Pa., foxhounds and beagles; Mr. J. H. Naylor the remaining classes. The secretary is Mr. Chas. W. Robinson, Hornellsville, N. Y.

PARASITIC DISEASES OF DOGS.—V.

WE have already found that the follicle mite of the dog belongs to the same species as the human parasite living in the sebaceous follicles, and the common canine mange mite (*Sarcoptes scabiei*) is also at most a mere variety of the human itch-insect. The mange mite may be known by the following description: body circular and obtuse posteriorly, soft, shining, and slightly transparent; the color is whitish. There are eight legs which are short and conical in shape, distinctly jointed and provided with hair-like processes. A few similar processes are to be found scattered over the body, and there are horny appendages on the dorsal surface. The mouth is provided with a pair of strong hooked mandibles, maxillæ, a labium, and a lancet-shaped tongue. There is an intestinal canal; respiration is accomplished through the skin; and well developed male and female sexual organs occur in separate individuals. The male is smaller, more oblong, flatter, and of a darker color than the female, it is also the more active of the two sexes. The genital aperture is near the middle of the body. The females exceed the males in number, in the proportion of ten to one. The genital pore of the female is situated near the sternal plates on the ventral surface of the body. This species is oviparous, and the female lays but one egg at a time; the young mites are active and have but six legs. The itch insect is just visible to the naked eye; the longest diameter of the female is about 0.33mm. Varieties of this parasite occur on the wolf and fox.

If an impregnated female itch mite be deposited in any manner on the skin of a man or dog, it pierces with its mandibles the superficial layers of epidermis and passes into the deeper layers of the skin, cutting a tunnel as it goes. At intervals it lays a single egg, which obliterates the furrow. In this way from forty to fifty eggs are deposited, and the female then dies. While engaged in feeding and boring through the skin the *Sarcoptes* secretes an irritant poison, which causes intolerable itching to the unfortunate host. At the end of about fourteen days the young hatch and break through the wall of the tunnel and appear on the surface of the skin. The young mites now quickly burrow into the skin and cause itching, and the fierce scratching to which the infested animal is driven in hopes of relieving itself of the irritation is causative of many of the skin lesions which now soon appear. In the dog, around the furrows first form small pimples, which soon change to vesicles and pustules, which may exude bloody matter; this dries into the dark crusts which are nearly always found in this disease. The scratching of the animal soon tears open and destroys this eruption, and this new irritation causes a severe form of diffuse eczema, which is in turn accompanied by intense itching, and so the vicious circle spreads. The irritation is thus found to be due to two distinct causes; that caused directly by the *acari*, and that due to the violent scratching to which the dog resorts to relieve itself from them.

The diagnosis of this disease depends first on the form of the irruption; pointed vesicles separate from each other are characteristic of this disease, and even when the original eruption has been destroyed new crops of vesicles will appear on previously sound skin as the parasites keep on burrowing. An accurate diagnosis is to be made by finding itch insects on the coat, or by digging them out of their furrows with a needle; they are easily identified by a good pocket magnifying glass, and they may be confined in a drop of glycerine on a glass slide for examination. Of course, this disease is actively contagious on contact from dog to dog and from dog to man. An infested animal should at once be isolated until cured, and care should be exercised not to get the *acari* on the hands while treating the animal. If a number of dogs in a kennel suffer at the same time from "mange," the diagnosis of sarcoptic mange is usually correct.

The treatment of this form of mange is quite satisfactory if carried out with care and skill. As "Ashmont" points out, uncleanliness is a marked predisposing influence to this disease, and this should never be lost sight of in conducting the treatment. When a dog is discovered to have this disease the first thing to be done is to thoroughly disinfect the kennel; the bedding should be burned, and every crevice and corner must be cleaned with a strong solution of carbolic acid in boiling water. This cleansing process should be frequently repeated until the animal is cured.

As to local remedies sulphur stands at the head of the list for general usefulness; it should be applied in the form of an ointment after having well washed the dog with soap and water. The following is a valuable formula: Carbonate of tassium, one dram; flowers of sulphur, three drams; glycerine or lard, one ounce; mix, and use externally. The balsam of Peru may be used with great benefit, according to the following prescription: Washed sulphur and balsam of Peru of each half an ounce; lard, two ounces; mix, and use externally, this is Ashmont's formula and a most valuable one. Napthol has been used with great benefit, but is not equal to either of the above. Whichever of these ointments be used it should be well rubbed in over the entire body of the dog once daily for two days and then washed off with soap and water. If necessary a second series of applications must be made. In the case of house pets, where an ointment is objectionable, a saturated solution of washed sulphur in ether and alcohol (of each one part) well rubbed into the skin answers admirably. The eczema which may persist after the destruction of all parasites calls for the treatment proper for that disease—application of oxide of zinc ointment, or of powdered oxide of zinc and starch, of each equal parts, by weight, will be found most useful. If there is much itching five grains of sulphate of morphia may be added to the ounce of ointment, this must not be applied so freely that the dog may by licking it off get poisoned, it may be necessary to closely muzzle the animal with a snug fitting leather muzzle to insure perfect safety.

Although sarcoptic mange is purely a local disease it speedily impairs the general health, and the canine patient will require extra care for a week or two after the cure of the disease.

Various species of tick occasionally attack the dog, especially in tropical countries, producing irritation and occasionally ugly sores; the species are too various and of too little practical importance to be described here. As to treatment, in short-haired dogs the parasites can often be found and extracted, if this be impossible the application of carbolized oil (½ dram carbolic acid crystals to 1oz. of pure olive oil) may be rubbed in over the individual swellings which locate the seat of the parasite of the thick parasites.

Passing on to the insect tormentors of the dog the common dog louse (*Trichodectes latus*) first claims our attention. This species has been already mentioned when treating of intestinal worms as being of considerable pathological importance as the intermediate host of an interesting species of tapeworm; we will now consider the life history of the insect. The *Trichodectes* belongs to the *Mallophaga* or bird lice, an exceeding numerous class, almost every bird and mammal harboring a more or less distinct species. In the *Trichodectes* the body is flattened and hard above, the head is provided with distinct jaws, the limbs are short and thick, the antennæ are three-jointed, and the tarsi are provided each with a single claw, the female has two hooks on the penultimate ring of the abdomen. In their reproduction there are no especial phenomena, the species being oviparous, the egg hatching on the body of the host. This insect lives on the blood of the dog, securely housed in the coat. It is found especially on young puppies, where its presence in numbers may seriously injure the health of the animal. They are very tenacious of life, and very difficult to finally dislodge, as they wander into the bedding and every nook and corner of the kennel.

The irritation caused by this parasite is not usually very

great, though we have seen lousy dogs half flayed alive and suffering from severe eczema from their furious scratching; often their presence is not even suspected. The diagnosis of lousiness is easy, as the insects will be found on carefully examining the coat.

The treatment is simple, but not so rapidly effective as might be supposed; salts of mercury used in the form of a wash or ointment, have been much recommended, as they are highly poisonous, and many accidents have occurred from their use; we think them but rarely indicated. Tincture of quassia sponged on the skin is a wholly safe and efficient remedy; it should be applied daily until all parasites are destroyed. Carbolic acid in the strength of one-half ounce of the crystals to a pint of water is an efficient but poisonous wash; kerosene lightly brushed into the coat is a sure remedy, but an unpleasant one and likely to irritate the skin. Good "Persian insect powder" well dusted into the hair will drive out lice as well as fleas, and is one of the best of all applications for vermin. The kennel must always be overhauled, the bedding burned, the walls and floor well scrubbed with boiling carbolized water and well whitewashed when dry. Eczema and loss of coat must be treated on general principles, and attention to washing and grooming is especially called for for some time after cure. Two other species of lice are found on the dog, *Hæmatopinus piliferus*, being tolerably common; when present, the treatment recommended for the *Trichodectes* will dislodge them.

Several species of gad fly act as canine tormentors in tropical countries; in Africa the bite of the terrible tsetse (*Glossina morsitans*) often proving fatal. As is well known to experienced sportsmen, many species of "wood," "deer" and "shore" flies torment the dog at certain seasons almost to madness. A good sponging with quassia tincture or a dusting with insect powder will often save a faithful friend much misery in the field.

The only parasites of the dog of clinical importance—so far as known to us—which have not now been mentioned are the fleas. There are two species which attack the dog, the *Pulex canis* and the *Pulex penetrans*. The first is the common species and is found more or less on all dogs which are not subjected to constant care and grooming. But little description of this common vermin is needed; the body is compressed, the antennæ are short and made up of three joints, the tarsi have five joints, and the posterior feet are saltatory, much like those of the grasshopper. The female lays about a dozen eggs, of a rounded shape and whitish color, from which hatch thirteen-jointed grubs, having the last two joints hooked. The eggs of the flea are shaken from the dog's coat on to the ground or floor, and there the larva hatch out and live among the dust and dirt, feeding—it is said by authorities—on decayed vegetable matter. After living for an indefinite time—according to temperature, etc.—in this condition, the larva becomes an inactive pupa, from which at the end of about twelve days emerges the perfect parasite, which soon hops gaily away to make a meal of the blood of some unhappy canine.

It has been claimed that the flea is of hygienic importance to its bearer, preventing laziness and keeping up, by enforcing exercise, the muscular tone of the dog! As soon would we believe, as a facetious Frenchman has observed, that homeopathic bleedings, using fleas instead of leeches, are of therapeutic value. We think the dog flea an intolerable nuisance, and spare no efforts to rid our own animals of the pest. The treatment given in detail for lousiness applies equally well to flea parasitism; the most careful cleanliness, regular washing, and the free use of insect powder and quassia will keep the largest kennels wholly free from the jumpers. Mange produced by scratching must be treated on general principles. The most careful cleansing of kennels is a prime necessity.

The sand flea, chigoe or jigger (*Pulex penetrans*) is very common in the West Indies and tropical and semi-tropical America, where it attacks man as well as dogs and other animals. The female only is truly parasitic, it attacks the feet especially, penetrating the skin between the toes. After entering the skin the body of the parasite grows very rapidly, and becomes filled with eggs—this swelling causes active inflammation, followed by abscesses and the formation of an open running sore. The treatment for this parasitic disease consists in opening the sack and applying carbolized oil, which kills the parasite and larva and promotes the healing of the sore. The latter must be ke kept perfectly clean, and several applications of the oil may be required.

Of the plant parasites of the dog, as the fungi which produce the diseases known as *favus* and *tinea*, and the immense group of *lacteria*, which are the cause or carriers of so many specific general diseases—probably distemper among the number—we will not at present speak. We may take up their consideration in some future paper.

No effort has been made in these papers to write a complete monograph of all the animal parasites which attack the canine race. All important species known to pathologists have, however, been mentioned, and those of clinical interest fully described. As has been already suggested, fuller observations on almost every species of parasite are needed, and we would urge all interested in canine diseases to look for parasites at every opportunity and to preserve and report their "finds."

It will give me pleasure to identify any specimens or give any information in my power in regard to parasitism. And I shall be always very glad to receive any specimens or notes through FOREST AND STREAM.

If I have written what will cure the suffering of one of the noble brutes we—it may be unjustly—call lower animals, I am content. Far too little attention is given to the sufferings of all domestic animals from disease, and many a fine brute is left to suffer and die from ignorance and inattention.

"But the poor dog, in life the firmest friend,
The first to welcome, foremost to defend;
Whose honest heart is still his master's own,
Who labors, fights, lives, breathes for him alone,
Unhonored falls, unnoticed all his worth." R. W. S.

PHILADELPHIA, Pa.

THE ST. LOUIS PRIZES.—There is some trouble about paying off the prize winners of the late St. Louis dog show. The cash in hand of the affair was lodged in the Provident Savings Bank, the smash-up of which is partly responsible for the fact winners are not paid off, but there is something worse at the back of the abrupt departure of Cashier Thomson. Before the show was advertised to the doggy men's world, a guarantee fund was raised—on paper. Some of the gentleman who pledged themselves to see the affair through being simply sportsmen, who were willing to assist anything connected with dog, and others being directly interested in the dog business, and therefore eager to promote a bench show in the city. The expenses and cost of prizes amounted to something like $500 more than the receipts, and it has been found that a number of the guarantors are very backward in coming forward to shoulder their obligations. The prize winners at a distance have so far accepted the situation very quietly, but unless they pay pretty soon, St. Louis will have a very poor name abroad as a dog showing center, and measures will therefore shortly be taken to collect the guarantee fund unless its subscribers come to the front, accept the situation, and allow the managers to put themselves clear with owners all over the Union.—*St. Louis Republican.*

THE EASTERN FIELD TRIALS JUDGES.—Messrs. J. W. Orth, of Pittsburgh, Pa.; D. C. Bergundthal, of Indianapolis, Ind., and Elliot Smith, of New York, have been invited to act as judges at the Eastern Field Trials, to be held at High Point, N. C., next November. All of the gentlemen have accepted and they will, doubtless be formally appointed at the next meeting of the Board of Governors.

THE CLUMBER SPANIEL.

THE Clumber spaniel is, unfortunately, but little known in America, a brief sketch of this most interesting breed of dog may, therefore, be acceptacle.

The Clumber is said to be the oldest known breed of dog, genus spaniel. Edmund de Langeley, in the "Maister of Game," published in the fourteenth century, speaks of the best spaniel for hawking as being in color "white and taurie," and not too "jougle," that is, rough or hairy, and that his tail should be "rough." It would, therefore, seem probable that the ancient "spaynel" of Edmund de Langley should be identical with the patrician Clumber of the present day.

The common supposition is that the breed originated at the Duke of Newcastle's seat in Nottinghamshire, Clumber House; but this is erroneous. They were imported many years ago by a former Duke, who obtained from the kennels of a Duc de Nouailles in France, and brought them to Clumber, where the breed has been treasured for many years. Their name, however, is undoubtedly taken from the Duke's estate of Clumber.

Only within the last decade or two has it been possible to obtain a Clumber spaniel, as the dukes jealously guarded their strain; but latterly they have become more common, and teams of clumbers are much used in covert shooting in England. A good Clumber is now easily, or comparatively easily obtained; but a well broken or even untrained dog still fetches a large price.

Of their great worth in shooting too much cannot be said in praise. They are worked in couples or teams of three or more. One Clumber, however, is by no means to be despised, and for the sportsman who can keep but one dog, a Clumber is a most useful adjunct to a day's sport. They are natural retrievers and readily take to the water, making excellent duck dogs. Their light color, to be sure, is an objection, as it readily reveals their presence to the sharp-eyed duck; but, taking into consideration their innumerable good qualities, the balance will be found so greatly in their favor that this objection will be almost forgotten.

For partridge, cock and snipe, these dogs are perfection, as they work very close, ranging not more than twenty yards from the gun, and working their ground most thoroughly, never missing a scent. Their nose is far superior to any other breed of spaniel, and is second only to the pointer or setter. As is well known they are perfectly mute, and even on the hottest scent give not a whimper. A thoroughbred

JOHNNY AND DRAKE.

Clumber spaniels (by Ben and out of Jean) owned by Messrs. F. H. F. Mercer and W. B. A. Hills, Ottawa, Canada.

Clumber spaniel is rarely found to give tongue. Their silence enables them to work up so close to a bird that they can almost clutch it, and frequently they surprise their master by bringing in a bird which he never shot at.

From long inbreeding at Clumber these dogs became constitutionally delicate. When young they are peculiarly susceptible to the ills of puppyhood. Distemper and jaundice commit sad ravages among them, carrying off whole litters at a time, but when once a Clumber has come to maturity he is a healthy dog for life and lives to a good old age, every year adding to his worth, and when other dogs are becoming lazy and used up a Clumber is in the height of his usefulness. Their beauty is also very great. "Idstone," that great authority on the dog, speaks of the Clumber as "decidedly the handsomest dog bred for the sportsman."

The points of the Clumber spaniel are as follows:

The head should be large and massive in all its dimensions, flat at the top, with a furrow running from between the eyes up the center. There should be a large occipital protuberance. The nose should be very long, broad and deep, the nostrils large, open and flesh, sometimes cherry colored. The eye is large and soft and very deep set. It is generally hazel colored. The ears are long and large at the top, not to be shaped like the Sussex, but "vine-shaped," to quote "Stonehenge." The hair on the ear should be short and smooth, without the slightest approach to wave or curl and not feathered below the leather.

The neck should be very long and powerful, but free from all dewlap with a large "ruff" of hair.

The body should be very long and low and well ribbed up. The shoulders should be very powerful to enable this dog to stand his work. This is of great importance.

The forelegs should be very straight and very heavy in bone. They should be heavily feathered. The feet should be large, compact and plentifully covered with hair.

The hind legs should also be powerful and heavily feathered to the hocks, but not below. There should be thick hair on the back of the leg, just above the foot, to protect the leg. The hindfeet should, as the forefeet, be large and compact.

The back and loin should be very powerful. The back long and free from droop, and the loin from arch.

The chest should be very deep and broad, and covered with shaggy hair.

The stern should be set on low and carried well down. It is always cut.

The color, lemon and white or orange and white, the white of course predominating. The less markings there are on the body, the better. The nose and legs should be well freckled. The markings should come over the eyes and ears, both sides as much alike as possible. Any marking but this is undesirable.

The coat should be soft, silky and perfectly free from curl, a very slight wave is permissible. It should not be long, but very dense. The feather should be long and thick.

The general appearance of a Clumber spaniel is of a long, heavy-looking dog, of a very solemn, thoughtful expression, betokening great intelligence. He should be very long and low on the leg.

The weight of dogs averages between 55 and 65lbs., but the bitches run much lower, frequently 20lbs. less than the dogs.

CLUMBER.

DOGS OF THE OCCIDENT.

Editor Forest and Stream:

In your journal of June 10 appears a letter from San Francisco, signed "Vox Populi," in which he is inclined to take Col. Stuart Taylor to task because, in the interest of truth and the improvement of the various breeds of dogs in San Francisco, he saw fit to say in his letter, published May 13, that so far as he knew, "there was not here one mastiff, St. Bernard, Newfoundland, deerhound, field spaniel, bulldog, bull-terrier (except his Kittie), which could, under a good and conscientious judge, win even he. in an established and reputable Eastern bench show."

I regret your correspondent did not sign his name to his letter, as we could then judge of his capacity to estimate what Col. Taylor considers a No. 1 specimen of any of these classes.

I inclose my name with this, and am willing to enter into a discussion with "Vox Populi" over my own signature if he will reveal his identity, and discuss with him this interesting question, and endeavor to prove Col. Taylor is right. Instead of finding fault with this gentleman because he has had the courage to tell us facts, and because he is trying to stimulate people who care for dogs to purchase the best and not to be satisfied with inferior specimens, I think every man who loves the canine race should thank him for inviting attention to the defects of our dogs and for his intelligent counsel.

Col. Taylor knows what he is talking of, and his judgment about the matters he has addressed you upon is respected by all in San Francisco who know him, and his enthusiasm upon a subject which for many years he has made a study and which he so well comprehends. I concur with every word he has written you. As he says, "there are some fair setters and some good greyhounds and a few noticeable pointers here." But the non-sporting classes are inferior as a rule. By this, I mean they do not come up to the modern bench show standards.

Dogs are spoken of as belonging to such and such breeds, which are crossed with other breeds, and consequently are mongrels.

So convinced am I that there is no purely bred, superior mastiff, or St. Bernard, or Newfoundland, or Scotch deerhound, or bulldog, or Yorkshire terrier, or bull-terrier (except Col. Taylor's Kittie) owned at this date in San Francisco, which will elicit encomiums from such a judge as Mr. Mason, or take even a second prize at the Westminster Kennel Club exhibitions, or at any Eastern show in good company, that I am prepared to give a long figure for the production of such an animal. If Mr. Mason comes out here this can be put to a test and I will be a ready purchaser, as I am looking for first-class specimens of three of these breeds. I will even include fox-terriers in my remarks, for although several are owned here not one is a superior specimen. Your correspondent seems not to judge dogs by their appearance, their bench show qualities, their form, their points and style. He appears to judge solely by pedigree.

This is a farcical way to judge and very fallible. Give me the requisite compliance with the adopted standards, the requisite form and carriage—and pedigree is all very good afterward.

"Vox Populi" calls attention to Mr. Heart's Irish setter bitch Kate II. and to Mr. Truman's setters and gives the pedigree of each. All very good in its way is his letter in these respects. Not desiring to hurt Mr. Hearst's or Mr. Truman's feelings or disparage their dogs, I must frankly say that, having seen all of these, I courteously advance the opinion that not one of them would take a third prize in really good company. These setters may be well trained, they may have long pedigrees, they may possess wonderful intelligence and yet they lack many necessary points requisite in the modern Irish setter and are woefully lacking in form and style. Some of them would never even attract a second glance from the eyes of a competent Eastern judge. As for Mr. Keading's (not "Keating") Irish setter, sired by Col. Gate's Pat, he is not the proper type by any means; is quite as defective as most of the others referred to, and no one knows this better than Mr. Keading, who has acknowledged it in a conversation with a prominent lover of the dog here.

Col. Taylor has informed me that he will be most happy to enter into a discussion through your columns with "Vox Populi," provided that writer will sign his own name to his letters, in regard to the bench show merits of the dogs referred to and in regard to the true type of not only Irish setters, but non-sporting dogs generally.

Good judges of the dog know very well that there are often found in litters from superior animals very poor specimens of the required type. So it may be with us in San Francisco. I do not refer to the whole State, for I know not what dogs may be owned in other counties. Dogs sometimes fail to take after their pas and mas just as children do. Father and mother may be physically and mentally perfect and bright in brain. Their offspring may be villainously ugly and mentally stupid. We see it daily. So with dogs. Poor puppies come from long-pedigreed sires which have won many prizes in many bench shows. "Vox Populi" must bear all this in remembrance when he attempts to judge dogs by pedigrees. My sole desire, Mr. Editor, as I am sure is Col. Taylor's, is to see a great improvement made in San Francisco's breed of dogs of all classes.

If we, away out here on the Western shore, are so swollen with admiration for ourselves and say, as I have heard many good fellows say with more love of locality and pride of birth than genuine knowledge of dogs (for they have not been East in long years to see the vast improvement in the several breeds), "Oh, we have got better dogs here than you can find in London or New York; let them bring along their bench-show winners, we'll beat them all to pieces," etc., etc.—if we are so lost to all ideas of progress as to be thus prejudiced, if we are so narrow-minded as to see only good in our neighbors and none in the outside world, and tickle them because they will tickle us, why don't let us invite any Eastern judge of good repute to come among us and show us our defects, but let us have standards of our own, old-fashioned judges, and stand stock still and look wise.

Prejudice is the reason of fools, and I for one, as a man fond of good and grand types of men and women, and horses and dogs, must say with all due courtesy and respect that I fear, in his present criticisms of one who has done much to show our people here the real value of first-class specimens of the canine race, Mr. "Vox Populi" cannot prove in this instance he is "Vox Dei."

Let Mr. Mason come out here and bring his pointer Beaufort and Revel III. or Jilt, not Seph G., as she never should have received first prize, I am told in a letter, being very faulty. Let him borrow the Irish setters Elcho, Jr. and Chief for the occasion; let him persuade the owner of Merchant Prince and Duke of Leeds, St. Bernards; and Bruno and Major, Newfoundlands; and Nevison (faulty as he is in head) and Ilford Caution and Lady Gladys, mastiffs; and

Chieftain, Scotch deerhound; and Royal Duke, black and tan setter; and Newton Abbot Lady, field spaniel; and Richmond Olive, and Bacchanal, fox-terriers; and Bellissima the famous bitch, as a specimen of what a genuine bulldog ought to be. Let Mr. Mason come out here with all these in his charge, as excellent representatives of their respective classes, and "my eyes for it," as an old sailor would say, the lovers of dogs here would be able to see just where the faults lie in their own dogs and would be a trifle less ready to believe we own the victors of the world. Why, I heard a man say the other day that he believed "we possess the best bull-terriers in the world!" "Why?" said a friend of his.

"Because they can lick any dog that can be brought here." was the answer!

The lover of Butchertown fighters evidently did not know that the standard of bench show bull-terriers had been so varied, that none but pure white will be allowed to enter the ring. And they must have great length of jaw and black noses, their ears must be well cropped, their tails fine and straight as a line.

There is but one here (the bitch referred to above) that is not of the old-fashioned type, with short thick head, and nearly all are of mixed colors and thick tailed. This is only a fair illustration of the appearance of the several breeds here, sporting and non-sporting.

Apologizing for the length of this letter and hoping it will offend no one, as it is written purely in the interest of truth and of solid facts, and the breeding of better dogs, I am

FREE LANCE.

SAN FRANCISCO, Cal., July 9.

THE MASTIFF TYPE.

Editor Forest and Stream:

With much interest I have read the letters of Messrs. W. Wade and V. Haldeman in your issues of May 27, June 24 and July 1, on "The Mastiff Judging at New York," or as Mr. Haldeman heads it far more correctly, "The Mastiff Type." As both have used my name, opinions and writings pretty freely, perhaps a few remarks from myself personally on the subject may not be unacceptable to some of your readers, and to save space and confusion, I may commence by saying the article signed "Zoilus" which Mr. Wade refers to (and which has been thought highly of in this country), was from my pen. With regard to the New York judging, Dr. Perry did quite right in boldly placing the exhibits according to his own opinion, but not having seen the specimens, I can offer no opinion as to how far I should have considered the awards correct. Nevertheless, a judge very often feels compelled in all honesty not to keep too strictly to one type. In Mr. Wade's letter in issue of May 27 there are several incorrect deductions. On the other hand, your editorial foot note was very lucid and correct. Moreover, it is evident Mr. Wade is no judge of a pug dog, yet in time I hope he and others will recognize that there is a certain similarity of characteristics in the mastiff, bulldog and pug dog. Again, the cut of Boss in your issue of July 1 shows a very good all round mastiff, yet any one must allow it is very similar to an enlarged pug, barring the stern. Mr. Wade is quite right in saying that I am as emphatic as any one in condemnation of weak loins, straight hocks, and general lack of power.

Mr. Haldeman's letter is to the point and far clearer than Mr. Wade's, as to what he would do, viz.: "Draw up a standard to suit the requirements of the animals (mastiffs?) in America." This is no proposition to try to lay down what the true type really is, was or should be, nor what constitutes a mastiff. Oh, no! The whole suggestion reads very similar to the skit of "St. Peter's Advice to Mundella."

Mr. Haldeman says: "The bulldog layback is a positive malformation, and is more objectionable than the hound muzzle."

I, for one, cannot allow the former statement to be correct, and have yet to learn how a characteristic of the group can be as objectionable as an evident sign of mongrelism. Again, Mr. Haldeman says that "Ilford Caution's upper jaw is too short." Now, may I ask, without giving offense, what authority has Mr. H. for saying a muzzle can be too short? How does he prove it? His mere *ipse dixit* won't do, especially when he confesses that evident sign of mongrelism, (*i. e.*, houndiness) is less objectionable to him than the presence of a characteristic common to the whole mastiff group. I am sorry to have to cut up any one, and to have to show Mr. H. in error, but, *pro bono publico*, I must say in this point Mr. Haldeman shows he prefers the mongrel to the real thing, and seems ignorant of what the true type is in this particular feature. Again, what he says about breeding up to a standard calculated merely to suit Western customers reads very like a suggestion. So breed away from the true standard for the contemptible sake of mere pecuniary gain, through selling to people who can only comprehend size, bone, muscle and courage, yet are not sharp enough to know that a long-muzzled brute that a Lancashire butcher would be glad to sell for £5 is not the real thing—not truly the English mastiff. If such are the general views and practices of American breeders, it is not to be wondered that "the American breeders are not able to produce a good-looking dog" in the opinion of English critics. It is certain many second-rate, badly-grown specimens, amounting almost to cripples, have been drafted from this country for America.

Coming to Mr. Wade's letter of July 1, shortness of head is one thing, and, if possibly a fault when very pronounced, it is a point in the right direction. Weak loins, crooked legs, general weakness of limb and deficiency of muscle are faults to be condemned, although often brought about by bad rearing and injudicious treatment. With regard to any need of fresh blood, it is a matter of opinion, and in mine quite unnecessary. What we as judges need and will have is the true type, and I for one don't care a button how it is produced or who produces it. In judging, extreme shortness of head should not carry too much weight with it, still head properties should always rather outbalance bodily properties. Short muzzles are now more common in England than they were ten years since. It is a point I have always advocated cultivating, as typical of the breed. The shortness of the top jaw in the true mastiff and projection of the lower jaw beyond the upper has been noticed by naturalists, and exemplified in Couchez, L'Ami and other Alpine as well as English mastiffs. These are facts that cannot be refuted when we come to examine what is the true type. I have fully gone into the point of shortness of muzzle in my book, "The History of the Mastiff," pages 142, 143, 162, 191 and 208.

For my own part I prefer an active, muscular, medium-sized mastiff, one approaching more toward the standard fitted for baiting purposes, but we must remember that the only legitimate use for the breed now is as watch dogs, for which activity is not so much required as a formidable appearance, which means size and a typical head, however ill developed the limbs and muscles may be owing to want of exercise.

Awarding prizes to undersized specimens has never been fashionable in England, however good the specimen, otherwise old King (2301) would never have been beaten and my Dreadnaught must have carried all before him on the show bench, as except for his want of size, there was nothing to touch him as an all-round good one, a specimen faultless in his build and who could have beaten in a fight most mastiffs now on the show bench, but the partiality for vast size has been equally an error on the part of judges as well as the general public.

In judging at a show the ring should first be weeded of all specimens having radically uncharacteristic faults, such as houndiness, showing signs of a cross among all such as typical brutes, should go out; any very long-headed, sharp-muzzled, heavily flewed, large-eared and leggy specimens; after these any undersized specimens, dwarfs and weeds should be sent out. Having got rid of these with any commendations they may be deemed worthy of for size or character, a real judge would then award the prizes to the most perfect all-round specimens left in the ring, such specimens being necessarily more or less typical and useful animals to breed from, whatever their defects. If it happened that they were a lot of badly-reared, crooked-limbed specimens, they would and should still win, for it stands to reason, if we are judging mastiffs, however ill-grown the specimen, it should beat a cross or low-bred untypical mongrel, however handsome and well-grown that mongrel might be as a dog.

Unless Mr. Wade and others can grasp and accept this they might as well argue that a well-grown half-bred boarhound or bloodhound should have beaten Bill George's Tiger if shown against that grand but accidentally twisted-limbed, weak-loined specimen. Actual lameness is quite a different thing, and the V. S. should have the power to disqualify for unsoundness, rather than leaving it to the judge, in my opinion.

If any other system of judging is pursued, in a very few years the breed would become simply a lot of large sized animals, very deficient in mastiff characteristics, and not necessarily better grown and straighter in limb than our best prize specimens in years past have been as a rule. It is equally a mistake to think that a dog with simply a remarkably characteristic head, but different in every other respect, should or would, in this country, beat a good all round specimen.

However, Mr. Wade and others, by ventilating the subject of cripples winning prizes, have done good service to the breed, both in England and America, and I trust, however defective his logic may be, he as well as others will not drop the subject. Here in England, when once a dog obtains fame, it often subsequently beats better specimens, simply because those appointed to adjudicate (unlike Dr. Perry) have not the courage to do otherwise than follow in the steps of their predecessors. Nevertheless, in future we shall probably see more good-bodied ones having good heads; but to say a good-bodied, well-reared, half-bred mongrel, however large, should beat a badly-reared but otherwise highly typical mastiff, is patently incorrect; and if any mitigation of the characteristics is allowed, or any alteration of the standard is made, to suit or favor any set of breeders or trainers, it simply implies lowering the standard of perfection, however difficult it may be to rear large-sized specimens, well—having typical heads.

Breeders should bear in mind that cross-bred cattle are always more robust and grow to a greater size than pure bred ones. The same in every other kind of live stock. Thus low and badly-bred mastiffs, bred merely with a view to size, are naturally easier to rear than high-bred pedigree stock; and for this reason judges at shows should always give the preference to typical specimens, and in the mastiff the head is the most typical feature.

M. B. WYNN.

THE ELMS, ROTHLEY, LOUGHBOROUGH, England, July 20.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them. Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Royal Dash, Maud Blue and Elsie Blue. By Shawmut Kennels, Charlestown, Mass., for black and white and ticked English setters, one dog and two bitches, whelped March 29, 1886, by Dash III., Jr. (Dash III.—Model Druid) out of Mabel Blue (Royal Blue—Eudora).

Dora Blue. By Shawmut Kennels, Charlestown, Mass., for black and white English setter bitch, whelped March 29, 1886, by Dash III., Jr. (Dash III.—Model Druid) out of Mabel Blue (Royal Blue—Eudora).

Count Dash. By Shawmut Kennels, Charlestown, Mass., for liver and white English setter dog, whelped March 29, 1886, by Dash III., Jr. (Dash III.—Model Druid) out of Mabel Blue (Royal Blue—Eudora).

DEATHS.

Toots. Orange and white pointer dog (A.K.R. 21), owned by J. E. Wilson, Lake Village, N. H., April 11, from stoppage.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. P. C., Worcester, Mass.—My mastiff dog, 2½yrs. old, since last March has spent fully one-half his time scratching. There appears to be a humor on his chest extending back two-thirds of his body. The skin is red when he scratches and black when he has scratched. He appears to be perfectly healthy, with good appetite and coat. Ans. Wash your dog gently with warm water and castile or carbolic soap where the redness exists. After drying apply the ointment of balsam of Peru with the fingers. Do this once daily. Give five drops of Fowler's solution of arsenic in the food three times daily.

BEAGLE.—My puppies are troubled with swellings of the lymphatic glands. I tried the bitch's milk, at your suggestion, with litmus paper, and found it neutral. The puppies are as lively as kittens and eat well. The swelling does not seem to bother them any, but it looks terribly ugly, some of the glands having swollen to the size of a pigeon egg. The puppies are now 8 weeks old and in good form for that age. I feed them on fresh and sour milk mixed in with boiled oatmeal and rice or unbolted bread. Ans. Give the puppies two teaspoonfuls, night and morning, of the following: Of cod liver oil 8oz., of the syrup of the iodide of iron 1dr. Mix. Shake before using.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

THOMASTON, Conn., July 11.—A good light and scarcely any wind were the weather conditions at our shoot to-day:

G A Lemmon	10	5	9	8	9	6	8	9	10	8—82
W H Dunbar	10	8	6	7	7	7	5	9	8	8—75

TORONTO, July 26.—A return match between the Toronto Rifle Association and the Hamilton Rifle Association took place on the Garrison Common to-day between the two teams, ten men a side, with Snider rifles, 200, 500, and 600 yards. The weather was fine, and though troubled with a very changeable light there were some very fair scores made. The following are the range totals:

Toronto R. A.	200	500	600		Hamilton R. A.	200	500	600	
	Yds.	Yds.	Yds.	T'l		Yds.	Yds.	Yds.	T'l

F H Martin	7	8	6	6	5	7	6	9	8	6—68

NEW ORLEANS, July 25.—The match between the Eicke and Olympic rifle teams came off this afternoon at the Olympic's range at the Jackson Sawmill. Mr. Willie Weiss did some fine shooting, making 351 out of a possible 375, without having had any practice, for the Olympics, while Hon. J. V. Guillotte did some good shooting for the Eickes. This is the second time that the Olympics defeated the Eicke team. The following is the score:

Olympic Team.		Eicke's Team.	
W Genest	322	W Huber	334
C Husson	337	Hon J V Guillote	336
W Weiss	351	B Mitchell	335
J Lambon	333	Capt E Rhinehardt	311
V Lambon	335	J Swan	318
Capt C Noel	324—2001	H Eicke	511—1945

BOSTON, July 31.—A large number of riflemen attended this Saturday's matches. Several brilliant scores were made. J. Francis scored 100 in the rest match, and Mr. Frye made three 99's and Mr. Chase two 99's. In the 500yds. military match Lincoln Grant made a clean score of 50, which is the second clean count he has made during the week. C. F. Cook has won the silver badge and W. D. Skinner the bronze badge in the State militia match. Following are the best scores made during the week:

Rest Match.

J Francis, F	10	10	10	10	10	10	10	10	10	10—100
J N Frye, F	10	10	10	10	10	10	10	9	10	10— 99
D L Chase, F	10	9	10	10	9	10	10	10	10	10— 99
S Wilder, F	10	9	10	10	9	10	10	10	9	9— 96
J Hurd, A	10	9	7	10	10	9	8	10	10	10— 93

W Charles, E	4455555555—48	R B Edes	2554555555—46
F Cutler	4555453554—47	C Williams	3355555555—46

CREEDMOOR, July 31.—The rain fell heavily at Creedmoor this morning, and although the weather brightened in the afternoon the attendance was not as large as usual. Nertheless, there were 220 entries. It was the seventh match of the year in the champion marksmanship's class, and a new man captured the medal. The fact that no marksman has won the medal twice during the season complicates the situation considerably. It is an unprecedented condition of affairs. The prize winners to-day were:

	200yds.	500yds.	Total.
Lieut Col T C McLewee, Staff	21	25	46
Lieut E F Young, 7th Regt	22	22	44
Sergt A McDougal, 7th Regt	22	22	44
Priv L C Pirrie, 23d Regt	21	22	43
Col J H Jones, 12th Regt	21	22	43
Priv W T Olliffe, 13th Regt	18	24	42
Capt E DeForest, 23d Regt	20	22	42
Capt W H Greenland, 23d Regt	20	22	42

Twenty-four marksmen made 40 or over.

NYACK, N. Y., July 28.—In the match here between the Tappan Zee Club, of Nyack, and the Peekskill Rifle Club, the following is the score out of a possible 300 at 200yds. range: Peekskill—G. A. Durrin 44, E. G. Halsey 42, E. Fuller 39, E. Hodgkins 30, O. J. Loder 42, Capt. A. W. Durrin 39; total, 236. Tappan Zee—Augustus M. Voorhis 39, Capt. C. W. Hyatt 36, G. W. Youman 35, J. Gesner 35, G. T. Blauvelt 38, E. Blauvelt 38; total, 219. A return match will be shot on the Peekskill range.

MASSACHUSETTS NOTES.—The handicapping committee of the Massachusetts Rifle Association has considered the question of superiority of the new Buffington sights on recently issued Springfield rifles, and concluded that the arms having these sights shall be classed as special military rifles, and receive twenty-five points on the aggregate of five scores on the standard American target, which is five points less than is given the Springfield rifle with the old sight....The recent issue of the new-sighted Springfield was based upon the plan of allowing one rifle for each two first-class marksmen in the different companies. One case at least is known where there is but one first-class marksman in a company, but that individual is one of the best and most reliable rifle shots in New England, and one of the high men in the last inter-State team which shot at Creedmoor. If this rule is adhered to that reliable man will have to shoot with an inferior-sighted rifle, which may result in the Massachusetts teams losing one of its best men..... The record in a rest match in the standard American target was broken last week by F. H. Rideout, of Fitchburg, Mass., who scored, on July 21, in a regular competition at that place, twenty-two consecutive tens. This remarkable shooting was done with a 32-cal. rifle, an arm which until recently was considered far inferior to those of larger bores.

BOSTON, July 26.—The Boston German Rifle Club held its regular shoot to-day at Clarendon Hills, and the following scores were made out of a possible 78:

G Kraft	11	12	11	8	12	10	—64	F Lins	13	11	11	6	5	10	—56
F Hubner	12	13	10	9	9	9	—62	G A Klucken	10	11	12	9	6	8	—56
H Loeser	9	10	13	8	11	10	—61	R Klucken	11	12	11	11	7	3	—56
J Kimmell	12	11	10	5	11	8	—58								

MASSACHUSETTS TEAM.—The following circular has been issued from the office of the Inspector-General of Rifle Practice: "BOSTON, July 30, 1886.—If, as expected, a team is selected from the M. V. M. for an inter-State match at Creedmoor, the scores in competition at Walnut Hill, Aug. 6, will be taken as a starting point for selection of State team, and the conditions of shooting will be made to conform as closely as possible to those required at Creedmoor. Teams will appear in fatigue uniform, with belt and cartridge box, and provide their own ammunition. Rifles may be interchanged. The full prone position will be required.—H. T. ROCKWELL, Colonel and Inspector-General of Rifle Practice."

WILMINGTON, Del., July 26.—Quite a delegation of the Wilmington Rifle Club visited the park this morning for the purpose of shooting a rifle match with the West Chester Rifle Team. While waiting the arrival of the latter team the Wilmington Club shot a match among its own members with the following conditions: Massachusetts target, 200yds., off-hand. Prizes were awarded as follows, S. J. Newman first, U. Fuller second, J. E. Seeds third, I. W. Seeds fourth, H. Simpson fifth. The full score was, out of a possible 36 points:

S J Newman	11	9	11	—31	E Clark	5	10	8—23
U Fuller	9	11	8	—28	W A Bacon	8	9	5—22
J E Seeds	12	3	11	—26	J B Bell	11	2	8—21
H Simpson	9	10	6	—25	W F Seeds	10	7	2—19
I W Seeds	7	6	12	—25	C Heinel, Sr	9	8	2—19
W O'Connor	5	12	7	—24	C Heinel, Jr	7	8	3—18
H B Seeds	11	8	5	—24	J E Newman	7	4	0—11

The West Chester team arriving, both teams were selected and the match opened under the following conditions: Massachusetts, or what the Pennsylvanians with refreshing coolness call the "Pennsylvania target," 200yds. off-hand. The Wilmington riflemen have a habit of opening their matches poorly and pulling up toward the end with but a narrow margin, or when it is too late, as was well shown in the matches yesterday. The West Chester team lead on the first round, and gradually gained until the end of the seventh round, when they were twenty-five points ahead; but on the last three rounds the Wilmington boys retrieved themselves finely, coming in 6 points ahead. The following is the full score out of individual possible 120 points and team possible 960:

Wilmington Team.

S J Newman	11	7	12	9	11	8	5	8	10	10—91
J B Bell	8	5	9	7	11	8	9	12	10	11—89
H B Seeds	10	4	10	10	6	10	7	9	10	9—86
U. Fuller	11	7	9	5	10	9	6	6	10	11—84
C Heinel, Sr	7	6	7	9	9	8	8	10	9	9—82
W F Seeds	2	11	6	4	8	10	6	21	9	12—79
J E Newman	5	10	7	6	9	11	7	6	9	8—78
J E E Seeds	7	7	6	6	7	8	8	2	8	3—62—650

Westchester Team.

G Walton	11	8	10	12	8	9	10	10	9	9—96
T Rodebaugh	10	0	8	12	9	9	11	11	9	9—88
G Williamson	7	8	12	9	12	6	8	6	9	10—87
J T Williamson	10	9	9	7	9	8	7	7	10	8—84
H Ingram	7	11	8	10	11	9	7	8	6	7—84
F H Eachus	8	6	8	8	11	10	6	2	9	7—75
T W Taylor	6	5	7	8	10	7	8	3	12	9—66
A L Smith	9	5	8	2	7	8	6	6	6	7—64—644

Another match was shot in the afternoon with the following conditions: Massachusetts target, 100yds., off-hand. As in the morning the carelessness of the Wilmington team on the first seven rounds, together with Newman's error of shooting at the wrong target, which lost him his shot and counted the best shot for his adversary, lost them the match, or at least greatly increased what would otherwise have been a narrow margin. As will be seen by the score, the West Chester team was 33 points ahead at the end of the seventh round, but it was far too late for the home team to regain themselves. The following is the full score, out of an individual possible of 120 points and team possible of 960:

Wilmington Team.

C Heinel, Sr	10	12	11	12	11	11	9	12	12	10—110
U Fuller	10	9	10	12	12	8	11	12	13	10—109
J B Bell	11	11	10	9	11	11	10	10	11	11—105
J E E Seeds	11	10	11	10	9	9	11	11	9	12—102
S J Newman	10	12	10	12	12	11	3	11	9	11—101
W F Seeds	11	10	7	11	8	9	10	12	11	11—100
R B Seeds	8	10	10	9	10	10	12	10	9	11— 99
J E Newman	12	10	*0	12	9	6	12	9	11	7— 88—813

*Error by shooting at wrong target.

West Chester Team.

T W Taylor	10	11	11	11	12	11	11	10	11	9—109
G Williamson	10	11	9	12	12	11	10	11	10	12—108

A Ingram	12	9	11	10	11	9	12	9	12	11—106
T Rodebaugh	11	11	12	12	10	10	11	6	9	12—104
G Walton	9	10	12	10	9	7	12	11	11	9—100
A L Smith	10	6	11	4	8	12	10	6	8	10— 89—830

Two special practice matches were held by the Wilmington Rifle Club at Schuetzen Park this afternoon. At the first match two competing teams were chosen by Bacon and Simpson, the latter team winning the match by fifteen points. Conditions—Massachusetts target, and 200 yards off-hand. The following is the full score out of individual possible 120 points and team possible 720:

W A Bacon	4	10	11	5	2	2	10	7	9	0—60
S J Newman	6	7	9	11	6	8	10	8	10	10—85
U Fuller	10	10	8	10	9	8	7	7	8	11—88
T Jones	9	12	9	10	10	9	10	9	8	10—96
W Floyd	7	3	8	6	6	2	10	12	3	7—64
J R D Seeds	9	9	8	8	6	8	6	7	8	8—77—470
H Simpson	7	12	9	0	3	7	5	3	0	0—46
C Heinel, Sr	11	7	10	10	10	10	10	9	11	12—100
W F Seeds	8	8	9	10	6	9	7	8	9	12—86
J E Newman	12	6	5	11	7	5	10	11	11	8—86
W O'Connor	5	7	10	10	7	9	7	7	6	8—76
C Heinel, Jr	7	11	5	12	10	8	12	9	8	9—91—485

A second match was then opened with the following conditions: Massachusetts target, 100yds., off-hand, prizes divided among the highest scores. After deciding a tie, the prizes were as follows: S. J. Newman first, C. Heinel, Sr., second, T. Jones third, U. Fuller fourth. The full score is as follows, out of a possible 120 points:

S J Newman	12	9	11	12	10	11	10	10	11	12—108
C Heinel, Sr	12	11	11	10	11	10	12	10	10	9—106
T Jones	11	8	12	10	10	12	10	10	10	12—105
U Fuller	11	9	11	10	10	11	12	10	9	11—104
W F Seeds	9	11	12	9	10	8	11	11	11	12—104
W Floyd	11	9	8	10	11	9	12	11	9	11—101
J E Newman	6	10	8	10	11	12	11	11	9	11— 99
J R D Seeds	10	10	10	10	9	9	7	10	8	11— 94
C Heinel, Jr	8	9	7	10	10	10	10	10	10	9— 93
W A Bacon	9	12	6	10	11	9	10	9	8	9— 93
W O'Connor	9	10	11	10	9	7	8	9	9	10— 92
H Simpson	7	11	3	4	5	10	2	4	3	6— 55

NEW ORLEANS, July 30.—To-day was a most pleasant one at Eicke's Shooting Range. The contest was between the Alvins, Capt. James T. O'Pry, on one side, and the Eickes, Capt. J.V. Guillotte, on the other. The distance was at 36yds. at a ⅞in. bullseye, 5 rounds apiece. The following is the score:

Alvin Team.		Eicke Team.	
Capt J O'Pry	61 58 63 64 61—307	E Reinhardt	51 55 59 45 55—265
C Heyle	49 60 61 59 49—277	Ben Mitchel	60 64 55 63 66—308
A Lawson	58 63 67 57 59—307	M Huber	59 62 60 65 61—307
J Jones	46 34 46 60 53—239	J V Guillotte	49 65 64 62 66—306
H Burkhardt	59 55 47 61 59—281	G Heyle	51 52 51 57 56—267
Paul Renaud	60 51 46 62 55—274	H S Kenny	63 62 67 64 64—320
	1682		1773

Scorer, T. Sieward. Judges, H. S. Kenny and Frank Scovell. Referee, J. W. Deyman.

SAN FRANCISCO, July 25.—The National Club held its regular medal and prize shooting to-day, with the following result:

	200yds.	500yds.
Capt J E Klein	4555454445—45	5555435555—47
Ed Hovey	4455555454—46	5354444554—43
P E Robertson	3454345454—44	

First Class.

S J Pembroke	4454543445—42	4344455453—40
A J Ruddock	4343544440—40	4344455453—41
A P Raye	4545454445—44	3323355553—37

Second Class.

N A Dodd	5544345544—43	4524320452—31
J S Dissery	2345434543—37	0253430354—29
H H Palm	4454443444—40	0000032543—17

Third Class.

G H Kennedy	3444434444—38	
C W Petrie	0344435444—36	

WASHINGTON, D. C., July 28.—The annual meet of the Capita Rifle Club took place this morning beyond Anacostia. The feature of the contest was the remarkably skillful shooting of Captain Jacobson in the championship event. Twice he shot ties and in the third attempt he scored 34 out a possible 35:

W C Mattingly	4544445—30	M T Ambrose	4444445—29
A Minnix	3434433—24	R Cavis	3344455—28
E Evans	4444344—27	L Raum	2332333—19
H Cate	3344444—26	E L Smith	3333344—26
C D Merwin	4445545—31	Capt S H Jacobson	4445555—32
H Eccard	3334333—22		

Handicap:

Cate (2)	3444444—29	Evans (2)	4343344—27
Merwin	4444555—31	Mattingly	4445555—32
Raum (4)	3345444—31	Jacobson	4555455—33

Those who had made less than 25 in the first event were given 4 points in the handicap; those who made not less than 25 or over 28 were given 2.

Championship:

Eccard	4344455—29	Ambrose	4555445—32
Mattingly	5544545—32	Jacobson	5544554—32

In the second shoot-off Jacobson won with 34.

HAVERHILL, MASS., RIFLE CLUB, July 31.—Badge match.

W Worthen	6	8	5	10	7	6	6	10	6	10—72
J Busfield	6	7	6	3	8	10	9	10	7	6—72
J F Brown	8	6	8	7	6	6	7	9	5	7—69
S E Johnson	4	8	8	8	6	8	5	5	7	9—68

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

AUGUSTA, Ga., July 27.—Quite a crowd was out to witness the regular weekly practice of the Gun Club to-day and the increased attendance is an evidence of the growing popularity of the club. In a sweepstake contest J. H. Myer and Denning tied. The tie was won by Myer. Jno. M. Weigle made five in four doubles, and six in eight singles. Clay-pigeon shooting is very pretty and interesting sport, and the Gun Club is anxious that the ladies should become interested in their sport and witness their practices.

Team No. 1.

Myer	11100111—6	01 10 11 11—5	
Sancken	01110001—4	11 10 11 11—7

A MUCH NEEDED REFORM.

WHY is it that such tournaments as the late one at Cincinnati are so poorly attended by amateur shooters? It is because they know they have no show against professional shooters like Ben Teipel, Stice and a few such men, who carry off 99 per cent. of the purses and prizes; and who are permitted to enter without any handicap whatsoever. Why should an amateur shoot against a man like Teipel who makes his living now attending such tournaments? It would be more advantageous for the amateur to play at a "square" game of faro. Any amateur who will enter against such men proves himself a "sucker" (to use a vulgarism) of the weakest type. But these amateurs outnumber the professionals 1,000 to 1. Let them rise in their might and insist on barring such pot-shooters, and thus exterminate the vile odor which still attaches to these tournaments, and which alone prevents trap-shooting becoming a most popular outdoor amusement.

We should like to have the opinions of interested parties on this question.—*Forest and Stream, July 29.*

Editor Forest and Stream:

You are correct; there is "a much needed reform in the matter of shooting tournaments." Many sportsmen throughout the country look upon shooting tournaments, where the sole object appears to be gain, in money or prizes, with much regret. The morbid desire in mankind to get something for nothing almost makes man by nature a gambler. It does appear to me, when shooting associations hold meetings or tournaments where the object is gain in money, that moment they cease to be sportsmen and become sporting men. My theory is that all true sportsmen throughout the country should discontinue all hippodrome tournaments that are organized for gain. There has as yet been no system of handicapping devised that would equalize amateurs with professionals, from the very fact that three or four professionals will go "in cahoots" and shoot for all the stakes, that is as soon as one has a sure thing for the first the others will throw off and shoot for the second and third; very much better for an amateur "to play at a square game of faro."

As a rule sportsmen are generous, noble-hearted and liberal, and are often induced to enter in sweepstake matches just to fill up, as well as the opportunity to shoot when they know there is not a ghost of a chance for them to win. It is through just this kind of liberality that hippodrome tournaments are made profitable to professional shooters.

Trap-shooting, to become a popular outdoor amusement for true sportsmen, must be freed of all gambling features. The difference between a sportsman and a sporting man must not be confounded. Social club shooting for club badges is a grand outdoor pastime when no game is in season. Social shoots between neighboring clubs add zest to the sport, but no gambling nor sweepstake shooting should be allowed at regular club meetings.

I have waited a long time to hear from the FOREST AND STREAM on this subject, and now feel like thanking you for starting the subject. A full discussion through your valuable paper will certainly result in much good, and, it is hoped, will accomplish the "much needed reform." REFORMER.

OHIO.

WOONSOCKET, R. I., July 30.—The Rod and Gun Club shoot at Dame's Grove this afternoon had a large attendance. Ransalier Mowry won the club badge by a score of 14 in a possible 20. Following is the score: Ransalier Mowry 13, Louis Ballou 13, Oscar Mowry 13, J. S. Blake 13, Augustus Aldrich 12, B. L. Darling 11, Charles H. Stebbins 8. In the first sweepstake of a possible 7 this was the score: J. S. Blake 4, A. Aldrich 2, O. Mowry 3, L. Ballou 5, R. Mowry 3, M. Griffey 3, M. Cary 3, M. Arnold 5, A. Maine 4. In this shoot Griffey took first money, L. Ballou second and Blake and Maine divided third. Second sweepstake of a possible 5: J. S. Blake 2, A. Aldrich 2, O. Mowry 2, L. Ballou 3, R. Mowry 5, Griffey 3, Cary 3, M. Arnold 3, A. Maine 5, B. L. Darling 4. In this shoot A. Maine and R. Mowry divided first money, B. L. Darling took second in a shoot off, Ballow third and Blake fourth. Third sweepstake of a possible 5: Carey 4, Griffey 4, Arnold 3, Ballou 4, Mowry 4, Aldrich 4, Darling 3. In the shoot off of ties, Ballou won first money and Darling second.

SAN FRANCISCO, July 25.—The Occident Club held its fifth shoot of the season at Blanken's Six-Mile House to-day. Match at live birds, plunge traps:

Garmes	101010—3	Schultz	111101—5
Blanken	111111—6	E Dunshee	111111—6
Meagher	100110—3	O'Brien	111011—5
Williams	111111—6	Cronin	101011—4
Rojas	111101—5	Perata	000101—2

Double-bird match:

Williams	00 11 11—4	Perata	01 11 11—5
Blanken	11 11 11—6	Dunshee	11 11 11—6
Garmes	10 10 11—4	Rojas	01 10 10—3
Schultz	01 10 11—4		

Sweepstakes at 6 single birds. Five men tied for first and second moneys, and as birds were scarce, decided to shoot it [illegible] in a freeze-out at 35yds. Two men dropped out at this long r[illegible]s, and left Blanken, Williams and Dunshee to divide the spoil:

Blanken	011110—4	E Dunshee	011101—4
Williams	111001—4	Rojas	001110—3
Perata	100111—4	Garmes	111001—4
Schultz	011010—3		

A fierce westerly gale blew the whole afternoon, making the shooting extremely difficult. E. Dunshee was the medal winner, with only 10. 15 clay-pigeons, 18yds. rise:

E. Dunshee	011011110101111—10	Cronin	111110010011001—9
Williams	001001001010111— 7	O'Brien	101110000010010— 6
Blanken	000011111101100— 5	W Dunshee	110001101100001— 7
Rojas	111010011100000— 7	Garmes	111101111010100— 9
Smith	111011001101011— 9	Perata	110001000000011— 5
Schultz	000011001110100— 6		

ST. LOUIS, July 29.—The following are the scores of Excelsior Gun Club, held at Rinkelville. First shoot—5 Peoria blackbirds, 21yds. rise:

Rinkel	00111—3	Henry	10100—2
Fink, Jr	01011—3	Rathburn	10010—2
Petcker	00110—2	Jones	10000—1
L Rinkel	00110—2	Krieger	10010—2

Rinkel and Fink divided first, Petcker second, Jones third.

Second shoot—5 clays, 18yds.:

Bradford	11111—5	G Rinkel	01000—1
Petcker	10011—3	Rathburn	10000—1
L Rinkel	11000—2	Henry	00010—1
Krieger	01000—1	D Jones	00000—0
Fink, Jr	00010—1		

Third shoot—5 Peoria blackbirds, 21yds.:

G Rinkel	01110—3	Bradford	01100—2
Fink, Jr	11000—2	Krieger	01000—1
Petcker	00110—2	D Jones	00001—1
Rathburn	10000—1		

Fourth shoot—Same terms:

Bradford	11101—4	Krieger	00010—1
Biermann	00111—3	Fick, Jr	00001—1
Henry	01011—3	G Rinkel	00010—1
Petcker	10010—2	D Jones	00000—0

Fifth shoot—5 clay-birds, 18yds.:

Bradford	10111—4	Krieger	10000—1
G Rinkel	00110—2	D Jones	00010—1
Henry	00011—2	Bierman	00000—0
Petcker	00010—1		

Sixth shoot—5 Peoria blackbirds, 21yds.:

Fink, Jr	01110—3	Krieger	00101—2
Biermann	00111—3	G Rinkel	01010—2
Petcker	10110—3	Henry	10000—1
Bradford	01001—2	D Jones	00000—0

Seventh shoot—5 live pigeons, 26yds.:

G Rinkel	11111—5	Bradford	10101—3
Petcker	10111—4	D Jones	00100—1
Krieger	10011—3		

Eighth shoot—5 Peoria blackbirds, 21yds: Bradford 5, Petcker 3, G. Rinkel 2, Fink, Jr., 2, D. Jones 0.

"HIGH" SPORT.—An egg shoot was recently held at Elizabeth by a number of gunners, and a case of doubtful eggs were thrown singly from a glass ball trap. The effluvia did not prevent the enjoyment of the sport at 15yds.

WASHINGTON, D. C., Aug. 2.—Two matches at live pigeons were shot at Melvale, near Baltimore, July 29; the first between Edward L. Mills, president of the Capital City Gun Club, Washington, D. C., and Henry Engle, of Baltimore, at 50 birds each, 26yds. rise, for $100 a side, loser to pay for all the birds, and the second between Fred Kell, of Baltimore, and Lem. Mayhew, of Washington, at 25 birds each, 26yds. rise, for $50 a side. Much interest was manifested in the match between Mills and Engle, the former having defeated the latter by one bird in a 25-bird race for $50, July 5, on the same grounds. Mr. Mills had the option of shooting at 24yds. if he shot with a 12-gauge gun under 8lb, which condition he accepted, and shot a 12-gauge hammerless, weighing 7¾lb, loaded with 4dr. Orange ducking powder No. 2 and 1¼oz. (struck measure), No. 8 Sparks' chilled shot, while his opponent used a 10-gauge, 9½lb W. W. Greener, loaded with 5dr. powder and 1¼oz. (dipped measure) No. 7 shot. Following are the scores:

Mills	1001110001111111011111111110011111111110111011111—40
Engle	0111111111001111011010101010001111010111111111—36
Kell	1101111101111011111011111—21
Mayhew	1111001001011111111101111—19

TWELVE-BORE.

JERSEY CITY GUN CLUB.—The fourth shoot for the cup took place on the club grounds at Marion, Jersey City, July 29, and a good time was had by all. The birds were fair, the weather ditto; both barrels, second barrel to count ½ bird (each member handicapped), 7 birds each. Official score:

Stevens, 28yds.	1 1 1 1 1 1—7	Levering, 23yds.	1½ 1½ 1 1 0—5
Siegler, 28yds.	1 1 1 1 1 1—7	Bird, 25yds.	0½ 0 0 1 1 0—2½
Heritage, 26yds.	0 0 0 1½ 1 1—3½	Quinlan, 27yds.	1 0 1 1 1 1 1—6
Hughes, 27yds.	0 1 0 1½ 1 1—4½	Burdett, 25yds.	0 0 1 1 0 1 1—4
Morris, 23yds.	0 1½ 1 0 1 1—4½	Fisher, 22yds.	0 0 1½ 0 1 0—2½

At the toss up Siegler won the cup and has to take the handicap of 2yds. at next shoot. Money to be divided between him and Stevens. Quinlan second money. A number of sweepstakes were had before and after the cup struggle, in which Wm. Taylor (of ancient fame as a pigeon shooter), W. Siegler, Quinlan and Mitchell took first honors, with Burdett, Hughes and Levering not far behind on the 12th inst. there will be another shoot on the club grounds by members of the club for the purpose of rating members for the team shoot of 20 men each club at the return match with the Middlesex Gun Club. The first match it will be remembered was won by the J. C. H. on the home grounds; the second at Dunnellen resulted in a tie. The third match will take place at Marion some time after the 15th of August, when a close contest is expected. Clay-pigeon and bat shooting on club grounds, Saturday, Aug. 7, 2 P. M. All shooters cordially invited.—JACOBSTAFF.

BOSTON, July 28.—While the attendance at the regular trap shoot to-day at Walnut Hill was not large, the interest did not lag and some fine records were made. The score: 1. Six clay birds, 3 traps—Nichols first, Stanton second. 2. Six clay-pigeons—Stanton first, Nichols second. 3. Ten clay-pigeons, 3 traps—Stanton first, Nichols second. 4. Six clay-pigeons—Adams first, Lawson and Stanton second, Swift third. 5. Six clay birds—Adams and Nichols first, Snow second, Lawson third. 6. Six bats, straightaway—Short first, Stanton second, Nichols third. 7. Seven clay-pigeons (diamond match)—Lawson and Swift first, Stanton and Snow second, Adams third. 8. Three pair bats, double (diamond match—Swift first, Lawson second, Snow third. 9. Six clay-pigeons—Snow first, Lawson second, Short third. 10. Novelty match, 6 birds—Snow first, Lawson second, Williams third. 11. Six clay-pigeons—Snow, Stanton and Lawson first, Swift second, Williams third. 12. Seven straightaway bats—Adams and Swift first, Snow and Nichols second, Stanton third. 13. Ten clay-pigeons, 3 traps—Snow and Lawson first, Adams and Stanton second, Swift and Nichols third. 14. Six bats, 3 traps—Nichols first, Stanton and Lawson second, Adams third. 15. Novelty match, 6 birds—Stanton first, Law and Adams second, Nichols and Williams third. 16. Six birds—Lawson and Stanton first, Swift and Adams second, Snow third. 17. Five clay-pigeons, straightaway 30yds.—Swift first, Snow and Stanton second, Williams third. 18. Miss and out match—Stanton and Nichols divided.

Diamond Match.

Swift	1111111—7	11 10 11—5—12
Lawson	1111111—7	11 10 10—4—11
Snow	1011111—6	10 00 11—3— 9
Nichols	0101111—5	00 11 01—3— 8
Stanton	1011111—6	00 10 10—2— 8

Visitors' Match.

Friend	0110010—3	00 10 00—1— 4

BOSTON, July 30.—There was a lively meet on the grounds of the East Boston Gun Club to-day of shotgun men. The interest centered on the match between the teams representing the Boston Gun Club and the East Boston Gun Club. Both sides did some excellent work, the Boston guns winning by a score of 104 to their opponents' 85.

Boston Gun Club.	Clay pigeons.	Blackbirds.	Macombers.
D Dirkwood	0101110111	1111010111	11111—19
B A Ward	0000110001	0111110101	01110—13
Dr Baker	0101010010	1001110011	11111—16
G Cutting	1011100111	0100001011	00011—13
B F Johnson	1111001110	1011111111	01111—20
S C Fields	1111111111	1101101111	11111—23—104
East Boston Gun Club.			
C R Dimock	0111101011	0101000011	01101—14
George Hargrave	1111010111	1010001111	11111—19
E Flanigan	1011011110	1101011111	10001—17
R Marliare	0111011001	1030001001	01100—11

Ties of 13, 3 at 21yds., Cary 2, Bushnell 2; at 22yds., Cary 1, Bushnell 0.

GRAHAM VS. MITCHELL.—July 30 was an exceptionally hot day, but the marksmen were out in force at Erb's grounds, Newark, to see William Graham, the well known English shot, and William Tell Mitchell, of High Point, N. C., shoot a match for $500 a side. The conditions were fifty birds each, Hurlingham rules, 30yds. rise, five traps, two barrels. Both used 12-gauge guns. Mr. Charles Heath, of Newark, acted as judge for Mitchell, Mr. Schurer for Graham, and Mr. J. Pentz, of Brooklyn, was referee. The birds were an exceptionally good lot, considering the intense heat. They were trapped out of the same baskets for both shooters. The birds were retrieved by Mr. Erb's Irish setter. Before the start and throughout the contest auction pools were sold on the event. The first pool was $45 to $30 dollars on Graham, and a number more were sold before the men scored at about 3 to 2, the odds being in favor of Graham. Mitchell won the toss and went first to the traps. He shot in a broad brimmed straw hat and without his coat. He is over the medium height, has a smooth face and a very determined look about him. He seems in excellent condition, while Graham who is short and stout and weighs 200lbs., has not yet become acclimated to our Yankee summers. He suffered dreadfully from the heat and said he was quite dizzy at times. He shot with his left hand grasping the front part of the trigger guard. Mitchell had, some thought, the most difficult birds to shoot at, many of them being low drivers, while Graham from time to time was favored with incomers and right quarterers. Summarizing the shoot Mitchell used his second barrel nineteen times and Graham seventeen times. Only one bird was challenged, and that was Mitchell's fourty-seventh, which fell just inside the 80yds. boundary. The score is as follows (2 signifies bird killed when two barrels were used):

W Graham..21112 10011 01211 20212 21111 12102 11221 11221 12122 11112—45
W Mitchell..21001 11011 12122 22212 11122 21110 21112 21220 12111 12210—44

Both men shot Schultz's English sporting powder in the first barrel, and there was but little smoke in the way of the second shot, while birds that were hit with the first barrel dropped within a few feet of the trap. There was a number of preliminary sweepstakes, in which some excellent shooting was done by Messrs. Canon, Castles, Duston, Sigler, Miller, Heath and others. In these sweepstakes Graham won first money twice in succession, shooting one barrel and killing ten birds straight in each at 27yds. He was tied by Canon in the first sweep and shot him out on two birds.

CINCINNATI, July 30.—Though the weather was threatening, fully 500 enthusiasts assembled on the old Avenue Ball Park this afternoon to witness the fifth shoot for the Bandle team trophy, open to all gun club teams of five in Hamilton county. The shooting, considering an exceptionally poor sky the shooters had to contend against, was good, especially that of the Price Hill Gun Club during the wind up of the race, where they broke 23 out of their last 25 birds. A slight rain began falling at the opening of the shoot, but not to an extent to interfere with the shooting. The crowd present were good natured, and the judging and refereeing of Messrs. A. B. Whitlock, E. Robinson and J. Ranger perfectly satisfactory. Following are the official scores; 20 single American clay-birds, 5 traps, 18yds., National rules:

Price Hill Club.		Miamitown (O.) Club.

WASHINGTON HEIGHT GUN CLUB.—This club is in a most prosperous condition, having a rapidly increasing membership which is not confined to the Heights exclusively, as several members live in the city, and find it to their advantage to belong to the W. H. G. C. We have just discarded the ancient glass ball, and are using as our targets the Ligowsky pigeon, the Blue Rock pigeon, and the Bat. Our grounds are most pleasantly located at 169th street and 12th ave., and are easily reached in a short time over the 6th ave. Elevated Railroad, and cable road from 125th street. It is a very enjoyable cool ride on a warm day from the City Hall to our ground. Among our members are several noted shots, and others who aspire to become crack shots, and may if they live long enough. To all lovers of the shotgun, not already members of other gun clubs, we extend an invitation to attend our regular monthly shoots held the first Saturday afternoon of each month. If you come once, you will again come; and be convinced that you cannot live happily until you are enrolled as a full fledged member of the W. H. G. C.—GROWLER (New York).

TRENTON, N. J., July 22.—Match at 25 clay-pigeons, 18yds., 5 traps, 5 yds. apart. Event drew out a large number of spectators. Fox used a Greener hammer gun 10-gauge, 8¾lbs. Loveless a Clabrough hammerless 9¼lbs. Allen a Lefever hammerless 8¾lbs. Leigh a Clabrough hammerless 9¼lbs.:

M Fox	1010011110101101101111110—17
H Loveless	1101000011111011011000100—13—30

Newquist	9	5	14
Butler	9	3	12
J N. Castle	10	6	16
Bronson	4	5	9

JERSEY SHOOTERS.—The Nimrod Club recently defeated the East Orange Gun Club in a glass ball shoot, in which 9 men on each side shot at 10 balls each. The Nimrods won by 7 balls. It was the first of a series of matches for which arrangements have been made. Thomas Dukes was captain of the East Orange team and W. L. Beatty was captain of the Nimrods. A bat match will be shot between the two clubs this month. The Phœnix Sporting Club was recently organized at No. 20 Houston street, Newark, with the following officers: Robert Krause, Chairman; Charles Faber, Secretary, and Henry Reinhardt, Treasurer.

OTTAWA, July 26.—For the seventh time Mr. W. L. Cameron, of this city, has won the Ligowsky clay-pigeon championship badge, defeating on Saturday Mr. S. Glover, of Carleton Place, the then holder, by a score of 23 points against 17, at 15 singles and 5 doubles.

CALIFORNIA FORESTS.—The importance of forest preservation to California cannot be over-estimated. The prosperity, even the habitability of the great interior valleys of the State, is involved in the perpetuation of forest growth upon the slopes of the Sierra Nevada. Bare those mountains, and tremendous freshets would pour into the valleys during winter and spring, while in summer the rivers would turn to beds of sand, and not a drop of water could be had for irrigation. Europe and Asia have great areas made desolate and uninhabitable through the effects of forest destruction. This matter must not be left to the lumbermen for settlement. Their industry is an important one, but where their interest clashes with the general welfare, the latter must govern. It is the farmers and fruit-growers, not the sawmill owners, who have the most vital interest in forest preservation. It is in fact, the State against the lumbermen. We do not advocate any interference with the operations of the lumbermen on their own ground, but the time has come to call a halt in the business of wiping out the forests upon whose permanence the future prosperity of the State depends. —*Sacramento Bee.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

7. Brooklyn, Paddling.
13–27—A.C.A. Meet, Grindstone.
21. Lake St. Louis, Annual, Lachine.

SEPTEMBER.

4. Brooklyn, Paddling.
4. New York, International.
11. New York, Sailing Trophy.
18. Brooklyn, Sailing Races.
25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

OCTOBER.

2. New York, Fall Regatta.

THE BUSINESS OF THE MEET.

THERE is always so much to be done at the annual meets in the way of pleasure that the essential business of the Association is apt to be hurried, and even neglected by many who should take an active interest in it. The business meeting on the last day is a most important one; officers for the year have to be elected, the question of a future meet should be discussed, and many other points come up for discussion. It generally happens that a number are in a hurry to leave at once on the conclusion of the races, and that others are loth to give time to the meeting, so that it is hurried through as much as possible. Every club and every member of the A. C. A. is directly interested in the work and legislation of the Association, and while thus far an effort has been made each year to make the nominating committee as thoroughly representative as possible; to distribute the offices geographically, and also to give full attention to the wishes of all sections, it has partly failed through the neglect of members to attend and take part. The action of the Executive Committee has at times met the disapproval of some, when, had their wishes been expressed, they would have been attended to. This year the question of the next meeting place promises to be a most important one, as on it hinges the growth and extension of the A. C. A. It has been felt thus far that the meet must be kept within easy distance of our large Canadian contingent, and this has operated to keep it near the St. Lawrence. The bulk of the American attendance has been from the Hudson River, and while it was a long journey to Clayton it was as fair an average location as could be had.

Of late, however, canoeing has rapidly increased in the Eastern States, and there are a large number who wish to attend the meet and who will join our correspondent in another column, who speaks for a salt-water meet next year. While this would suit a very large number of canoeists, it would be very far for the Canadians to come from Ontario to Long Island Sound, but no doubt many would be glad of the opportunity to see New York and the Atlantic. What they themselves wish remains for them to make known for the guidance of those who have the responsibility of a selection. Other suggestions no doubt will be made and there are many places where a camp could be held. Now it rests with each member, whether present or not, to indicate his choice of a location, and if possible he should attend the meeting and take his part in the business there transacted. The question of offices is also a very important one and it is time now to consider who are most desirable and who will do the most in the promotion of canoeing in their localities. Our columns are always open for the discussion of Association matters and we should be glad to hear from all A. C. A. men in regard to place of meeting and other interests of the Association.

THE SEASON'S VERDICT ON MODELS.

WE look to this season to teach more about models than any previous one, as the various types will meet in some important contests, while men are much more alive to the importance of a proper model and dimensions than they formerly were. No one is better fitted to speak on this subject than Mr. Baden-Powell, to whom canoeists are really indebted for the first sailing canoe, and we reprint the following from his pen from the *Field* of July 17, as it contains many important hints. Our cruising class has been greatly improved in the point he mentions, the depth of 9in. in the Shadow being increased to 11 in later models, and these boats seem to answer very well for the use they are put to. Mr. Powell's suggestions as to depth and fuller lines have been to a great extent carried out in our later boats, while circumstances have concurred, without any definite legislation, to limit sail area:

"One of the old public schools had for its motto 'Teach, learn or depart,' and I think this may be aptly applied to canoe models, for unless a particular model has good points to throw off to the benefit of other models it teaches nothing; so also a model having no good points of its own, and which merely exists from year's end to year's end without moving ahead with improvements, may be said to learn nothing. Then why should such nonenties be encouraged?

"I submit that the season's racing in the Royal C. C. has distinctly proved two things. First, that the heavily built, heavily ballasted, heavily plated canoe of the largest dimension, both in hull and sails, is no match in any weather, blow high, blow low, with the canoe of moderate proportions in the constructive elements named; and secondly, that the small type of canoe called, and I think misnamed, the 'cruising' canoe, has not in any way approached the form she should be in, considering the enlightenments of the age of 1886.

"I need scarcely dwell upon the fact that the heavily ballasted boat of deep midship, high side, and cumbersome fitting, is not the craft in which to enjoy an ordinary canoe cruise; and so far has not even proved the craft in which to win a sailing match (notwithstanding theory and practice in yacht racing point in the opposite direction). Suffice it to say that each new canoe built within the past two years, chiefly for the purpose of sailing matches, has been built of smaller dimensions and fitted with less ballast, lighter centerplate, and smaller sails, and has been successful as a sailing racer.

"On the other hand, the so-called cruising canoe has gained in popularity, that is, in numbers called into existence; but this must not be taken as a result of inherent merit of that particular kind of canoe, but rather to the fact that this class of canoe has been largely placed before the public eye at the numerous exhibitions which have been held during the last eighteen months. Specimens of this canoe, perfect in every department of workmanship, have been exhibited by the R. C. C. builder, Mr. Turk, and have met with well-deserved success at the hands of the judges, and in the market.

"But on the racecourse and in cruising, though a general advance on the old-time hog-back craft fitted with Lilliputian sails and Brobdignagian flags, this canoe has simply shown itself capable of vast improvement; and the move now should be to improve it. No doubt the owners of this style of craft will bring forward what may be good in it; but in criticising it I shall confine myself to its faulty side, and endeavor to point out where it may receive improvement.

"In the first place, take model; the leading dimensions, except depth, are only slightly under those of Pearl and Nautilus, the boats which have beaten the 'heavier.' A few of the measurements I have received are: Length, 14ft. 6in. to 15ft. (same as Pearl and Nautilus); beam, 28in., 30in., 31in. (Pearl is 32½in., Nautilus, 31¼in.). But in depth there is considerable difference—taking depth of hull at side at midships as really the governing depth—we have the average cruiser at 10in. or 10½in. garboard to gunwale or deck edge, whereas Nautilus is 12in. and Pearl about 13½in. or 14in.

"Now this is the one point in which the cruiser is deficient from a sailing, camping and sea-going point of view; and as to its being in favor of paddling, I can only say I find little or no difference in paddling a cruiser and the Nautilus, when both are laden and fitted for cruising. The improvement I suggest is that the depth be increased to 12in. for any work, except perhaps for mere river drifting.

"Next, come and look at the form of hull. There you are, a short pod of a body with two long-pointed ends; no stowage, no stability, and a wet ship in the least touch of rough water. Lengthen that same middle body out toward the ends, especially aft. Cut off about half that deadwood in stem and sternposts, rocker the keel up at both ends and give her a reasonable sheer forward. Now see what a different ship you have—buoyant, dry, stiff and roomy; no heavier than the other, you have cut off pounds weight of keel and deadwood.

"Now, to make her sail give her a good-sized rudder, a drop rudder for a choice; next, if you want full stowage or 'tandem' fittings, give her a full-sized centerboard of folding pattern, which stows under or level with the floor boards. But for real hard work and good sailing give a boiler-plate (galvanized) weighing at least 30lb., if for use on lakes or large rivers, and let it be of quite 2 square feet area. Give her two water tanks, fitting one each side of the C. B. case (Nautilus's hold 30lbs., of water in each); and, unless the deck steering position is to be taken, give her two 25lb. shot bags for shifting to windward. The after end of the plate should be about at midlength. Place the mainmast so that the tack of the sail comes plumb with the stem head of the mizzen, so as to bring the center of effort at least 1ft. forward of the center of lateral resistance. Mainsail area, 70ft.; mizzen, 15ft. Such a canoe will walk to windward and tack so long as there is any wind; she will stand a lot of sea, and carry a heap of camping outfit; she will be found roomy enough to sleep in ashore or afloat; (and safely afloat, provided it be in sheltered water and her tent of a low nature), and she will not be larger nor heavier than one man can easily manage, either afloat or on shore (unpacked).

"No time allowance or handicap can fairly bring the two classes together as they exist. A handicap is simply a speculative gift, intended to amount to a certainty, to an inefficient performer, at the expense of real merit. Nobody, not even the winner, is satisfied: it improves nothing; in fact, nine out of ten times the laurel goes to the worst boat and greatest duffer.

"The R. C. C. match of July 10 gave a day of light, fluky wind, and just the day for a small craft to steal away from a larger craft but the result showed that even had the time allowance (which was obtained by girth measurement of T. V. S. Club rule) been doubled or trebled, the 'cruisers' would not have been in it with the larger boats. Sail area, could it have been correctly, or fairly, allowanced for, would have told a different tale; but still 'the cruisers' were so badly out of it as regards finishing time, that difference of sail area cannot alone account for it.

"Whatever line we look to for improving the cruisers upward and the larger craft downward, in my opinion we cannot look to a better line than the limitation of sail area; that, in conjuction with the existing hull limits and divided into two classes, racing and cruising, as regards sail area, would undoubtedly patronize a moderate and therefore popular, class of craft.

W. BADEN-POWELL."

A SALT WATER MEET.

Editor Forest and Stream:

The "vague feeling of doubt that this year may prove the last general meet of the A. C. A," as stated by Mr. Reade W. Bailey in your last issue, will, I fear, prove a reality unless the A. C. A. adopt a new policy. The very nature of our sport is roving from place to place and seeing new waters. In my opinion the meet should never be held twice in the same waters, and I think I express the ideas of many of our brotherhood when I say that it was trebly a mistake calling it for '86 at Grindstone Island. The last meet of the A. C. A. I attended was in '84, and the argument for a meet at Grindstone in '85 was, first, the beautiful location and fine water for cruising and racing; second, it would cost the Association much less if we met there, as the grounds were all prepared for our meets; but the attendance at the meet of '85 proves to my mind that canoeists must have a change of base. Then, again, the canoeists of New York, Connecticut and Massachusetts, and all New England ask, Why do we always go north? For six years we have bidden the A. C. A. meet up on small lakes and rivers. Now there are strong clubs all along our coast line that have only sent a man or two to the meet in the past, but would rally strongly to the cry of a "Salt-Water Meet." The New England canoeists would never have thought of division under that name had the meet at intervals tended to the south. But our "Mecca" and the "Mecca" alluded to in the commodore's letter are still the same, but it seems too far off for many of our canoeists. Would not the West rally also to a salt-water meet? It seems to me it would be a decided change from their home canoeing.

Let me conclude by saying that the New England clubs are only anxious by their union to prove themselves a strong branch of the A. C. A. and work for its best interest, and that of canoeists in general. Such were the sentiments expressed at Calla Shasta meet. I for one will be ever ready to work for an increase of membership in the A. C. A. I was one of the thirty that gathered on a stormy night toward the close of a damp and rainy meet in 1880, at a boat house on the Crosbyside of Lake George, and gave to ourselves a name, elected a commodore, called to our association the canoeists all over the United States and Canada, little dreaming that it would prove the glorious A. C. A. of to-day. L. Q. JONES,

Commodore H. C. C.

A TRIP ON THE NEPONSET.

FOR two weeks preceding the 30th of May all was bustle and preparation at the headquarters of the South Boston C. C.

The light canoes which some of the members of the club had built this spring for river cruising, were just receiving the finishing touches and the tents were being fitted to them, the canoes being intended to be slept in. While the owners of these craft were busy fitting them out, the others were hurrying about with thoughtful looks, overhauling frying-pans, coffee-pots, blankets, grub, etc., appearing as busy as though preparing for a cruise of several months instead of a two days' trip. At last, by Saturday night all was ready, the fleet comprising six canoes, with seven paddlers. It was intended to start at 7:30 P. M. and camp for the night at Milton, only a three hours' paddle, but the fleet did not get ready till 9 o'clock, when we at last pushed off, followed by sundry consolatory remarks from some local yachtsmen, provoked by our avowed intention of crossing the harbor and reaching Milton that night, blow or no blow. "Pay me that quarter now, won't you, before you go." "What do you want put in the obituary notice, Commodore, eh?" and so on.

Once off, we settled down to a hard paddle against a strong head wind and opposing tide, reaching the town of Neponset at midnight. While passing under the bridge, we were hailed by some one who wanted to know if we had a bet, and on receiving a negative answer, assured us we would have to turn back, though he did not give his reasons for thinking so. Two hours later five of the canoes reached Milton at low tide, and five tired and fagged out individuals landed and set about pitching the tents at once, it being then about 2:30 A. M. After the tents were up, some anxiety was manifested about the canoe which had not yet arrived, as she carried the grub, and we were half starved after paddling most all night; but as she did not appear we had to make the best of it, so all hands turned in. After a sound night's sleep (*i. e.*, two hours entertaining the mosquitoes) we were up just as the sun appeared above the horizon.

One of the squadron was detailed to go in search of the absent boat, and while waiting for it to show up, the rest built a good fire. In about five minutes the two boats appeared around a bend of the river, and inquiry elicited the following facts: Near the mouth of the river the crew had paddled ahead, indeed so much as to make a short cut, and in the darkness had gone up a creek, mistaking it for the main stream, and lost fifteen minutes trying to find their way out, so by the time they were fairly started right again the rest of the squadron were a good distance ahead.

Paddling hard to make up for lost time, they got into shoal water, and suddenly found themselves stuck hard and fast in the mud. There was no help for it but to wait for the tide to release them from their uncomfortable situation, which it did in about two hours.

After a hearty breakfast the tents were struck, and carrying the canoes around the falls at Milton, "agony carry," as one of the members dubbed it on account of its extreme length, we started on the paddle up stream, reaching Hyde Park about noon, after making four more carries.

A little beyond Hyde Park a stop was made for dinner, said dinner being cooked by the commodore, and consisting of dried beef, flapjacks, canned salmon, potatoes and coffee, topped off with pineapple, bananas, oranges and limejuice. It is needless to say that full justice was done it by the seven hungry fellows who constituted the party.

The dinner, combined with the heat of the day, made us all so lazy that it was well on in the afternoon before we thought of looking for a suitable place to camp, which was finally found a short distance up the river, a pretty wooded bank being selected for the purpose. After supper all turned in early, to be awakened next morning about 4 o'clock by a thunderstorm, accompanied by a heavy rain. The commodore and secretary donned their oilskins, and stood grinning sarcastically at the others, who had neglected to bring any, saying they would risk its raining, and who now huddled together under the large tent, trying to keep dry.

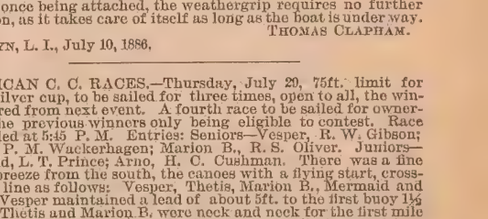
By 8 o'clock the storm had passed over and shortly after the squadron was underway, homeward bound.

The run down to Hyde Park was soon made, and as it was intended to leave the canoes at Matapan, a small town on the river between Milton and Hyde Park. There was no particular hurry, so it was proposed to explore Mother Brook, a small stream which connects the Neponset and Charles. Though it is but a few miles long the scenery in some parts is of rare beauty, surpassing even the Neponset in that respect.

East Deadham, which is on this stream, was reached a little before noon, and dinner was cooked.

One of the club, who is noted for his easy assurance (he is a dry-goods clerk) was sent after some eggs and milk, which he obtained at a farmhouse near by. While measuring the milk the farmer casually inquired where he might be laboring, and on ascertaining that he was with a party on a holiday trip, asked where he came from, what he worked at, what store he worked in and finished up by remarking impressively: "This is pure milk, sir, no whitenin or adulteration in this milk; I make my my own milk."

The dinner over, the canoes were packed and we paddled leisurely down stream, reaching Matapan at 5 P. M., where the canoes were stowed away in a barn until the following week, and the club took the cars for South Boston, all agreeing that it had been one of the most enjoyable trips they had ever made.



JAMES CRADDOCK, Sec'y South Boston C. C.

THE "ROSLYN WEATHERGRIP."

Editor Forest and Stream:

I send a sketch of a new weather grip, or substitute for the centerboard in canoes and other small sailing craft. I have recently obtained a patent for the invention, and think perhaps your canoeist readers may be interested by a brief description of it.

The purpose of the weathergrip is to do away with the necessity for centerboards, keels and centerboard trunks, and at the same time to provide a perfect substitute, equal to a centerboard in many respects, and superior to it in some others. The weathergrip is simply a board, made of hard wood or metal, which floats edgewise in the water at a distance of about 30in. from the boat's side. It can be used equally well either on the weather or lee beam, or, if preferred, two smaller ones may be applied, one on either side. It is kept in position exactly parallel to the boat's center line by a swinging arm of metal, which arm is branched or divided outside, and the two ends, being bent downward, are inserted in suitable sockets or tubes in the upper edge of the board. The inboard end of this arm is hinged, or jointed, to an eye on the deck, to the coaming, or even attached to the ordinary metal rowlock. On the inclosed diagram the letter A shows the position of the metal arm

where hinged to the boat, B is the upper edge of the board, and C shows the board as it floats, partly submerged in the water. It will be seen at once that with the above described arrangement the board must always retain a plumb position, and also the same depth below water, no matter how much the boat may be heeling, as the jointed arrangement at A renders its vertical movement entirely independent of that of the boat's hull, while the guys, attached fore and aft to cleats, keep it always parallel to the center line, while at the same time it can freely rise and fall, and also pitch automatically to the wave motion.

The advantages of the weathergrip are: First—One-half the cost of any other good collapsable board.

Second—No opening of any kind is made in the boat's hull, and the whole arrangement can be applied in fifteen minutes, with a screw driver, to any small boat or canoe.

Third—It can be attached or detached in half a minute, taken apart and stowed under deck like a paddle, or left ashore, if desired.

Fourth—As the board acts close to the surface, any boat can sail to windward with the weathergrip in full action in less depth of water than is the case with any other device in use.

By having two or more places for connecting the arm A to the boat, the position of the board can be shifted forward or aft, thus regulating exactly the balance of steering, whether the entire sail be carried or reefed canvas.

After once being attached, the weathergrip requires no further attention, as it takes care of itself as long as the boat is under way.

THOMAS CLAPHAM.

ROSLYN, L. I., July 10, 1886.

MOHICAN C. C. RACES.—Thursday, July 29, 75ft. limit for Oliver silver cup, to be sailed for three times, open to all, the winner barred from next event. A fourth race to be sailed for ownerships, the previous winners only being eligible to contest. Race was called at 5:45 P. M. Entries: Seniors—Vesper, R. W. Gibson; Thetis, P. M. Wackerhagen; Marion B., R. S. Oliver. Juniors—Mermaid, L. T. Prince; Arno, H. C. Cushman. There was a fine strong breeze from the south, the canoes with a flying start, crossing the line as follows: Vesper, Thetis, Marion B., Mermaid and Arno. Vesper maintained a lead of about 5ft. to the first buoy 1½ miles, Thetis and Marion B. were neck and neck for the first mile when the Thetis drew ahead and the buoy was jibed around in a heavy squall, Vesper, Thetis, Marion B., Mermaid and Arno. The boat home did not change the positions, but greatly widened the gaps, Vesper, as usual sailing closer than Thetis and Thetis closer than Marion B. The finish was made in order named: Vesper 34m., Thetis 36m., Marion B. 40m., Mermaid 50m., Arno 60m. The Vesper has changed position of mainmast and sails faster than ever. The Marion B. has abandoned two boards for one Atwood and handles infinitely better in consequence, but her crew does not seem able to sail her any faster. Mermaid captured the junior pennant from Arno who had won it twice. Vesper is barred from next contest and holds the cup for a month, the name being inscribed theron. There will be a large gang of turtles at the meet, but they will mostly arrive about August 21, as one week is all that can be spared —MARION B.

THE WESTERN CANOE ASSOCIATION MEET.—The second annual meet of the Western Canoe Association was held this year at Ballast Island, in Lake Erie, the site of last year's camp, about 100 canoeists and 40 canoes being present, besides a large number of visitors. Sailing and paddling races were held, the results of which have not yet been made public by the Regatta Committee. The most important race was for the Gardner challenge cup, six miles, sailing, won by C. J. Bonsfield, of Bay City, Mich., with Harry Gardner second. It is a handsome silver goblet, with a cupid paddling a canoe at the base. The camp lasted from July 8 to 24, the time being filled up by races, camping parties on the island, cruises, and entertainments in the evenings. On July 16 the annual meeting was held and officers for 1886-7 elected, as follows: Commodore, Geo. B. Ellard, Cincinnati, O.; Vice-Commodore, A. W. Kitchin, Chicago, Ill.; Rear-Commodore, Thos. P. Paddie; Secretary and Treasurer, J. O. Shiras, Cincinnati, O.; Executive Committee—Geo. A. Warden, O. H. Root, C. R. Melville. The name of the association was changed to Western Canoe Association, and the membership was limited to 200. Mr. Harry Gardner presented from his father a silver challenge cup to be raced for at each meet. A fuller report will be given next week.

A. C. A. PRIZE FLAGS.—Oswego, N. Y., July 28.—*Editor Forest and Stream:* In addition to names already published as having promised prize flags for the A. C. A. regatta, I have to report the following: Mr. W. B. Davidson, Hartford; Mr. R. J. Wilkin, Brooklyn; Miss F. M. Seavey, Mr. L. W. Seavey, New York; Ex-Rear Com. Andrews, Mr. C. F. Walters, Mr. Seward, Mr. C. H. Moody, Rochester; Mr. Geo. W. Ruggles, Charlotte; Mr. Edwin L. French, Buffalo; Mr. Fernow, Albany; Mrs. Drummond, Perth; Mr. Wicksteed, Ottawa; Mrs. S. G. Fairtough, Miss McPherson, Kingston. Mr. Wicksteed also promises two silk A. C. A. flags. Mr. Seavey's flag is to be known as the first American Canoe Exposition flag.—J. B. MCMURRICH, Chairman Regatta Committee.

NEW BEDFORD C. C.—This club was organized on May 12 with Asa T. Thompson, captain; George Rugg, secretary and treasurer; John S. Wright, Jesse Allen and Charles H. Gifford. The headquarters is at Smith's boat shop on Fish Island. Seven canoes line the floor, among them an Everson and a Rushton's Mohican. The club burgee will probably contain the figure of a sperm whale rampant. Buzzard's Bay offers many attractions for deep water sailing and we hope ere long to receive visits from our brethren of the paddle. We shall be glad to extend the hospitalities of the house to any cruiser and will give him an opportunity to defeat us in a race.—R.

ROCHESTER C. C. RACES.—The first race of the R. C. C. for the Moody cup was sailed on July 28 over a 1½ mile triangular course, two rounds. The wind was light N. W. The times were:

	Time.	Points
Sophronia, Andrews	54 45	5
Marie, Stewart	59 15	4
Bounce, Gray	1 12 50	3
Vixen, Walters	1 13 50	2
Eleanor, Wilson	1 15 15	1

The next race was set for Aug. 4.

THE ENGLISH VISITORS.—Mr. W. Baden-Powell will soon arrive in New York on his way to Grindstone. Owing to the recent death of their father, the Messrs. Tredwen will not race again this season, and their visit to America has been abandoned. Mr. Walter Stewart, a young canoeist and friend of Mr. E. B. Tredwen, has purchased the last "Pearl" and will bring her here, arriving on the Germanic next week. He will take Mr. Tredwen's place in the races.

NEWBURG B & C. A.—A race was sailed on July 23 over a 3 mile course. The canoes entered were: Peggy, G. E. Edgar Jr.; Iolus, W. G. Van Dalfsen; Winona, A. King; Calloo, H. A. Harrison; The boats were Daddy, Messrs. Waring & Smith; Jeunie, H. Marvel; Mabel, N. S. Smith; Billy, W. H. Hilton. The times were: Daddy, 57:15; Jennie, 1:00:01; Mabel, 1:00:15; Peggy, 1:01:07; Billy, 1:01:47; Iolus, 1:03:18; Winona, 1:05:11; Calloo, 1:18:28.

IANTHE C. C. RACES.—The Ianthe C. C. will hold their second annual regatta on the Passaic River Aug. 21, at 2:30 P. M., to which we invite all canoeists. There will be 6 races, 2 single paddling, 1 tandem, 1 sailing, 1 hand paddling and upset; prizes for the winner of each race. Regatta to be governed by A. C. A. rules and race open to members of canoe clubs only.

A. C. A. MEMBERSHIP.—The names received to date are Messrs. Geo. G. Brown and Wm. A. Hall, Boston; Fred. M. Fisher, Sing Sing, N. Y.; Charles J. Laney, Rochester, N. Y.; H. L. Ward, Brooklyn, N. Y.; W. S. Buell, James Moore and James G. Findlay, Brockville, Ontario, Canada.

RONDOUT C. C.—We have received a very neat club book of the R. C. C. containing constitution, by-laws and house rules. The club now numbers 19 active members and 4 honorary.

A CRUISE DOWN THE DELAWARE.—Mr. John Boyle O'Reilly and a friend, Mr. E. A. Mosely, will start this month on a long canoe cruise down the Delaware River to its mouth. Mr. O'Reilly's new canoe is named Blanid.

CANOEING ON THE SHREWSBURY RIVER.—A race was sailed on July 24, the winner being Caliope, Mr. Frank Leonard, with Pocahontas, R. H. Sneden, second.

THE A. C. A. BOOK.—We have received from Dr. Neidé the Association book for 1886, copies of which have been sent to all members.

11. Corinthian, Sweepstake, Marblehead.
11. Sandy Bay, Sweep., Glouces-
17. Toledo, Pen., Toledo.
18. Sandy Bay, Club, Rockport.
18. Great Head, Club, Winthrop.
19. Quaker City, Review, Cruise.
25. Buffalo, Club, Lake Erie.
28. Beverly, Club, Nahant.

THE ARRIVAL OF GALATEA.

THE long and anxious watch for Galatea which has been kept up for nearly two weeks from Marblehead, was ended on Sunday, when at 5:15 P. M. a white yacht with no topmast was sighted off Thatcher's Island, and a couple of hours afterward the handsome white cutter dropped her anchor in Marblehead Harbor. An immense crowd of small craft at once surrounded her, hearty cheers were given for Mrs. Henn, Lieut. Henn, and the yacht, while huge bonfires were kindled on shore in honor of their arrival. After being reported by the Westernland last week, Galatea was next heard from through the following report brought by pilot Michael McDonald on the steamer Edam on July 31, from pilot Francis Connor, both of the pilot boat A. M. Lawrence:

"July 29, on board the pilot boat A. M. Lawrence, No. 4, of New York, 480 miles east of Sandy Hook, 360 miles east of Marblehead. 8 A. M.—I have just been on board the Galatea and had a good shake hands with Lieut. and Mrs. Henn, who, with all the crew, are well and hearty. Lieut. Henn reports leaving the Azores on the 14th, since which time he has had a succession of light winds, with which, with his light rig, he has made but poor progress, his day runs being from 60 to 120 miles only. His best day was the 27th inst., when he made 185 miles. He has now a leading fourknot breeze from the north. Her rig is only a lugmainsail, forestaysail, and jib, with flag pole at the masthead. Noon, July 29—Latitude 41° 50' north, longitude 63° 10' west. With the aspect of the weather she will probably arrive Monday."

On Sunday evening Com. Hovey and Messrs. Appleton and Jackson visited the yacht and offered the courtesies of the Eastern Y. C. to Mr. and Mrs. Henn. On Monday morning General Butler also paid a visit on board. After the yacht was partly put in order visitors were freely admitted and a very large number boarded her. Lieut. Henn is greatly pleased with Marblehead and proposes to refit there. The cruising spars which have been waiting for some time in Boston will be sent to Marblehead. They include a main boom 72ft. 6in. long, gaff 48ft., topmast 51ft. 5in. bowsprit 52ft. 6in., and spinnaker boom 65ft. The racing spars arrived at New York on the Tower Hill on Saturday. Galatea is fitting out as rapidly as possible in order to be at Newport by Saturday. The following messages passed yesterday from Messrs. Smith and Krebs of the N. Y. Y. C. Cup Committee:

NEW YORK, August 2, 1886.—To Lieut. W Henn, Marblehead, Mass: On behalf of the America's Cup Committee, I tender my congratulations and salutations to yourself and Mrs. Henn.—JAMES D. SMITH, Chairman of Committee.

BOSTON, August 1, 1886.—James D. Smith, New York: I shall go to Marblehead to see Lieut. Henn. Shall I say anything to him officially?—WILLIAM KREBS.

NEW YORK, August 2, 1886.—To Mr. William Krebs, Boston, Mass; Am in hopes to meet Lieut. Henn at Newport, R. I. Have arranged with Mr. J. Beavor Webb to meet our America's Cup Committee there during the cruise of the New York Yacht Club to complete details for the international races. Act officially with your usual discretion.—JAMES D. SMITH, Chairman of Committee.

Mr. Beavor Webb left for Marblehead on Monday night. We are indebted to the Boston *Herald* for the following copy of Galatea's log: Lieut. Henn's interesting log is headed "Voyage of the Galatea from Plymouth to Marblehead, U. S. A." During the early part of Wednesday, June 30, the Galatea's crew was employed in watering ship and preparing for sea. It was 2:50 on that day when she weighed anchor and proceeded out of Plymouth Sound. It was but an hour and 20 minutes before the wind died away and so light did the air remain that at 7 o'clock Lieut. Henn sent the ship's cutter away after fish. The expedition was not very successful, however, as at 9:20 the cutter returned with only one lobster, and that was all the fresh fish the voyagers had until they met an American fisherman on this side of the ocean.

On July 1 the wind was so light that at 2:30 A. M. the masthead spinnaker was set. At 10:30 that morning Galatea made out to signal Lizard's station and a request was sent to report all well. It was 4:30 that afternoon when the yacht lost sight of land, bearing northeast by east. The gig was secured to the deck and the anchor was unbent and stored below. The wind freshened enough toward midnight to cause the balloonforesail to be stowed, and the sailing record of the first whole day out was 41 miles, the course being south 95° west.

At 9.30 o'clock on the morning of Friday, the 2d, the lieutenant observed a steamer standing southwest, and in the afternoon sighted a bark standing northward. The cutter was secured on deck that afternoon, the last precaution when standing out on the "waste of waters." The record that day was 150 miles, and the course south, 83° west.

On the following day the yacht's course was west, and, with a light east wind, she made but 98 miles.

While loyal Americans were making the spreading eagle scream on the "glorious Fourth," the cruisers were spending a very quiet day. At noon the yacht's course was changed to west-half-west, and she sailed 101 miles with a light northeast wind.

On the morning of the following day there were some slight showers of rain, and the vessel carried her balloon foresail. A bark was observed standing to the southeastward, and a school of porpoises came alongside, heading west. At 5 P.M. a brig was sighted, standing southeastward. Otherwise the day was uneventful, but the yacht made 120 miles during the 24 hours, with a light northeast wind, coursing north, 82° west.

At 2.30 o'clock on the following morning there was weather to warrant the setting of the spinnaker. The wind was variable, with passing light showers from the north, the sea smooth, though there was a swell. The weather continued so all day, but the swell went down at night. The sloop made 117 miles that day, the course being north, 83° west.

At daylight next day a brig was observed standing to eastward, and at 5:30 o'clock exchanged, and Lieut. Henn found out that the brig was a fellow-countryman. The weather was fine, but the sea was smooth. Later on in the morning a bark was sighted, steering eastward, and at sunlight there were four sails in sight, the wind being light and variable, with rain. Nevertheless, 120 miles were made during the day, the course being south, 87° west.

Early on the morning of the 8th Galatea passed south of a bark standing to the eastward. There was as little wind as there was anything else to interest the drifting voyagers, and with a variable westerly to northwesterly air, but 91 miles was made, courseing south, 72° west.

The principal object of interest on the 9th were a fleet of Portugese men-of-war and a big school of jelly fish, and the wind was from light to moderate, so that the Galatea made 141 miles, course south, 85° west.

On the morning of the 10th, a big turtle that hove in sight gave the crew something to do. A dinghy was lowered and pursued the turtle, but after a long chase returned without it. The picture with which this incident is illustrated is almost as interesting as the chase must have been. The air was light from the north-northwest, the sea smooth. The record of the day was 118 miles, south, 87° west.

Just before noon on the 11th Galatea exchanged colors with a Portuguese bark standing to eastward, and in the afternoon a brig standing to eastward was observed. There was a swell from the northwest, and barely steerage way. Only 91 miles were made, the wind northwest to west, light, and the course south, 70° west.

On the 12th Galatea made her number to a steamer standing to westward, and observed a bark standing to eastward. During the morning a whale showed up, but wasn't signalled. He was going northeast. In the afternoon a bark standing to eastward was observed. Only 65 miles were covered in the variable light airs, the course being south, 62° west.

On the 13th, the distance made was even less, only 60 miles, with variable northwesterly to northerly winds, the course being south, 77° west.

On the morning of the 14th Galatea ran with balloon foresail to the Flores, and hove to, proceeding on her way again at 4:10, but coming to again before 6, and a boat was sent to shore. The crew was employed watering ship, and at noon she weighed and proceeded with spinnaker. A fore-and-aft schooner was observed to the northward. Seventy miles were made that day, in spite of stops, the course being south, 78° west.

Next day the weather was fine and sea smooth, though there were passing showers of light rain, and lightning was observed to northward. Late at night the balloon foresail was taken in, in time to escape a passing squall. An even 100 miles were made that day, the winds being light, east to south, course north, 78° west.

Several heavy showers fell on the Galatea's deck next day, though the wind remained light and variable and the sea smooth. Many flying fish interested the sailors during the morning. The sea rose and became lumpy later in the day, and the balloon was shifted for working foresail. A school of porpoises going south was seen closely enough to give Lieut. Henn an opportunity to add another little sketch to his log. The weather was changeable during the remainder of the day, with passing rain squalls. In the afternoon the sea was cross and lumpy and showers frequent. The vessel made 10 miles better than on the day previous, course north, 39° west.

The light air monotony was relieved on the 17th by a fresh wind, and there was a moderate sea. A bark was observed standing to eastward. That afternoon gulf weed was observed by Lieut. Henn for the first time. There were plenty of flying fish all around to afford the captain a chance to display his artistic skill. Late in the afternoon a bark was observed passing to the northward. The sloop made 155 miles, wind west to north, squally, course north, 66° west.

Next day the wind was light, and at 7:15 colors were exchanged with the French bark Grospere of Nantes, standing to eastward. The sea was smooth, and progress, as usual, slow. In the afternoon a bark was observed standing to the eastward. An incident rather out of the usual occurred that day, or, at least, was discovered then. On examining his patent log, Lieut. Henn found that a shark had been tampering with it. Though the shark hadn't found it palatable, he succeeded in seriously deranging it. The wind, northerly and light, carried the vessel 140 miles that day, course north, 75° west.

Next day the captain sighted a trunk of palm tree, but as it was found to be covered with barnacles it hadn't recently left America. That afternoon again Lieut. Henn found that another hungry shark had been after his patent log, which had been disabled by a bite which was plainly apparent. The wind being moderate, northwest and westerly, and the course north, 39° west, only 95 miles were made.

There were plenty of showers next morning, and the crew was kept busy scraping and varnishing the dinghy. A steamer, standing eastward, was observed, and Lieut. Henn found an insolent dolphin following the cutter and casting an admiring eye on the gallant sailors. Light airs from west-northwest to west carried the sloop only 65 miles, course north, 40° west.

Very early next morning the balloon was shifted for the working foresail, and by 5.45 o'clock the weather was threatening and sea rising. At 10 o'clock there was a cross and heavy sea; and the foresail was stowed. An hour later there was a heavy head sea, and the sloop was laid to on the port tack. In the afternoon there were strong winds and a passing rain squall, but toward nightfall it became more regular, and the vessel filled and proceeded northwest by west, half west, but just before midnight she lay to again on the port tack. She made 110 miles in the 24 hours.

Next day there was a strong wind, with rain, the sea being very heavy, but the ship making good weather of it. Galatea made numbers to a steamer standing to eastward. A brigantine was observed standing to the southwest. Galatea filled and proceeed, but before 11 she lay to, it being squally, with rain and a cross sea. In the afternoon the wind and sea subsided somewhat and she filled and proceeded once more. The day was a black-looking one altogether, and only 64 miles made, north, 75° west.

On the 23d the swell went down, and at 9 o'clock a bark was observed standing westnorthwest. In the afternoon, Lieut. Henn fell in with his first foggy weather, which was accompanied with light rain and cross swell. Only 95 miles were made, course north, 75° west.

Next day, 24th, the wind fell light, with rain, but by noon there was again a heavy cross swell. Lieut. Henn entered the wind fresh to calm, course north, 60° west; distance made, 91 miles.

On the 25th there was a light air and heavy swell. The Galatea exchanged colors with, and made numbers to a British steamer standing to eastward, and before noon passed a bark, standing eastward. Rings around the sun were observed at the time, betokening bad weather in prospect. In the evening a fourmasted steamer was observed, well down, standing to westward, and she showed colors. Just an even 100 miles were made that day, with a moderate to light wind south to southwest, course north, 70° west.

On the 26th the wind was very light and variable, and at noon a steamer was observed, bound eastward. Thunder was heard to westward, so that the voyagers got a little touch of what people on shore were having during that thundering week. In the afternoon there were squalls with heavy rain, and only 80 miles were made, the prevailing direction of the light wind being north-northeast to southwest; ship's course, north, 75° west.

At 11:20 next morning Galatea exchanged colors and made numbers to the Dutch steamer Zaandam, standing to eastward. That night Lieut. and Mrs. Henn enjoyed the beautiful aurora which was visible on shore. The vessel made 155 miles, wind west, southwest, fresh to moderate, course north 45° west.

Early at 2:30 A. M., on the 28th, a heavy squall, accompanied with thunder, lightning and heavy rain, was experienced, and the weather continued squally all the morning and the sea lumpy. In the afternoon there was a heavy, confused swell, and barely steerage way on, and the sky was overcast with rain. It was on that day that the best run was made, 185 miles, south-southwest to southwest, course north, 70° west.

At daylight on the 29th, Galatea observed a schooner to northward, and at 5.30 o'clock made numbers and exchanged colors with the schooner Alexander Lawrence, the New York pilot boat which reported Galatea. The yacht hove to, and the pilot came aboard, bringing newspapers containing the first news of the English election which Lieut. Henn received. At 7:30 in the morning Galatea filled and proceeded west-northwest, and the pilot left. In the afternoon a steamer was observed, well down, standing to westward. Weather fine and smooth. Only 75 miles were made all day. Wind west-southwest to northwest, course north, 67° west.

Early next morning, the 30th, Lieut. Henn shifted his balloon for working foresail, and at 8:10 o'clock sounded on Great George bank in 50 fathoms "sand, shell and small stone." At 10 o'clock, Galatea hove to and communicated with a fishing vessel, which sent Lieut. Henn a supply of fresh fish. Galatea then filled and proceeded, westnorthwest by west, half west, setting balloon foresail. In the afternoon she again hove to, and received a communication from a Gloucester fisherman, proceeding again at 12:30 o'clock. Much lightning was observed to the southwest, and there was a very heavy swell, steerage way being difficult. The vessel made 125 miles, coursing north, 67° west.

Early next morning Galatea ran into a dense fog, which lifted at 6 o'clock, when Lieut. Henn set the balloon foresail, but the fog soon settled down again, bringing the horn into constant use. Again at dark the fog lifted, and the anchors were got on the bow and cable bent, preparatory to running close to the coast. The vessel made 90 miles in the 24 hours in a southwest light wind coursing north, 70° west.

At 7:30 o'clock Sunday morning the captain sounded, but found no bottom. The fog was dense. Sounding again at noon, there was found to be 35 fathoms. The density of the fog hadn't been affected up to noon, but at 3:30 P. M. lighted, and the captain observed land ahead. At 5:30 Thatcher's Island was abeam. The course was changed for Marblehead, and at 7:20 Galatea came to anchor in Marblehead harbor. The last day's run was 63 miles.

THE LAKE Y. R. A. ROUND.

THIS year the cruise of the Lake Yacht Racing Association begins at the lower end of Lake Ontario, the rendezvous being at Belleville. The following yachts met there on Saturday, and on Monday the first regatta of the cruise was sailed.

FIRST CLASS.

Ariadne, New York, 55.98ft.; Atalanta, Brighton, 66.8ft.; Aileen, Toronto, 57ft.; Cygnet, Toronto, 48.3ft.; Gen. Garfield, Kingston, not measured; Norah, Belleville, 50ft.; Verve, Toronto, 39.8ft.; White Wings, Trenton, not measured, but about 50ft.; Eudie, Cobourg, not measured; Ethel, Oswego, not measured.

SECOND CLASS.

Gracie, Kingston ——ft.; Iolanthe, Belleville, 38ft.; Laura, Kingston ——ft.; Minnie A., Gananoque, 26ft.; Mollie, Hamilton, 25.20ft.; Surprise, Trenton, 32.6ft.; Vision, Cobourg, not measured.

The following account of the race is from our correspondent, "Port Tack":

Belleville, Ont., July 31.—The eleventh annual regatta of the Bay of Quinte Y. C., which was sailed over the usual course yesterday, was the greatest success in the number and quality of the competitors that the club has ever had. The starters in the first class, over 28ft. corrected length, numbered eight of the fastest craft on fresh water; in the second class, over 25ft. and under 38ft., five; and in the third class, under 25ft., seven. The wind was, unfortunately, light, but the beauty of the spectacle was unharmed by that part, as all the fleet were enabled to carry their kites, which gave them a fine appearance. The result in the first class was a glorious surprise, as nobody supposed that the Norah could beat the Atalanta, even with time allowance, but she did so to the extent of 18m. 12¼s. beyond allowance. The idea also that the White Wings, a new craft of medium size, half finished in hull and so hastily got ready that she had only been under canvas twice before the race was started, yet she won third prize very easily. She will evidently be a dangerous one in her class. It is only necessary to state that Norah and Atalanta at once ran away from their followers, and that the former, having obtained the lead before the first buoy, kept on increasing it every foot of the way. The start was, as the figures show, a very fine one, and the wind was so light that topsails had to be shifted only once. The official figures are as follows:

	Start.	Finish.	Elapsed.	Corrected.
Norah	1 02 17	4 59 20	3 57 03	3 49 21
Atalanta	1 02 09¾	5 17 25	4 15 15¼	4 15 15¼
White Wings	1 03 17¾	5 42 09	4 38 51¼	4 22 36¼
Cygnet	1 01 35	5 48 35	4 47 00	4 32 32
Aileen	1 02 49	5 43 20	4 40 31	4 34 58
Ariadne	1 00 00	5 49 04	4 49 04	4 41 22
Garfield	1 03 05¾	Not timed.		
Verve	1 03 57¾	Not timed.		

Atalanta allows Aileen 5m. 38s., Norah 7m. 42s., Ariadne 7m. 42s., Cygnet 14m. 28s., White Wings 16m. 15s., Garfield 21m. 16s., Verve 26m. 12s. Norah thus beats Atalanta 18m. 12¼s. actual and 25m. 54¼s. corrected time. Atalanta wins second by 7m. 21s., and White Wings beats Cygnet 10m. 4¼s.

In the second class there was another suprise in the victory of the little Minnie A., of Gananoque, a craft which was built here several years ago by Mr. John Addinn who, although a professional yachtsman, is an amateur rule-of-thumb designer. Her victory, however, was the result more of mistake and accident than anything else, though the wind was just what she wanted. The start in this class, although there were but five starters, was very slovenly, Laura being handicapped 16¾s. and Iolanthe 1m. 9s. The latter, which came out the day before the race with a new stern and new mainsail, jib and foresail, very soon ran into second position and was within a length or two of the Gracie at the first mark, but standing too far to windward for the second mark she lost nearly a mile and let the others up again. When hauled on the wind it was found that the experiments worked badly. She steered very hard and worse than all, her new stern was found to have leaked so badly that the water was up over her cabin floor. In this plight she was of course beaten, but made a splendid fight. The times are as follows:

	Start.	Finish.	Elapsed.	Corrected.
Minnie A.	1 28 13	5 00 00	3 31 47	3 17 14
Laura	1 29 00	4 47 50	3 18 15	3 18 15
Iolanthe	1 29 00	4 49 39¾	3 20 39¾	3 20 39¾
Gracie	1 27 00	4 53 26¾	3 26 26¾	3 23 26¾
Mollie	1 27 47	Not timed.		

Iolanthe and Laura measure the same, 36.75. They allow Gracie, 34.5ft., about 3m., and Minnie A., 26.8ft., 14m. 32s. The Minnie thus wins by the narrow margin of 1m. 3s., or during handicap at starting, 44¾s., and Laura beat Iolanthe 1m. 14¾s.

The third class race was shorn of interest by the contest between the bigger yachts. The Mischief, of Toronto, won first, Hulme's entry second, and Laporite's third.

The prizes were presented at a supper to the visitors in the evening, when all professed their delight with their reception and with the cruise, and promised to visit us next year. The regatta was managed by Com. W. H. Biggar, Captain C. S. Hostage and Messrs. Corby, McKinnon and Ponton, Regatta Committee.

BEVERLY Y. C.

THE 111th regatta, second championship, was sailed at Swampscott, July 31. The club had unusually bad luck in the way of weather; the entry was a very good one, 23 boats, but the day opened with rain and a flat calm, making it impossible to reach starting point except by rowing, and to all appearances making it hopeless to start the race. The start was advertised for 12 o'clock, but it was 1 when a very light air struck in, and even then stakeboats which had started home before were not near their positions, so course was changed and boats went round Egg Rock and the Little Nahant stakeboat, 5 miles.

Witch had a walk over for a prize and practically the same for pennant; but the catboat race was close and interesting. In second class, Hoiden did best on the beat to Egg Rock, but overstood to the eastward, and Peri picked a good deal by tacking earlier. After rounding they had a luffing match close up to the Nahant shore, but after rounding stakeboat Hoiden did best and won pretty easily. In third class there was not wind enough for Dolphin, and she fell astern; Bluebell footed with Psyche and pointed closer, having a lead of some 8 or 10 lengths at the rock, which was rounded thus—Witch, Hoiden, Peri, Bluebell, Psyche, Pixy, Nixie, Dolphin, after rounding with the wind way aft. Psyche gained and Bluebell had to resort to a luffing match before reaching stakeboat; she got the best of it and rounded just ahead, but Psyche closed on her at once, and both were soon jammed on the wind at right angles to their course; at this play Bluebell was the better, and Psyche finally bore off for home on Bluebell's lee quarter. The rear boats had gained in the meantime, and Pixy had passed both.

Both passed Pixy again, when another luffing match took place, with same result, Pixy again passing both, and soon being passed again; but close to the line Psyche tried it a fourth time and Pixy crossed ahead, Bluebell leading Psyche 4s. The summary was:

SECOND CLASS SLOOPS.

Witch, B. B. Crowninshield.....Cut. 22.6	1 33 54	1 26 26

SECOND-CLASS CATS.

Hoiden, Com. Dexter	23.00	1 45 59	1 38 52
Peri, Henry Parkman	20.07	1 48 44	1 40 02
Pixy, F. W. Chandler	21.10	1 51 37	1 43 46
Nixie, A. L. Cochrane	21.02	Withdrawn.	

THIRD- CLASS.

Bluebell, W. Lloyd Jeffries	18.07	1 46 54	1 36 41
Psyche, H. M. Sears	19.04	1 46 58	1 37 20
Dolphin, R. Robbins	18.08	1 57 12	1 47 03

Witch, Hoiden, Bluebell take firsts; Peri and Psyche second; Witch takes and holds pennant; Bluebell takes pennant bearing Dolphin. BLUE WITH A GOLD CASTLE.

A CRUISE IN A STEAM LAUNCH.—A long cruise in a steam launch has lately been made by two young gentlemen, Messrs. Bradford B. McGregor and J. Tomlinson, Jr., of Marmaroneck, N. Y. On June 15 they started in the launch Daphne, 48ft. 6in. by 8ft. 6in., with two assistants as engineer and crew. Passing down the East River and into the Hudson they ran to Troy, thence into the Erie Canal, where a pilot well versed in the language and manners of the natives conducted them safely to Buffalo. Thence they went to Port Colborne, through the Welland Canal into Lake Ontario, calling at Toronto, Kingston, Alexandria Bay, Ogdensburg and Montreal. From the St. Lawrence the little boat turned homeward down the Richelieu River and Lake Champlain to the Hudson, and on July 24 finished their journey of nearly 2000 miles. Every evening the boat laid up in some safe anchorage while the crew slept and lived on board.

WOMEN AS SAILORS.

In a few cases, not many, women have proved themselves excellent sailors. You may have seen cruising in the Lower Bay of New York harbor a large schooner yacht with a handsome gray haired lady at the wheel, who manages her craft like any old salt. I have seen her, and I have been told that the wives of about half a dozen members of the N. Y. Y. C. are as handy on board the yachts as their husbands.

Owners of ships forbid, following an old theory, that captains take their wives out to sea, because they are afraid the wife would demand some of the husband's attention when the ship requires all of it. This theory is unfounded and happily has many opponents. I remember the case of the freight steamer Edgar, bound from the Senegal to London. A fever breaking out on board laid low the whole crew, excepting the captain and the mate. These two men took charge of the engine room, while the captain's wife steered. If she had not shown her ability to do so the ship would have been lost.

During the first days of the California gold fever the heroical Mary Patten sailed round Cape Horn with her husband. He fell ill and his brave wife took his place on the quarter-deck. The crew was composed of land lubbers, who could not tell the difference between a sextant and a molasses jug, the mate being no better. Mrs. Patten kept the log, took the sun, and led the ship without misadventure to San Francisco, nursing her husband when below and off duty.

The fact that the British brig Cleotus was navigated by a Miss Betsie Miller for many years, is not less remarkable. Her father was an owner of ships at Saltcoats. Having no sons, he took the daughter into his business, and was frequently accompanied by her when business brought him to the docks. She gathered so much information concerning ships and navigation, and imbibed such a desire for a genuine sailor's life that "papa" made her captain of the Cleotus, a vessel which he had specially built for her. For more than twenty years she navigated her craft in the waters of the continent and on the stormy coasts of Great Britain, constantly besieged by and refusing the offers of seamen, who had been fascinated by her courage. After her father's death she retired from the sea to take charge of his business.

The partly historical, partly romantic accounts of female pirates are equally interesting. Alwilda, daughter of the Gothic King Synardus, had been destined by her father to become the wife of Alf, the heir to the throne of Denmark. Alwilda was opposed to this union that she gathered a following of youthful amazons, with whom, disguised as seamen, she left her home to follow the sea in true Viking style. Always brave and frequently successful, she encountered one day a band of pirates mourning the death of their captain. She proposed to them that they should join her, and her band, thus increased, became the terror of the coast. Finally it was decided to destroy the band, commanded by a pretty but unknown female captain, and Alf, the refused lover, was ordered to proceed against her with a formidable fleet. They met in the Bay of Finland; Alwilda ran alongside of the Admiral's ship and the fight began. One-half of the pirates were killed and Alwilda herself had to surrender to Alf. She was recognized when forced to doff her armor and helmet. The prince, thoroughly surprised, had won by his bravery the respect of the piratical beauty, and to clinch matters she ended by marrying the man who had conquered her. A good subject for an opera.

Not less romantic is the following case: Mary Reed, an English girl, was put into boy's clothes by her mother, that her youth might be free from the cares and wants which the mother had suffered. Mary at first entered service as valet, then she went as volunteer into the Guards. Falling in love with another volunteer, she confessed her sex and was married to him in presence of the whole regiment. The husband dying a few years later, Mary donned men's clothing again and went to sea. Captured by pirates, she joined their band and—fell in love once more.

The man of her heart became embroiled in a quarrel with a shipmate, and Mary feared for his life. Not being well able to prevent a duel, Mary sought a quarrel with the same adversary of her lover, compelled him to fight, and vanquished him two hours before the time at which he was to meet the lover. She had in the meantime confessed her sex to the latter, and as a proper end of this chapter in her career she was married to him by the priest of an isolated island. The man was subsequently killed, and Mary joined the crew of the celebrated pirate, Captain Rackman, who was accompanied by another female, Anne Bonney, also a former sailor and pirate. Mary had again donned male dress, and through her bravery and ability rose high in the estimation of her companions.

Captain Rogers, of the Royal Navy, captured the brigantine commanded by Rackman, and taking her to Port Royal, Jamaica, the whole crew was sentenced to the gallows. Mary, however, disclosed her sex, and might have escaped if a fever had not ended her adventurous life. Rackman and eight of his companions were executed; the fate of Anne Bonney is unknown.—*Translated from "Ahoi" by Fior da Lice.*

FAIR PLAY IN THE CUP RACES.

We are glad to believe that yachtsmen on both sides are ready to view the coming races in a fair and impartial spirit, and to accept defeat if it comes without complaint or grambling, as Genesta's owner did last season; and in the interests of fair sport we can only regret the mischievous attempt to cover up a possible defeat by a letter in the last issue of the London *Field* from Mr. David Reed, Jr., of New Jersey, a gentleman whose writings last year on the same subject will be remembered. Our own preference for the cutter is so well known that we may venture to criticise this letter without any suspicion of prejudice:

SIR—Now that the Galatea is actually on the way here, will you permit me to encroach a little on your valuable space in connection with the past and coming struggle for the so-called America's Cup? The editor of the New York *Herald*, in yesterday's issue, says: "Few people in England, whose opinions are worth having, are sanguine enough to anticipate that the Galatea is good enough to take home the America Cup. After the Genesta's failure it became evident that only an exceptionally fast vessel could hope to successfully compete with the American flyers." Now, I beg to assure my fellow countrymen that the Galatea, or any ordinary British cutter, is plenty good enough (to use an Americanism) for the purpose, if the conditions were "a fair field and no favor," but all the same, you must not expect the Galatea or any boat you send, to be more successful than was the Genesta. As to the American flyers, let me just state here, for the benefit of your readers who may not know, that, in the late regatta of the New York Y. C., the so-called flyers (the Puritan, the Atlantic and the Mayflower) were placed behind a cutter (the Bedouin) which the Genesta could admittedly vanquish, and it was by a mere prearranged class division that the other flyer, the Priscilla, was not also placed after the cutter. The corrected times for the race in question were: Priscilla, 5.59.45; Bedouin, 6.07.19; Atlantic, 6.12.55; Puritan, 6.22.00; Mayflower, 6.34.31; this latter being also beaten by the little English cutter Clara with a record of 6.29.12, while the famous Gracie could not finish under 6.46.09, and it was not cutter weather either, being, as is almost general at yacht races here, only sufficient to make a good drifting match. In New England waters on the same day, June 17, two cutters headed the fleet in the Dorchester regatta, the English cutter Stranger leading the Yankee cutter Huron by 8min. 3sec., and both cutters leaving all the sloops half an hour behind. I only mention these matters to show your readers that they must not judge as to the comparative methods of cutters and sloops, even for these waters, by any performance in the America Cup races. Certainly cutters are not so suitable for the shallow waters and generally stagnant atmosphere here as are the skimming dishes; but then these conditions do not prevail on your side, and should not affect you at all. It is well enough understood here that if once that Cup crosses the ocean again, there is small hope of ever getting it back, and that is why the Yankees will not agree to any of the changes in place, etc., of sailing the match suggested by Mr. Beavor Webb. In the case of the Genesta, it was to an unprejudiced person simply an engineered affair all through. Yachtsmen on our side must not think—unless by the rarest good luck—of beating a skimming dish with a cutter when the course to be sailed over is inside. The Bay is full of shoals and knolls, tides and currents, and so on, so that even in charge of skillful pilots many a vessel finds itself suddenly landed on *terra firma* without a moment's warning. Even the New York *Herald* has the grace to suggest that the races should be sailed outside, as Mr. Webb desired; but the club committee were too wide awake for that; if the Cup must go to England it will not be their fault. It is a pity the Galatea accepted the terms at all. She may win, of course—there is no absolute impossibility in it—but the chances are seemingly all against her, she is handicapped all over. Should she be unsuccessful, as was last year the finest yacht that ever floated in these waters, I trust Englishmen will cease to challenge for the Cup till the Yankees see fit to meet them in a fairer spirit. Let the Cup be sailed for at a season when there is probability of some wind, and over a fairly navigable course; or, if the Yankees will not consent to these conditions, let them keep the Cup. When the Genesta was here, after the America Cup farces were over, she sailed three races. In the first she had a crowd of competitors, including the famous Gracie, admittedly the best Yankee sloop before Puritan was put together, and also including a little boat which beat an "American flyer" in the late regatta. Well, there was no engineering about that race, it was a fair, square sailing match, and the Genesta left them all out of sight. Next race was round to Brenton's Reef, a long deep sea affair, so all the yachts squirmed out of it except the Dauntless, a big schooner, which thought she could beat the Genesta, as heavy weather was expected. The weather did prove pretty bad, but the cutter won easily. The third and last race was also a long one, and only the Dauntless, true to her name, ventured to contest it with the English cutter. The pilot of the Dauntless vowed he would tow the Genesta home, but somehow he seemed to have missed her, as no trace of the schooner was visible when the Genesta earned her last cup. I do not remember when the Dauntless got back, but it must have been some time between then and now, as she appeared as a crack boat in the late regatta, to get beaten again by the little English cutter Clara. Now I do not disparage the Dauntless one bit. She is a good boat as Yankee boats go, and her owner is a gentleman and a sportsman, and showed it by his action in coming forward on both occasions so as to make a race for the Genesta, when all the other yachts selfishly held back rather than take a beating. Of course the Puritan did not try conclusions again, as her reputation was at stake and could not safely be ventured, and she was as well at any rate she did not go on the Brenton's Reef excursion, as even the small sum she actually brought at auction would hardly have been offered for a dismantled wreck.

Let me beseech of my fellow countrymen to stick to their cutters in spite of all results one way or another of these so-called international matches; and let me say, in conclusion, that cutters will have a long lease of favor with you if you will only stick to them till one of the Yankee skimming dishes goes over, and three times running cleans you all out, as the Genesta did the flat bottoms here.

DAVID REED, JR.

FOURTH AVENUE, ROSELLE, N. J., June 29.

The gist of this rather disconnected epistle is a statement that the New York Y. C. "engineered" the races to secure a victory for their own boat; in other words, that they used unfair means to defeat Genesta and to retain the Cup. As we have in the past criticised their actions pretty freely, we can say a word on the other side with good grace. The club course we have condemned as not suitable for a match race, and now we believe that the club is making an error by holding to it, but last year Genesta was fairly beaten over the course through Puritan being faster in light paltry winds, and her loss of sixteen minutes was due to fluky winds rather than the shoal waters. This year the club have agreed to bar certain portions of the course at Mr. Beavor Webb's suggestion. It is the club course and they have a perfect right to only one race over it, but Mr. Reed carefully ignores the fact that two out of three races are to be sailed over a fair and open course at sea. To go to Marblehead or Newport would entail a loss of time and expenditure of money which the club cannot be expected to make. Our objections to the course are mainly that, with its tides and fluky winds it is not one for an important match, as the advantage generally lies with the leading yacht, be she keel or board. With the shoal spots barred out this year, the disadvantages of the keel boat will be decreased, and it must be remembered also that she draws at no time over 13ft., while her rival must have at times 20ft. for efficient working. A serious objection to the course is that the attendant vessels will hamper the following boat, but if Galatea can round buoy 5 well ahead coming in, she will gain, not lose, by this.

That terror he letter infers that all the races are to be sailed over this course in light weather, but the truth is that the date has been made as late as possible in deference to Lieutenant Henn's suggestion last year, and that two out of three races will be sailed over an open sea course in September, when there should be plenty of wind. With no special love for the centerboard type and a belief in the superiority of the cutter as a sea-going yacht, we can at the same time condemn the criticism of Puritan as a skimming-dish and the probabilities of her being a dismantled wreck after a race outside as utter nonsense. Mr. David Reed and the *Saturday Review* to the contrary notwithstanding. Probably neither have ever heard of Vesta's midwinter passage at racing speed.

It is only too well known that if the Cup goes abroad there is no chance of retaking it under a rule which virtually assumes that Galatea is 7¼ft. deep and Puritan 11ft., and while such conditions are imposed on American yachts the less we hear about British fair play the better. Believing in the superiority of the cutter over the old American type, we have looked for a cutter victory in these races, and while we should rejoice over such a vindication of our position for many years, we should at the same time regret to see the trophy placed where only one certain type of boat could ever hope to win it, so that international contests must virtually cease, as far as it is concerned.

The figures given above prove absolutely nothing, as the race was all flukes and drifts. Fast as she is, no one believes that Clara can come within a few minutes of Puritan, and in the E. Y. C. race none of the boats mentioned were in it with the three big ones, being far astern. Fortunately Americans are no longer building skimming dishes, and if we were there is no danger of their "cleaning out" the British fleet in home waters, as in the first place they would have to carry an unjust handicap from larger boats, and in the second they would not be allowed even the fair play of entering the races.

ANOTHER "YACHTING ACCIDENT."

The great reforms in our yachting fleet and the general prevalence of healthier ideas and more correct knowledge have of late given grounds for the hope that the terrific calamities that mar the history of American yachting for the past ten years have not been entirely without their important lessons; that the needless waste of human life on the Mohawk, Sophia, Mystery, Coming and scores of smaller craft has not been entirely without its warnings, that those who venture afloat, and still more those who take the ignorant and confiding with them, would pay some regard to the dictates of ordinary common sense and prudence. Within the decade that has barely expired since the yachting world was shocked by the terrible tragedy of the Mohawk there have been many similar calamities, but none so fatal in results, so sad in all surroundings or so totally inexcusable as that which occurred last Friday. The main facts are easily told; indeed given the results, the premises might be laid down without further knowledge. A vessel of extreme beam, limited draft, lofty rig and a little loose sand for ballast is struck by a squall such as we are used to throughout all our summer months, especially after a term of extreme heat; a squall preceded by plain warnings which were disregarded. The vessel with a large spread of sail is struck without steerage way, the jib jams and cannot be lowered; there is a moment of suspense, and she is on her beam ends with seven passengers, six of them ladies, imprisoned under water in her cabin, none of them to emerge alive.

The vessel, though not a yacht, was in use at the time by a pleasure party who had chartered her. She was a little trading schooner, the Sarah Craig, built in 1881 at Patchogue, L. I. (from which port she hailed), by Elisha Sexton and Edwin Post, and as will be seen from the dimensions, one of the worst of her class, the famous American shoal, wide centerboard boat: Length on L. W. L. 47ft., beam 19ft. 6in., hold 8ft., draft 4ft. 6in., tonnage 27 tons, ballast, one ton of sand. She is schooner rigged, with lofty lower masts, short topmasts, standing bowsprit, long main boom and single jib working on a traveler. She is commanded by Capt. Edward Ruland, of Patchogue, with a mate, cook, and two extra colored cooks, five in all. During the winter she was trading up and down the coast as far as North Carolina, carrying oysters, and lately has been carrying fruit. When in Philadelphia lately, unloading watermelons, she was chartered for a cruise of ten days at the rate of $13 per day, by Mr. M. S. Bulkley, of that city, and on July 27 she sailed down the Delaware with a party of 8 ladies and 5 gentlemen on board, beside her crew.

The party was organized by the young men, Messrs. Z. W. Jordan, M. S. Bulkley, Alfred Potter, Frank Hall and Chester Clarke. All of them were young business men and not yachtsmen. The ladies were Mrs. T. W. Stevens, Mrs. Bulkley, Mrs. A. Askin, Misses Mary Stevens, Jessie McClure, Bessie and Emma Merritt, and Maud E. Rettew. The accommodations of the boat were of a most limited kind, a cabin about 11ft. square and 5ft. high, the house being 27in. above deck. In this were a berth and locker on each side, three windows, each 1ft. high and 2ft. long, protected by heavy iron bars, and a companion aft on the port side of the center line, with double doors and three steps to the cabin. A small bulkhead door gave access to the main hold, with less than 5ft. headroom and unfurnished. Here cots were spread on the flat floor for the gentlemen and the crew, while the cooking was done forward. Two large hatches gave access to the hold. The party engaged their own cooks, and the regular cook did duty as "crew."

Wednesday was spent at Cape May, and on Thursday Atlantic City was reached, where Mrs. Bulkley and Miss McClure left the party. Six new arrivals were expected, but they did not appear, and on Friday at 7 A. M. the boat was under way for Sandy Hook and New York. After a pleasant day the Hook was reached about 6 P.M., and after supper all were on deck when a little rain fell and the ladies, with several of the gentlemen, went below. The warnings of a squall had been visible there as in all the vicinity of New York for some time, but the only preparation for it was to brail up the small foresail, leaving jib and mainsail set. The vessel lay in a flat calm without steerage way, when a squall was seen coming from S.W. The captain at once ordered the jib down, but before it could be stowed the wind filled it and jammed the hanks so that it would not lower. The captain lashed the wheel hard down and ran forward to assist, when a heavy blow struck the boat and laid her on her beam ends. A second squall, heavier than the first, bore her still further down, until the sand ran to leeward, and she filled completely. In the cabin were the ladies and Mr. Clarke, but the doors jammed and the companion was partly under water.

A long and very severe storm of wind and rain, with large hailstones, prevented any action on the part of those on deck, who were obliged to hang to the bulwarks, standing on the edge of the hatch coaming, the deck being nearly vertical. The captain made some attempts to break in the house top, but could not accomplish it, and the force of the storm made it impossible to do more than cling to the rail. After a time pilot boat No. 5 sent a yawl, but none of the men would leave the wreck. The mate was sent to a tug now in sight, the Geo. W. Pride, but she had a dredge in tow with a crew of 5 on board, and declined to allow it to go adrift. Soon the tugs Wm. Cramp and B. P. Haviland appeared and made fast to the schooner, towing her in to the Government Pier at the Hook. None of the men would leave her until it was evident that no further aid would avail to save their friends.

Early next morning Captain Thomas Scully, of the Haviland, entered the cabin and worked bravely for three hours, staying under water as long as possible at each dive, until he had secured all the bodies but Miss Merritt's, which was not found until later. The bodies were removed to Philadelphia. The schooner was finally righted by a steam lighter and towed to Tebo's Pier, South Brooklyn.

She presented a sorry sight when pumped out, everything being buried in a mass of wet sand to leeward; shoes, parasols, books, letters, canned goods, valises, and quantities of other articles. She is still sound and has sustained apparently no very serious damage.

Remembering all that they have recently passed through and the heroic manner in which they stayed by the craft and declined all chances to leave her until the last, it is very hard to sit in judgment on the survivors, but no such affair as this happens without good and sufficient cause, and to let it pass without notice would only lead to a repetition. On the water as on land there are veritable accidents which happen in spite of all human care and skill; some collisions, failure of gear or cables, striking hidden obstructions; but no such excuse can be advanced in this case, and the capsize of the Sarah Craig must be placed beside that of the Mohawk, the Sophia and the Grayling, as directly due to ignorance of the plainest laws of designing, and carelessness in handling a most dangerous type of boat. The promoters of the party were young men, not sailors or yachtsmen, and inexperienced in all pertaining to vessels. A single glance at the boat they chose would convince any boating man of her entire unfitness in every way for such a purpose, but in ignorance of any danger they blindly selected her as the bearer of such precious freight.

Of Captain Ruland's bravery and coolness all speak in the highest terms, and to him it is due that more lives were not lost. On him, however, must rest the responsibility for taking aboard such a vessel a party relying solely on him and his knowledge of his craft; and yet there can be no doubt that in this case he erred only through ignorance and over-confidence. He believed firmly in his craft last week, he believes just as firmly in her to-day. She had never capsized before and he did not expect her to then. Blind to the obvious failings of a shoal, unballasted and overrigged craft, ignorant of all the principles of stability and flotation and still at a loss to understand how a vessel with so much beam could capsize he regards the occurrence as due solely to a wind of greater force than usual and that would have treated any vessel as it did his. In such a case it is hard to blame the individual, we can only lament the widespread ignorance and disregard of the teachings of competent authorities, which in this, as in other cases, has resulted in the sacrifice of innocent and trusting persons.

The neglect of the plain warnings of the squall and of the obvious preparations which should have followed them is most culpable, considering the large party in his charge. Working the coast with a crew of seamen such risks are a daily matter and a man becomes hardened to them, but with a dozen helpless passengers dependent on his skill such carelessness becomes criminal.

Perhaps the most blame in the whole matter attaches to those who, while fully competent to judge, have persistently championed the cause of the wide, beamy, "seaworthy" centerboard boat, and who for ends of their own have opposed the reforms now so general in the direction of depth and less beam. To their false teachings is due much of the ignorance and misapprehension of nature's laws which has kept in use for pleasure purposes these floating coffins. The shoal draft, beamy centerboard boat is a necessity in America; with our shoal harbors and streams commerce is only possible by their aid. They have a function in our domestic economy; and so has a powder mill or a dynamite factory. In their proper place when used for inland commerce and manned by professional crews accustomed to them, who know and undertake the risks as a matter of business, as a man works in a powder mill, they fill a legitimate purpose. Sometimes the one capsizes, sometimes the other blows up. Neither can well be dispensed with and on one thinks of condemning them. The trouble arises when they are diverted from their proper purpose; in which case, to carry out the parallel, the person who takes a party who are utterly ignorant of any danger afloat in such a death-trap as the wide, shoal, badly ballasted yacht or boat, is as directly answerable for the consequences as though he had taken them for a pleasant picnic to the vicinity of a powder mill or under the roof of a dynamite factory.

SHARPIES ON LAKE CHAMPLAIN.—The Rev. W. H. H. Murray, better known to our readers by his familiar soubriquet of "Adirondack" Murray, is now located at Burlington, Vt., on Lake Champlain. With its noble waters close at hand he has gone into yachting, and is now industriously promoting the building of cheap, roomy sharpies, for use on the lake. Several are building for residents of Burlington, and it is expected that a large fleet will follow as they become better known. The following description of one, written by Mr. Murray, we copy from the *Boston Herald*: "Length over all, 50ft.; depth, 4ft. amidships; extreme width of deck, 12ft.; length of centerboard, 16ft.; width, 3½ft.; distance between masts, 30ft.; sail area, 200yds.; length of foremast 50ft.; length of mainmast, 47ft. The sails are laced to small booms, or the sprit can be used. The sails can be of strictly "mutton leg" shape or 'clubbed' in form, which is desirable when a large spread of canvas is demanded, because it allows a large sail area, and at the same time, keeps the major section of the sail low down, where the wind pressure should be located. These boats are decked and stayed in hard woods, oak, cherry, birch, or southern pine. White pine is of course allowable, but is soft and liable to be marred by indentations. The sides are of white pine plank, 2in. in thickness, 8in. wide, and from 16 to 20ft. in length. Such plank work is easily shaped, and makes a strong boat. Bottom of southern pine, finest quality, 2in. thick and 6in. wide. Stem piece of best white oak, with plenty of size to it. Fourteen feet abaft the stem is the front of the cabin. Length of cabin to suit service. If for home sailing, it can be 12ft., divided amidships into two apartments, one for ladies and the other for gentlemen. Front section of each apartment, says 4x5, is fitted with a lavatory like a Pullman car. Height of cabin, 6ft. in the clear. This gives elevation of sides known as line sail. These sides to be built in two or three panels which can be opened inward in fair weather, and buttoned to cabin roof. The cabin is thus converted at will into a charming sitting room, in which ladies and children can be protected from the sun, and yet enjoy the sight of water and mountains beyond. If the boat is intended for cruising, the cabin can be made longer, say 22ft. This would still leave a large cockpit, and accommodate a party of a dozen with berths and tables for sleeping and eating, whether the weather was fair or foul. The table leaf can be hinged to the centerboard case so as to hang vertically to it, and takes up no room when not in use. Berths or bed frames made of wicker, 6x2ft., are hinged to the cabin sides, and like the table, hang pendant when not in use. Cook's galley, immediately ahead of the cabin, is entered by a hatch of large size, say 3x4ft., built to be slid forward in close fitting grooves, so that in rough weather it would be practically water-tight. Cabin to be of quartered oak, or cherry, or any desirable wood."

HULL Y. C. CRUISE.—The cruise of the Hull Y. C. was begun on Saturday, when twenty yachts started from the anchorage for Marblehead. The flagship, Silvie, was at anchor, and when she fired a gun at 11 A. M. the fleet started past in the following order: Steam yacht Annie S., Fred Pope. Schooner yachts Adrienne, C. S. Lancaster, and Vif, ex-Com. W. H. Crane. Sloops Active, Chas. Kenny; Zepho, A. S. Kilburn; Posey, R. S. Hunt; Rambler, J. J. Henry; Hera, Rear-Com. George R. Howe; Nimbus, J. J. Souther; Nebula, Clarence Jones; Carmen, Vice-Com. B. L. M. Tower; Venture, E. C. Neal; Optic, G. S. Hutchinson; Seabird, C. L. Joy; Ida, Emily and Helen, and the catboat Gisela, Herbert Aborn. Marblehead was reached with very little wind, at 5:30 P. M., and the fleet anchored all night. Expert and Vivian joined the fleet at Marblehead.

LARCHMONT Y. C.—The oyster boat race held last year by the Larchmont Y. C. proved such a success that it will be repeated this season, the date being Aug. 21.

BEVERLY Y. C.—The 112th regatta, the third race for Buzzard's Bay championship, will be sailed off Monument Beach on August 21 at 1 P.M. It will be open to club members only.

GRAVESEND BAY RACES.—A race for catboats was sailed on Gravesend Bay on July 31 over a course from a line between two stakeboats anchored off Stillwell's, in Gravesend Bay, to and around buoy 13 on the West Bank, thence to and around buoy 15, to starting point. The summary was:

CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Ripple	4 16 39	5 50 10	1 33 31	1 33 31
Aida Bender	4 16 51	5 52 28	1 35 37	1 34 52
Annie M.	4 16 20	. . . .	. . . .	. . . .

CLASS B.

Mary Dillon	4 18 12	6 08 35	1 50 23	1 50 23
Carrie	4 17 09	6 09 35	1 52 26	1 52 22¼
Elfin	4 17 05	6 06 11	1 49 06	1 48 51
Wave	4 17 50	5 58 21	1 40 31	1 39 38½
Psyche	4 18 06	6 16 43	1 58 37	1 57 22
Lillie	4 16 25	5 57 05	1 40 40	1 39 17½
Bon Ton	4 18 18	5 59 23	1 41 05	1 39 35
Puck	4 18 45	6 18 23	1 59 38	1 57 00½
Willet	4 18 51	6 12 45	1 53 54	1 51 16½

Ripple wins in Class A, Lillie Class B. The judges were Messrs. Carrigan and Whittlesey, of the Brooklyn Y. C.

CORLETT-TOMLIN MATCHES.—On Aug. 1, the second match was sailed off Guttenberg, N. J. over a 5-mile triangular course, two rounds, in a light S. W. wind. On the second the Tomlin fouled the Corlett while the latter was on the starboard tack. Later on the Tomlin lost one of her crew and picked him up again. The times were as follows:

	Start.	Finish.	Elapsed.	Corrected.
Jas. T. Corlett	2 19 52	4 33 37	2 13 45	2 11 55
P. J. Tomlin	2 20 18	4 52 01	2 11 43	2 11 43

The Corlett protests againt the Tomlin for fouling, but no decision has yet been made. The judges were Messrs. A. Cameron, John Gage and Frank Oliver, of the Hudson River Yacht Club.

SHREWSBURY RIVER.—A race was sailed on July 31 on the South Shrewsbury in a light S. W. wind. The summary was:

FIRST CLASS.

	Elapsed.	Corrected.
Mascotte, L. Rathbun	2 23 31½	2 24 50
Maud L., John Borden	2 26 10	2 26 10

SECOND CLASS.

Fern, Bracken Bros.	2 29 20	2 29 20

The judges were Thos. F. Chadwick and George C. Miller. The third race will be on Aug. 5.

SALEM BAY Y. C.—On July 31 the Salem Bay Y. C. sailed their first regatta of the season in a light S. E. wind. The summary was:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Dreadnaught, P. S. Chase	30.02	3 39 45	3 07 15
Nettie, T. J. Sargent	26.00	3 50 20	3 12 08
Cleopatra, G. W. Mansfield	34.03	3 50 15	3 21 35

SECOND CLASS.

Witch, Crowninshield	23.02	3 08 03	. . . .

THIRD CLASS.

Comus, J. Newcomb	19.01	3 27 45	. . . .

The judges were Clarence Murphy and H. A. Brooks.

OPEN SWEEPSTAKES RACE AT COMMUNIPAW.—On July 26 an open sweepstakes race for catboats under 20ft. was sailed over the Pavonia Y. C. course, from black buoy between Ellis and Bedloe's Islands, around buoy 17 off Robbin's Reef, two rounds, 15 miles in all. The start was near Murphy's bathhouse, Communipaw. The starters were Wave, Teaser, Julia, Fedora, Maud F. and C. A. Woolsey. The wind was from S. E., blowing fairly during the race, and coming out strong on the last round. Teaser led over the course, Julia parted her peak halliards and Fedora and Wave, having started ballast in the light wind at the start, had not enough in the breeze on the second round. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Teaser	2 11 16	5 36 29	3 25 13	3 22 13
Maud F.	2 12 26	5 41 44	3 29 18	3 29 03
C. A. Woolsey	2 12 02	5 49 38	3 37 36	3 37 36
Wave	2 10 40	Withdrew.		
Fedora	2 11 35	Withdrew.		
Julia	2 11 43	Disabled.		

Teaser takes five-seventhis of the sweepstakes and Maud F. two-sevenths. The judges were Messrs. John Govern, W. Reynolds and N. Schalkenbach, of the Pavonia Y. C.

GREAT HEAD Y. C.—On July 27 the Great Head Y. C. held a race off Winthrop, the courses being 6 miles for first and second, and 4 miles for third class. Owing to shoal water the start was not made until 6:30 P. M., the wind being then light S. W., dropping to a calm before the finish. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Clio, E. F. Dodge	23.00	1 25 31	1 21 47
Nellie D., E. Dixon	21.06	1 26 45	1 21 51
Clytie, E. A. Cook	19.07	1 29 06	1 22 35
Freya, H. Turner	23.04	1 36 53	1 33 24

Cadot, H. Belcher	16.10	1 34 36	1 32 32
The Pair, Landy & Waggett	Withdrawn.		

THIRD CLASS.

Topsy, 8-15-81, J. B. Mason	14.04	1 08 12	1 07 47
Annie, R. H. Mitchell	15.06	1 08 15	1 07 56
Elf, H. A. Joslin	15.09	1 16 19	1 16 05
Ariel, C. B. Belcher	13.08	1 24 35	1 23 31

The prizes were $5 and $3 in each class. The winners are: First class, Clio and Nellie D.; second, Zoe and Victor; third, Topsy 8-15-81 and Annie. The judges were Messrs. Harry Hutchinson, S. S. Smith and J. H. Hartley.

NEW YACHTS.—Mr. John S. Morris, owner of the Cora, steam yacht, will sell her and build a schooner 95ft. l. w. l., 24ft. beam and 5ft. 6in. in draft for Florida cruising. The model will be made by Mr. Phillip Ellsworth. Harlan & Hollingsworth, of Wilmington, are negotiating for the construction of a steam yacht for Mr. W. M. Singerly, editor of the Philadelphia *Record*.

ARRIVAL OF MIRANDA.—On the evening of August 3 the schooner yacht Miranda, lately purchased in England by Mr. G. W. B. Hill, arrived at Bay Ridge, after a voyage of 38 days from Cowes. On board was the owner, with Mr. J. Langdon Ward. The log shows light winds from the west on the entire voyage. Miranda will refit at once and join the New York Y. C. cruise.

ONEAGH.—This schooner, which for a year past has been reported as bound for America, is a veritable Flying Dutchman. According to the latest reports she had sailed for New York and was due here, but now she has turned up at Southampton from a cruise to Leath, and after some repairs will resume cruising.

AMERICAN Y. C.—The Regatta Committee of the American Y. C. has decided that the Atalanta has won all the prizes for which she was entered, and her owner has accordingly selected the Commodore's Cup. Yosemite takes the Emery Cup in first class, Lagonda in the second and Nereid in the third. Inanda wins the Haswell Cup and Orienta the prize for naptha launches. The race between Henrietta and Surprise was declared to be void, each side protesting.

A STEAM YACHT IN COLLISION.—On July 28, in Boston harbor, the steam yacht Annie S. and the ferryboat Hugh O'Brien collided, injuring the yacht forward. Each party blames the other, but the affair has not yet been officially investigated.

POOR POPOFFKAS.—A further proof, if further proof were wanting, of the wretched sea-going capacities of the circular Popoff gunboats of the Russian Navy was instanced here the other day, says the Odessa correspondent of the London *News*. The Nishni Novgorod started from Sebastopol to join one of her consorts in the evolutions in the Odessa roads. She encountered what at the worst I should term a stiff half gale, with a slightly choppy sea, a few hours' weathering of which sufficed to bother and damage her to such an extent that she was towed back to port. Even for harbor and coast defense, the unwieldy form and virtually unmanageable movements of this class of gunboat, or floating battery, in any but the smoothest waters, puts the Popoffka out of all serious calculation as an effective fighting arm of the Russian Navy. These vessels, designed by Admiral Popoff and so much lauded a few years ago, are now considered by all competent naval authorities in Russia to be practically valueless. I have seen it stated on former occasions in the Russian press that they were capable of attaining a speed of 12 knots, but as a matter of fact, under the most favorable circumstances, the maximum speed of the Popoffka is from five to six knots only.—*Exchange.*

CORINTHIAN Y. C.—On July 31 a meeting was held to decide protests. The first was by Carmen against Bessie, for fouling, on July 23, the race postponed from July 10. As both parties desired a re-sail it was ordered, the date not being fixed. The Petrel's protest against Favette for carrying a professional was allowed, and the race was awarded to Petrel. The protest of Myrtle against Peri was not decided, as the latter yacht was not represented. As it was uncertain whether her owner had been notified to appear, the decision was withheld until this question was decided.

YOSEMITE.—This steam yacht, so well known for the last six years, has at length found a purchaser, having been sold by Messrs. Field & Young, the New York yacht brokers, to the Canadian government, the price being $50,000. Yosemite was built in 1880 for Mr. Wm. Belden by John Roach & Son, at Chester, Pa., and is an iron screw steamer of 170ft., l.w.l. After using her for a time, during which she made a reputation by sinking a few canal boats and cutting in two the steamer Charlotte Vanderbilt, her owner failed to make the full payment, and turned her over to Roach & Son, since which time she has laid idle, being chartered for a short time by Mr. S. J. Tilden, and lately by Mr. W. E. Connor, who entered her in the A. Y. C. race last month. Mr. Connor agreed to surrender her at one week's notice, and will return in her from Halifax, N. S., at once, after which she will be delivered to the agents of her new owners and will return to Canada.

LAUNCH OF THE DAGMAR.—On July 29, at the yard of James Bigler, in Newburgh, was launched a steel screw steamer for Mr. George Bech, of Poughkeepsie, owner of the steam yacht Marina. The new yacht, designed by Mr. C. D. Miller, is 121ft. over all, 98ft. L.W.L., 16ft. 6in. beam, 9ft. 4in. hold, 7ft. 6in. draft and 93.25 tons displacement. Her engine, built by the Wright Engine Company, of Newburgh, is 12in. and 21in. by 20in., with a wheel 6ft. in diameter and 9ft. pitch. The coil boiler is 8ft. 6in. in diameter, 8ft. 2in. high, with 1,300sq. ft. of heating surface. The yacht will be schooner rigged, and will be fitted with a bridge and hydraulic steering gear.

HULL Y. C. OPEN MATCHES.—The annual open matches of the Hull Y. C. will be sailed on Aug. 14, under the rules of the N. E. Y. R. A. The classes and prizes are as follows: First Class—For centerboards and keel yachts measuring 31ft. and less than 40ft. sailing length; first prize for centerboards, $50; second, $25; first prize for keels, $50; second, $25. Second Class—For centerboard and keel yachts measuring 24ft. and less than 31ft. sailing length; first prize for centerboards, $40; second, $20; first prize for keels, $40; second, $20. Third Class—For centerboard and keel yachts measuring 21ft. and less than 24ft. sailing length; first prize for centerboards, $35; second, $20; third, $15; fourth, $10; first prize for keels, $35; second, $20; third, $15; fourth, $10. Fourth Class—For yachts measuring 19ft. and less than 21ft. sailing length; first prize, $30; second, $20; third, $15; fourth, $10. Fifth Class—For all yachts measuring less than 19ft. sailing length; first prize, $30; second, $20; third $15; fourth, $10; fifth, $5. Entries must be made and numbers obtained of E. H. Tarbell, 111 Washington street, Boston, before 12 o'clock noon of Friday, Aug. 13. The Regatta Committee consists of E. H. Tarbell, chairman; Dr. W. H. Litchfield, secretary; B. W. Rowell, F. C. Brewer, O. A. Ruggles, W. A. Cary, W. K. Miller. The following gentlemen will officiate as judges: Chas. V. Whitten, chairman; B. W. Rowell, W. A. Cary, F. M. Griffin, O. A. Ruggles, Peleg Aborn, W. K. Miller, C. F. Loring, J. B. Forsyth.

OPEN BOAT SWEEPSTAKES.—A match has been made between the boats Susie S., Annie and Inanda, to be sailed on the Sound, either at Larchmont or New London, ten miles out and return, between August 20 and 25. The entrance will be $100 per side, open to any boat of 25 to 28ft.

SEAWANHAKA C. Y. C.—The club book for 1886 has lately been issued in the same serviceable style as last year. Among the additions are the flags of the U. S. Signal Service for storm, wind and weather signals. In spite of the serious troubles which threatened the club last winter the membership now is 210 compared with 213 last season, while the fleet is now 99 in place of 96, divided as follows: steamers, 14; schooners, 18; cutters, 22; sloops, 22; open boats, 23. The club yacht Venture is now in commission at the Basin for the use of members.

LAUNCH OF A STEAM YACHT.—On July 27 a steam launch named Loretto was launched by Messrs. Connolly & Shea, at Twenty-seventh street, Brooklyn. The new boat is 60ft. long, 11ft. beam and 5ft. 6in. deep, with engines 7 and 12 by 10in. The hull is of wood. The owners are Messrs. Muldoon & Hilerlane, N. Y.

ANOTHER RECKLESS NAVIGATOR.—Undeterred by the fate of other similar adventurers, a fisherman of North Truro, Mass., now proposes to start for a voyage around the world in a 13ft. dory, 4ft. wide and 30in. deep. He proposes to row across the Atlantic, thence by way of England, France and Spain to the Mediterranean, Red Sea, and so to Australia, and by steamer from there to San Francisco; then by rail to the Mississippi, down it to the Gulf, and up the Atlantic coast.

KRIEMHILDA.—*Land and Water* is the authority for the statement that Com. MacDonough, of San Francisco, has bought, not leased Kriemhilda. She is a famous old cutter, built at Cowes in 1872 and is 82.2ft. stem to sternpost on deck, 17.5 beam and 11.1 hold.

POTLEAD FOR BOTTOMS.—After trying various compositions Priscilla has gone back to graphite, or, as it is commonly called, potlead, for a racing bottom. The blacklead is that especially prepared for yachts by the Dixon Crucible Co., who make a specialty of lead for that purpose. The iron hull was thoroughly scraped, then painted with red lead, after which the black lead is applied in varnish, making a very smooth bottom for racing.

ANOTHER MIGNONETTE.—Messrs. Wallin & Gorman launched last week another of the little cruisers for which they are rapidly making a reputation. This latest, the Blanche, built for service at Newport, R. I., is 35ft. long, 9ft. beam, 4ft. 6in. hold and draws nearly 6ft. Her outside iron weighs 4,500lbs., with 6,500 inside, cast to fit. The boom is 26ft., bowsprit, outboard, 14ft., and topmast 18.

DAUNTLESS.—Mr. Colt's schooner has been on the screwdock for repairs and alterations, prior to the cruise. Her keel has been cut away somewhat at the ends and deepened amidships, giving a decided rocker, while a larger rudder has been hung. She has also been caulked and newly coppered and with her new sails is once more in racing trim.

NEW HAVEN Y. C. LADIES' DAY.—On July 27 the New Haven Y. C. held its ladies' day sail, 14 yachts taking part. After the sail an entertainment was given in the club house.

OSWEGO Y. C.—The 5th annual regatta of the Oswego Y. C. will be sailed on Aug. 6, over the second class course of the club. The yachts of the club will race for the Mott championship pennant besides the regular class prizes as follows: First class, first prize, $100; second, $60; third, $40. Second class prizes $75, $50 and $25. A second prize will be given if three yachts start, a third if four start.

CAROLINA Y. C. REGATTA.—On July 23 the Carolina Y. C. sailed a regatta on Wrightsville Sound over the club course. The entries were: Glide, R. H. Cameron; Restless, J. McR. Cowan; Lillian Florence, H. M. Bowden; Rosa, W. L. Smith, Jr.; Ripple, Norwood Giles; Vixen, H. R. Latimer; Idler, Pembroke Jones, and Mascotte, Geo. D. Parsley. The winners were Vixen in Class 1, and Lillian in Class 2.

STRANGE IF TRUE.—Some genius at Marblehead, according to Boston papers, has discovered that Galaten's stern is exactly like Puritan's, also that Galatea has a single bowsprit with no jib-boom, "just like America."

BRUNHILDE.—San. Francisco, Aug.—The Brunhilde arrived here to-day on her cruise around the world. The yacht reached Bombay Jan. 7, Hong Kong April 8, Yokohama April 20. From here Mr. Phelps will sail to Honolulu and then set out for the passage around the Horn home.

GENESTA.—On August 3 Genesta sailed in the Royal Yacht Squadron Regatta, from Cowes to Yarmouth and back, with Aline, Egeria, Lufra, Waterwitch and Sleuthhound. She came in first, after a day of very light winds, but was beaten on allowance by Sleuthhound.

NEW YORK Y. C. CRUISE.—A very large fleet, comprising nearly all the large yachts of New York and Boston, will join the cruise on Wednesday at New London or will be at Newport. The Goelet cups will probably be raced for on Saturday.

You can work sheet, centerboard, etc., so easy with Lake's Steerer. See second page.—*Adv.*

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

J. A. L.—The season is given in our gun columns.

W. D. N.—New York woodcock season opens August 1.

G. O. W., Champlain.—You can secure the goods through any of the dealers.

N. E. W.—You will find the English gun reports in Greener's "Book of the Gun."

P., Fort Clark, Texas.—Does a common sense game-law protect deer during the running season? Ans. No.

F. D. H.—In Sunapee Lake you will find landlocked salmon and trout fishing. Season extends through September.

J. W. J., New Haven.—You will find prairie chicken shooting in vicinity of Bismarck, Dakota, whence you may branch out to several good grounds.

S. E. C., Brick Church, N. J.—Can you inform me as to where I can get different sorts of hard woods for making fly-rods? Ans. Write to our advertising dealers in fishing tackle, who may supply you.

UNDINE, Rockaway, L. I.—The Broadway Theatre was built in 1847, on the east side of Broadway, between Pearl and Worth streets. It was closed April 2, 1859. The Mount Pitt Circus was built in 1826, on the north side of Grand street, opposite its junction with East Broadway, at the corner of Sheriff street.

CAMPER.—1. Mr. Chas. Fenton's address is Number Four, New York. 2. The axe is not manufactured that we are aware of. 3. You can procure compass of any one of the dealers who advertise in the FOREST AND STREAM; they cost from $1 to $5. 4. Write to Mr. Fenton, he will put you in the way of the game you want. 5. You should have a guide.

R. B. S., New York.—Is there any trout and bass fishing at or near Stevens Lake, Sullivan county, N. Y., and what flies or bait would I require during September? Ans. The trout season will be over in September in this State. There are no bass in that lake, unless recently introduced. You may find perch there. For the latter use a red-ibis or a brown-hackle, or a worm or minnow bait.

A. F. O., Albany, N. Y.—Will you be kind enough to inform me if there is a successful German carp breeding pond very near New York City? I am trying to get information on this subject, and, as I expect to visit the city in about two weeks, would like to avail myself of the opportunity to learn something by personal observation. Ans. There are no ponds near the city where carp are bred for market. Perhaps a visit to the ponds of Mr. E. R. Wilbur, Sayville, Long Island, would be instructive.

O. G. L., Comstock, Mich.—My little boy, ten years of age, wishes a natural history. He is well advanced for his years. Will you please advise something that will be suitable for him? Ans. Rev. J. H. Langille's "Our Birds in their Haunts" will be suitable if he is interested in birds; and, that is likely to prove as satisfactory a subject as any branch of natural history. Let him join the Agassiz Association, of which *St. Nicholas* is the official organ; and Mr. N. H. Ballard, Lenox, Mass., the secretary, will send a manual of the Association, price (we believe) 50 cents.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

Made simply with boiling water or milk. Sold only in half pound tins by Grocers, labelled thus:

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.

THE PERFECT FLY-BOOK.

Spalding's Hammered Bait.

THE BRAY meets a want long felt by anglers. Flies may be as quickly attached in this book as they could be thrown into an ordinary envelope, and are as readily detached, taking all flies regardless of size or length of snell.

A. G. SPALDING & BROS., Sole Selling Agents.

The success with which our NEW HAMMERED BAIT is meeting attests to its superiority.

SOLE AGENTS FOR THE

Gogebic Reels, Brooks' Line Dryer and other leading specialties in Fishing Tackle.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Owners of Beagle Bitches!!

I offer the services of the following famous English beagle stud dogs:

CAMERON'S RACKET (Rally—Louise), pure Rowett; beautifully marked white, black and tan; a grand hunter; winner of first and special, Cleveland, 1886, only time shown; a grand stock-getter.

RACER (Rally Lill), pure Rowett; white, black and rich tan; a phenomenal stud dog; sire of Little Duke, Pet, Racer, Jr., &c., &c.

CHAMPION BANNERMAN, imported; height, 11½ in.; the only champion basket beagle in the country; winner of three 1sts, three championships and seven specials Has never been beaten when scored by points. A wonderful stock-getter and splendid little hunter.

Stud Fee, for either, $10. Full particulars on application. A. C. KRUEGER.
tf Wrightsville, York County, Pa.

CHAMPION LAVERACK SETTER

ROCKINGHAM,

The acknowledged best English setter in America, and a grand field dog. Will be allowed to serve a limited number of approved bitches. Fee $50.

FRANK WINDHOLZ,
525 Sixth avenue, New York.

SMALL IMPORTED PRIZE PUG DOG

Silver Shoe.

Particulars, pedigree and references to FRANK QUINBY, P. O. Box 555, N. Y. City. Stud fee, $10. may20,tf

In the Stud.

The "Boss" in Stud.

Services limited to ten approved bitches, at $50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being very large and finely marked.

Boss' Record.—Vhc. at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class *and special prize as the best American bred mastiff* at the Westminster K. C., New York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—*Am. Field, April* 8, 1886.

In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—*Sporting Life, March* 31, 1886.

A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best of pedigree and markings.

Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair $50; others from $15 to $20 each.

J. L. WINCHELL,
jy1,tf. Fair Haven, Vermont.

Gus Bondhu

IN THE STUD.

Imported from Mr. Llewellin's kennels (he is bluest of the blue), by Dashing Bondhu ex Novel. He is also a grand field dog, as his record shows at the late trials of the N. F. T. Club at Grand Junction, beating such noted dogs as Gladstone Boy, Mainspring, Bessie A., Gath's Mark, Trinket's Bang and other fine ones. Fee $35. A. M. TUCKER, 85 Main street, Charlestown, Mass.

MEMNON,

Champion Greyhound of England and America, in the stud. Puppies for sale.
TERRA COTTA KENNELS, Box 345, Toronto, Can.

Prize-Bred Collies.

A choice litter by Bounce (sire of Braw an' Bonnie, 1st and special, New Haven) out of Raspberry Girl, by Rutland out of Strawberry Girl; five dogs and three bitches. They are as promising a lot as the Eclipse—Nesta litter, which includes Glengarry, Heather, Clipper and Lintie. Price on application.

At the Stud.—CLIPPER, the only one of the Eclipse—Nesta litter at public service. Fee, $25. Also BOUNCE, by Tramp, averages nine pups to the litter and gets winners. Fee $15.
JAMES WATSON, P. O. Box 770, Philadelphia.

DO YOU WANT A DOG

DOG BUYERS' GUIDE. Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them Mailed for 15 Cents. ASSOCIATED FANCIERS, 237 S. Eighth St. Philadelphia, Pa.

MT. PLEASANT KENNELS.—THE LARGest in America. For Sale—Two first-class fox-terrier bitches, imported stock, one litter light-weight bull-terriers, one pointer dog, one Gordon setter bitch, one snow white light-weight bull-terrier dog. For particulars address.
C. T. BROWNELL, Box 335, New Bedford, Mass.

HIGH BRED POINTERS AND SETTERS.—WE breed and dispose of nothing but first-class broken and unbroken dogs and puppies. Address ELM GROVE KENNELS, South Norwalk, Conn.

LLEWELLIN SETTER PUPPIES, WHELPED June 21, 1886, by Gun (Gladstone May B.) out of Morning Star (Dashing Dan—Daisy Starlight), all black, white and tan and blue belton. Ready to ship when 6 wks. old; order now. For pedigree and price address CHAS. YORK, 9 & 11 Granite Block, Bangor, Me.

ENGLISH SETTER PUPPIES.

From imported Flora, by Roy (Dash III.—Bessie), whelped March 3, 1886. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch, requiring but little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, and to show as well in the field as on paper. Address, H. J. PIERRE, Winsted, Conn.

Pointer Puppies For Sale.

A dog and bitch, liver and white, 10 wks. old, by Bang Bang out of Fan Fan. I will take one or two dogs South to train for the field trials. For terms address J. N. LEWIS, Ramseys, N. J. jy22,3mo

ENGLISH SETTER PUPS, BY CHAMPION Dash III. out of a champion Leicester and Nelly bitch. WM. W. REED, 85 Milk street, Boston, Mass. jy22,2mo

CHAMPION TRAINED BEAR, COON, FOX, Gray Squirrel and Rabbit Dogs; Lop-ear and Himalayan Rabbits; Abyssinian Guinea Pigs; Ferrets. H. C. GRAFF, Kensington, Ohio. jy22,tf

WHITE BULL-TERRIER YOUNG ROYAL Prince (A.K.R. 2102). Fee $15. Pups by Royal Prince and 50 bull-terriers for sale, dogs, bitches and puppies, white or colored, large or small kinds; all first-class stock; state what you want. J. W. NEWMAN, 87 Hanover street, Boston, Mass. jy22,3mo

FOR SALE.—A MASTIFF DOG, 3 YRS. OLD, of very large size, gentle, kind and fine looking. Will be sold at a low price as the owner has no place to keep him. Address P. O. Box 1053, Clinton, Mass. jy22,3t

FOR SALE.

English setter pups, Dash III. stock; will be sold low. Address E. H. HARTSHORN, 71 Blackstone st., Boston, or Alfred G. Larkin, West Berlin, Mass. jy22,4t

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

POINTERS.

I offer for sale cheap a very choice lot of pups, by Dash (champion Sensation ex Grace) out of Zoe (A.K.R. 1444), 3 mos. old. Price $10 each. Address A. J. LEE, Southington, Conn. 1t

FOR SALE.—DARK RED IRISH SETTER bitch Red Biddy (Chief ex Biddy), 3 yrs. old, in whelp to champion Glencho. Sold for no fault. GEO. LAICK, Tarrytown, N. Y. 1t

FOR SALE.

Handsome, healthy pointer puppies by the celebrated field and bench champion Fritz, A.K.R. 1351 (Beaufort ex Sport) out of Virginia, A.K.R. 1357 (Sen Satire ex Rose).
C. W. LITTLEJOHN,
1t Leesburg, Va.

HIGH CLASS FOX-TERRIERS FOR SALE.—St. Joe (champion Fennel ex Molly), a grand youngster, black tan marked head, stands low on the very best of legs and feet, exceedingly hard, dense coat, a gay, sprightly terrier, full of fire and character. Norman II. (champion Fennel ex champion Silver), rich, even marked, long, lean head, a splendid terrier, game and beautifully bred. Also a very good bitch shortly in season. FRANK C. WHEELER, 112 Dundas street, London, Ont. 1t

FOR SALE.—GORDON SETTER PUPS. A FEW of the above breed, out of Rose, by Grouse II. to be closed soon. Correspondence solicited. Address, QUINEBAUG KENNELS, Danielsonville, Conn. jy8,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 12, 1886.

VOL. XXVII.—No. 3. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

CONGRESS AND GAME LAWS.

IT has been repeatedly suggested that Congress be asked to legislate on game protection. At the recent meeting of the National Sportsmen's Association a petition to Congress was regarded as the solution of the problem of how to preserve the vanishing race of wildfowl. Had Congress jurisdiction in this matter, it might be worth while to seek a national law forbidding spring shooting; but it is quite clear that Congress has no power to legislate on the subject. On the other hand, there is every ground for the opinion that we must look to State Legislatures alone for such laws as may be needed.

It is elementary law, laid down by commentators and frequently announced in judicial decisions of the highest authority, that the protection of game and fish is within the police power of a government. It is equally well established that, before the formation of the National Government, the police power over their respective territories was vested in the States, and that they, never having ceded that power to the Federal Government, are still possessed of it.

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."—*U. S. Constitution.*

"The National government possesses no powers (as toward the States) but such as have been delegated to it. The States have all but such as they have surrendered."—*Gilman v. Philadelphia, 3 Wall 713.*

"The powers bestowed by the Constitution upon the Government of the United States were limited in their extent, and were not intended, nor can they be construed to interfere with other powers before vested in State governments which were, of course, reserved to those governments impliedly, as well as by an express provision of the Constitution. The State governments, therefore, retained the right to make such laws as they might think proper, within the ordinary functions of legislation, if not inconsistent with the powers vested exclusively in the Government of the United States, and not forbidden by some article of the Constitution of the United States, or of the State."—*Golden v. Prince, 3 Wash. 316.*

"We admit that the deposit in Congress of the power to regulate foreign commerce among the States was not a surrender of what may properly be denominated police power. * ** It [police power] extends to the protection of the lives, limbs, health, comfort and quiet of all persons, and the protection of all property within the State."—*Railroad Co. v. Husen, 95 U. S. 465.*

"In the American constitutional system the power to establish the ordinary regulations of police has been left with the individual States, and it cannot be taken from them, either wholly or in part, and exercised under legislation of Congress. Neither can the National Government, through any of its departments or officers, assume any supervision of the police regulations of the States. All that the Federal authority can do is to see the States do not, under cover of this power, invade the sphere of national sovereignty, obstruct or impede the exercise of any authority which the Constitution has confided to the nation, or deprive any citizen of rights guaranteed by the Federal Constitution."—*Cooley's Constitutional Limitations [5th ed.], p. 708.*

"The State of Missouri has as much right to preserve its game as it has to preserve the health of its citizens."—*State v. Randolph, 1 Mo. App. 15.*

A statute of New Jersey forbidding non-residents of the State to take oysters, clams or shells from the waters of the State was held to be constitutional. As fish have frequently been judicially decided to be like game, *ferœ naturæ*, the following language of the court applies to the question before us:

"It [commerce with foreign nations and among the several States] is this intercourse which Congress is invested with the power of regulating, and with which no State has a right to interfere. But this power, which comprehends the use of and passage over navigable waters of the several States, does by no means impair the right of the State governments to legislate upon all subjects of internal police within their territorial limits, which is not forbidden by the Constitution of the United States, even although such legislation may indirectly and remotely affect commerce, provided it do not interfere with the regulations of Congress upon the same subject."—*Corfield v. Coryell, 4 Wash. 373; see also McCready v. Virginia, 94 U. S. 391.*

The Committee on the Judiciary of the House of Representatives, to whom had been referred a proposed bill to give to the several States equal right with the citizens of each State to fish for floating fish in the navigable waters and lakes of the latter, presented an unfavorable report in May of this year. The report (printed in our last issue) closed in these words:

"That case [Blades vs. Higgs, in the House of Lords] decides clearly and distinctly that if A, a hunter, finds, kills and carries off in one continuous act, any game, *ferœ naturæ*, on the land of B, the dead game is the absolute property of B, *ratione soli.* That the same doctrine is applicable to fish caught and taken from the waters of the owner cannot be questioned; and the cases referred to by the judges in the discussion of the cases above cited, mention fish as of the same character as animals and birds. Your committee, therefore, being of opinion that the navigable waters within each State belong to it, subject to the paramount right of navigation for the benefit of its own people, it has the right to secure the exclusive right of fishing in them to its own citizens by virtue of their common property in said waters, and that the citizens of other States have no constitutional right, nor can Congress confer any, to participate in them."

When migratory game is properly protected by statute it will be not by Congressional but by State legislation. Such legislation cannot be secured by sportsmen meeting in national convention and passing resolutions to petition Congress. It must be the work of determined, persistent and not easily discouraged men who will present the subject in a proper light to State legislatures, and then see to it that the votes of the members are not bought up nor dickered for by the lobbies.

SENATOR EDMUNDS is on a fishing excursion in Canada, his companions being ex-United States Marshal W. W. Henry, and Editor Marden, of the Lowell, Mass., *Courier*. Senator Edmunds was one of the "simple wise men" whose characters as men, anglers and camp comrades were discussed in so charming a manner by George Dawson in his "Angling Talks." Of the "Distinguished Anglers of Our Time" there mentioned were Vice-President Wheeler, President Arthur, General Spinner, Senator Edmunds, Judge Folger, Governor Seymour, Chief Justice Ritchie (of New Brunswick), and Chief Justice Gray. In the short time since that writing death has made sad havoc in the ranks of the goodly company of angling friends, Dawson himself having been the first to go. Ah! how the years flow by as rivers to the sea.

FABLES have a wonderful vitality. The wisdom which three thousand years ago was made by the fabulists of India to proceed out of the mouths of brutes has currency to-day, and you may buy collections of fables as old as the hills. The FOREST AND STREAM has gathered for republication seven of the Fables printed in these columns a few years ago. They have been illustrated by the author, "Awahsoose," and make capital mid-summer reading.

GEORGIA SPORTSMEN are considering a new game law. The report given in another column contains gratifying evidence that the Augusta movement is in good hands.

THE BOTTLE JOKE is passed around by the funny men who think that it is all of angling to swill whisky.

THE SCARCITY OF BLUEFISH.

IN another column we give a report of a meeting of citizens living along the Great South Bay, Long Island, to consider the bluefish and menhaden question. For some years past there has been a growing feeling that this great spawning ground should be kept free from nets, and this feeling was strongly illustrated at the meeting, where a large majority were shown to be in favor of the abolition of all nets in the bay. These nets have been set in the channels to capture the fish as they enter, and it has been customary to haul seines upon certain of the shallower waters. These seines, for such they are in reality, are technically known as "fly nets," and the owners claim to make a distinction because the net is not hauled on shore, as is usual in the case of seines; one end is fastened to a stake out in the water and the other is swept around to the stake, and the inclosed fish are then lifted out by making a bowl of the net by drawing the lead line in ahead of the buoy line.

There have been complaints by the netters this year that certain persons, supposed to be connected with some of the angling clubs, have placed obstructions upon these shoals to prevent netting, and local feeling has run high from this cause.

It appears to us that every dweller upon the south side of Long Island, whether farmer or hotel proprietor, should see that it is to his interest to abolish all nets from this bay. The net fishermen are not many in numbers, and the fish taken in the bay bring them but a small sum in comparison to the money that would be left by anglers, who would hire these same fishermen and their boats if the fishing in the bay would warrant it, and these men who now get but a bare living from the fish they take, would find an increased revenue from the influx of men who, as a class, spend five times the value of any fish which they capture, and this sum would be distributed among the hotels, boarding houses and the baymen, not to mention a possible demand for houses or building lots by those who like residences near such good fishing ground as the Great South Bay has been, and which in former years attracted just such a class of men who have built up Bay Shore, Babylon and Islip.

Make the Great South Bay a grand preserve to be fished by hook and line alone, let the menhaden come and go out unharmed and in a few years the increased fishing will attract more dollars to the villages along its shores than the netters would obtain in a lifetime. The market gardners would find a home demand for their produce; the saving of the commissions on which would more than repay them for letting the menhaden alone and allowing them to spawn and attract the food fishes, instead of putting these bony fishes into their soils as soon as they appear in the bay. We have no sympathy whatever with this manufacture of menhaden oil, which, if we understand the question rightly, is largely used for diluting other and more valuable oils, and we believe that it is this increased destruction of the menhaden which is responsible for the gradual diminution in the catch of bluefish for some years past. As we have said before, we do not lay the extraordinary scarcity of bluefish this year entirely to the menhaden steamers, for the fish may come again next year, but never while this menhaden oil industry is pursued as it is now will the bluefish and some other of our valuable food fishes be as plentiful as they have been in the past. It may not be possible perhaps to abolish this industry in which so much capital is invested, but it is possible to restrict it in our bays and harbors, and this should be done at the earliest possible moment.

TRAP-SHOOTING REFORM.—A new order of things is demanded. It is high time shooting tournament rules were so modified as to insure an equitable division of the prizes among amateur competitors. When Carver or Bogardus come into a town with the circus it is a treat to see them shoot, and every man who wishes to know what can be done with a gun or rifle is justified in paying gate money for the show. But it is all foolishness for amateur trap-shooters to pay in entrance money to make up a purse for the sake of seeing a purse-hunting, make-his-living-at-it shooter display his skill at raking in the prizes.

MISS KATE FIELD has joined the ranks of the vacationist scribblers, and in a letter to the *Graphic* writes in enthusiastic praise of July jack-hunting of deer in the Adirondacks.

THE NATIONAL PARK POLICE.

THE failure of Congress to appropriate an adequate sum of money for the protection of the Yellowstone National Park is one of the most astoundingly foolish and short-sighted acts of the present incompetent and neglectful House of Representatives.

For more than a year excellent work has been done by the Superintendent, Col. Wear. This gentleman has made an excellent and efficient officer and the personnel of his staff of assistants is almost without exception very satisfactory. The protection he has given to the game and to the natural curiosities of the region commends his work to all who are familiar with it. Jack Baronett, who recently came in from a trip through the Park, reported having seen fifty elk and a number of antelope within five miles of the Superintendent's office. The Superintendent has put up over 200 signs to mark the names of places of interest and trails; some fencing has been done and many other little improvements made this season, all of which will add to the comfort of visitors and tend to the better protection of the Park.

Col. Wear has had much to contend against, but at length, after unceasing effort and much disappointment, he has succeeded in getting his force of assistants into such shape that they perform thoroughly the work which they have to do.

Visitors to the Park have learned that the authority of these officials must be respected and obeyed, and this being understood, violations of the law have been few in number. The members of the force are now, most of them, men of several years experience in the Park and are familiar with it and their duties.

The failure to appropriate a sum of money for the pay of this force and for contingent expenses, will undo the work of the past few years, unless some steps are promptly taken to remedy the omission. This failure throws the present force out of office, and leaves the Park a prey to whomever may choose to spoil it.

We believe that the Secretary of the Interior is authorized to call on the Secretary of War for troops to assist in protecting the Park, but it is manifest that a company of cavalry can accomplish but little as a police force in comparison with a staff of experienced men, like those under Col. Wear. The soldiers have no special interest in the region such as is felt by the present police. They are ignorant of it, and will be careless. There is danger that hunters will slip off into unfrequented localities and kill game, and that careless campers or malicious persons will start fires which may do an infinite amount of damage.

If there is any way in which it can be done the present force ought to be retained in their positions at least until the hunting season is over. In less than two months travel in the Park will have ceased, but there will remain two or three months more, during which the game if unprotected can be slaughtered in great quantities. For it must be remembered that this game, having for a year or two been free from molestation by hunters, is now comparatively tame, and can be approached without great difficulty.

There is unfortunately no appropriation out of which any compensation can be paid to the Superintendent or his assistants for any period subsequent to Aug. 1. The crass folly of appropriating money to build roads and at the same time permitting the natural curiosities of the Park, its game and its timber to be destroyed without let or hindrance is apparent, and the course of the House of Representatives in this matter—while it perfectly agrees with its action on other subjects of importance—fills one with an ever increasing contempt for our lawgivers. To bring the Park up to its present condition has cost years of labor and many thousands of dollars, and now a heavy-witted House throws the whole thing overboard by refusing to appropriate funds for its protection.

We apprehend that the greatest danger to the Park will be within the next six months, for no doubt Congress will make some provision for its protection at the next session.

Were it legal for it to do so, the force in the Park might perhaps consent to serve without pay until Congress meets again, trusting to that body to provide compensation from Aug. 1, but the Interior Department cannot accept their voluntary services if offered. An Act approved May 1, 1884, provides that—

> No Department or officer of the United States shall accept voluntary service for the Government or employ personal service in excess of that authorized by law, except in cases of sudden emergency involving the loss of human life or the destruction of property.

If it were not for this we should earnestly urge Colonel Wear to do all in his power to hold his force together as long as possible. We feel sure that he will regret to see all the good work that he has done here go for naught. We know that he feels personal pride in what he has accomplished in the Park, as well as in the force he has built up and organized. He knows, too, that he has a strong support among the more intelligent members of Congress, in the Interior Department and among the people at large.

We feel sure that, though Congress has been incredibly neglectful of the people's interests during the session just ended, the blunder which has been made will soon be repaired. The end is not yet, and we believe that next winter the voice of the people will find expression in a way that Congress will listen to with respect.

THE VACATIONIST CORRESPONDENTS go so far as to pitch into the protection of moose and deer in the Maine woods, and ask, in the name of the much injured poacher, that the game laws of that State be so modified that shooting shall be lawful enough just to thin out the wonderfully-increased deer and caribou and thus keep back the wolves which are coming on their tracks. Alas, for such stupidity! What in the name of all that is true has increased the deer in Maine? Is it jackshooting the mother does in the vacation season, when these writers would like to be paddled on to them, but when the death of the poor creature—poor in a double sense—is sure to be followed by the starvation of one or two helpless fawns? Has jacking caused them to increase? Or has that much worse method, hounding and clubbing, done it? That the deer have increased in Maine, under just such laws as she has, and that the deer are there to be taken by fair means in open season, is sufficient reason for letting her statutes remain just as they are.

LOCAL OPTION GAME LAWS are proposed by certain parties in Arkansas, who probably think that if once the State law can be done away with they can arrange local legislation to suit themselves. The State law, particularly the restriction on marketing game, has worked well, and it should be retained.

The Sportsman Tourist.

Addresss all communications to the Forest and Stream Pub. Co.

IN CAMP ON TWO MEDICINE.

ONE looking at the muddy waters of the Missouri at Bismarck would little think that its sources are clear mountain streams. This mighty river drains a vast scope of mountain country. To the sportsman of means and leisure nothing could be more pleasant than to explore the mountain head of every one of its tributaries, from the southernmost branch of the Yellowstone to the north fork of Milk River. One would always find an abundance and great variety of game for camp use. Any pool would supply a pail of trout, and as for scenery, it would be ever varied and changing. I doubt if any place in the world affords more grand and inspiring views than the Rocky Mountains. The greater part of these streams have never been explored, especially the more northerly ones.

Our party last fall was probably the first of white men who ever visited the head of St. Mary's. If you remember, our hunt ended at Cutbank. After reaching the trading post and resting a few days, we got another outfit of grub, and started for Two Medicine. After crossing the south fork of Cutbank this trail climbs an immense ridge. From the summit one can see, far below, the source of Two Medicine: two beautiful lakes set in a group of massive mountains.

It was the 11th of December when we arrived there. The lower lake was already frozen over, and we crossed on the ice to the west shore and built our cabins. We had barely finished them when the great snow storm came, and when it was over we found all about us over three feet of feathery snow. There was a great deal of conjecture as to how the game would stand this immense fall of snow. Bears, of course, were snugly esconced in their dens, dreaming probably of by-gone days in the sarvis berry patch. We wondered how the mountain lion, the lynx, fisher, martin, could move around when even the snowshoe rabbit sank to the top of his back at every leap. Every tree and bush was weighted down with a great shroud of snow. Where would the different species of grouse find food? Even about our cabins we found them buried deep in the snow, and one day Ben actually caught one in his hands. But how would the larger game, upon which we depended for our winter's meat, fare? Could the deer and elk push out on to the prairie where there was but little snow, and whither our horses had already gone? We feared that the short-legged bighorn would perish, but in a day or two we could see with the glasses great yards on the sides of the mountains where these plucky animals had trodden and scraped away the snow to enable them to get at the luxuriant mountain grasses. And Norris one day surprised a band of old bucks near the cabins; he wounded one, which slid into a deep coulie, where it lay at the bottom completely covered with snow. Leaving his gun on the bank he slid down after it, but the minute he struck it, it jumped up and took the back track up the mountain, leaving Norris in blank surprise, holding in each fist a wad of hair which he had pulled from its rump. After this storm we had at least ten days of still weather with not a breath of wind, something most unusual in this mountain region. During the interval we busied ourselves making snowshoes. We had several bighorn skins, which I grained with the back of a draw shave and cut into strands; the bows we made of willow, but as yet the snow was too light for them to be of any use.

One day we went fishing up to the head of the lake, distant about two miles. We took turns breaking a trail, and were about two hours getting there. Where the inlet comes in we cut holes in the ice, and in a short time had all the trout we cared to pack home. I noticed several peculiarities in these fish which our Eastern trout (*Salmo fontinalis*) do not possess. I have caught them at all seasons of the year, and have always found more or less of them in spawning condition, and again they are always in good condition for the table; but the *Salmo fontinalis* is during several of the winter months, especially in the Adirondacks, wholly unfit for the table, being soft, flabby and strongly flavored. In September, as I know by experience, one can catch very large trout here, some of them weighing as much as 4lbs., but during our stay at the lake we never caught one which would weigh over a pound, although we fished in deep and shallow water in different parts of the lake, and in the inlet and outlet. Where could the big fish have cached themselves?

One morning we saw an immense column of snow rising obliquely from a mountain near the head of the lake. The wind was coming. In less than an hour it came sweeping down the cañon and roaring through the woods, blowing the great masses of snow from the heavily laden branches of the pines, and making it so dark that we were obliged to light the candles. Often during the winter I have seen the wind play strange freaks with the snow. Sometimes it would blow a single straight shaft of snow far out on to the prairie; again, bridge the space between two mountains, and once I saw a thin shaft of snow blown from a mountain five miles distant and fall in a graceful curve on to the lake.

After this, there was scarcely a day when we did not have a flurry or two of snow, accompanied with more or less wind. The snowshoeing became good, and I had as a result grouse, rabbits, fish and bighorn to choose from for every meal.

I spent the greater part of my time hunting grouse, of which there are several species. In the valleys along the streams, where willows and scrub cottonwoods, with quaking asp groves are thickest, is the winter haunt of the ruffed grouse. Not being so skillful as to "knock off their heads at 50yds. every time" with a rifle, I invariably took the shotgun and shot them as often sitting as I did on the wing. I know that it is very unsportsmanlike to kill a grouse in a tree, but all compunctions as to the method are silenced when one sits up to the table to enjoy the juicy broil or savory stew.

The haunt of the spruce grouse is further up on the mountain sides, where young pines are thickest. Like the ruffed grouse, in winter these birds feed on the buds of cottonwood, quaking asp, willow, and the tender shoots of pine. As a table bird I found these very inferior to the dusky grouse, and consequently I seldom hunted them.

By the majority of sportsmen the ruffed grouse is considered the king of American game birds, not only in wariness and swiftness, but in beauty of plumage and delicacy of flesh. My opinion is that the dusky grouse (*Canace obscura*) is entitled to this position. In winter its haunt is far up on the mountain sides among the scrub pines at the edge of timber line, right under the shadow of the great bare cliffs and hedges which cap the tops of the mountains, and during this season it lives entirely on the needles and shoots of this pine. As the spring gradually approaches they begin to come down among the open parks along the ridges and creeks, where they mate and raise their young. In the mating season the neck of the male bird swells to an enormous size, and he may be heard at all times of the day making that peculiar bellowing sound (in calm weather it may be heard a mile) which has given it the local name of bull grouse.

Unlike the spruce and ruffed grouse in these mountain wilds, this is at all times a wary bird, exceedingly difficult to approach. In spring and fall the best place to hunt them is along the steep ridges, among the scattered clumps of pine, and the minute you flush one he clears off down the mountain side and into the thick woods. You may see one alight in a pine, and as you approach you hear him sail out of the opposite side and perchance may catch a glimpse of him. To successfully bag this bird, more snap-shooting is required than in hunting woodcock. The highest score I ever made was seven in about three hours hunting. There were four of us, and we got in all twenty-nine birds, and I have no doubt that we saw and heard three hundred different birds. The males of this species will, I think, weigh from four to five pounds. At certain seasons of the year, in the fall and all through the winter, they are very fat; the flesh when cooked is white and juicy, and of a most delicate flavor. The plumage, as compared with that of the ruffed grouse, I will not discuss. Any of your New York readers may satisfy themselves on this point by visiting the magnificent collection of the grouse family in Central Park.

In the middle of winter I was surprised to find just above timber line occasional flocks of sharp-tailed grouse (*Pediœcetes phasianellus*), very tame and a perfect mass of fat. I always supposed their winter habitat was along the streams in the lowlands. Still higher up, among the rocks and crags on the very tops of the mountains, I found the ptarmigan, always in flocks of from half a dozen to fifteen or twenty. The plumage of these bright little creatures is pure white, relieved only by the black beak and sparkling eyes. Several times I contemplated making a special hunt for them, but I always reasoned thus: If I take the shotgun, I am liable to see a bighorn; if I take the rifle, I may kill the bighorn and may get close enough to shoot a ptarmigin's head off. The result was that I always took the rifle, and never killed one of these birds, although I shot at several.

Of all hunting, I believe the pursuit of the bighorn is most arduous as well as most dangerous, especially in winter. At this season many places are covered with ice or slippery snow, affording but little footing, sometimes where a single misstep would cause one to be dashed to pieces.

One cold, still morning Ben Norris, Belair and the writer started out in quest of meat. There had been a "chinook," followed by a storm, so that we had fair walking on a heavy crust, covered with five or six inches of light snow. We struck up the mountain directly back of camp, and after four miles of pretty steep climbing came to the edge of the timber. Here the mountain became very rocky and steep, with great bare cliffs hundreds of feet high. As we emerged from the timber we surprised two large rams feeding near us, but before we could get a sight on them they ran behind a convenient boulder, and when next we saw them they were a quarter of a mile away.

From here a large deep coulie extended to the top of the mountain, hemmed in on each side by enormous cut rock walls. This we determined to ascend, for right at the very head of it we could see a small band of sheep feeding leisurely along. Soon we came to a very steep place where the snow was very hard and slippery. The other boys, having on rubber boots, were able to travel over this in comparative safety, but I wore moccasins and could proceed no further. Reluctantly I turned back and started for home. It proved afterward it was a lucky thing for me that I could not accompany them. As the early night came on, we cooked a good dinner for the hunters, and as we expected them every minute, we kept waiting for them to join us at the table. Six, seven, eight, nine o'clock passed, and still no sign of the hunters. I

went to the door and fired four or five heavy charges from my gun. No response. Then we ate our supper and went to bed, having concluded to start early in the morning in search of them. About daylight, however, they came in, completely exhausted, bringing each one of them a pocketful of steaks. Belair was completely fagged out, spitting some blood and immediately went to bed. Norris's heels were frosted, and Ben said that he felt 175 years old. After giving Belair some salt and water to check the bleeding, we gave Ben and Norris a good breakfast, and afterward as they lay back on the robes enjoying a mixture of perique and Virginia leaf, we learned the history of their adventures.

After I left them they succeeded with much difficulty in reaching the head of the coulie, and found that the band of sheep had traveled over to the top of another mountain still further back. Here the hunters separated, Norris starting around the base of this mountain and the others taking the trail of the sheep. After several hours hard climbing Belair and Ben reached the top of the mountain, and coming suddenly upon the band they fired simultaneously and wounded a fine doe, which ran over a cut ledge some eight or ten feet high and fell over dead. In the excitement of the moment they jumped over after her.

After dressing the doe they put a rope around its neck and started back, but found to their surprise that they could not ascend the ledge. On either side of them was a cut wall, below the side of the mountain rounded so they could not see the bottom. It was getting late. Some move must be made. Pushing the sheep ahead of them they began to descend. Soon they came to where they could see the bottom, and they were horrified at the sight. From here the mountain was so steep that they could not get a foothold, and far below at the bottom were numerous boulders and stunted trees. They gave the doe a push and in a second she slid to the bottom, never striking a boulder nor tree.

"Better be killed than freeze to death," said Ben, and lying down, he grasped his gun so the stock would scrape on the snow and started down. Afraid to see how Ben fared, Belair followed. Ben said the sensation as they descended was just horrible. Strange to say, Ben reached the bottom without a scratch or bruise; but Belair, less fortunate, caromed against a pine, receiving a severe blow on the chest and smashing the stock of his "Old Reliable" Sharps to splinters. Just at this time Norris came along; and cutting a few steaks from the doe they started for home. Night overtook them shortly after they entered the timber, and, as they were completely exhausted, they decided to camp. Having no axe, they were obliged to build a fire of such dead branches as they could break from the stunted trees. The snow here was six or eight feet deep, and the fire soon thawed a hole to the bottom, making, as it were, a well, and for the rest of the night they shivered over the edge of it, throwing on what scanty wood they could gather, and narrowly escaping freezing to death. We took Belair down to the Agency, where, under the kind treatment of the doctor, he gradually recovered from the shock.

The bighorns are probably the most numerous of any kind of game in the Rockies. Every single mountain, in my experience, I have found to be the home of one or more bands. I do not mean, though, that a band confines its range to one mountain. I do mean that they are so plenty that they are to be found on every peak.

Long after the last elk and deer shall have disappeared there will be plenty of bighorns left, for the simple reason that not one sportsman in ten has the strength and patience to follow them to their homes above the clouds. Nor are strength and patience the only requisites of the sheep hunter. The highest attribute is recklessness, for often one must say to himself, "Well, I'll make the jump. If I fall before I dash upon the rocks beneath, I'll say to myself, 'here goes nothing.'" And then, if one falls, why, what's the difference? It cannot be said that you committed suicide. For your tomb you would have the deep, dark cañon; the giant mountains would surround you; and you would fall asleep in the midst of that wild, rugged nature which you loved so well.

Two Medicine! Isn't there a certain charm in the name? Why so named? Because long ago the Blackfeet and Bloods each built a lodge to the Sun, in one summer, in one of its grassy bottoms. There the medicine men made long and fervent prayers. The Sun and the Old Man were implored to have pity on the people, to give them health, food and shelter. One can imagine now the opening chant, the chorus of a thousand voices, as with bowed heads they sung *Ni-ā'! Ni-ā'! Ni-ā'!* (My shelter, my covering).

These people have a certain tradition that beyond the lower lake the stream gushes out from the rocks. Not that they had ever visited it, for they are essentially prairie people, but they had heard the Kootnus say so. No white man, so far as I could learn, had ever been to the upper lake. That there was an upper lake could not be doubted, because we had seen it from a mountain near camp. One bright March morning three of us, Ben, Fred and the writer, started out to explore the inlet, and, if we had time, the upper lake. Our weapons were varied; one carried an axe, another a rifle, and I took the shotgun. Each of us had a fishhook and line and a chunk of bighorn meat, for we were about to visit unknown waters, and who knows what monsters of the finny tribe might be lurking there?

When we entered the deep swamp at the head of the lower lake there was a great rushing of wings as a flock of grouse flew up before us. I got four of them and hung them up in a tree until our return. A little further on we struck the fresh trail of a mountain lion, and as it led in our direction we followed it a way. By a slough in the creek we saw the fresh signs of beaver. The mountain lion had noticed them also, for the impressions in the snow told us that he had crouched behind a clump of bushes a long time in hopes that one of the flat tails would come out. Mountain lions, I think, highly prize this kind of meat; at least I have often noticed where they have cached by beaver workings; and several times I have found the remains of the animals they have killed; there was not much left of the flesh either time. I think a hungry mountain lion is able to eat a common sized beaver at one meal. One characteristic of the mountain lion, wherein he differs from all others of the cat family, is that he is not afraid of water, and at times I believe he really enjoys a bath. In summer I have often noticed where they have crossed broad, deep streams; in each case the tracks led into the water on one side and away from it on the other. Again, three different times in winter I have seen where they crossed the cold, rapid, unfrozen mountain streams, once on this very creek where the water was very deep and at least 12yds. wide.

We traveled three miles through patches of pine, quaking asp, and cottonwood, with here and there great parks of alder brush. This in summer would be impossible, but now weighted down with 5 or 6ft. of snow they were easily crossed. We began to hear the unmistakable roar of a waterfall, and after twenty minutes further travel came to the most peculiar freak of nature I ever saw. The valley narrowed and the spurs of mountains on either side of the valley met in the lowest part, forming a perpendicular rock wall some 200ft. high. From a jagged hole in this wall 40 or 50ft. from its base the stream which we had been following burst out in a mighty volume and fell with a roar into a deep wide pool below. Here and there on the massive wall jutting rocks afforded precarious holds for stunted pines. Above great spruces leaned over as if shuddering at the dark water into which they must some day inevitably fall. On the right a grove of pine and cottonwoods came down to the water's edge; on the left a steep hill covered with giant boulders rose from the very brink. On either side, towering above the tops of the pines, the great wall mountains guarded this gem of nature, jealous, we thought, that human eyes should ever rest upon it. Nor were there lacking signs of life in this grand wild place; several otter slides led down the bank into the deepest waters of the pool. Venturing close, we could see, deep down, schools of trout and "pea mouth." Two water ouzels darted in and out of the spray at the foot of the falls. Along these mountain streams which never freeze these somber-colored little birds are to be found every month in the year. In the very coldest weather they may be seen diving along the riffles and rapids, anon, perched on a spray-covered stone pouring forth their beautiful song melody.

By making a detour to the right we found a place where we could ascend the ledge, and in a few minutes we stood directly over the falls. Ages ago, and perhaps even now in times of freshets, the water poured its whole volume over this wall. Following up this ancient stream bed, lined on either side by frowning walls of limestone, we came once more to the stream, half a mile or more distant from the falls. Here, with a mighty swirl and rush, it disappeared beneath some huge boulders. Following up the stream from here another hour's tramp brought us to the lake. At the outlet the creek runs very rapidly for about fifty yards, when it forms a large pool 75yds. in diameter. This is very deep as we failed to find bottom with 50ft. of line. Chopping holes through the ice, which was very thick on the pool and lake, we caught half a dozen trout. From the pool we went up on to the lake, but owing to the hour had not time to explore it. The head is in a cañon to the northwest and the entire length may be three miles. On the right a very steep mountain comes down to the water's edge. Numerous sheep trails led along its sides not far above the lake. Higher up an old ram was gazing down upon us in astonishment. A bullet from the rifle ploughed the snow near him, and he quickly gave us an exhibition of his agility in mountain climbing. On the left of the lake is a valley hemmed in by wall mountains, some of them at great height; one of them has the highest perpendicular wall I have ever seen. In the valley is some evergreen, mostly bull pine and of stunted growth. Timber line, from all appearances, is not over 500ft. above the lake.

Just above the timber, under a rock wall, we saw nine large animals walking along in single file. They were either elk or moose, but having no glasses we could not determine which. On our way home we saved a mile or two by taking a short cut over the spur of a mountain, and reached camp just as the sun was setting.

One day Ben, Fred and I went sheep hunting. It was an exceptionally fine March day, not a breath of wind was stirring, and the sky was cloudless. We left camp before daylight and reached timber line by 8 o'clock. The mountain on which we hunted this day divides Two Medicine and the South Fork of the Cutbank. As we left the timber and commenced to climb the steep ascent to the top of the mountain, we found we had a difficult task before us. Successive warm days had so melted and hardened the snow that it was almost like ice. In the steepest places we had to jab holes with our gun stocks to get footholds. After an hour of this kind of work we reached the foot of the rock wall, and here the dangerous part of the work began. Fred, who was a novice in mountain climbing, declined to go any further, and said he would wait for us to come back.

From the base of this rock wall a sharp trail led up toward the point of the mountain, and this we determined to follow. Before reaching the top we passed several narrow and dangerous places, and twice Ben's collie dog stopped and howled dismally, hesitating to take the necessary leap. However, we ascended safely and reached the top of the mountain, which was wide and covered with a series of ridges of rock. We immediately sighted a large ram, which got out of the way as quickly as possible. After half an hour's walk over this broken ground, we came to, or rather directly over, the North Fork of Cutbank. Here the mountain ended abruptly in a cañon of immense depth and not over one hundred yards in width. Ben, more adventurous than the writer, crawled to the edge and looked over. I was hanging on to one of his legs, and he had no sooner glanced at the great depth than he cried out, "Pull back!" I exerted all my strength, and half pulled and half slung him away from the edge. "I wouldn't look over there again for anything," he said; "just the glance I had made me faint." Close by us was a loose boulder. We pushed this over the wall and listened. It was a long time before we heard the faint thud which told us it had reached the bottom.

Everywhere on the mountain were fresh signs of sheep, and as we turned back Ben decided to make a detour to the left, while I was to go back to Fred by the way we had come. I made the descent safely, and as soon as I came in sight of Fred he cried out, "Did you see them?" I was about to ask what, when I heard firing above us, and, looking up saw Ben on the very verge of the cliff firing directly down. Between us and him was a broad terrace, and I concluded that whatever he was firing at must be on this terrace.

"Didn't you see them?" again asked Fred.

"See what?"

"Why the sheep, of course. They came down over the cliff right where Ben is. There were two of them."

"Why didn't you shoot?"

"I—I don't know," said Fred confusedly. "I—I—I was watching the sheep."

The terrace toward which Ben was shooting was not over fifty yards above us, and I managed with much difficulty to climb upon it. Just then Ben came in sight along our sheep trail, and I waited for him to come up. When he had regained his breath he said that on the extreme left of the mountain he had surprised a doe and yearling, and that they made directly for the cliff above us. When he reached its verge he saw them directly below him and wounded them both. A short walk led us to where the sheep had come down the cliff. It looked as if nothing but a bird could have come down there; but there were the fresh trails and blood on each one. The larger animal, the doe, had left the terrace and reascended the mountain to a little shelf just above us, upon which she was undoubtedly lying. This shelf we could not reach either from above or from the terrace, so we turned to follow the trail of the yearling, which led off to the right. Turning the dog loose, he soon disappeared around the point of a ledge, and in a minute or two we heard him barking and soon came in sight of him. On a little level place the sheep was standing, head down, and the dog trying to grab it in the rear, but as fast as the dog moved around the sheep wheeled also. As it turned we could see on each side a bright red spot, and knew that the ball had gone clear through it. Ben shortly put it out of misery by shooting it through the head. When he fired, the animal made a leap, fell off the edge of the terrace and rolled down to where Fred was standing a most interested spectator. By digging footholds in the snow we managed to get down also. From there to timber line we went quickly, and on the less steep places I straddled the animal and took a glorious slide. Arrived at timber, we cut up the animal, shouldered each his share and trudged wearily home.

Not long after this hunt the geese and ducks began to come, and packing our wagons we hitched up and struck out for civilization, leaving with regret the little cabins where we had so pleasantly passed the winter.

THE OLD MAN OF THE HILL.

I LOVE to doze here in my cosy chair now that the old tyrant, Rheumatism, has laid such violent hands upon me, and since I cannot get about in my physical self, I am fain to stroll off with Memory for a companion and take long, retrospective journeys such as old men delight in. You may be sure it does not take us long to shake the dust of the city from off our seven-league boots, and we never slacken speed until the last graded, curbstoned, picket-guarded street is far behind, and we are out upon the country road where the cows browse unmolested by the way, and you may stumble to your heart's content over boulders that were there when Adam dwelt in Eden. I cannot mention all our strange adventures, nor present you to all the interesting people by the way, nor call your attention to all the noble landscapes we stop to contemplate.

Nor do we always pursue the same road in our journey. Sometimes we are floating on a stream where at first the landscapes are easily recognized as recently visited, but soon the journey takes on all the little excitement of a trip through a strange country, and more, as frequently, around some distant curve, comes floating into view a long-forgotten scene.

We pause a while in a quiet cove where the waters seem to eddy and rest beneath an ancient willow, which they have almost undermined, whose branches overhang a few crumbling tablets, on which the inscriptions, lichen-bound and time-eroded, we can scarce decipher.

When the mists lift again other landmarks are visible, and quickly-recurring mile stones, which seemed so far apart so long ago, are flitting by, while our guide is getting more at fault, the stream getting narrower and more narrow, until at last—but we have been dreaming.

They have dubbed me here the "Old Man of the Garret," but I choose rather to call myself the "Old Man of the Hill," for had we not a moment since been interrupted in our journey, you would have seen how, eventually, we would reach a quiet New England village where we could not pause, but passing through and up the hill a mile beyond, would come to where a farmhouse stands with open gates and doors just off the road. Behind the house a path leads up from the garden wicket across the pasture to the great bald summit of the hill where, at the highest eminence, a magnificent boulder looms up as majestically as any Sphinx or Pyramid, and yet with such a gentle inclination, I may with ease ascend to the apex, where the other sides fall away, a beetling precipice.

It is evident this boulder is a prime favorite with old Dame Nature, too, for see how she is taxing her resources in its adornment. Over all the bald places she glues a myriad wafers of lichen. These form the basis for a hardy growth of moss, and some day a belated insect toiling homeward becomes involved in the miniature forest, relinquishes his burden of seed, and the barren rock has become fertile. Avaricious clumps of briers are reaching out in all directions, emulating possession of the whole, and meeting with little opposition except an occasional bunch of primrose and whortleberry, with here and there a solitary juniper. There is a tangled fringe of barberries about the base, the woodbine and wild ivy are clambering up the sides investigating all the clefts and crannies, while a thrifty sapling has even found a foothold in a rift half way up, and is nodding his plumes over my head. The woods form a dark background, but before the eye may hover at will over an infinite variety of landscape, while far to the south a thick haze on the horizon indicates the busy city. It looks peaceful enough from here, not a sound of its commotion reaches us, and the pigmies we can almost see crawling about are as mute as so many toilers on an ant hill, but well we know if we descend among them they will become a struggling, sweating, jostling, snarling throng, and those structures, which from here are pasteboard toys, will rear themselves in massive piles of masonry, resounding with a horrible din of clanging hammers, creaking pulleys, panting engines and the myriad sounds of weighty bulks of merchandise.

It is fitting enough that men should get together here in pursuit of business or science and art, while nature is driven out and takes her stand upon the hill, but if you could only know as I know the pleasures she has in store for her disciples you would find a home like this "upon a hill." Then at evening of a struggling, disappointing day

you might clamber up the path, till turning on the summit, your gaze might wander in an unobstructed sweep of miles until, behold! the town Brobdingnaggia has become Lilliputia and you have left your little knapsack of troubles there also.

Years ago I said all this to my friend, the city dweller, but "No, it is too far away," said he, "It is too steep, this hill of yours to climb. I will build me a Queen Anne castle and at evening I will smoke and swing in a modern hammock and this will be comfort."

So he does. But it is not comfort; his landscape is a croquet lawn, his horizon a board fence, his sun sets behind a barn. So now he sleeps in the valley and I, although you think you may climb the garret stairs and find me dozing in the arm chair, I am still the "Old Man of the Hill." JEFFERSON SCRIBB.

THE INTELLIGENCE OF THE DOG.

BEFORE a crowded sitting of the biological section of the British Association, Sir John Lubbock read a paper in which he gave some interesting notes on the intelligence of the dog. The man and the dog, he said, have lived together in more or less intimate association for many thousands of years, and yet it must be confessed that they know comparatively little of one another. That the dog is a loyal, true, and affectionate friend must be gratefully admitted, but when we come to consider the physical nature of the animal, the limits of our knowledge are almost immediately reached. I have elsewhere suggested that this arises very much from the fact that hitherto we have tried to teach animals rather than to learn from them—to convey our ideas to them rather than to devise any language or code of signals by means of which they might communicate theirs to us. The former may be more important from a utilitarian point of view, though even this is questionable, but psychologically it is far less interesting.

Under these circumstances, it occurred to me whether some such system as that followed with deaf-mutes, and especially by Dr. Howe with Laura Bridgman, might not prove very instructive if adapted to the case of dogs. I have tried this in a small way with a black poodle named Van. I took two pieces of card-board, about 10in. by 3in., and on one of them printed in large letters the word "food," leaving the other blank. I then placed two cards over two saucers, and in the one under the "food" card put a little bread and milk, which Van, after having his attention called to the card, was allowed to eat. This was repeated over and over again till he had had enough. In about ten days he began to distinguish between the two cards. I then put them on the floor and made him bring them to me, which he did readily enough. When he brought the plain card I simply threw it back, while when he brought the "food" card I gave him a piece of bread, and in about a month he had pretty well learned to realize the difference. I then had some other cards printed with the words "out," "tea," "bone," "water," spelt phonetically, so as not to trouble him by our intricate spelling; and a certain number also with words to which I did not intend him to attach any significance, such as "nought," "plain," "ball," &c. Van soon learned that bringing a card was a request, and soon learned to distinguish between the plain and printed cards; it took him longer to realize the difference between words, but he gradually got to recognize several, such as food, out, bone, tea, &c. If he was asked whether he would like to go out for a walk, he would joyfully fish up the "out" card, choosing it from several others and bring it to me, or run with it in evident triumph to the door.

I need hardly say that the cards were not always put in the same places. They were varied quite indiscriminately and in a great variety of positions. Nor could the dog recognize them by scent. They were all alike, and all continually handled by us. Still I did not trust to that alone, but had a number printed for each word. When, for instance, he brought a card with "food" on it, we did not put down the same identical card, but another bearing the same word; when he had brought that, a third, then a fourth, and so on. For a single meal, therefore, eighteen or twenty cards would be used, so that he evidently is not guided by scent. No one who has seen him look down a row of cards and pick up the one he wanted could, I think, doubt that in bringing a card he feels he is making a request, and that he can not only distinguish one card from another, but also associate the word and the object. This is, of course, only a beginning; but it is, I venture to think, suggestive, and might be carried further, though the limited wants and aspirations of the animals constitute a great difficulty.

My wife has a very beautiful and charming collie, Patience, to which we are much attached. This dog was often in the room when Van brought the "food" card, and was rewarded with a piece of bread. She must have seen this thousands of times, and she begged in the usual manner, but never once did it occur to her to bring a card. She did not touch, or indeed even take the slightest notice of them. I then tried the following experiment: I prepared six cards about 10in. by 3in., and colored in pairs—two yellow, two blue, two orange. I put three of them on the floor, and then holding up one of the others, endeavored to teach Van to bring me the duplicate. That is to say, that if the blue was held up, he should fetch the corresponding color from the floor; if yellow, he should fetch the yellow, and so on. When he brought the wrong card he was made to drop it, and return for another till he brought the right one, when he was rewarded with a little food. The lessons were generally given by my assistant, Miss Wendland, and lasted half an hour, during which time he brought the right card on an average about twenty-five times. I certainly thought that he would soon have grasped what was expected of him. But no. We continued the lessons for nearly three months, but, as a few days were missed, we may say ten weeks, and yet at the end of the time I cannot say that Van appeared to have the least idea what was expected of him. It seemed a matter of pure accident which card he brought. There is, I believe, no reason to doubt that dogs can distinguish colors, but as it was just possible that Van might be color blind, we then repeated the same experiment, only substituting for the colored cards others marked respectively I., II. and III. This we continued for another three months, or say, allowing for intermission, ten weeks, but to my surprise entirely without success. I was rather disappointed at this, as, if it had succeeded, the plan would have opened out many interesting lines of inquiry. Still, in such a case, one ought not to wish for one result more than another, as of course the object of all such experiments is merely to elicit the truth, and our result in the present case, though negative, is very interesting. I do not, however, regard it as by any means conclusive, and should be glad to see it repealed. If the result proved to be the same, it would certainly imply very little power of combining even extremely simple ideas.

I then endeavored to get some insight into the arithmetical condition of the dog's mind. On this subject I have been able to find but little in any of the standard works on the intelligence of animals. Considering, however, the very limited powers of savage men in this respect—that no Australian language, for instance, contains numerals up to four, no Australian being able to count his own fingers even on one hand—we cannot be surprised if other animals have made but little progress. Still, it is surprising that so little attention should have been directed to this subject. Leroy, who, though he expresses the opinion that "the nature of the soul of animals is unimportant," was an excellent observer, mentions a case in which a man was anxious to shoot a crow. "To deceive this suspicious bird, the plan was hit upon of sending two men to the wash-house, one of whom passed on, while the other remained; but the crow counted and kept her distance. The next day three went, and again she perceived that only two retired. In fine, it was found necessary to send five or six men to the wash-house to put her out in her calculation. The crow, thinking that this number of men had passed by, lost no time in returning." From this he inferred that crows could count up to four. Lichtenberg mentioned a nightingale which was said to count up to three. Every day he gave it three meal-worms, one at a time; when it had finished one it returned for another, but after the third he knew that the feast was over. I do not find that any of the recent works on the intelligence of animals, either Buchner, or Peitz or Romanes in either of his books, give any additional evidence of this part of the subject. There are, however, various scattered notices. There is an amusing and suggestive remark in Mr. Galton's interesting "Narrative of an Explorer in Tropical South Africa." After describing the Damara's weakness in calculations, he says: "Once while I watched a Damara floundering hopelessly in a calculation on one side of me, I observed Dinah, my spaniel, equally embarrassed on the other; she was overlooking half a dozen of her new-born puppies, which had been removed two or three times from her, and her anxiety was excessive, as she tried to find out if they were all present, ar if any were still missing. She kept puzzling and running her eyes over them backward and forward, but could not satisfy herself. She evidently had a vague notion of counting, but the figure was too large for her brain. Taking the two as they stood, dog and Damara, the comparison reflected no great honor on the man." But even if Dinah had been clear on this subject, it might be said that she knew each puppy personally, as collies are said to know sheep.

The same remark applies generally to animals and their young. Swans, for instance, are said to know directly if one of their cygnets is missing, but it is probable that they know each young bird individually. This explanation applies with less force to the case of eggs. According to my bird-nesting recollections, which I have refreshed by more recent experience, if a nest contains four eggs, one may safely be taken; but if two are removed the bird generally deserts. Here then it would seem as if we had some reason for supposing that there is sufficient intelligence to distinguish three from four. An interesting consideration rises with reference to the number of the victims allotted to each cell by the solitary wasps. Ammophila considers one large caterpillar of *Noctura segetum* enough; one species of Eumenes supplies its young with five victims; another ten, fifteen, and even up to twenty-four. The number appears to be constant in each species. How does the insect know when her task is fulfilled? Not by the cell being filled, for if some be removed she does not replace them. When she has brought her complement she considers her task accomplished, whether the victims are still there or not. How then does she know when she has made up the number twenty-four? Perhaps it will be said that each species feels some mysterious and innate tendency to provide a certain number of victims. This would under no circumstances be any explanation, but it is not in accordance with the facts. In the genus (Eumenes) the males are much smaller than the females. Now in the hive bees, bumble bees, wasps and other insects, where such a difference occurs, but where the young are directly fed, it is of course obvious that the quantity can be proportioned to the appetite of the grub. But in insects with the habits of Eumenes and Ammophila the case is different, because the food is stored up once for all. Now, it is evident that if a female grub was supplied with only food enough for a male, she would starve to death; while if a male grub was given enough for a female it would have too much. No such waste, however, occurs. In some mysterious manner the mother knows whether the eggs will produce a male or female grub, and apportions the quantity of food accordingly. She does not change the species or size of her prey; but if the egg is male she supplies five, if female, ten victims. Does she count? Certainly this seems very like a commencement in arithmetic. At the same time it would be very desirable to have additional evidence how far the number is really constant.

Considering how much has been written on instinct, it seems surprising that so little attention has been directed to this part of the subject. One would fancy that there ought to be no great difficulty in determining how far an an animal could count, and whether for instance, it could realize some very simple sum, such as that two and two make four. But when we come to consider how this is to be done, the problem ceases to appear so simple. We have tried our dogs by putting a piece of bread before them and prevent them from touching it until we had counted seven. To prevent ourselves from unintentionally giving any indication, we used a metronome (the instrument used for giving time when practicing a pianoforte), and to make the beats more evident we attach a slender rod to the pendulum. It certainly seemed as if our dogs knew when the moment of permission had arrived, but their movements of taking the bread was scarcely so definite as to place the matter beyond a doubt. Moreover dogs are so very quick in seizing any indication given them, even unintentionally, that on the whole, the attempt was not satisfactory to my mind. I was the more discouraged from continuing the experiment in this manner by an account Mr. Huggins gave me of a very intelligent dog belonging to him. A number of cards were placed on the ground numbered respectively 1, 2, 3, and so on up to 10. A question is then asked; the square root of 9 or 16, or such a sum as 6x52—3. Mr. Huggins pointed consecutively to the cards, and the dog barked when he came to the right one. Now Mr. Huggins did not consciously give the dog any sign, yet so quick was the dog in seizing the slightest indication that he was able to give the correct answer. This observation seemed to be of great interest in connection with the so-called "thought reading." No one, I suppose, will imagine that there was in this case any "thought reading" in the sense in which this word is used by Mr. Bishop and others. Evidently "Kepler" seized upon the slight indication unintentionally given by Mr. Huggins. The observation however, shows the great difficulty of the subject.

I have ventured to bring this question before the section, partly because I shall be so much obliged if any lady or gentleman present will favor me with any suggestions, and partly in hope of inducing others with more leisure and opportunity to carry on similar observations, which I cannot but think must lead to interesting results.—*English Mechanic.*

A PREHISTORIC SWORD.

Editor Forest and Stream:

During the last autumn, 1885, I was engaged in an exploration of the central part of northern Missouri, which country is yet to a great extent primitive, the settlements being few and many miles apart. This portion of the State is noted for its numerous and beautiful lakes of bright pure water, the primeval forest upon the shores of which, except in a few instances, remains as yet unbroken.

In Forest county, on the northern border of Pine Lake, resides Daniel Gagen and family, pioneers in these woods. This "Uncle Dan" of the woods—as he is known everywhere—is a pioneer indeed. For more than thirty years the borders of this beautiful lake has been his home. He is an Englishman by birth, his wife a native of the forest, of the Chippeway tribe of Indians, an estimable and excellent lady, and well versed in good housekeeping. They have raised to manhood four sons, some of whom have been educated outside the forest in the schools of Milwaukee, and all are worthy young men.

We enjoyed the hospitality of this family for several days, and upon one occasion, while discussing the prehistoric implements and curiosities which have from time to time been picked up or exhumed in the region stretching from Lake Superior to the valleys and mounds of the Ohio and Mississippi, "Uncle Dan" remarked that a short time since he had ploughed up a piece of pure copper which had been worked into the form of a sword, and that near this he also found a copper arrow.

Such prehistoric relics of a people now utterly extinct, of whom even tradition is silent, at once begat in me much interest, being an index, as they must, to the culture, the skill and capacity for design of that race now silent except by the few and scattered relics of their works.

The sword was produced and proved to be, apparently, only a part of what once was a sword blade of good dimensions, and appears to consist of pure copper, which seems to have been tempered, being harder than the pure metal and was also somewhat eroded. It was shapely, 14⅝in. in length, curving slightly and on good line toward the point, and while both edges were thin it was plain that only one was designed for the edge. Where it had parted from the base of the blade, which it did by indirect cleavage, it was two inches in width, tapering thence gradually to a point. It was about as shapely as would be expected of modern manufacture, thicker in the middle so as to confer strength, and nicely shaped off toward either side. Its weight was seventeen ounces. I inclose to you a correct outline of this relic on paper. Upon search the arrow could not be found. Mr. Gagen believed that the fine plateau overlooking the lake and on which he lived must have been a favorite resort for these people on their migrations to and from the copper mines of Lake Superior. GEORGE H. CANNON.

WASHINGTON, Mich.

COPULATION OF EARTH-WORMS.—Rothley, England.—*Editor Forest and Stream:* Happening to read in your issue of May 27, under natural history, Mr. James Stoller's most interesting essay on earthworms, I notice he states the pairing takes place in the "night time, in the months of July and August." Now I have not infrequently noticed worms in a state of copulation, when suddenly lifting a large store box, hencoop, or anything of that nature which has stood for a few days. On the commencement of this last June, on turning over a large box which I had used as a coop for some young ducks, I noticed on the grass two large worms in a state of copulation. I watched them for a few seconds and then drove a strong chicken toward them, hoping to see him peck at them. This he did, when they quickly parted company and made off into separate holes, although they had taken no notice of the box being lifted from off them. This proves that earthworms will copulate in the day time, and as early as June.—M. B. WYNN.

ALBINO BAT.—Lakeville, Mass., July 27.—*Editor Forest and Stream:* I send a box in which you will find a white bat. It was shot by a boy. It is a novelty to the sportsmen in this vicinity, as no one has ever seen nor heard of one before.—C. F. S. [Probably young *Atalapha noveboracensis* Coues].

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase and presentation—1 red kangaroo (*Macropus rufus*), 1 ocelot (*Felis pardalis*), 1 barred owl (*Syrnium nebulosum*), 4 screech owls (*Scops asio*), 5 pigeon hawks (*Accipiter fuscus*), 1 American crow (*Corvus americanus*), 1 red-headed duck (*Fuligula americana*), 2 copperhead snakes (*Ancistrodon contortrix*), 4 alligators (*Alligator mississippiensis*), and 2 gopher tortoises (*Testudo carolina*). Born in the Garden—2 beaver (*C. fiber canadensis*), 1 common macaque (*Macacus cynomolgus*), and 1 pea hen (*Pavo cristata*).

AUDUBON SOCIETY PICNICS.—Almost simultaneously with the bird concert at Central Lake, Michigan, noticed in our last week's issue, a similar fête was arranged by Mrs. Linda Loy, the local secretary for Watson, Ill. in concert with Miss Ada Kepley, the local Secretary of Effingham, that State. Children of course formed the excuse for the fête in both cases, and the happy idea of connecting the Audubon movement in their memories with the pleasurable associations of a gala day, appears to have been due to germs of ideas wafted on the air, for each society acted in ignorance of the other's intent.

GRAY SQUIRREL AND SONG SPARROW.—This morning, on a stroll in Central Park, I saw what in my forty-five years field experience was never before my lot to behold; a large gray squirrel carrying in his mouth a young, half-field-fledged sparrow. The squirrel passed within the range of 25ft., and I could not be mistaken. Has any reader ever detected the grim scamp in such acts before? —CANONICUS. [Acts such as the one above related are very common by the red squirrel, but much less so by the gray, we think.]

THE PARK APPROPRIATION.

THE Senate debate on appropriation of $20,000 for maintenance of the National Park superintendents is thus reported in the *Congressional Globe:*

MR. VEST—I wish to inquire of the Chairman of the Committee on Appropriations in what condition is the provision as to the Yellowstone Nation Park?

MR. ALLISON—I am sorry to say to my friend that so far as his view and my own are concerned it is left rather dubious. The House of Representatives refused to agree to the Senate amendment, and I believe the very last thing we did before finally separating was to surrender the amendment put on by the Senate in reference to the Yellowstone Park.

MR. EDMUNDS—Does the House bill change the law?

MR. ALLISON—No.

MR. VEST—The House simply appropriated $20,000 for the construction and improvement of roads in the Yellowstone National Park and made no appropriation for the salaries of the Superintendent or the ten assistant superintendents. I have taken considerable interest in the Yellowstone National Park, and I do not propose now to deliver any valedictory on the subject.

I am profoundly disgusted with the condition in which this Park is now left, but I am not disheartened. I believe the sentiment of the people of this country is in favor of that Park. I know the sentiment of this Senate is in favor of it, and I propose at the next meeting of Congress to urge the adoption of a bill now upon the Calendar providing for the permanent government and improvement of that great reservation.

I had been aware for some time that an organized attempt would be made in the interest of speculators and land-grabbers to break up that Park. The Geysers and the waterfalls and the Yellowstone Lake remained there unnoticed until the greed and avarice of these people have been aroused by the number of visitors who have lately gone there, and this whole thing is intended for the purpose of breaking up that reservation in order that these speculators, that these children of avarice and greed may grab, each one of them, as they can, one of these great, wonderful products of nature, that he may make as much money out of it as is possible at the expense of the people at large.

The Park was originated by my distinguished friend from Massachusetts on my right [Mr. Dawes], who was the author of the law, and I have simply supplemented his exertions and acted as his adjutant in the whole matter. It was said yesterday in a very public place in this Capitol, where I can neither speak nor vote, that my interest in this Yellowstone Park arose from the fact that a constituent of mine had been appointed Superintendent, and that a number of Missourians had been appointed to positions under him. It is false. It is false, Mr. President. Colonel Wear, the Superintendent of that Park, was appointed at the instance of my colleague and myself on account of his peculiar fitness for that position. The Park had been going sadly to ruin and decay, and it was necessary to put some vitality in the enterprise, and we believed honestly that his appointment would do that thing.

He was a distinguished soldier, a colonel in the Federal Army. He was an ardent sportsman, devoted to the chase, to outdoor life. We were not mistaken in that appointment; and a great deal of this opposition has arisen from the fact that he has stood against the speculators and adventurers even at the peril of his life, and so stands there to-day.

This present legislation breaks up the Park as effectually as if the original act introduced by the Senator of Massachusetts had been repealed. It is proposed to put troops there. Soldiers are as utterly unfit for that duty as they would to become professors of astronomy in any college in the land.

It was stated publicly yesterday in another place from this that the present Superintendent had put in a lot of political appointees. It is not true. So far from that Park being filled with any constituents I have distinctly refused to give one single recommendation to Colonel Wear of a single citizen of my State, and I have invariably written to him to appoint men upon his personal acquaintance and upon their knowledge of the mountains and their fitness from their past lives for those positions.

I allude to this because Colonel Wear cannot speak for himself, and he now goes out of office under this legislation. For the motive that prompts this attack upon me I have only the most unmitigated contempt. It could only emanate from a small politician whose political horizon is limited and bounded by the area of greed for office and patronage.

It was said here the other day, and it was a cheap species of rhetoric which I shall not emulate, that this Park was reserved for the rich and for the distinguished, and that the poor of the country were excluded from it. I assert here to-night that there is not one place of public resort on this whole continent where travel and accommodation are so cheap as in the Yellowstone National Park. There is no place where the tourist or the visitor can travel and can be entertained for so small a sum as to-day upon that reservation.

In the same line of attack upon the Park it was said that the poor man's cart was excluded, and that only wagons with tires 4½in. broad were permitted in the Park. Colonel Wear was held up here before the public opinion of the country as an aristocrat, an autocrat, who was seeking to exclude the carryalls and the humble farm wagons that the poor man desired to take into that Park, and that none but broad tires could be admitted there.

Mr. President, the Senator from Nebraska [Mr. Manderson], when this charge was made, telegraphed to the Department of the Interior, and here is the reply.

THE PRESIDENT *pro tempore*—The paper will be read.

DEPARTMENT OF THE INTERIOR, Aug. 2, 1886.

Hon. Charles F. Manderson: In compliance with recommendation of Lieutenant Kingman, an order was issued to the superintendent May 25, 1886, requiring that all wagons engaged in heavy freighting over roads constructed or improved by Government in Yellowstone Park shall be equipped with tires not less than four inches wide.—H. L. MULDROW, Acting Secretary.

MR. VEST—So it seems, instead of this being a movement in favor of the aristocracy and titled and distinguished visitors, in lieu of this picture so graphically drawn on this floor a few days ago of a Senator before whom the officials of the Park made oriental salaams and genuflections of humility, this order was issued at the instance of the engineer officer in charge of the Park, and not at the instance of Colonel Wear; and it was issued and properly issued to protect the roads in the Park from being destroyed by the heavy ore wagons that haul from Cinnabar to Cooke City.

It is said that this Park to-day is under the control of a hotel monopoly. If the men who make this charge had the fairness and honesty to go to the Interior Department and investigate the lease under which these hotels are built they would see that the Government has provided against a monopoly in every shape, form or conception. It was intended in that lease, of which I myself was a critic at the instance of the Secretary of the Interior—it provided in that lease in the most complete terms that every citizen in the United States should have free access and there should be no especial privileges granted to any one. If I know myself, without pretending, without making the demagogic plea of being the especial friend of the poor man—if I know myself, I would be accessory to no act of legislation which would look to a monopoly on that subject in any shape or form. It is not true that any monopoly exists there to-day.

But, Mr. President, I come now to a matter somewhat personal to myself, which I desire to notice very briefly. It was said also in a very public place in this Capitol yesterday:

> I desire to state here that the last I heard of the Superintendent of that Park was that he had become partially interested in a coal mine which was situated on the margin of the Park; and that thereupon or immediately thereafter, no doubt without the knowledge of the Senator who introduced the bill, a bill was introduced in the Senate of the United States which would cut off that portion of the Park, leaving it in his possession with a title. If that is so it indicates jobbery. I do not mean to say that it was jobbery; but if an investigation is moved into this matter by anybody, I will undertake to introduce a gentleman of credible character to the House who claims to be able to give the information necessary to substantiate that fact.

MR. TELLER—I should like to ask the Senator on which side of the Park that is.

MR. VEST—The northern portion of it.

MR. TELLER—I can say that that was recommended by the Department a long time before the bill was introduced, that the northern line should be moved south.

MR. VEST—Not only that, but the—

MR. TELLER—The Senator will allow me a moment. The line is now north running into Montana. The Department propose to have it moved south far enough to get upon the Wyoming line. That recommendation, involving I think about six miles, was made at least three years ago.

MR. MANDERSON—Two miles in width.

MR. TELLER—Whatever it was. There was an attempt to move it down on a recommendation made to Congress a long time ago.

MR. VEST—Not only that, but the identical language, every word of which is contained in the fourth section of the bill that I introduced, and I believe I introduced every bill in regard to the Yellowstone Park, its government and its boundaries—every syllable of this section of the bill was written by Mr. Hague, a member of the Geological Bureau, who had been stationed in the Park and who was familiar with all the lines, and he desired a change in the boundary that would bring it down two miles south so as to conform with the boundary line between the Territories of Wyoming and Montana. And to show how absurd this whole intimation is that there could have been any job in this matter, I hold in my hand the bill I introduced Feb. 4, 1884, containing this change of boundary, during Mr. Arthur's administration, long before Colonel Wear was thought of in connection with the Park in any capacity, and when the most sanguine hardly dared to hope that a Democratic president would be inaugurated at the coming election.

These are the simple facts and there could have been no job unless there had been a prescience which the Deity Himself only could have had.

MR. MANDERSON—I ask the Senator from Missouri whether the motive that actuated the Interior Department and actuated him in introducing the bill changing this northern boundary of the Park and that actuated the Committee on Territories, was not that the jurisdictional extent of the Park should be within the limits of the Territory of Wyoming so as to reach more nearly the punishment of crimes?

MR. VEST—It was.

MR. TELLER—Not to have an additional criminal jurisdiction.

MR. VEST—Exactly. That was the object of the amendment, and of the Committee on Territories, of which I was a member, when I introduced the bill, and of Mr. Hague, who wrote the section himself and brought it to me and I incorporated it in the bill a year and a half before Mr. Wear was ever thought of in connection with the superintendency of the Park.

I apologize to the Senate for having noticed this matter at all. It is so absurd and ridiculous that I should have a very poor opinion of myself if my character needed any defense in regard to any such allegation.

Now, sir, as I said, I am not making any valedictory in regard to this enterprise. I propose at the next session of Congress to urge the bill now on the Calendar. I know that there are many Senators and Representatives who honestly think that this Park should be destroyed. I know there are other persons who are actuated by the meanest and the basest motives of avarice and of greed that can be found in any degraded human breast. For them and their motives I have only the feeling which I have for any other loathsome object, and I shall waste no more words upon them or upon their attacks on me or those who, like me, favor the Yellowstone National Park.

But, God willing, with health and strength, I will devote myself to reversing this conference report. It strikes down this Park, it gives up this magnificent reserve to those people who are unworthy to press their feet upon its soil. I shall vote against the report for this reason, if for no other.

MR. BECK—I only desire to say a word about the Yellowstone National Park. There are $20,000 given in the House bill as it now stands for the improvement of the roads and bridges in the Park, and the law which authorizes the Secretary of the Interior to call on the Secretary of War for sufficient force to guard it remains. While I regret as much as the Senator from Missouri does that the Senate amendment was stricken out, and while I believe that everything he says in regard to the Park is true, and while I will go as far as he will to maintain it, I believe that under the House provision, with the aid of the Secretary of War, the Park can be preserved until some suitable provision for it can be made hereafter. Therefore, I was unwilling, much as I differed with the House in this regard, to jeopardize a bill of this importance by refusing to agree to it. Notwithstanding this was stricken out, believing and feeling assured that the Secretary of the Interior, with the aid of the Secretary of War, will take care of the Park until something better can be done, I shall vote for the adoption of the report.

The PRESIDENT *pro tempore*—The question is on the adoption of the report of the committee of conference.

WASHINGTON TERRITORY GAME LAWS.

Editor Forest and Stream:

I append herewith an epitome of Washington Territory game laws, as compiled for a local journal by my old friend, Judge Jacobs, himself a veteran nimrod:

1. Deer or fawn cannot be pursued, hunted, taken, killed or destroyed between the 15th day of January and the 15th day of August of each year. If killed at any other time, the carcass of such deer or fawn must be used or preserved by the slayer, or be sold for food. This is to prevent the wanton destruction of such animals, as well as to prevent their slaughter for their pelts alone. These animals cannot be hunted or pursued with dogs in the counties of San Juan, Whatcom, Island, Mason, Kitsap, Cowlitz or Kittitas.

2. No person can take, kill, injure or destroy, or have in possession, sell or offer for sale, between the 1st day of April and the 1st day of September, of each year, any wild swan, mallard duck, wood duck, widgeon, teal, butterball, spoonbill, gray, black, sprigtail or canvasback duck.

3. No person can, between the first day of February and the 1st day of September, of each year, for any purpose, take, kill, injure or destroy, or have in possession, sell or offer for sale, any prairie chicken, sage hen, grouse, pheasant, partridge or quail.

4. No person can lawfully catch, kill or have in possession, sell or offer for sale, any mountain or brook trout, in the months of November, December, January, February and March, and no person can at any time of the year lawfully take or attempt to take or catch with any seine, net, weir, or other device than hook and line, any mountain, bull, or brook trout, or salmon trout.

5. It is punishable for any person to destroy or wantonly remove the eggs or nests of the birds mentioned under figures 2 and 3 above.

6. It is illegal to hunt, pursue, take, kill or destroy any elk, moose, or mountain sheep between the 1st day of January and the 15th day of August of each year; and it is illegal at any time to kill these animals for the purpose of obtaining the hide, hams or cutlets of the same.

7. It is illegal for any person to use any sinkbox on any lake or river in this Territory for the purpose of shooting any ducks, geese or other waterfowls therefrom, and it is also illegal to use any batteries or swivel or pivot guns for such purposes.

8. For a violation of any of the above provisions the offense is a misdemeanor. It is punished by a fine of not less than ten nor more than three hundred dollars, or imprisonment in the county jail for not less than five days nor more than three months.

The protective points in the foregoing law were, I believe, prepared and presented by the Rod and Gun Club, of Seattle, an organization in which I possess the proud distinction of an honorary membership. Notwithstanding this fact, however, I take issue with them in the matter contained in the third clause, so far it relates to pheasants. Sept. 1 is at least fifteen days too late. From Aug. 1 to Sept. 1 pheasants are in better condition, and by Aug. 15 are fully grown and matured. However, as the law stands or until amended, it must be recognized. A violation of any clause gives license for the violation of another.

WILL D. JENKINS.

WHATCOM, Washington Territory, July 26.

THE COMING FIGHT IN ARKANSAS.—The prospects for fall shooting are good. Quail have wintered well, and prairie chickens are reported as increasing rapidly on the prairies. In Cache River bottom bear are plentiful, and the deer are fairly plentiful in all the thinly settled country, as are turkeys. There is very serious danger that our game law will be repealed this winter. I notice that a number of candidates for the Legislature are advocating a local option game law, like the whisky law, that is to be put in force by a majority of the voters in the county or township. This will be equal to no law at all. The present law has been very generally observed here, and the strong penalty against having game in possession and shipping it in the close season have made it dangerous to violate. As a consequence, the game has not been killed for market all summer, as it formerly was, and has increased wonderfully. A strong fight will be made by one-horse politicians to repeal the law, and there is great danger that they will do so. Everything that we can do will be done to prevent such a disaster.—CASUAL (Little Rock).

GEORGIA GAME INTERESTS.

THE organization of the Gun Club has created much enthusiasm among our sportsmen, and the interests in field sports will be greatly increased by the protection of game. For the purpose of framing a recommendation such as our legislators could have passed at the next session, a large and enthusiastic meeting of the Gun Club was held at the office of Salem Dutcher, Esq. D. Sancken was called to the chair, and John M. Weigle, Esq., acted as secretary. Letters were read from the following gentlemen, giving valuable suggestions: John E. Wheeler, Lieut. George Hood, A. A. Sturgis, of McDuffie; P. S. Jones, of Burke; S. P. Jones, of Burke; George W. Jones, of Burke; Captain F. E. Eve, of Columbia; R. H. Berrien, captain of the Millen Gun Club; Hon. M. P. Reese, of Washington; Hon. Martin V. Calvin, of Richmond; and several others. Hon. John S. Davidson and Jos. R. Lamar were present and gave material aid by their suggestions. The following suggestions from Lieut. Hood will be embodied in the bill when presented to the Legislature: "I would suggest to our legislators the framing of a bill punishing by fine of not less than $50, or in default of payment confinement in jail or public works, as the judge may see fit in his discretion; make it the duty of all police, constables and sheriffs to make reports of violations of the game laws. I would further offer to the informant half of all fines collected when he convicts." Mr. Salem Dutcher from the committee then read the following, which was adopted: "Your committee appointed 'to consider and report on the best means for the preservation of the game in this (Richmond) county,' beg leave respectfully ro report as follows: The object of game laws is not to deprive any one of the right to hunt, whether for pleasure or profit, but simply to restrict the pursuit to proper seasons and proper means, and thereby preserve the game from extinction. We have kept this object steadily in view, and propose nothing which is not to the general advantage of the whole public.

"We find that four game laws have been passed for Richmond county, one in 1850 and one in 1858, as to deer; a third in 1859 as to partridges, doves, snipe, wild turkeys, wild ducks and all other wild game birds; and a fourth in 1874, as to partridges and deer. The act of 1859, we may here remark, is the earliest act on the statute book of Georgia for the preservation of game birds, and Richmond may therefore be justly regarded as the pioneer in this field. Our local acts, however, while containing some valuable provinces which we have retained in our recommendations, are not as a whole, adequate to their purpose.

"We further find that game laws have been passed in as many as forty-five other counties of this State, namely in Baker, Baldwin, Bartow, Bibb, Bryan, Burke, Calhoun, Camden, Carroll, Chatham, Clarke, Cobb, DeKalb, Dougherty, Effingham, Fannin, Fulton, Gilmer, Glynn, Greene, Houston, Jefferson, Jones, Laurens, Lincoln, Lowndes, Macon, Marion, McIntosh, Morgan, Murray, Muscogee, Putnam, Rabun, Randolph, Screven, Talbot, Taylor, Thomas, Washington, Wilkes, Wilkinson, Whitfield and Worth. Most of these enactments are of recent date, and some of them are drawn with great skill, evincing equal knowledge of woodcraft and of law. From them we have derived many valuable suggestions. We have also availed ourselves of the kind assistance of a number of gentlemen experienced in field sports, and have consulted with much profit the magnificent works on ornithology of Bonaparte and Wilson, courteously placed at the service of the committee by Dr. Harrison. From these and other sources we have been enabled to mature a plan for the preservation of the game in this county, and do recommend that steps be taken for the enactment of the same into a local law. The plan is this:

"First—We recommend that the hunting, killing, snaring, or taking in any way, of deer in Richmond county be totally prohibited until October 1, 1888, fire-hunting or taking or killing of deer other than by hound or gun, remain still prohibited, but that except between January 1 and October 1 of each year, it be lawful to kill or take them by hound or gun, but not otherwise; no fawn to be at any time killed or taken. Not many years ago this noble game was not infrequent in Richmond county, and of late has shown an inclination to return.

"Second—We recommend that the killing or taking in any way of the summer duck, or, as it is sometimes called, the wood duck, be prohibited between April 1 and August 15 in each year. This bird, which Buffon styles '*Le beau canard huppe*, the handsome crest-crowned duck,' and Wilson calls 'most beautiful of all our ducks,' is indeed worthy the praise of these learned ornithologists. The very mention of its colors, 'orange-red, bronze-green, violet, pure white, deep black glossed with green, drab, brown flecked with white,' gives some idea of its splendor. Surmounting all these gay hues is a stately looking crest of long pendant plumes, green and violet, striped with snowy white. This beautiful bird is indigenous to this county; it loves to build its nest in hollow trees near the water, and from the ample cover afforded by our swamps, would be abundant, as it once was, were it not incessantly pursued. Even the ducklings, or 'floppers,' as they are called before able to fly, are hunted, sometimes being even trailed with hounds.

"Third—We recommend that the close time for doves be from April 1 to August 15 in each year. The massacre of these birds, beginning in June or July, is exterminating them. At this period the young birds are scarcely able to fly, and the old ones are engaged in rearing a second brood. When full-pinioned the dove has extraordinary velocity, and he who can bring one down when in full flight may well claim to be a marksman. It is a somewhat current impression that the dove is not a game bird, but this is only from the fact that it is not found in Europe, or to any great extent North. Its normal habitat is the latitude of Georgia and the Carolinas, whence its scientific name, *Columba carolinensis*. Our Richmond county act of 1859 and the acts for several other counties expressly put it down as a game bird.

"Fourth—We recommend that the close time for wild turkey be from April 1 to October 15 in each year. This noble inhabitant of the woods is par excellence the game bird of America. The turkey is strictly indigenous to the North American continent, and was never known to the old world before the discovery of the new. The great Dr. Benjamin Franklin—who, by the way, was agent for Georgia at the British Court some years before the revolution, and after whom Franklin county is named—had a very high opinion of the turkey, and even favored his adoption as the national bird instead of the bald eagle. 'For my own part,' says he, 'I wish the bald eagle had not been chosen as the representative of our country; he is a bird of bad moral character; he does not get his living honestly; you may have seen him perched on some dead tree, where, too lazy to fish for himself, he watches the labor of the fishing-hawk and, when that diligent bird has at length taken a fish and is bearing it to its nest for the support of his mate and the young ones, the bald eagle pursues him and takes it from him. With all this injustice he is never in good case, but, like those among men who live by sharping and robbing, he is generally poor and often very lousy. Besides, he is a rank coward; the little king bird, not bigger than a sparrow, attacks him boldly, and drives him out of the district. The turkey is, in comparison, a much more respectable bird, and withal a true original native of America. Eagles have been found in all countries, but the turkey was peculiar to ours. He is, besides, (though a little vain and silly, 'tis true, but not the worse emblem for that) a bird of courage, and would not hesitate to attack a grenadier of the British guards who should presume to invade his farmyard with a red coat on.' A bird thus highly vouched for, your committee respectfully submit, is entitled to some annual period of immunity from trouble for himself and family.

"Fifth—We recommend that the close time for woodcock be from January 1 to August 1 in each year. This famous bird, the epicure's daintiest dish, and one of the sportsman's highest prizes, would soon become plentiful in this county if protected.

"Sixth—We recommend that the close time for partridge or quail be from April 1 to November 1. As everybody knows and, in every sense of the word, loves plump, little whistling Bob White, we need say nothing to enforce this particular suggestion.

"Seventh—Snipe, plover, teal, English duck, and other game birds not above mentioned, being migratory, only appearing among us when full grown and en route to other fields, must be hunted as they appear or not at all. We, therefore, make no recommendation as to them, except that trapping, netting, or snaring be prohibited.

"Eighth—We recommend that it be made illegal at any time to net, trap or snare game birds; or to put out nets, traps, or snares for them; or to poison, or put out poison for, partridges or doves; or to injure, destroy, or disturb the nest of any game bird, or to rob the same of its eggs; also, that it be made an offense to buy, sell, or offer to sell any game bird during its close season, possession of such bird at such time to be proof of having taken the same illegally. Most, if not all, of these provisions have already been enacted for other counties, and we deem them well worthy of adoption in this. In this connection we make the further recommendation that it be made legal for any person finding the same set, incontinently to destroy any trap, net, snare or other like device for taking game. It is already 'hunter's law' that such devices are to be kicked to pieces, but it may be best to make the same statute law as well.

"Ninth—We recommend that any infraction of the above stated provisions as to deer or wild turkey be punished by a fine of not less than $25 nor more than $200, or imprisonment not to exceed three months, or by both fine and imprisonment within said limits in the discretion of the court; other infractions to be punished by a fine of not less than $10 nor more than $100, or imprisonment not to exceed two months, or by both fine and imprisonment as above. In many of the game laws we have mentioned the penalties are much more severe than those we here suggest, but we believe a moderate course the best, and have therefore recommended a system graded as above. We have further to report that we have considered the subject of how best to enforce the local act we recommend, but reserve the same for a subsequent report, desiring here only to say that a proper system of rewards for information of infractions of the game laws, such as are in vogue in other States, is a part of the scheme."

A resolution was adopted inviting the anglers to meet the Gun Club at the office of Salem Dutcher on the 15th inst., to make laws for the protection of fish as well as the game.

AUGUSTA.

AUGUSTA, Ga., Aug. 7.

GAME PRESERVING IN BRITAIN.

II.—THE GAME OF THE FIELDS.

THE game of the fields of a British preserve is, strictly speaking, of decidedly limited variety, embracing, as it does, but two descriptions of ground game and but one of feathered game—to wit, hares, rabbits, and partridges. Small, however, as is the variety of quarry our fields provide, it nevertheless makes up for such shortcomings by the excellence of the sport afforded, as well as by the number and ubiquitous nature of the several birds and animals. Besides "ground game," as we call hares and rabbits and partridges, quails and land rails may also be included in the category; but inasmuch as neither of these birds is rigidly preserved, and their inclusion in the list of game birds is rather indirect than direct, they may be regarded as of secondary importance.

In the British Isles we have but one species of wild rabbit, *Lepus cuniculus*, but owing to various influences many varieties of more or less pronounced nature may be met with in various parts of the country. The British rabbit is the same wild rabbit met with all over the world. Everyone is conversant with its general contour. Its pleasing aspect, its nimbleness, its ubiquity, its easy adaptability to varied conditions of life, its fecundity, its extensive and accommodating appetite are as well known in Australia as in Britain, in America as in Syria. It is found from end to end of Britain. In parts we preserve it; we breed it in warrens, and foster it as we would a tender plant; in others we, as farming tenants, term it vermin, and never cease our exterminating war against it, while, going further afield, we as preservers term it ground game, but cannot stand its overwhelming plenitude, and shoot and net and trap it to provide an income against the expenditure incident to a heavy head of feathered game. I have not the space at my disposal to admit of my telling you of the rabbit's haunts, of the character and nature of the localities they favor and of those they do not. They are ubiquitous, and Britain varies largely in natural aspect.

Rabbits, as a rule, live in small colonies. In the spring time a buck and two or three does which may have wintered together will provide the nucleus of the colony. Fecund beyond measure they rapidly multiply, and their offspring coming after them do likewise, until the colony outgrows itself and the young rabbits combine to found subsidiary ones, which exist till autumn comes and they disperse for the winter months, still retaining, however, the social item in their arrangements for winter

Their haunts during the several seasons of the year will vary largely. From March to May you would find them for the most part dwelling in their burrows. These burrows may be in hedge-rows, hedge-banks, or in the ground. Anyhow, they will not be far from the rabbits' feeding ground, for at this time of year they seem to bear this point in mind when choosing a site for their ramified habitations. Some will lie out in the thick and cosy undergrowth of the plantations, and some will find warm and sheltered berths in the thick growth of the hedges and rough corners of the preserve. Being unmolested they will in summer pass the time enjoyably enough in the open air, basking in the sun or seeking shelter from the mid-day heat beneath a rustling canopy of bracken or ensconced in the agreeable maze of a bramble bush; sometimes, too, beneath the broken wood at the root of a tree, sometimes lying in their run through the hayfield, sometimes 'mid the sweet luxuriance of the cornfield, but in any case well within reach of the protecting burrow—a welcome shelter from inclemencies of weather or retreat from foes, human or animal. When autumn comes round with its varying weather, rabbits will likewise vary their haunts, favoring those of spring or summer, according to circumstances. Winter time finds the coneys—such do we legally term them—ensconsced in snug, warm burrows, situate wherever cold and wet least penetrate.

As I said before, we have but one variety of wild rabbit, but it varies in size and color, according to locality. Sometimes when they deteriorate in numbers and in size, as they will upon a preserve, and sometimes when untrammeled, crossings with varieties of fancy rabbits are resorted to. The silver-gray rabbit, and a large variety colored like the wild one but named the Belgian hare, produce the best effects upon the wild stock. Occasionally rabbits sport, and an occasional black or mouse-colored specimen is secured. I have shot many such myself. These two "sports" occur with frequency in some districts and in others are equally rare. As far as preserving goes, the rabbit needs but little attention. The chief points we guard against are overstocking, vermin, and poachers. The former leads to the outbreak of epidemics, with the usual disastrous result. Vermin of all sorts prey upon rabbits, notably the weasel tribe, cats, and such feathered marauders as magpies, jays and crows in particular. In rabbits the fox finds at once its favorite and its most general provender. A game preserve well supplied with rabbits need never suffer from foxes' depredations among the feathered game or the poultry at the house. Poaching rabbits is in Britain almost as common as the quarry itself. No description of game-stealing is practiced so extensively or so successfully. Ferrets, a rabbit dog, and a dozen rabbit nets constitute the usual equipment, and very efficacious they are. Give me these and a couple of hours unmolested work in a well stocked covert upon a damp day, and I will pick up from half a dozen to twelve rabbits easily, and there are countless men in Britain far more clever at the business than I can hope ever to be. Besides netting, snaring and trapping—in the former case with a common running noose, in the latter with the old-fashioned steel-gin—are the next most favored manners of poaching and, for all that, of capturing rabbits at any time.

Besides rabbits in the preserve and upon the farm, we now largely practice wild-rabbit raising upon a large scale in warrens. There are purely and simply rabbit farms of greater or less extent, and it is possible, under favorable conditions of soil and surroundings, to raise up to a hundred rabbits per acre upon such farms. Some of these warrens are maintained purely for sporting purposes, others as commercial operations having as their aim the supply of cheap fresh meat to the masses. In both respects they succeed admirably when run upon discreet and proper lines. The movement, as an important one, dates its commencement but a few years back, and the writer of these lines, with all modesty, claims to have put the matter into practical form and laid down the lines of successful working of such warrens. I have not the scope to go into the matter fully here; indeed I can but allude to it *en passant*. The business is worked much as one would work a sheep or cattle-breeding farm. A nucleus of healthy, hardy parent stock is acquired and turned down, provision for their confinement within the necessary limits of the warren is made, and certain steps taken to assist their quick breeding and acquisition of a healthy, robust and early maturity. The rabbits are annually killed off, in the autumn and winter months, sufficient young breeding stock being left to provide a next season's supply, and at intervals, when required, new blood is introduced to improve and assist in maintaining a good average size of rabbit. In some warrens cross-breed rabbits are produced, and for this purpose the two breeds known "in the fancy" as the silver-gray and the Belgian hare are universally admitted to be most suited and most successful.

We now come to the hare, and of this animal we have two, if not three, varieties in the British Isles. Chief among them and far outnumbering the other two is the common hare (*Lepus timidus*), which holds premier position among British ground game. The second variety we call the Scotch, Alpine or mountain hare (*Lepus variabilis*), and the remaining variety, if I may so term it, is the Irish hare (*Lepus hibernicus*).

I need enter into no description of the aspect of our common hare—that is too well and universally known, but I may more reasonably detail the diverging points of the mountain hare. It is practically confined to the northern province of Great Britain, being essentially a Highland animal, frequenting the wilder and least hospitable of our moors and mountains. It is in size smaller than *timidus* varying in color, inclining rather to gray than brown; the ears, moreover, are shorter and tipped with black. Its most notable feature, however, is the changing of its coat from the natural hue to white during the winter. This seems to proclaim it of arctic origin, as the other hares do not suffer any such transformation. The change commences from the middle to the end of September; first the feet become blanched, then the legs, and finally the white coloring seems to creep up and close over the back of the animal, this portion of the body maintaining its normal color latest. In the end the animal becomes a beautiful glossy white, the tips of the ears alone retaining their summer blackness. The transforma-

tion is at this time of year an actual alteration of color, but when in March, April, or early May, according to the season, it returns to its proper color, the alteration is effected by an absolute change of fur, the white hair being shed as the new covering rises from the animal's body. As far as its general habits go, the mountain hare differs no more from the common variety than one would suppose incident to the markedly different conditions of locality.

The Irish hare may be a variety, and may not. Some maintain that diminutiveness does not constitute a variety, and as the fact of its smaller size is its sole divergence from the common hare, no very great proof can be brought to bear either way. To me it seems to be the common hare, but by reason of some subtle climatic influence it does not attain the same dimensions in our sister isle as in Greater Britain. In habits, aspect, and the like, the analogy is complete, but in size alone it as a rule never attains the limits of *timidus*, and but rarely those of the mountain hare.

The hare is in Britain as ubiquitous as the rabbit. The latter we have with us in numbers incalculable, but the former is no less universally distributed, thriving and increasing speedily when offered a due measure of protection as against man and vermin. Indeed, compared with the rabbit, it is more susceptible to the influences of preservation, and will multiply and establish itself in fair numbers, often more quickly and invariably more surely than its decidedly more prolific relatives.

It is curious to note the peculiar manner in which the hare will favor particular localities, even particular spots, as habitat, against others which to all intents and purposes are of precisely similar nature. Indeed I cannot point to any game bird or animal in which this trait is more strangely apparent.

The hare is decidedly prolific, although not often regarded as such, the error being traceable to the common practice of instituting comparisons between it and the hare. The hare does not pair, and breeds somewhat indiscriminately nearly all through the year, according to the influence of season and locality. The common hare is the most fecund of the three, the mountain variety least so. Gestation occupies thirty days; the young are usually two or three, rarely also four, in number, are suckled from three to four weeks, then being able to provide for themselves, by which time also the doe will again have another litter well on the way. When breeding freely and well, I have known the hare to rear from twelve to fifteen young per annum, and at this rate the annual increase from a couple of hares may reach eighteen or twenty—a decidedly prolific result, I opine.

It is difficult to imagine a less carefully prepared place of birth than that usually vouchsafed to this animal's young. A rough, rude, often unsheltered, frequently exposed farm is all the provision sometimes made; but as a rule a roughly scraped hole upon the fine-weather side of some small hillock, the ridge of a fallow, or such like, sparsely lined with a few scraps of dry moss, grass or leaves, is the apology for a lair in which the doe-hare kindles and rears her feeble progeny. MOORMAN.

[TO BE CONTINUED IN ISSUE OF AUG. 25.]

A SIMPLE RIFLE REST.

Editor Forest and Stream:

Will you give a novice a few hints about adjusting the sights upon a new rifle, *i. e.*, how to make a simple rest for holding, etc? (2) Can you tell me the diameter of the aperture of the Lyman rear sight?—H. B. W.

Editor Forest and Stream:

In response to your request for description of my rest, I give the following. Although I have long since given the subject of rest shooting some attention, I have not, until lately, had a rest for testing rifles that suited me.

Last year I determined to make one according to my own ideas, and it proved so satisfactory that I intended to send a cut and description of it to the FOREST AND STREAM before this, but have procrastinated.

This rest consists first of a platform about 6ft. long by 3ft. wide placed lengthwise with the target. This platform is boarded up on three sides, viz.: on the right hand side (facing the target) and at both ends to the height of about 5ft. From the top of these sides a covering of boards is so placed that when the shooter stands on the platform the right arm, the left arm and the left hand rest on this covering, allowing the shooter to take same position as when shooting off-hand.

There is plenty of room in this box-like arrangement for ammunition shelves, gun holders, etc. Almost any one can improvise a rest of this kind at very little expense by using a large box made of inch boards without a covering.

Stand this box firmly on its side and cut away the top boards to get the proper shape for an off-hand position. There should be a movable blocking for the left hand to rest on, for it needs to be higher than the part which holds the arms. It is desirable to have the rest made high enough for the tallest person that is likely to use it, and then regulate the height you require by standing on some plank blocking of the right thickness. Sand bags can be used for the arms and hand to rest on, but I doubt if there is any advantage in using them with this rest. One object in having the rest boarded up on three sides is to protect the shooter from the wind, for it must be understood that this is an outdoor rest.

The trouble with most rifle rests is that they disturb the natural position of the body, either by cramping some of the muscles or by pressing against the body in such a manner as to allow the heart beats to affect the holding.

My rest should properly be called an "off-hand rest," for while it gives, as nearly as possible, perfect steadiness, it disturbs the off-hand position as little as possible.

There are so many riflemen who learn to shoot in bad positions that this rest will not be comfortable to some. Those who will appreciate it most are the riflemen who shoot with the left hand well out on the barrel, the right elbow elevated and the butt of the rifle against the shoulder (not on the arm), or in other words those who hold the rifle about the same way they hold a shotgun.

Answer No. 2.—The large aperture of my sight is 3-32 of an inch in diameter and the small aperture is about 1-32 of an inch. Better shooting can be done with the large aperture on account of the better light which is obtained.

I would refer "H. B. W." to an article in the FOREST AND STREAM of Dec. 31, 1885, and also to one of the last February numbers, which speaks at some length on the aperture subject. WILLIAM LYMAN.

LONDON, Eng., July 27.

FOXES AND FOXHOUNDS.

Editor Forest and Stream:

I am glad to see that Mr. H. C. Newall, of Massachusetts, has acknowledged that a foxhound cannot run forty-eight hours, for in his last article he does not say a word to defend his position, he only attacks my sweeping dogs, which I feel called upon to defend.

I would like to state to the gentleman that, from his own statement, he knows nothing of the qualifications that makes a killing foxhound. I have great respect for the hunters, hounds and foxes of New England, but to me a chase without a kill is no pleasure. I had much rather be at home.

And I would also state that the gentleman doesn't know when a sweeping dog puts in his best work. Our dogs get bothered most in crossing large, freshly-ploughed fields. Any experienced hunter knows how difficult it is for the pack to follow the scent across one of these fields; in fact, it is almost impossible to do so if the field is of any size, say from one to two hundred acres, as we often have down here.

When the pack misses in one of these fields, if you have a sweeping dog, and a good one, he will take the fence and sweep around the whole field, or until he strikes where the game has gone out; and again, when the pack comes to check in thickets or bluffs, the sweeping dog makes a circuit, strikes where the game has gone off, calls the pack to him, and the check is of short duration; whereas, if they had to follow around and nose out the pad scent, many precious moments would have been lost. And because a dog sweeps and strikes ahead of the pack is no sign that he has no nose, or is part cur, as the gentleman seems to think. I have two sweeping dogs now, and there is not a dog in the pack, or in any pack, that can work on a colder night trail or will trail closer when it is required. When dogs run to kill their own game they must press all the time.

As I said before, I have great respect for the hounds of New England, but if they were after one of our old reds and they did not sweep and press, they would not run him from sun-up till sun-down, for he would run them out of scent; that is, would get so far ahead of them that they could not trail him. When one of our old reds starts he means business. After going twelve to fifteen miles without a double, they don't double around a bluff nor creep along a granite ledge and wait for the dog to get up, as they do in New England; but just seek safety in out-footing the hounds, and don't often go to earth unless late in the season. Now a gray will double-dodge, walk fences, go up trees and any such tricks to outwit the hound.

If the gentleman has never seen a pack of killing hounds nearly up to their prey, he has missed much, and as a later correspondent has said, it will be a revelation to him indeed.

The instance that comes to my mind occurred in one of our southern countries. I had occasion to be traveling down there on horseback. One morning as I was nearing an opening, after traveling for several miles in timber, my attention was arrested by the cry of hounds off to the left. It took but a short time to tell that they were coming my way. They came nearer and nearer and a better cry I never heard. I also found by the mad cry of the pack that they were close to the game. They struck the road several hundred yards from me on the way I had come from with a sudden check to the pack. Just then I saw the fox coming up the road to me, and a larger red I never saw. It took but a glance to tell that his race was nearly run. His brush was down and he was running with that heavy jolting motion so eagerly looked for by the hunter. He came right by me, within ten feet of my horse. Just then a large blue hound swept into the road; the pack came crowding to his call; they rushed all around my horse and on up the road like dry leaves before the north wind. A prettier sight I never saw. Tongues out, sides heaving, bristles standing erect, eyes glaring, breast and sides flecked with saliva flying from their open jaws. It took not a second glance to tell that they were killing dogs and in blood. I sped after them and saw the death in the clearing beyond. They tore him limb from limb and ate him up, hide, hair and all. I afterward heard that they were Gen. Fitz Lee's pack.

Many thanks to the gentleman for his kind invitation to visit him this season. Perhaps I may do so some time in the near future. To be honest with him I should be afraid to come when there was snow on the ground, for our dogs know nothing about tracking a fox, for that requires much experience. We have but little snow here and seldom hunt when it is on the ground.

I may write something of deer hunting in the Wilderness (made historic in the late war) and tell our Northern friends how we hunt them here. HOUNDING.

VIRGINIA.

AN INCIDENT AT THREE PINES.

Editor Forest and Stream:

There is one feature of fox hunting, or perhaps I should say, practice of fox hunters that I have never seen commented upon, and that is their habit of bestowing appropriate names upon the different runways, names that stick to the place, although the surroundings that suggested them have long since passed away. No matter if the big rock was blown to fragments and utilized for fencing scores of years ago, the runway is Big Rock still and will so be known as long as a single fox hunter remains in the locality. In my early fox hunting days I soon became familiar with the names of the different localities in the immediate vicinity and could describe a run with all of its twists and turns so plainly that my hearers could almost see the fox when he jumped and follow him through all his devious windings from start to finish.

I shall never forget the way I learned the name of one runway. The dogs struck a trail one morning that led straight away over the hills toward a section of country with which I was not familiar. I therefore stuck close to Uncle Mose in order that I might not be thrown out. We plodded along parallel to the general course of the dogs and as the track was cold we kept well up with them. Suddenly there was music in the air. The dogs had jumped the fox and were "arter" him in full cry. Uncle Mose had been shambling along with his head down and the old musket carelessly slung over his shoulder, apparently about petered out, but at the first scream of the dogs his bowed form straightened as by magic, his head was erect, a wonderful light shone from his eyes, and as he stood there with parted lips listening to the dearly-loved music and apparently unconsciously with careless grace withdrawing the wad of tow from the pan and pouring in fresh priming he, made a picture strikingly worthy his calling. Intently listening a few seconds until he had determined the direction of the hunt, he turned to me and exclaimed: "Run like a heater for the Three Pines, he'll be there in half an hour." As I knew nothing of this locality I naturally inquired the direction. "What?" said he with a withering look of contempt, "don't know the Three Pines? A blamed pretty fox hunter you are not to know them," then in a milder tone added, "Run for Long Rock and cross the brook, then make for Snake Hill, go round Jelly Swamp, then up the river to a gully and follow it up to the end, and there you are." Although I could make out neither head nor tail to his directions, I started off at top speed in the course indicated by the wave of his hand. After going about a mile I crossed the brook, but could see no hill in any direction for a long distance. There was a slight elevation, however, just beyond, and I kept on to the top, from where I could see an ugly-looking cedar swamp. Concluding that this was Snake Hill, I flanked the swamp and kept on until I came to a gully, where I paused to take breath and listen for the dogs. I could hear them a half mile ahead and so near the place I was making for that I knew that I could not head them. I therefore leisurely continued my course, and was thoroughly enjoying the music when I heard a gun just ahead of the dogs, who at once responded with more eager notes, but still kept on, showing me by their gradually softening tones that no taint of blood was in the air. Putting on more steam I was soon at the scene of operations, where I found old Rube Mosely, a little dried up fellow, whose appearance suggested that "there was a heap of trouble on the old man's mind." As I approached him he stood gazing in the direction of the chase, but soon turned, and with wild, wide open eyes, glanced at the wall behind him, then dubiously shaking his head and muttering to himself, he shook his fist at the fox, then stamping his feet, he brought the butt of the old gun down upon the ground with a vim that made everything jingle, and hissed out, "I've shot more foxes than you've got hair on your pesky hide, drat you, and if I don't don't blow your blasted carcass out of your dogoned skin afore night my name ain't Mosely, you consarned chicken thief you."

Ever circumspect in obtaining my share of any fun going on I drew down the corners of my mouth and stepped forward as though I had but just seen him and asked him if he could tell me where were the Three Pines. Bestowing upon me the same contemptuous look that I had received from Uncle Mose, he waved his hand in a half circle and laconically replied, although there was no pine tree within a mile, "This 's them," and then added with unction, "Drat that gol-darned fox, he'll be back here in an hour, and if I don't fill his blamed hide fuller er holes than a pepper box, I'll stand treat for the whole crowd; I'll larn him to run over me, dang his ugly pictur'."

With a few innocent questions I drew from the old man the story of his sorrow. It appeared that when he heard the dogs he made for the Three Pines and had arrived within a few rods of the barway where he intended to take his stand when the dogs broke out so close that he dare go no further and he crouched under the wall, expecting every second to see the fox poke his nose through the barway. "I hadn't fairly got fixed," said he, "when that pesky fox jumped the wall and landed square on my shoulders, and as I tried to gather myself up my foot ketched a brier or suthin' and down I went kerflop, and old Betsey here went off on her own account, fer I'll take my bible oath I never touched the trigger, and 'fore I'd got more'n half straightened up I swan to man if old Hero didn't strike me fair and square and knock me down agin and 'fore you could say Jack Robinson the hull pack trapsed over me, and I'm blowed if every one of them dogs didn't step on me more'n seven times apiece; but you jess wait," added he, shaking his fist, till he comes round agin and if I don't smash every bone in his pesky body, call me a liar, dod drast him."

After the old man had cooled down a bit we seated ourselves facing each other in the barway and patiently awaited events. We had sat thus for nearly two hours, when a slight motion caused me to glance at my companion. His face was a study; his eyes flashed fire, his jaws were firmly set, the muscles of his face were twitching, and his fingers gripped old Betsey firmer than the iron bands that bound her to the stock. Suddenly he brought the old gun to his face, a fiercer look flashed from his eyes, and with a savage surge forward to give added impetus to the death-dealing charge, he viciously pulled the trigger. All ye who have not wept at his tale of woe prepare to drop a kindly tear now. Only a few sparks from the flint followed; old Betsey was empty; in the excitement of his tumble he had forgotten to load her. Almost convulsed trying to suppress my feelings I sprang to my feet, and as I caught sight of the fox going like a streak through the orchard I threw the old gun about a row of trees ahead of him and cut loose and missed him clean. Turning round, I was just in time to see old Betsey sailing through the air end over end on her way to the bottom of the gully. Old Rube had slung her with all the force he could muster, and was dancing on his cap and bellowing out a storm of adjectives and expletives that lacked but little of doing justice to the occasion. Old Rube belonged to meeting, and, although many of his harmless oaths were noted for their brilliant nearness to profanity, he had never been known to be actually guilty of the crime, but I would not like to hold up my right hand and assever that on this occasion some of his most strongly emphasized and peculiarly appropriate expressions did not contain cuss words. O. M.

MINNESOTA PRAIRIE CHICKEN AND WILDFOWL.—Hallock, Minn., Aug. 4.—*Editor Forest and Stream:* The prospect for prairie chicken shooting in this locality this year is very good. The early part of the spring was so dry that every egg was hatched and none of the young were drowned. Week before last I took a drive of about sixty miles across the prairie east of this place, looking for a place to locate a sheep ranch. During this trip, which lasted three days, I saw thousands of chickens, most of them nearly full grown. I also saw lots of ducks and a few sandhill cranes. Next month the ducks and cranes will begin to feed upon the wheat fields in large numbers. Any sportsman wishing to indulge in sport of this kind will have have his wish gratified if he will visit this part of Minnesota.—DAVID R. STREETS.

DAYS WITH CALIFORNIA QUAIL.

DURING a residence of twelve years in the early settlement of California, I improved my abundant opportunities for enjoying a shoot among these lively birds; and the delight still lingers with me like the remembrance of a pleasant dream, as I recall the many tramps in pursuit of them I have had over the chaparral-covered hills and valleys of Eldorado county.

The two varieties of these birds, which have been often described and are well known, are quite distinct in their nature, habits, and the localities they frequent, as well as in their size, color and general appearance—and I think there is a slight difference in the flavor, and a perceptible difference in the tenderness of their flesh, though both are delicious when properly cooked in almost any way. I do not know the ornithological name of either, and would not give it if I did, preferring to designate them as I learned and knew them—the smaller as the blue or valley quail, and the larger as the mountain quail. Their relative weight is about as 5 to 8; and though I have weighed them together and remember distinctly this proportion, I do not remember the exact weight of either.

The blue quail does not differ much in size from our Eastern quail, and I should judge would weigh about the same, possibly a trifle more, as its flesh is firmer and more compact. This bird was common throughout California anywhere below the snow line; and although a strong and very lively bird, it shrank from the frost and snow and generally kept beyond the reach of the latter.

Below an elevation of 2,000ft. above sea level they were generally secure from the reach of "the beautiful." They bred and thrived in the ravines, flats and ridges of the foothills of the Nevada Mountains at this elevation, but were more numerous in some of the lower valley counties. They were very rapid and strong flyers, much more so than our Eastern quail, making generally a longer flight, and were much more tenacious of life, requiring a strong shot to cut them down at once, and would often continue their flight a long distance, much like the partridge, even when mortally wounded. I always have made it a point in shooting quail, partridge or chicken, if I see them quiver when the gun cracks, to watch if possible the termination of their flight, and have often been rewarded by seeing them go down in a lump. I will go half a mile any time to recover a dead bird, even though I know the time it takes will deprive me of the privilege of bagging two others while I am gone for this one.

In reading the accounts of quail shooting in California in recent years I sometimes wonder whether the sportsmen and dogs or the quail have been the more educated in my absence. Sportsmen now tell of bagging fifty and even more in a day's shoot, while I have to confess the most I ever carried home was twenty-five, though I may have killed and failed to retrieve a few more.

They tell us now how nicely these birds lie for a dog, while then I could seldom get a dog within gunshot of them while in the open field ere they would flush and skip for the chapparel. Sometimes, early in the season, I have found a young brood, perhaps three-quarters grown, and have had them act as though they were civilized, and would wait to be killed in a sportsmanlike manner, but after they had become full grown I seldom found them submitting to anything like this, but they would "git" for dear life at the first sight or sound of an intruder. My failure to induce the birds to be killed in a sportsmanlike manner may have been caused by my lack of skill in the business, but as no one with whom I was acquainted succeeded any better than I did, I conclude it was not entirely my fault. Neither will I permit the fault to be charged against my dogs, for having had four during the twelve years—two setters and two pointers—which I think were a fair average with dogs of those days, and one of which, a pointer, was brought to this country by an Englishman who came to visit Gen. Fremont; I believe they tried faithfully to do their part of the business in a skillful and artistic manner. So I conclude it was the fault of the birds; they were untutored, uncultivated and uncivilized in the delicate and pleasing arts of being shot "according to rule." I am glad to learn that since then they have been educated up to the proper requirements of being bagged scientifically.

The best sport I could get was to find a locality where the chaparral was not more than breast high, and it was generally so thick as to preclude seeing the dog or ground ten feet away, and by working the dog carefully within short range, shoot as the birds raised within shooting distance; and as they generally got up 25yds. or 30yds. away the hunter having no premonition whether it was to be in front or to the left or right, and it took but an instant for them to make a blue streak 75yds. or 80yds. away, where it was good luck or an accident if you cut him down at that distance. The dog was indispensable in retrieving, for without him you would not find one dead bird in ten, so thick was the cover; and to simply wing a bird was generally to lose him, as he would outrun and out-dodge a dog for an hour in this tangled thicket.

When I say that quail of this variety were very plenty and that I have raised hundreds in a day's tramp, some one will be ready to exclaim, "Why didn't you get more?" Well, I used to wonder at that myself, sometimes, after banging away 3lb of shot in 1½oz. doses from a 10-gauge Manton muzzleloader (and a good one, too, I thank you), and then I would brush up my gun and my wits and try it again some other day with about the same result; and I think if Mr. Why-didn't-you-get-more had been with me we should probably have bagged about double the birds that I did; and if he had increased the number beyond that, he would have been an exception to the general rule. I tell you they were strong and rapid flyers, very tenacious of life, and would carry to the end of their flight more lead than any other bird of the same size I ever followed; but for these very reasons, and because they were delicious food I enjoyed their pursuit. Many a time have I stripped the jacket from one, washed him clean in a mountain stream, built a fire, and on the point of a stick broiled him brown and crisp, and with a little seasoning of salt and pepper, if there be any morsel more sweet to a sportsman's taste I have never found it.

In the early fall, after the long parching summer had dried entirely many springs and small streams, water in some localities would be much like the proverbial visits so often quoted. Then, in such localities, these birds would gather at morning and evening in great numbers at the infrequent pools and springs to slake their thirst. I am sure I have seen a hundred or more rise at once from such a place; and confess to having tried to sneak up and murder them like a pot-hunter, but also have to own up that I never succeeded, as some wary sentinel would always give the alarm and leave me sneaking on the ground, while the birds were off to the chaparral.

After the rains set in, generally the last of October, and water could be found any where, the broods would scatter somewhat, and only bunch near exceptionally good cover or feeding ground.

Notwithstanding what I have described as the faults in the education of these birds, and their persistence in remaining in the thickest of cover, they offered me much delightful sport.

The mountain quail seek higher ground—a rougher and wilder country—generally among or in proximity to heavy spruce or hemlock timber, where there are patches of underbrush of a species of laurel, or a cover of manzinita, seldom coming out into the open level country, but living a more quiet, weird and retired life; and though not nearly so shy and wild when pursued as the blue quail they seem to delight in seclusion and obscurity, much like the woodcock. They are not as rapid flyers as the blue quail, and though not fast runners, will not take wing until they have tried skulking and a short race, and find themselves too closely pressed; and when they do take wing they do not fly as far as the blue quail. They will lie very nicely for a dog, but being found in very thick cover and generally among evergreen timber one has to shoot at short range, which is quite likely to destroy it entirely. They resemble somewhat the sage hen in their skulking habits, and if they could only be induced to leave the tangle of their steep, rocky and almost impenetrable haunts, they would make one of the most delightful game birds I have ever followed. Unlike the blue quail I never knew one to take a tree or bush at the end of its flight.

I have on several occasions found a bevy in fairly open country, and had an hour's shooting, the pleasure of which still lingers with me. I once bagged nine from a bevy of fifteen, which, with their copper-hued, black-tipped feathers and long, slender plumes, and above all their plump, delicious bodies, made it the finest string of birds I ever handled. I had at this time the English pointer before named, and he did his work admirably. On this occasion I made a double shot, the birds falling near together on an open spot, and when I sent the dog for them they were bouncing up and down like hens with their heads cut off. Seizing the one he came to first, he quickly tried to pick up the other only to have the first fall from his mouth. I watched him without a word, and after trying this for several times and evidently satisfying himself that the storage capacity of his mouth was not equal to the task before him, he hurriedly gave me one and immediately bounded back for the other. I have seen some dogs—and men, too, for that matter—who seemed proud of their achievements; but I shall never forget the magnificent pride of that old dog as he looked up at me and seemed to say, "Did you see how nicely I managed that little job?" If I were an artist and could place that scene upon canvas as I saw it, I should cherish the picture as I still do the remembrance of it. Incidents like these, which seem to the outside, every-day world insignificant, are the gems which a true sportsman cherishes as among his choicest treasures; for when he looks them over they bring up visions of the past that make his heart tender, gentle and mellow.

A.

July, 1886.

THE FIRST GUN.

THERE is one day which stands out in my memory with a vividness which not even the swift passage of the years can efface—the day when for the first time I sallied forth, the happy possessor of a real gun, to initiate myself into the mysteries and the joys of the sportsman's craft. I had been afield before, but never in the *rôle* of principal. I had always acted as an accessory, a sort of subsidiary fiddle, to many a schoolmate of my own age and size, whose good fortune in being actual possessors of actual guns I was wont to envy most intensely, and yet with kindliness of feeling that made me fairly worship them. *O beati!* had I been familiar with that classic vocative, would have expressed my feelings toward them better than any term I can muster from a limited vocabulary of ancient and modern tongues. For in my eyes these lads were heroes, raised as high above ordinary boys—boys without guns and without ambitions for guns—as kings above peasants, as the crowned men above the hatted men of this sadly sycophant and hero-worshiping world.

But at last I had risen from the vulgar throng to be one of the heroes. After long and patient waiting, beseechings innumerable, promises thick as the leaves on the trees in spring, dutiful and honorable deeds at home and in the flowery paths of knowledge, I had secured the coveted permission to purchase the gun of my choice. How with trembling hands I broke the seal of the little bank where my pennies had been hiding for years, and counted the precious store as if my very life depended upon the result, the reader need not be told; nor yet of the bitter tears that flowed when I found my fund too small; nor of the smiles and sunshine that followed when my indulgent parents made up the deficit and sent me on my way to the express office rejoicing. The money was sent, the gun came, and a happier boy than I surely never danced over the face of this green earth, I verily believe my heart was so light I could have flown had it not been for the precious box beneath my arm.

When at last I stood equipped, the shining little breech-loader in my hand, the handsome fringed gamebag at my side, my pockets stuffed with new brass shells, I felt every inch as great and grand as Cæsar ever felt; and as for George Washington, he and his little hatchet and his monumental veracity faded away into contemptible juvenile obscurity. What were a boy in knickerbockers, equipped with a common store hatchet, to a boy in long pants, with a real gun in his hand and a genuine sportsman's gamebag slung over his shoulder? How vividly I recall, even to-day, my sensations as I crossed the fields beyond the old house and climbed the ridge beyond. Only the boy who has had a devouring passion for something—an inborn, natural passion—and has realized his desires just at their height, can appreciate or understand my feelings on that glorious day in early winter. The light carpet of snow with which the landscape was covered gleamed about me like a floor of marble, and the spotless blue of the sky was like a cerulean dome surmounting the temple of God's beautiful and happy world. There was absolutely nothing left for me to desire. For once, and only once in my life, the summit of attainment and the horizon of hope were one—there was nothing beyond!

Over the hill I passed and into the dark, still woods. My feet in the soft covering of snow made no sound, and I seemed to be borne along as in a dream, too happy, too light of heart to feel fatigue or discomfort of any kind. My precious gun, with loaded chambers and in readiness to shoot, occupied my chief attention; but with the natural instinct of the sportsman I glanced, as I passed, into every promising covert in search of the nervous, winding trail of the wary grouse, or the bold, broad imprint of the "snowshoes" of the hare. So alert was every nerve that the twitter of the little chickadee, the swish of the twig from which it sprang and the flutter of its wings made me thrill all over with a delightful excitement. Not that I actually expected to bring home with me the lordly tenant of the covert, or even puss with her bright eyes and big ears; but the spirit of the huntsman was upon me, and it was delight and satisfaction enough to explore the secrets of the woods, gun in hands, conscious of the power of some time attaining my share of their hidden treasures.

Shall I ever forget the moment when, as I entered a dusky bit of wood road between two almost impenetrable thickets, a magnificent grouse flushed from underneath a small hemlock at my very side, and was roaring away through covert as my gun sprang instinctively to my face? No! for at the next moment the hammer fell, there was a bewildering loud report, a rush of smoke that filled the air before me like a curtain, and with an exultation and bounding of heart that I never expect to know again, I heard my glorious prize beating its death tattoo in the depth of the thicket. How I gloated over that bird; how I hugged, nay, even kissed my precious, my incomparable gun; and then how proudly, as though walking on air, I marched through the woods all that long winter afternoon with the grouse hanging in the network of my game bag, and my gun at full cock and ready for the next that rose. Fortunate it was for my exalted mood that no hurtling grouse again called the little gun to shoulder and evoked the cloud of smoke and fire. Experience has long since taught me that all that flushes is not bagged, even by an enthusiastic boy with a brand new gun.

Since that day I have owned a very respectable armory of guns, good, bad and indifferent, but I have never regarded any combination of wood and steel with the enthusiastic affection and almost worship which I bestowed on my first little single-barreled breechloader. I have long since parted with it (for who does not sometimes part with the object of his first, his most romantic affection?—'tis the irony of fate) but I shall never cease to think of it in my waking dreams, and long for something of that inexpressible, that fresh, unspoiled delight with which I looked upon its shining outlines and called it mine.

Paul Pastnor.

The Woodcock Fund.—The ardor of the enthusiastic game protector, who sits up all night writing letters to the newspapers, is apt to cool quite suddenly when he is asked to put his hand in his pocket or to take any trouble to help to do what he so earnestly advocates. Our correspondent "Ajax" who a week or two since offered to furnish the evidence to convict certain New Jersey violators of the game laws expresses himself as utterly disgusted with his fellow sportsmen for their apathy. We have received a number of subscriptions toward the fund to pay the legal expenses of the prosecution referred to, but their sum does not yet amount to one-tenth of what would be required. There is an old and vulgar, but very expressive saying to the effect that "talk is cheap, but it takes money to buy land." The average sportsman is quite willing to contribute his share of talk—he has a lot of it, more in fact than he knows what to do with—but when it is a question of money, his interest is apt to abate. This is not true of all men by any means, but it is of a very considerable number. It seems curious that the law-abiding sportsmen of New Jersey should not interest themselves in this matter. We have heard from a few of them, but not from as many as in New York. It is difficult to say, perhaps, whether their indifference arises from laziness or stinginess or from both combined. At all events it exists and its existence is an explanation of the inefficient protection afforded to our game. If the sportsmen do not take interest enough in protection to exert themselves in the matter it is certain that no one else will devote thought, effort or money to this object. Our correspondent did his fellow sportsmen no injustice when he indulged in a little quiet sarcasm at the difference between their preaching and their practice.

Arkansas.—Clarendon, Aug. 6.—I am having royal sport shooting summer ducks. Young ones just getting to fly well, are full grown and fat as butter. Have killed one hundred in the last two weeks, also fifty squirrels. The crop of young quail is large, and the birds are in fine condition, having been unmolested as the game law is on till Sept. 1. Then I pity them, as many new guns are being bought, and old ones rubbed up for the fall shooting. Some people in this and adjoining counties don't seem to know there is any game law at all, as they have never stopped killing deer and turkeys the whole summer. Some of them had better look "a leedle out" when the Grand Jury meets. Send you newspaper accounts of Mr. A. Stinson killing two bears recently. Since the above was put in type two more have been killed not over five miles from town, the first two were killed 1½ miles from town.—Cavalier.

Meacham Lake, N. Y., Aug. 2.—*Editor Forest and Stream:* What has become of the game protector for this district? Has Paul bought him, price $25? or have the parties who made such an outcry against hounding gone to night-hunting? The first party we hear of killing deer in this section was from St. Lawrence county, where all the good boys come from, who would not kill deer out of season. Why not spur up some of the good ones and send them into the woods to stop the killing? We see deer in the clearings and about the lake nearly every day—three were seen yesterday and two to-day, all by guests of the house. All are waiting patiently for Aug. 15—then we expect venison.—A. R. Fuller.

Kansas Prairie Chickens.—Chico, Kan., Aug. 6.—Chickens are more plentiful than for a number of years, on account of dry weather. Quail are also plentiful, and every one has chosen his companion for the glorious 1st of September.—Plover.

INTERCHANGEABLE RIFLE CHAMBERS.—*Editor Forest and Stream:* The new gun principle described in the FOREST AND STREAM some time ago has "materialized." I got the Massachusetts Arms Co. to apply it to a Maynard rifle. In testing the gun at Walnut Hill I found it to perform admirably, making thirteen consecutive bullseyes at 200yds. at a rest. The gun is rather light for the larger charges, being but 8¼lbs. in weight, and yet the recoil was not so heavy as I expected. Used in the excitement of a hunt I do not think the recoil would be noticed. The barrel is 32in. long, and is rifled with a twist of one turn in 20in. I have practically three sets of sights for the gun—hunting, mid-range and long range. It shoots all the way from 100 to 1,000yds, by simply changing the chambers and the ammunition. I do not see but that it shoots as steadily at all distances as other guns with their special rifling. I think the use of this gun is destined to explode a good deal of the nonsense imposed by gunmakers upon the sportsmen of the country. It will no longer be necessary to invest in half a dozen different guns to be duly equipped for any kind of a hunt or the different distances of the shooting range. It is my purpose to do some trajectory testing with this gun, and I shall not allow any preconceived opinions to stand in the way of demonstrated facts. The loads taken by the (.40-cal.) arm are: 45-285, 60-260, 75-258, 90-300.—COMMON SENSE (Boston).

BEARS IN THE DISMAL SWAMP.—Belvidere, N. C., Aug. 4.—Bears are more numerous than usual up near the headwaters of the Perquimans River. My health has been too poor to admit of such violent exercise as bear hunting, but the party with whom I hunt has killed eight since the summer months began, some of them very large—"old hes." The wet weather has prevented our getting up organized hunts, but should the swamps dry up within a few weeks the bears will suffer, as they are depredating on the pigs of farmers adjacent to the great Dismal Swamp. Quail seems to be in great abundance. We can hear them in every direction from daylight until dark piping in the corn and meadows, and a right cheery sound it is.—A. F. R.

THE BAY BIRDS.—Philadelphia, Aug. 1.—I last week saw a nice flock of curlews flying over; and snipe and small birds are around in flocks. The gulls were cleaned out for ladies wear three years ago, and hardly one is seen for hundreds before that time. I am glad to see the bob-olink question brought up, as the absence of this merry singer is felt in Vermont and all the Eastern States. Give them a chance.—S.

TENNESSEE.—Bond's, Aug. 3.—Game prospects in this vicinity are flattering. We have been visited with some tremendous thunder storms which I feared would prove disastrous to the young quail; nevertheless, I have since seen a goodly number of strong flying bevies.—O.

MR. GRIFFIN SMITH, of Longmont, Col., claims to have shot a mountain lion on the Little Thompson, which measured 9ft. from the end of its nose to the tip of its tail.

LONG ISLAND DEER.—Four deer raced with a railroad train for a distance, between Ronkonkoma and Central Islip, Long Island, one day last week.

ROBINS AND MEADOW LARKS are protected at all times in New York.

AN ANGLER'S TRIBUTE.

IN MEMORIAM—GEO. B. CORKHILL AND E. B. PATTERSON.

AS summers come and go at Cape May we miss at the bivouac some dear familiar faces, and there is one face we recall with undisguised pleasure and affection. No summer solstice came and vanished without his historical and familiar presence. He had everywhere troops of friends, ever glad to grasp him by the hand, to smoke with him on the broad piazzas of Congress Hall, or to sail in his genial company out into the deep blue sea, and tempt with alluring bait the swift swimming denizens of the deep.

Alas! there is more than one of these dear familiar faces who have gone across the river into the sweet bye-and-bye. One of these was George B. Corkhill, who had passed of his pilgrimage on earth only forty-eight winters, when the inexorable call of the grim Reader summoned him from the kindly circle of admiring and warm-hearted friends into a world beyond the stars. George B. Corkhill did not expect to die so soon. God disposes while man only proposes where and how he will spend his summers. Our genial and warm-hearted companion of many a pleasant and long-to-be-remembered fishing excursion had even engaged for the summer his old quarters at the same hotel in which he was an ever welcome guest. But death marked our dear friend for his own, and in the midst of the storm and stress period of his life the soldier laid aside his sword till we can say of him as of Colonel E. B. Patterson ("Old Shamokin" we tenderly called him):

"Our good Knights are dust,
Their swords are rust,
But their souls are with the saints, I trust."

George B. Corkhill will not rank among the great of the earth, but he accomplished some great things, and that fills Napoleon's definition of greatness. As a professional man he was true to his clients, ardently in love with his profession, and possessed of a strength of purpose, and professional tenacity in pursuit of legal victories which made him a formidable antagonist in political life and in the forum, whose strife and triumphs were very dear to him. But as a man we respected him, and to-day put flowers over the grave of our dead friend. Here's "rue for remembrance and pansies for thought."

Older in years, but of the same genial spirit—"touched to fine issues"—was Colonel E. B. Patterson, who was the close and familiar friend of Mr. Corkhill. It was but yesterday they went away, and yet it doth appear as if they had been away a thousand years. Time takes no measure of eternity, and yet the ancients said of death that it could not be an evil, for it was universal. And the divine William, who sits "pensive and alone above the hundred-handed play of his own imagination," says the sense of death is most in apprehension. The very beetle that we tread upon feels pangs as great as when a giant dies. We gladly recall the rare courtesy and the strong, manly and genuine simplicity of Patterson's character. Like all good men sound to the core, both those we loved and who have gone before, were fond of the pleasures and health-giving joys of forest and stream. Many a winsome hour have we spent, as the sun was slowly sinking behind the western stars, on the strand near the old Congress Hall Pier, while my sweet-spirited friend (Patterson) told of his piscatorial joys among the speckled trout of the mountain regions of the Keystone State, whose rocks and foaming rills he loved so well. These hours were bright and memorable, and their memory hath an immortal perfume; and over these graves, now sacred, we pause to drop a tear and plant the laurel of tender affection.

Friends in yon brighter and better world than this, we say Hail! and Farewell! And when we, too, have joined the ever moving army who go forward to the silent Halls of Death, may some kind reader of these lines say one kind word of him who pens this honest tribute to two brave and generous hearts. JAMES M. SCOVEL.

CAMDEN, New Jersey.

ADIRONDACK NOTES.

Editor Forest and Stream:

In the early part of last month I was suffering somewhat from overwork, and a short trip was advised by the doctor, for the purpose of recuperation. Of course I did not wish to leave the city in July; had hoped to get my vacation in October, and all that; but when one's doctor says a fellow must go away from the city, and he can get away, he's pretty apt to go. Just in the nick of time came a letter from a friend at Cooperstown, asking me to meet him at Albany and go through the Adirondacks.

As we were rowing up Long Lake a very peculiar thing happened. Van was trolling with a spoon hook for pickerel and had caught a couple of small ones, I doing the rowing. Presently Mrs. T., seeing Van's luck, called out to me for a spoon. I had none, but I took three hooks, of about the common perch size, and tied them together for a grapnel. To these I tied a swivel sinker to keep the line from twisting all out of shape; and then for a spoon I tied on a stick of birch bark cut in the shape of a spoon as nearly as possible. With this crude tackle Mrs. T. caught the largest fish of the trip, a mighty pickerel of about 8lbs.; and also a small catfish or bullpout, or bullhead or whatever the reptile's name is. This is something new to me, I never heard of a bullhead taking a strolling spoon.

At Long Lake we struck a camp and stayed for four days, sleeping in the open camp and cooking *à la* "Nessmuk" our own grub. We caught a good many pickerel and had a royally good time.

We saw quantities of deer tracks and a good many boats on the Raquette River in the evenings, with the jacks lit, night-hunting. These fellows would douse the jack as soon as they heard oars, and skip into the bushes; but as soon as we had passed they would light up and go to work. Almost all the hotels had venison on the table. We were talking with one man who keeps a good many dogs, and who made no secret that last season his dogs ran deer for gentlemen from New York. He wanted us so stay a couple of nights and go jacking with him, and was quite disgusted when we refused. On Long Lake we heard of one man (a justice of the peace) who had a seine, and who (from the drift of the conversation) was intending seining trout. As we afterward saw this same man shoot at a deer—a magnificent buck that came out on the bank just opposite the house at the end of the carry at Forked Lake (from Forked Lake to Raquette River)—I can well believe that the old gentleman would seine trout or anything else.

We had a splendid time, and after rowing a loaded boat and carrying 150lbs. over carries, I arrived at Blue Mountain Lake with a gain of 5lbs., and I never gained a pound before in my life. COCKER.

THE GREAT SOUTH BAY.

ON Tuesday evening, Aug. 3, the citizens of Babylon, Islip and Bay Shore, N. Y., held a mass meeting at the latter place to consider the protection of the fishing interests of the Bay. Mr. James H. Doxsee was called to the chair and Dr. S. Moore was appointed secretary. Mr. Vail said that fishing in the main channel with nets should be prohibited and Mr. Hulse offered the following: "Resolved, That it is the sense of this meeting that all net-fishing in the Main Channel, from Fire Island Bar to the head of the said Main Channel, and also in Dixon's and the East channels should be prohibited."

A lively discussion followed in which ten speakers favored the resolution and three opposed it, the former being warmly applauded showed where the sympathies of the audience lay. It was shown that the nets have increased both in numbers and size for several years, and that some of them are three-fourths of a mile in length.

The cause of the present scarcity of bluefish was attributed by Capt. Moses Downs, a net fisherman, to the cold easterly winds of last spring, which so chilled the waters of the Bay and inlet that the fish would not enter. He feared that if the present differences between the net and line fishermen were not amicably adjusted the Almighty would prevent the fish from coming into the Bay at all.

Chairman Doxsee thought that the welfare of the South Side depended upon the summer visitors, many of whom come here to enjoy line fishing, and that if it was destroyed the villages of the south shore would suffer greatly. He thought the meeting should endeavor to so act that the greatest good should be done to the greatest number; if line fishing benefited more people than net fishing the latter should be prohibited.

Mr. L. B. Garrett stated that from Sayville to Amityville seventy-five persons were engaged in the net fishery, while 5,000 people were directly benefited by line fishing.

Dr. Moore favored exact and equal justice to all classes of fishermen. He thought that if net fishing was prohibited during the spawning season the effect would be to increase the quantity of fish. The speaker also referred to the menhaden fishery, and said that a well-known citizen of Islip, while at Fulton Market on Monday of last week, saw unloaded from a fishing steamer $10,000 worth of food fish, and heard the men on the steamer say that the fish were caught a mile and a quarter from Fire Island Inlet.

Editor Johnson, of the *Journal*, corroborated Dr. Moore's statement in regard to the fish taken from the menhaden steamer, and stated that he was authorized to give the name of the gentleman—William Nicoll, of Islip. The steamer, Mr. Johnson said, was the J. C. Humphrey, and the fish taken weighed, on an average, eight pounds each. Mr. Nicoll saw the fish and heard the men say where they were caught. Mr. Johnson cited the case of the Olympic Club, the members of which removed from the Shrewsbury River, N. J., because the net fishermen ruined the line fishing. Mr. Johnson declared himself as strongly opposed to the use of nets in the Bay—believing that the prosperity of the whole South Side depended upon the prohibition of net fishing—that being decidedly the lesser interest.

Capt. S. A. Titus, of Babylon, said that he believed the question at issue could be amicably settled, and that if good judgment was allowed to prevail there would be no trouble; there would be fish enough for all. He called attention to the fact that the South Side Association for the Protection of Fish and Game, organized two years since, failed in its attempt to prohibit net fishing, because the net men were antagonized instead of conciliated. The speaker warned the meeting against making a similar mistake. He did not think that the menhaden steamers were responsible for the scarcity of bluefish, and read a letter from ex-Assemblyman Hawkins substantiating his views. The bluefish were of a migratory nature—here one day and away the next. The speaker thought that if the net men were consulted they would join in any effort to restore the fishing—if it could be restored by work of man.

The resolution offered by Mr. Hulse was adopted. John Snedicor offered the following, which was adopted: "Resolved, That a committee of seven be appointed by the chair to circulate petitions asking the Board of Supervisors to pass a law in accordance with the resolution previously adopted at this meeting." The chair appointed Henry Oakley, George W. Pettit, L. B. Garrett, Isaac Smith, John Clock, Nelson Ketcham and D. W. Wicks.

F. A. Johnson offered the following, which was adopted: "Resolved, That a committee of five citizens be appointed by the chair to appear before the Board of Supervisors at its next meeting and urge the passage of the law asked for in the petitions to be circulated throughout the towns of Islip and Babylon." The chair appointed as such committee, J. H. Vail, John S. Snedicor, Hon. C. T. Duryea, Isaac G. Terry. On motion the chairman was added to the committee.

THE PICKEREL DEFENDED.

Editor Forest and Stream:

A recently printed article by Mr. Backus vilifies the gaminess and edibility of pickerel. He describes the pickerel as "slimy to the touch, nauseous to the taste and smelling of decay. They have no spirit of game nor other virtue in them."

Having caught trout in brook and lake, bass and pickerel in pond, let me say a word in favor of the latter. A trout will grab the fly and usually you can land him; a black bass is strong in his lips, and when he bites he is sure; but when a pickerel takes hold of the bait much more scientific work must be used than to catch either trout or bass. The pickerel will sometimes "fool" a half hour with the bait, which latter should be a live shiner or perch, or small sunfish. He will endeavor first to kill the bait at the head, and in doing so he will carry the bob down. This is not the time to pull up. After the bob comes to the surface, the pickerel is intent to have the bait in earnest; down goes the bob the second time and this is the time to "strike" him. Now is the time for the angler to show his skill. The rule is to draw the fish steadily direct to the breast of the fisherman. Let the pickerel have any slack line or strike him against the side of the boat, he is gone. He will either cut loose from the hook, his jaws being under, or he will cut the snell with his teeth, which are very sharp.

With a bass or trout it is fun to let him have the line; not so with the pickerel. The latter is naturally a lazy fish; but when he knows he is hooked he is in a great hurry to get off, and to land him he must be brought in with a steady pull toward the body of the angler. In order to avoid the fish striking the side of the boat, the line and hook should measure same as rod. It often occurs that the fish, not being caught, has only scarified the bait, in which case throw back the line, and, whether the bait be dead or alive, the pickerel will go for the same bait rather than take a live minnow on an adjacent line. The writer has let the pickerel sometimes take the line in pretty much the same way as with a trout. This it is not safe to do unless you are sure that the fish is hooked, which can be done on the second immersion of the bob by lifting the rod so that the line be taut, whereupon the hook will turn and catch in the mouth of the fish. Then let Mr. Pickerel go and the fisherman is apt to have as much to attend to as if he had a trout on his hook.

That pickerel are "slimy to the touch" is true, but the charge that they are "nauseous to the taste and smelling of decay" is nonsense unworthy of reputation.

On Wednesday, Aug. 4, the writer, with Mr. Rossiter Bailey, of Sparkill, N. Y., caught 31 pickerel, weighing in the aggregate 44lbs., at Wescoline Pond, Pine Grove, Pike county, Pa. Near by is Tink Pond, stocked with bass. It is not usual for sportsmen to tell where the game is, I think there are enough fish in those ponds for all, just as good as ever were caught. And one good feature about the sport is that Andrew Quick, of Pine Grove, takes good care of the fishermen, and gets them their live bait gratis.

W. B. T.

SALMON NOTES.

Editor Forest and Stream:

I send you scores of two rods on the Restigouche River. The river was unusually low and clear and the fish very shy. I was compelled to use leaders of double the usual length and the smallest "Forrest" fly he makes. I caught one large black bass in trap and had a lively canoe chase with another one; but unfortunately he landed out of rifle shot. Among some of the amusing antics of the salmon was one instance where a 25-pounder must have started a neighbor, and both jumped at same instant clear two to three feet of the water and within one foot of each other. On several occasions I could see (the water was so clear) that other salmon would swin up to the fish I was harnessed to, and apparently inspect him and swim around him; I could also plainly note the muscular motion with which the fish make (as they always do during the fight), the trying and provoking tugs so destructive to the hold of the hook by their force and rapidity.

THE SCORES.

A. R.'s rod—Mouth of Kedgewick to Little Cross Point, Restigouche River. Five days fishing, 37 salmon; weight, 870lbs.; average, 23½lbs.; largest, 28½lbs., 31lbs., 34lbs. Fly, smallest double Jock-Scott and black do. made. Every fish killed without gaffing.

E. P. R.'s rod—Mouth of Kedgewick to Little Cross Point, Restigouche River. Fourteen days fishing, 56 salmon, weight, 1,168lbs.; average, 20¾lbs.; largest, 24lbs., 25lbs., 26lbs. Other pools on river, 12 salmon; weight, 230lbs. Twenty-seven killed with double J.-Scott, 16 with single J.-Scott, 5 with Ranger, Butcher and Titus, 8 with smallest double J.-Scott, 12 with smallest double blackdo. Fifty gaffed, 18 not gaffed.

MEACHAM LAKE, N. Y., Aug. 2.—Our fishing continues good. The score for May, June and July is 10,127. There is every prospect of good fishing in August.—F.

Forest and Stream Fables.

LIGHT RODS FOR SALT WATER.

Editor Forest and Stream:

Let me welcome "A. E. C." Perhaps we who have always held that given the light rod and tackle there is almost if not quite as much sport to be found in salt water as fresh water, is gaining converts at last. A small enough array are we, laughed or at least smiled at by both salt-water anglers of the general run, and by our brethren of the fresh water and brooks; but the proof of the pudding is in the eating, and we who fish with light pliable rod and thinnest tackle want no approbation from others.

Years ago I turned some attention to the question, having become more and more dissatisfied with the heavy rods generally used; and as the result of my cogitations I entrusted my tackle dealer with the duty of making a rod for the purpose of salt-water angling. I left the weight to his discretion, as also all other details, as to stiffness, etc., simply telling him I wanted one as much like a black bass rod of medium weight for bait-fishing as practicable. What was the result? He took advantage of the clause "as practicable" and made a stiff, though light rod which had the most unearthly bend, threatening at every strike to break, yet at the crisis recovering almost by a miracle. It gave as much play as a 3lb. hop pole. I discarded it and tried from that time on many rods in succession, yet never succeeded in getting one exactly right. I have tried rods of lancewood, greenheart, etc. (not made to order), of all weights from 16 to 6oz., but none were suitable. Some were too stiff, others too pliable. If I had had the tackle dealer make another one to order I could, no doubt, have been suited much sooner, although I am satisfied at last, that is, since last year. I had a very light and remarkably well-made trout rod, weighing only about 6oz. It was of split bamboo and was just a tantalizer to me. Time to go trouting I had none, having only one or two days at intervals in which I could escape business. So I stopped to consider what could be done with it. One day I took it to Sheepshead Bay to see what could be done with it in casting, intending to meet a friend (a splendid fly-caster), who wished to use the rod in a tournament. He had not arrived so I laid the rod in the boat and went fishing. I had no notion of using it, but angled with my heavy rod, with, however, very poor success. Through ennui I rigged up the light rod with a squid hook and soon had the pleasure of making fast to a large sea bass, and, as he happened to be a good game fellow, I had quite a lot of fun. After that I used this light rod (it weighed just 5½oz.) but soon found it was too pliable altogether and could only be used in slack water, being useless in a tideway. Now, as it behaved so well in slack water I felt very loth to discard it like the rest, so I had the thin tip taken off and on the middle or second joint put an agate tip, making a remarkably light two-joint split bamboo rod. This suits me exactly. It is stiff enough to carry some lead in a tideway without bending materially, and yet so pliable that when a fish takes the hook you feel, after he is landed, more as if you were his conqueror and not his murderer.

On such a rod weakfishing is inferior to none and becomes the true thrilling sport. Let me assure "A. E. C." that I had no trouble at all by either losing fish, getting the line tangled round stakes or any other difficulty, and so I think I can answer his question by saying that a weakfish can be taken like a black bass, not forgetting even the bass fly, for I often use that instead of the squid. I don't mean that I cast the fly, but I use it in still-fishing submerged and bait the hook besides.

Why don't you, Mr. Editor, give us poor struggling anglers a lift? Of the thousands who love the art, how few are there who have the time or wealth to follow it, and how many would not welcome any news of true sport from salt water? The average salt-water angler I know has screwed the sport down to slaughter. The more reason, then, for you to help us who are trying to build it up. Open your columns to the experience of true anglers who have tried salt, you have been and are so liberal in all other matter, be liberal in this also. Give us a chance. Don't be so silent about our doings, which is as bad almost or worse than decrying us or fighting us. You are looked up to by so many sportsmen as an authority, that any words you say in encouragement will be certain to find response and belief. Ah, what game lies hidden in salt water. The gamy weakfish and kingfish first on the list, the resistless sheepshead, last, but not least by a great sight, the striped bass. (By the way, why does every one persist in pronouncing the poor fellow stripe'd bass?) And in deep water I have had very fine sport with the sculpin, sea-robin, gurnard, or whatever other name the rosy-winged little marine butterfly may go by.

There is one trouble about fishing in salt water with a light rod; you are liable to get dogfish and fluke, which are unmitigated nuisances, being almost as hard on fine tackle as skates. But have not fresh-water anglers the pike and pickerel to look out for? So perhaps both sides balance here. Salt and fresh-water fish do seem to be counterparts to some extent. Weakfish fight very much like trout. Large bluefish often fight like black bass, leaping again and again from the water. Striped bass are much like salmon in some points. Fluke resemble pike and pickerel in voraciousness, mode of taking the hook and their way of fighting; as with pike, there seems to be no limit to their weight, and I have often taken them with pike spoons. I have a pair of fluke jaws at home which look more like a shark's than any other fish's, and are about as large as a small-sized handsaw. That is another point about sea angling which captivates its votaries. There is the delightful and exciting probability of getting those big ten and fifteen-pounders. Except, however, in the way of fluke (which I have taken of great weight), I have never made fast to any very large fish, and the few times I did almost excite me yet. Once I had a fish or a locomotive on the end of some heavy Cuttyhunk tackle and rod which two of us could not hold. That fish pulled one man who caught the line half way overboard, and myself nearly so, when luckily the line parted. Five minutes afterward I had another strike and got him. I don't know how much he weighed, as we omitted doing that, but I know it took two of us to hold him down after he lay in the boat, which he half filled.

But now, before my snow-white reputation gets dangerously tarnished, I will close. Yours, in hopes of sympathy, J. W. MULLER.

[The FOREST AND STREAM'S columns are always open to the salt-water anglers, and the reason the sport is not more frequently represented is only that those who find in sea angling a most charming pastime do not oftener write their experiences for publication.]

DON'T USE YOUR LEG FOR A FISH POLE.—*Editor Forest and Stream:* The above advice may seem superfluous, but it will perhaps be better appreciated after an experience like one which I had last Monday morning in Prince's Bay. The weakfish suddenly stopped biting, and even the sea robins and dogfish quit bothering me. Thinking that it would be fun to get a few crabs, I picked up a good-sized dogfish, split him through the middle and fastened him on a big hook and strong piece of trolling line. Attaching a half pound sinker to the line, I threw it overboard and took a couple of hitches about my leg. Then I went to fishing again with my rod. In the midst of a quiet reverie which followed I was astonished at seeing my leg go over the gunwale and to find myself yanked off the seat and sliding along the bottom of the boat. I had time to brace myself and prepare to have my sins come back to me, when all at once the line slackened. He had bitten it in two. My leg shows a black and blue streak the line sawed on it. Next week I'm going down again rigged for sharks, but I'm not going to tie a bait to both ends of the line any more. The question for the debating society is, which one of us escaped?—MARK WEST.

METAPEDIA SALMON AND SEA TROUT.—Mic-Mac Salmon Club, Metapedia, P. Q., Aug. 1.—*Editor Forest and Stream:* The salmon fishing in this region has not been so good as last year. Early in the season the catch was very fair and some good-sized fish were taken. Dr. and Mrs. J. H. Baxter, of Washington, scored some very large fish —30-34lb—during the last week in June. Mr. Dean Sage, of Albany, N. Y., and his friend, Mr. Laurence, killed over a hundred fair-sized fish at his camp up the Restigouche, at the mouth of the Upsalquitch. The members of the Restigouche Club, at Metapedia, have done fairly well. Sea trout are now running of good size. I have taken them fresh-run and silvery, and in all the various stages of transformation of coloring, until they cannot be distinguished from the ordinary brook trout in coloration. There are no specific differences whatever; they are one and the same fish, as I have heretofore averred. My friend, Dr. Dawson, of Cincinnati, O., and I start to-morrow for some newly opened brook trout waters on the Batiscan River, a hundred miles north of Quebec, where the trout are said to rival those of the Nepigon in size and numbers. More anon.—J. A. HENSHALL.

A POT-HOLE INCIDENT.—Place, Wild River, Me.; scene, two fishermen on a ledge above a pot-hole. We had just arrived. H., as a preliminary, caught his fly in a hemlock, and I had taken in two quarter-pounders out of the wet, and no more would rise to all our wiles; so putting a worm on the end of our flies, we dropped them deep toward a "big un." "Big un" ignored it; not so a baby trout, which seized and wrestled with mine mightily. I was drawing it away, when out rushed the pounder and seized the infant and sailed away down the pool with the fly still in the latter's mouth. Now for it. If he swallows one he must the other! When lo! out rushed a larger trout and chased him around the pool. The fly shook out, the little trout vanished and my hopes with it, while the largest one, mad at losing his dinner, snapped at H.'s bait, and then there was a rumpus. H. fairly hugged him when 'twas landed, but I've been in the dumps ever since. If only I'd caught that cannibal!—JOHN PRESTON TRUE.

SPORTSMEN AND CANADIAN CUSTOMS.—Agency of Department of Marine, Quebec.—*Editor Forest and Stream:* In answer to your letter I beg to state that I have seen our collector of customs, and learn that guns, fishing tackle, etc., are subject to duty: Firearms, 20 per cent. Flies, etc., 25 per cent. Fishing rods, 30 per cent. Nets, free. But if parties visiting Canada for sporting purposes will deposit with the collector of customs, at the first port of entry, the amount of duty, it will be returned to them when they go out of the country again; or if they know any responsible Canadian at such port of entry, he will be accepted as security that duty will be paid unless articles again go out of the country in a reasonable time.—J. U. GREGORY.

RAQUETTE LAKE, Aug. 5.—It may interest men fond of fishing that Raquette Lake is by no means fished out. Judge Freedman and son brought to this place as result of a day's fishing a string of forty, say forty bass and trout, ranging from ¾ to 1½lb. Dingman, a guide, employed by this hotel, delivered as welcome addition to our *menu* a lake trout of 19lb. and 8 bass of about 2lb. each. All that on a day on which the thermometer never showed more than 53°, the previous days having depressed the mercury to 42°.—FIOR DA LICE.

BLUEFISH AND WEAKFISH.—Philadelphia, Aug. 5.—The scarcity of bluefish at Beach Haven, N. J., and the neighborhood is quite marked, and it is laid to the menhaden fishers. Weakfish have been caught in great numbers the past week, at any time and tide. Our party took 733 last Friday; and there were numerous catches of 300 and 400. No one wanted them and they were left on the dock to spoil. They run small, and will continue to do so until something is done to stop the "slaughter of the innocents" by net and hook. Bass are also small, and seem to grow so each year.—S.

LITTLE ROCK, Ark., Aug. 4.—Fishing has not been good around here this season. The long drouth during the summer and winter, and constant netting, has ruined all the lakes and streams around here. No attention whatever is paid to the so-called fish law. A party from the Ouachita River report fishing unusually good there. Fishing on Fourche La Fave is reported good, if minnows can be obtained, but they are scarce. No other bait seems to tempt. White and Cache rivers have been too high all the season. —CASUAL.

Forest and Stream Fables have been reprinted with illustrations by the author, "Awahsoose," whose sketches are as felicitous as the text of the fables themselves. There are seven of the Fables, each with a full page picture, and specially designed cover and title page. Postpaid, 10 cents

THE ICED AND FROZEN FISH TRADE.

BY A. HOWARD CLARK.

[Read before the American Fisheries Society.]

THE iced-fish trade of the United States began about the year 1842. Prior to that date the inland trade in fresh fish was very limited and could be carried on only in the winter months. In 1845 the fishing vessels of New England began to carry ice for keeping the catch fresh. Care was at first taken that the ice be kept separate from the fish, being placed in a corner of the hold. It was soon found, however, that packing the fish in crushed ice did not materially injure them, and this method was soon in general use on all the vessels and largely superseded the trade in live fish north of Cape Cod. For many years it was thought impossible to transport fish inland, even if packed in ice, and it was not until 1859 or 1860 that Gloucester dealers could be induced to try the experiment of sending fish in ice to Boston and New York. Old sugar boxes were used for packing, and as the experiment was perfectly successful, a large trade was quickly developed and iced fish were sent west as far as Minnesota and south to St. Louis, or even to more distant markets.

For ten years or more prior to 1842, Boston and Gloucester dealers had carried on a trade of frozen fish during the winter and early spring, sending the fish by teams inland as far as Albany and Montreal; but as warm weather advanced the frozen fish gave place to dry and pickled fish. In the winter of 1854 an enterprising Gloucester fisherman tried the experiment of bringing frozen herring, cod and halibut from Newfoundland to Gloucester, where the herring were sold to the cod fishermen to be used for bait. From that experiment began a rapidly increasing trade in frozen herring from Newfoundland and New Brunswick for the supply of the George's codfishermen, and this bait is still the principal kind used by the fleets fishing from Gloucester in winter. The frozen herring also found a ready market in Boston, New York and other places as a cheap food supply. These fish have always been frozen by simple exposure in the open air, a warm spell interfering with the work. After freezing they are packed in bulk in the vessel's hold, snow being often mixed with them.

In Russia and other cold countries of Europe and Asia, for very many years there has been a trade in frozen fish and other animal foods. In Thibet, as early as the year 1806 the flesh of animals was preserved by frost drying—not simply freezing—and in this condition it would keep in good condition for many months. Meat thus preserved did not have a raw appearance, but in color resembled that which had been well boiled, the ruddiness being removed by the intense cold.

Thus far I have spoken only of iced fish and of fish frozen by natural means. The first definite record we have of fish frozen by artificial method is the patent (No. 31,736) granted in March, 1861, to Enoch Piper, of Camden, Maine. It is described as a method of preserving fish or other articles in a close chamber by means of a freezing mixture having no contact with the atmosphere of the preserving chamber. Mr. Piper states that the most important application of his invention is for the preservation of salmon, which had heretofore been preserved in a fresh condition only by being packed in barrels with crushed ice, which in melting had moistened and injured the fish. The ice, he said, could not keep them more than a month, whereas by the new method they could be kept in good order for years, if need be. The apparatus used by Mr. Piper is described as a box in which the fish are placed in small quantities on a rack, this box being surrounded by a packing of charcoal or other non-conducting material. Metallic pans filled with ice and salt are then set over the fish and a cover shut over the box. About twenty-four hours is needed to complete the freezing, the ice and salt being renewed once in twelve hours. The fish are then removed to be packed in the storage or preserving box. If desired, the fish may be coated with ice by immersion in iced water; they may then be wrapped in cloth and a second coating of ice applied, or they may be coated with gum-arabic, gutta-percha, or other material, to exclude the air and to prevent the juices from escaping by evaporation. The storage box is a double one, the inner one without a cover; the space between the sides and bottoms of the two being filled with charcoal or other non-conductor. Metallic tubes for the freezing mixture pass through the cover of the outer box and through the bottoms of both boxes, connecting with a small pipe to carry off the brine. The combined area of the tubes is required to be about one-fifth the area of the inner box, in order to keep the temperature below the freezing-point.

Numerous and complex methods of freezing fish have been devised since Mr. Piper obtained his patent, but the simplest methods are perhaps as effective, and are surely more economical than the expensive machinery sometimes used.

In 1869 Mr. William Davis, of Detroit, patented a freezing pan for fish which he describes as a thin sheet metal pan or box in two sections or parts, one made to slide over the other, the object being to place the fish or meat in one part of the box and to slide the cover on to or in contact with the freezing mixture. The pans are packed on top of one another in a freezing box with iced salt over and around them. By this method from thirty to fifty minutes is said to be sufficient to complete the freezing, when the fish may be taken from the pans and stored in a keeping chamber where the temperature is constant at six to ten degrees below the freezing point.

In 1869 Mr. Davis also patented a preserving chamber, which he says may be a room, box or chamber of any desired form. It has two walls with the intervening space filled with a non-conducting material. Within this are metal walls of less length than the outside walls, so that between the two a freezing mixture may be placed. Entrance is obtained through the top or side by closely fitting doors or hatches. Other methods of freezing fish have been patented, such as making a series of seven circular pans of a size to fit in a barrel, and of putting the fish in rubber bags while they are being frozen. In 1880 Mr. D. W. Davis patented a method of packing fish in finely crushed ice in a barrel and freezing the mass solid, the fish being so stowed as not to come in contact with each other.

Freezing pans, with or without covers, are now in common use in most of the fishing centers of the Great Lakes, as also in some Eastern markets. In Boston, New York and at other points large buildings are devoted to the freezing and storage of bluefish, salmon and other species. The large species are frozen by hanging them in the freezing room or by ranging them on shelves. The improved systems of refrigerator cars and steamers render it feasible to transport frozen fish to any part of the United States or to foreign countries whenever the trade may require.

WASHINGTON, D. C.

THE accident policies of the Travelers, of Hartford, Conn., indemnify the business or professional man for his profits, the wage-worker for his wages, lost from accidental injury, and guarantee principal sum in case of death.—*Adv.*

A SOFT, VELVET TEXTURE is imparted to the skin by the use of Glenn's Sulphur Soap. For skin diseases it should be used freely. Never take a bath without it. FIXTURES.

DOG SHOWS.

Aug. 24 to 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. Geo. H. Hill, Manager, P. O. Box 70, Cincinnati, O. Entries close Aug. 14.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Fred Hoey, Secretary, Box 2017 New York. Entries close Aug. 21.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville. Entries close Sept. 1.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, 14 Murray street, New York. Entries close Sept. 1.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4006.**

ENGLISH KENNEL NOTES.

XXXV.

BRIGHTON dog show has almost obliterated Warwick from my memory, but I can still recall the eulogies that were lavished on the king-maker's town. The chairman was a paragon, the committee were so many loving M. C.s. I can't help thinking that this fulsome laudation is becoming a little hysterical. The *Stock-Keeper* has rather led the way in this conflict of compliments, and, to use an expression that I overheard in the Brighton show, and that amused me very much, its editor has become "too bally politeful." I was extremely diverted when the papers came out the week after Warwick show to perceive they were all screaming, "*Nous sommes trahis.*" It seems that at the bloodhound trials in Lord Warwick's park, the erstwhile gracious chairman, Mr. Evans, discovered a curmudgeon side to his character, and brusquely declined to tolerate the Press Gang in the inclosure. Dr. Walsh, of the *Field*, and Mr. Krehl, of the *Stock-Keeper*, smiled ominously at the provincial *gaucherie* and nursed their wrath for the ink pot. Mr. Gresham's nature of coarser fiber suffered no rebuff from the refusal, so he crawled under the dividing ropes and stolidly stood it out. Now these trials have been treated with jocose contempt by our kennel organs. For my own part I must admit that I was favorably and beyond my expectation impressed with the result. I own that out of all the competitors only two did actually well, but it cannot be said that the others were totally ignorant of the task. They ran the trail for a short distance, and then lost their heads. Two of the hounds ran the whole course, Mr. Hood-Wright's Hector came out an easy first, and Mr. Edwin Brough's hound showed the second best performance. To follow the unassisted body scent of a man is far more than one had a right to expect of hounds that have for generations been confined to the courtyard and the show bench. Warwick was further remarkable for the first appearance of two grand young St. Bernards, Hesper and Prince Battenberg. The first named ruffled the equable temperament of Plinlimmon's owner, and rumor flew round the show that the giant could be bought, but the Aquarium show has dispelled all fears, as Hesper has not come on at the rate he was expected to, and now, I deeply regret to record, he is stricken down with distemper.

The show at the popular southern watering place was a bright success. The press has ascribed this to the unflagging zeal of the honorary secretary, Dr. Horace Seelig. The doctor in his restless bustling activity comes very near realizing the meaning of perpetual motion. This gentleman's name first came to the fore in canine circles at Henley-on-Thames, but his sphere of kennel usefulness was too restricted in that lovely little old town. Brighton supplied him with full scope for his energy. He is the promoter and vendor of the "Kennel Company." I have not heard whether the company has been definitely floated yet, but as some good men have joined the directors' board and there is plenty of room for such an institution I have no doubt it will succeed. The kennels are at Brighton, perched on the salubrious downs. Dogs are taken in and "boarded" at a weekly tariff and I hear that several of the prize-winners at Brighton underwent their show preparations at Dr. Seelig's kennels.

Besides the Doctor, the show owed much of its success to a large honorary committee, pulling fairly well together and headed by a model of reserved force and intelligent capacity, the chairman, Captain Pearson. Not a thing was left undone that could contribute to the comfort of the dogs and the satisfaction of the exhibitors. The dogs were benched in the Pavilion Dome and the Corn Exchange; judging rings were formed on the lovely lawns, and the spectators sat under the shade of the trees; the weather was superb. In the evening a promenade concert took place in the grounds of the Pavilion, which was built after the architecture of the Moscow Kremlin, by George IV. Could but the spirit of the festive prince have listened to the canine chorus issuing from his royal stabling, and seen those keepers and kennelmen parading the curious corridors where once twinkled the little feet of light-hearted houris, it would have moaned that time had spared the harem for such desecration.

Brighton without its "incident" would be incomplete. This year it was the turn of a well-known exhibitor, Dr. Webster Adams, of Ipswich, to furnish the meal for a few days' scandal. The "incident" arose out of a misunderstanding that comes to the fore rather frequently now. The new form of the challenge class regulations is at the bottom of it. At the great shows most of the breeds have a challenge class; at other shows, where some breeds are not thus provided for, champions are permitted to enter in the open classes, but at other shows again, like Brighton, where no challenge classes are included in the schedule, champions cannot be entered in the open classes, and are, therefore, excluded from competition altogether. This amounts to debarring the public from the opportunity of seeing the best dogs of each breed. Well, there was a regulation to this effect in the Brighton schedule, but Dr. Adams did not see it. He entered a champion black and tan terrier named Streamlet in the open class, accompanying his entry with a note to the hon. secretary saying if this was not admissible he (the secretary) could substitute for Streamlet another bitch, Miss Jummy, whose pedigree, etc. he inclosed. Receiving no reply before he left home, Dr. Adams quite naturally supposed his entry of Streamlet had been accepted, and took her with him to Brighton. He competed and won, but another lynx-eyed defeated exhibitor recognized the champion Streamlet and found her entered in the catalogue as Miss Jummy. An objection was lodged immediately, and things looked "ugly" for the Ipswich medicine man. At the inquiry that ensued it transpired that Dr. Seelig had replied to Dr. Adams' letter, inclosing letter, telling him Streamlet was ineligible, and he had, therefore, substituted Miss Jummy. All that Dr. Adams had then to do was to prove he had left home before the delivery of that letter, "and he did it," and the last "incident" ended in bows and smiles.

The *Stock-Keeper*, that with its report of the show gave a pretty little sketch of the Dome, has published Dr. Seelig's letter, which it says tells Dr. Adams that he "left the court without a stain upon his character." The actors in last year's incident were present in the show as visitors. Mr. Pointer was also among the exhibitors, but Mr. Alfred George's dogs stopped at home. He hadn't recovered from the committee's absorbing all his prize money last year.

The St. Bernard Club held their last show in the north, at Southport. It was a good idea and a concession much appreciated by the northerners to locate the fixture in their neighborhood. A dinner was given to celebrate the meeting, and Mrs. Frederick Gresham chronicles the presence of several old ladies, and adds that their company gave great pleasure in a tone of simpering modesty that reads like "though I say it myself, as shouldn't."

I beg to express my very cordial congratulations to the St. Bernard Club and felicitate them upon electing a committee that possesses independence and sagacity enough to hold its own shows under its own rules. The manner in which shows and clubs, serf-like, prostrate themselves for the Kennel Club to walk over them is the lowest form of middle-minded snob worship and obsequious toadyism. I hold no brief against the Kennel Club, I freely acknowledge that in their progress up the stream of reform they have towed some weaker vessels behind them and cleansed them with their wash. I am willing to say with the rest of the kennel public that "we have much to be thankful for," but in taking Uriah Heep's" words I repudiate his character, "I'm not a very 'umble person." I know that the Kennel Club is a self-elected body and that its duty and authority are therefore self-imposed and at times even arrogated. They are not the representatives of the kennel world, they are simply its dictators, the public has not elected them to make their laws; the task is self-sought and can be laid down at will. So long as they retain the position they must observe its duties—and it certainly is not, most emphatically not, one of those duties to bear down with puffing and snorting upon the little craft to swamp them. Grumbling is not unknown among the members themselves, that so many good men among them fail to secure election upon the committee. That body is far stronger than it used to be. Mr. Shirley is still its mainspring, and if he were only a little more resolute and firm in character he would be quite perfect in his role of chairman. Useful and practical members of the committee are Messrs. Arkwright (he is wealthy, as well as useful); Mark Beaufoy, an unsuccessful candidate in the last parliamentary elections; J. Doyle, P. C. Reid, J. C. Tinne, Montague Wootten, Radcliffe, etc. But among the *et cetera* I will not include Mr. A. Jackson, who in spite of his six foot four, modesty, and retiring disposition is credited with a knowledge of the "tricks and ways" of the lower fanciers' world which stews beneath the "upper crust," second to none. He goes everywhere, sees all, and says nothing. He is the repository of confidences and one of the most trusted keepers of the fanciers' conscience. Notwithstanding his gentle nature, he has been suspected of complicity in the compilation of these notes! It was at Norwich, I think, I heard him mournfully repine: "Everybody takes advantage of me *because I am so tall!*" In faithful anxiety and ability to do good upon the committee, I should give Messrs. Shirley and Jackson equal firsts.

Of the parsons Mr. Mellor stands out away from the rest, his invariable geniality, his long experience as exhibitor and judge place his services above the rest. A shower of gold has lately descended upon him which, while adding to his earthly comforts, has not in one thought corrupted the simple sincerity of his character. Of the other "freeres" Mr. Lovell is an Oxford Don and Mr. O'Callaghan a navy chaplain, a very worthy master, a very worthy minister; but there are men "standing down" among the rank and file of the club whose experience has been gained in a work where human nature had a chance, unshackled by copybook maxims or the traditions of the nursery—that, be it observed, is not *le monde où l'on s'ennuie*, which may be bowered by college walls or ships' sides. As for Messrs. Legh, Lindoe, Platt, Richards, etc., beyond seeing their names on the yellow covers of the show catalogues, the kennel community knows remarkably little of them.

Among the late acts of the Club is an amendment of Rule 1. It used to suffice to give the Kennel Club Stud Book number of a dog in entering him at a show, it is now necessary to give full particulars, age, breeder, pedigree, etc. This is good, as the number alone conveyed no information to the visitors. A resolution has been passed disallowing a man to exhibit at all in a show where he is judging, this is also self-evidently proper.

Brentwood show followed closely on Brighton, and is noteworthy for the *début* of a beautiful bloodhound bitch pup, Chesterton Duchess. LILLIBULERO.

THE MILWAUKEE DOG SHOW.

THE list of awards of the Milwaukee dog show as sent by our correspondent was incomplete. Below we publish the full list. The judges were: Major J. M. Taylor, Cleveland, O., setters, pointers, foxhounds and Chesapeake Bay dogs; Mr. F. F. Dole, New Haven, Conn., Scotch and Dandie Dinmont terriers; Mr. F. White, Milwaukee, Wis., Newfoundlands; Mr. J. H. Naylor, Chicago, Ill., the remaining classes:

AWARDS.

MASTIFFS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Wacouta Kennels' Corsair; 2d, Coughcura Medicine Co.'s Ilford Cromwell II. Very high com., A. Uhlion's Kaiser. High com., Otto Kitzinger's Reno, Dr. A. J. Richter's Dash McD. and K. K. Kennan's Leo. *Bitches:* 1st, Dr. A. J. Richter's Renee; 2d, O. Kitzinger's Flora. Very high com., Coughcura Medicine Co.'s Dolly Varden II. *Puppies:* 1st, withheld; 2d, C. Schreiber's Flora.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—Mohawk Kennels' Noma.—OPEN—*Dogs:* 1st, Coughcura Medicine Co.'s Otto II.; 2d, Mohawk Kennels' Jumbo. Very high com., W. Kirchner's Barry and Pierrepont L. Prentice's Mouk. High com., M. H. Thiman's Duke *Bitches:* 1st, Coughcura Medicine Co.'s Bonnie Duchess; 2d, Mohawk Kennels' Clio. High com., M. H. Thiman's Fido. *Puppies:* 1st, Mohawk Kennels' Jumbo; 2d, R. Bush's Blanche.—SMOOTH-COATED—*Dogs:* 1st, Mohawk Kennels' Rector II.; 2d, Dr. J. Senti's Bello. *Bitches:* 1st, Coughcura Medicine Co.'s unnamed.

NEWFOUNDLANDS.—WAVY-COATED—Prize withheld.—CURLY-COATED.—1st, J. J. Kuehn's Alex; 2d, C. Thomas's Nero. Very high com., V. Schiller's Turk.

GREYHOUNDS.—CHAMPION—Terra Cotta Kennels' Memnon.—OPEN—*Dogs:* 1st, H. R. King's Gollert. *Bitches:* 1st, F. B. Rice's Daisy. Com., J. D. Olcott's Belle.

DEERHOUNDS.—No entries.

GREAT DANES.—1st and 2d, W. Elser's Tyras and Diana. Very high com., A. Gfrorner's Krao.

ULMERS.—1st, Osceola Kennel Club's Don Cæsar; 2d, Dr. G. Nicolai's Cæsar. Very high com. reserve, Paul Merker's Pluto. Very high com., Dr. G. Nicolai's Nero. High com., E. R. Kuemmel's Nick. *Puppies:* 1st, Dr. G. Nicolai's Juno.

ENGLISH SETTERS.—EXTRA CHAMPION—E. E. Pray's Bessie A.—OPEN—*Dogs:* 1st, R. B. Morgan's Mandan; 2d, T. Donoghue's Consul. Very high com., Reserve Kennels' Pendragon. High com., Col. Reitbrock's Prince, T. Donoghue's Laverack Chief's Clyde. *Bitches:* 1st, Mrs. W. A. Collins's Pickles; 2d, T. Donoghue's Blue Cubas. Very high com., T. Donoghue's Blue Sparks. High com., A. H. Pape's Jean, C. T. Donoghue's Jeannette and Dart Gladstone.—PUPPIES—*Dogs:* 1st, W. G. Barker's King Dan; 2d, F. Zirney's Gyp. High com., W. A. Collins's Pepper. *Bitches:* 1st, J. Welsch's Lulu; 2d, T. Donoghue's Dart Gladstone. Very high com., J. J. Dapper's Pond Lily. Com., T. Donoghue's Sue of Hatchie.

BLACK AND TAN SETTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, withheld; 2d, G. H. Joadlun's Dan. High com., W. J. Dalliba's Argus II. *Bitches:* 1st, J. B. Wickery's Patti; 2d, G. Poppert's Bella Brandon. *Puppies:* 1st, E. J. Asmus's Bang; 2d, G. Poppert's Capt. Jack.

IRISH SETTERS.—EXTRA CHAMPION—J. A. J. Sprague's Brush.—CHAMPION—*Dog:* No entries. *Bitch:* 1st, H. E. Chubb's Zella Glenduff.—OPEN—*Dogs:* 1st, J. H. Naylor's Frank; 2d, Mrs. F. B. Rice's Larry Thorn. Very high com., G. F. Steele's Watts, Jr. *Bitches:* 1st, T. Donoghue's Irish Maud; 2d, P. Thomas's Gipsy. Very high com., H. Schubert's Wells.

POINTERS.—EXTRA CHAMPION—Detroit Kennel Club's King Bow.—CHAMPION—*Dog:* J. H. Kraft's Robin Adair. *Bitch:* No entries.—OPEN—*Dogs:* 1st, Mrs. C. I. Engel's Young Metcor; 2d, S. B. Dilley's Ranger Croxteth. Com., E. K. Howes's Tony. *Bitches:* 1st, Castleman Kennels' Kate.—UNDER 55LBS.—*Dogs:* 1st, withheld; 2d, Detroit Kennel Club's Fleet. High com., Castleman Kennels' Rebel. *Bitches:* 1st, Reserve Kennels' Patti; 2d, D. Stirn's Juno S. Very high com., Castleman Kennels' Dot. High com., Detroit Kennel Club's Judy, Castleman Kennels' Kate and Badger State Kennels' Birdie. *Puppies:* 2d, L. Auer's Sport.

IRISH WATER SPANIELS.—CHAMPION—T. Donoghue's Count Bendigo.—OPEN—*Dogs:* 1st and 2d, Excelsior Irish Water Spaniel Kennels' The O'Donoghue and Mack. *Bitches:* 1st, T. Donoghue's Little Sioux; 2d, and very high com., Excelsior Irish Water Spaniel Kennels' Judy and Chippewa Belle. *Puppies:* 1st, J. Delehanty's Barney O'Donoghue.

CHESAPEAKE BAY DOGS.—1st, Osceola Kennel Club's Drake.

SPANIELS.—OVER 25LBS.—No entries.

COCKER SPANIELS.—UNDER 28LBS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, American Cocker Kennels' Doc; 2d, withheld. *Bitches:* 1st, Osceola Kennel Club's Topsy; 2d, L. Kuhn's Nellie. Very high com., C. Shinn's Miss Lotta.

FOXHOUNDS.—*Dogs:* 1st, W. A. Van Brunt's Driver; 2d, J. Swan's Bruiser. *Bitches:* 1st, J. H. Naylor's Lady Stewart.

BEAGLES.—*Dogs:* 1st, Mrs. H. Krause's King Pat. *Bitches:* 1st and 2d, Mrs. C. E. White's Bonnie and Fairy. Very high com., C. Wiles's Flavia. High com., Mrs. C. E. White's Bon Bon. *Puppies:* 1st, W. C. Fish's Music o' the Woodlands; 2d, Mrs. C. E. White's Busy. Very high com., unnamed.

DACHSHUNDE.—*Dogs:* 1st, 2d and very high com., Geo. Poppert's Waldmann III., Jumbo and Romeo. Very high com., J. von der Feifen's Burgmann. *Bitches:* 1st, Geo. Poppert's Juliette.

FOX-TERRIERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, W. A. Lacey's Rattler. *Bitches:* 1st, C. Wiles's Nettle.

COLLIES.—CHAMPION—Absent.—OPEN—*Dogs:* 1st, Mitchell Harrison's Nullamore; 2d, J. A. Long's Clifton Hero. Very high com., Chestnut Hill Kennel's Blue Jacket. *Bitches:* 1st, Chestnut Hill Kennels' Dot. Very high com., C. H. Kaetel's Nellie.

BOBTAILED SHEEPDOGS.—*Dogs:* 1st and 2d, Glencho Collie Kennels' Sir Lucifer and Maverick. *Bitches:* 1st, Glencho Collie Kennels' Dame Hester.

BULLDOGS.—*Dogs:* 1st withheld; 2d, E. Jones's Keno. Very high com., unnamed.

BULL-TERRIERS.—OVER 25LBS.—*Dogs:* 1st, F. F. Dole's Count; 2d, C. E. Feller's Joker. Very high com., W. Mariner's Nimble. High com., Mrs. C. S. Cummings's Grover. *Bitches:* 1st, F. F. Dole's Young Venom; 2d, W. Mariner's Kit. Very high com., C. E. Feller's Nell.—UNDER 25LBS.—*Dogs:* 1st, J. Callahan's Jumbo. *Bitches:* 1st, F. F. Dole's Lady in White; 2d, W. Mariner's Flirt. *Puppies:* 1st, C. E. Feller's Patsey; 2d, W. Mariner's Flirt. High com., G. F. Dore's Pincher. Com., J. E. Shaughnessy's Trix.

BLACK AND TAN TERRIERS.—OVER 7LBS.—1st and 2d, Henry Muss's Mahomet and Lady. UNDER 7LBS.—1st, Mrs. C. E. White's Dandy; 2d, Mrs. R. Hassig's Winnie.

SCOTCH TERRIERS.—*Dogs:* No entries. *Bitches:* 1st and 2d, J. H. Naylor's champion Heather and Rosy.

DANDIE DINMONTS.—*Dogs:* 1st, J. H. Naylor's Bonnie Briton. *Bitches:* 1st and 2d, J. H. Naylor's Pansy and Pride of Leader.

IRISH TERRIERS.—Prizes withheld.

YORKSHIRE TERRIERS.—1st and 2d withheld. Very high com., C. A. Sanger's Flossy.

KING CHARLES SPANIELS.—*Dogs:* No entries. *Bitches:* 1st, F. Collinge's Mollie; 2d, H. Jansen's Lisla.

SKYE TERRIERS.—1st withheld, 2d, C. A. Shinn's Lady K.

ITALIAN GREYHOUNDS.—1st, H. Giles's Lillie; 2d, unnamed.

PUGS.—CHAMPION—*Dog:* No entries. *Bitch:* Mohawk Kennels' Bo-Peep.—OPEN—*Dogs:* 1st, Mrs. C. S. Cummings's Colonel. Very high com., G. Neefzer's Dan. *Bitches:* 1st, Coughcura Medicine Co.'s Tiny; 2d, Mrs. C. S. Cummings's Flossy. Very high com. and reserve, Mohawk Kennels' Tody. Very high com., A. R. Maguire's Nellie M. and Mrs. C. S. Cummings's Dusky. *Puppies:* 1st, Mohawk Kennels' Tody; 2d, A. G. Maguire's Emma L. Very high com., G. Neefzer's Dan.

TOY TERRIERS.—OTHER THAN YORKSHIRE—1st, withheld, 2d, Mrs. K. Hassig's Tiny.

MISCELLANEOUS.—1st, W. Kirchner's Nero. Remaining prizes withheld.

SPECIAL PRIZES.

Best Mastiff, Wacouta Kennels' Corsair; best rough-coated St. Bernard, Coughcura Medicine Co.'s Otto II; best smooth-coated St. Bernard, Mohawk Kennels' Rector II.; best Newfoundland, J. J. Kuehn's Alex; best greyhound, Terra Cotta Kennels' Memnon; best Great Dane or Ulmer, Osceola Kennel Club's Don Cæsar; best English setter, R. B. Morgan's Mandan; best black and tan setter, J. B. Wickery's Patti; best Irish setter, J. A. J. Sprague's Brush; best pointer, Reserve Kennels' Patti; best Irish water spaniel, Excelsior Irish Water Spaniel Kennels' The O'Donoghue; best cocker spaniel, American Cocker Kennels' Doc; best foxhound, J. H. Naylor's Lady Stewart; best beagle, Mrs. C. E. White's Bonnie; best dachshund, G. Poppert's Waldmann III.; best collie, M. Harrison's Nullamore; best bobtailed sheepdog, Glencoe Kennels' Sir Lucifer; best bull-terrier, F. F. Dole's Count; best black and tan terrier, H. Muss's Mahomet; best Scotch terrier, J. H. Naylor's Champion Heather; best Dandie Dinmont, J. H. Naylor's Bonnie Briton; best King Charles spaniel, F. Collinge's Mollie; best Skye terrier, C. A. Shin's Lady K.; best Italian greyhound, H. Giles' Lillie; best pug, Coughcura Kennels' Tiny; best kennel of St. Bernards, Mohawk Kennels; best kennel of English setters, T. Donoghue's; best kennel of pointers, Detroit Kennels; best kennel of beagles, Mrs. C. E. White's; best kennel of dachshunde, G. Poppert's; best kennel of bull-terriers, F. F. Dole's; best kennel of pugs, Mrs C. S. Cummings's; best collection of sporting dogs, T. Donoghue's; largest dog or bitch, G. Nicolai's Cæsar; smallest, K. Hassig's Tiny; best pair Dandy Dinmonts, J. H. Naylor's Bonnie Briton and Pansy; best bull-mastiff, Osceola Kennels' Keno.

Specials for dogs owned in Wisconsin were awarded as follows: Best non-sporting dog owned by a member of Wisconsin K. C., J. Richter's Renee; best sporting dog owned by a member of the club, W. A. Collins's Pickles; best English setter, Pickles; best Irish setter, P. Thomas's Gipsey; best black and tan setter, E. G. Asmus's Bang; best pointer, D. Stirn's Juno S.; best Irish water spaniel, E. I. W. S. Kennels' The O'Donoghue; best fox-terrier, W. A. Lacey's Rattler; best Yorkshire terrier, C. A. Sanger's Flossy; best bull-terrier, W. Mariner's Nimble; best mastiff, A. J. Richter's Renee; best dachshund, G. Poppert's Waldmann III.; best King Charles spaniel, F. Collinge's Mollie; best litter of pointer puppies, Badger State Kennels' Birdie; best beagle, W. C. Fish's Music o' the Woodlands; best light weight bull-terrier dog, S. Callahan's Jumbo; largest pointer dog owned in Milwaukee, C. Burkhardt's Kara Rex; best kennel non-sporting dogs, F. F. Dole.

MR. MAX WENZEL, Hoboken, N. J., writes that he has had the misfortune to lose by death 33 of the 48 Irish setter puppies recently whelped at his kennels, and in consequence will be obliged to disappoint many customers who had engaged them. He wishes us to state that all orders will be filled as soon as possible.

THE FOX-TERRIER SHOW.—*Editor Forest and Stream:* Class 9, American Fox-Terrier Club show, for wire-hair puppies, the premium list has made for dogs only, it should be for dogs or bitches; will you kindly announce the mistake? Mr. John E. Thayer, Lancaster, Mass., offers a cup, value $100, for the best puppy under 12mos., and we expect many more specials. We have secured Music Hall, adjoining the Casino, a most perfect place in every respect for the purpose. —FRED HOEY, Secretary.

MASTIFF TYPE.

Editor Forest and Stream:

Mr. Wynn's communication of last week was read with great interest and I will answer the following questions which he propounds to me.

"What authority has Mr. H. for saying a muzzle can be too short? How does he prove it?" I did not say a muzzle could be too short, but I did say, "Ilford Caution's upper jaw is too short." I prove my assertion by the highest authority, "The Points of the Mastiff, as adopted by the Old English Mastiff Club," which informs us the muzzle should be "blunt and cut off square, thus forming a right angle with the upper line of the face." The shortness of Caution's upper jaw prevents the forming of this right angle and consequently it is too short.

I have looked carefully through a large collection of mastiff photographs, as far back as Couchez and L'Ami, and not one of them show the bulldog layback which Mr. Wynn would have us believe is a true characteristic of the breed. He tells us the hound muzzle is a sign of mongrelism, yet I notice some of these pictured mastiffs have this sign impressed upon their faces, thus bearing out my statement, "The bulldog layback is a positive malformation and is more objectionable than the hound muzzle." While Mr. Wynn cannot allow this statement to be correct, I think the evidence is upon my side. VICTOR M. HALDEMAN.

GENERAL WAYNE, Pa.

DANDIE DINMONT SOCIETY.

Editor Forest and Stream:

I send you first annual report South of Scotland Dundie Dinmont Terrier Society, and shall be glad if you refer to it. I ask this because I have repeatedly had communications from fanciers in America who are interested in the work of the society, and indeed we have among our new members for this year one or two resident in your country, so that it would appear that distance is no objection to those interested becoming members of the society. This is the strongest canine society in Britain. JOHN HOULISTON, Hon. Sec.

DUMFRIES, Scotland, July 21.

The report states: There are now on the roll 70 members. At Edinburgh show in October and Dumfries show in December last our members came well to the front, and by their numbers signified their approval of our actions. The judges were Mr. A. Steel, of Kelso, at Edinburgh, and Mr. D. J. Thomson Gray, of Dundee, at Dumfries. So far as your committee can learn, the awards of these gentlemen were very well received. Your committee have had considerable correspondence with secretaries of other dog shows, with the view of becoming patrons; but from various reasons, unnecessary here to detail, they did not offer specials to be competed for. It is proposed during the ensuing year to offer more specials than hitherto, and to divide these over a considerable number of exhibitions. Our specials will generally be given in the form of a handsome silver medal, the committee having already ordered their own die, from which the medals will be cast. A list of gentlemen (members of the society) thoroughly conversant with and able to judge the breed, is kept in the society's books, and secretaries of dog shows applying for such are duly furnished with the same. The first object in view in forming the society was to draw together in harmony the lovers of the breed, with the view to promote and encourage the breeding and exhibiting of "Pepper and Mustards," or Dandie Dinmont terriers. Your committee believe they have exerted themselves to this end; and from the harmony that has existed among members, and also from the encouraging letters they have had from many sources, believe that their efforts have been appreciated by the great majority of the members. Belonging, as our society does, to no sect or clique, all alike being eligible for election, your committee trust that all our present members will at once renew their annual subscription and induce all they can who take any interest in the society to come and join us, so that our second year's work may be even more encouraging and successful than the past year.—W. A. F. B. COUPLAND, Chairman (Dock House, Dumfries, Scotland, July 13, 1886).

THE WAVERLY DOG SHOW.—*Editor Forest and Stream:* The following gentlemen have consented to judge at our forthcoming show at Waverly: Mr. John Davidson, of Monroe, Mich., pointers, Irish setters and black and tan setters. Mr. James Mortimer, of Babylon, L. I., St. Bernards, foxhounds, Basset hounds, bulldogs, Dandie Dinmonts, Bedlingtons, Irish and rough-haired terriers, Skyes, black and tans, Yorkshires, King Charles, Blenheim spaniels and toy dogs. Mr. Charles H. Mason, of Brooklyn, N. Y., mastiffs, Newfoundlands, deerhounds, greyhounds, bullterriers, fox-terriers, dachshunde and pugs. Mr. A. Clinton Wilmerding, of New York, spaniels (all classes). English setters, collies and beagles will be provided for at the meeting of the bench show committee, to be held Thursday, the 12th inst. The dogs will be fed by the Challenge Food Co.'s food, under the supervision of Mr. William Tallman, of Tarrytown. The club has appointed Mr. H. Clay Glover the veterinary surgeon. From the large number of requests for entry blanks in our daily mail, the prospect for a large display is very flattering.—A. P. VREDENBURGH, Sec'y.

DEATH OF JOE, JR.—The celebrated Irish setter dog, Joe, Jr., owned by Mr. G. W. Campbell, Carter's Creek, Tenn., was killed by the cars July 24. He was whelped March, 1876, and was by champion Elcho out of Buck, Jr. He won the champion stake at the Nashville Field Trials in 1877, and with his dam was second in braces at the same meeting. In 1878, at the same place, he divided first and second in the champion stakes with Luther Adams's Drake. In 1879 he defeated Gladstone in their celebrated two days' race.

THE MINNESOTA KENNEL CLUB.—*Editor Forest and Stream:* The Minnesota Kennel Club was organized at St. Paul August 3. The officers are: President, S. Lee Davis; Vice-Presidents, E. F. Warner, J. N. Castle, Stillwater; Major G. A. Camp, Minneapolis; Secretary, N. Van der Velde; Treasurer, S. Van Wyck. The Board of Directors is composed of H. G. Drake, W. G. Whitehead, R. A. Craig, C. C. H. Smith, E. F. Warner, N. Van der Velde, S. Van Wyck, J. W. Stevens and S. Lee Davis. The club starts out anew under very good auspices with a membership of about one hundred.—C.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Leda. By L. & W. Rutherfurd, New York, for fox-terrier bitch, whelped Nov. 17, 1885, by Splauger (Dickon—Sutton Veda) out of Warren Lass (Diamond Joe—Diana).

Saucy. By L. & W. Rutherfurd, New York, for fox-terrier bitch, whelped Sept. 14, 1885, by Splauger (Dickon—Sutton Veda) out of Jostle (Warren Jim—Dance).

Vanity. By L. & W. Rutherfurd, New York, for fox-terrier bitch, whelped Nov. 28, 1885, by Splauger (Dickon—Sutton Veda) out of Vora (Belgrave Primrose—Regent Vora).

Spangle. By L. & W. Rutherfurd, New York, for fox-terrier bitch, whelped March 15, 1886, by Splauger (Dickon—Sutton Veda) out of Wrangle (Belgrave Primrose—Wrinkle).

Chance and Violet. By L. & W. Rutherfurd, New York, for fox-terrier bitches, whelped May 27, 1885, by Royal (Echo—Cricket) out of Diana (Tackler—Belgrave Viola).

Storm Bow, Bill Bow and Croxbow. By Detroit Kennel Club, Detroit, Mich., for liver and white pointer dogs, whelped July 1, 1886, by King Bow (Bow—Taffee) out of Ruby Croxteth (Croxteth—Seitner's Lass).

Frank Berwyn and Kate Berwyn. By Detroit Kennel Club, Detroit, Mich, for white, black and tan English setter dog and bitch, whelped June 30, 1886, by Dashing Berwyn (Dash II.—Countess Bear) out of Early Dawn (Nixey—Princess Louise).

Countess Lill. By Detroit Kennel Club, Detroit, Mich., for lemon and white pointer bitch, whelped July 1, 1886, by King Bow (Bow—Taffee) out of Ruby Croxteth (Croxteth—Seitner's Lass).

Mark Berwyn. By Detroit Kennel Club, Detroit, Mich., for white, with fawn ears, English setter dog, whelped June 30, 1886, by Dashing Berwyn (Dash II.—Countess Bear) out of Early Dawn (Nixey—Princess Louise).

Romp III.'s Revel. By Howard B. Rathbone, Syracuse, N. Y., for orange and white pointer bitch, whelped May 16, 1886, by Don (Dan—Juno) out of Romp III. (Rowell—Romp II.).

Count Petrel and Petrel IV. By W. Tallman, Tarrytown, N. Y., for black, white and tan English setter dog and lemon and white bitch, whelped February, 1886, by Don Juan (Tam O'Shanter—La Reine) out of Petrel III. (Carlowitz—Petrel).

C. A. P. and Wescott. By Chas. E. Taylor, Bath, Me., for black and white English setter dogs, whelped May 18, 1886, by Dash III. (Blue Prince—Armstrong's Kate) out of Donna (Royal Blue—Dryad).

Mikado and Belle of Woodford's. By Fred F. Harris, Portland, Me., for liver and white and ticked pointer dog and bitch, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358).

Model Doodle. By Dr. Francis Spring, West Winsted, Conn., for liver and wite ticked pointer bitch, whelped March 1, 1886, by Prince (Max—Belle III.) out of Belle II. (Fritz—Belle III.).

Roger and Lady Gay Spanker. By Henry Richard, Warren, O., for black, white and tan English setter dog and bitch, whelped Dec. 13, 1885, by Count Noble (Count Wind'em—Nora) out of Queen Meg (Prince Al—Moll).

Noble Count, Liz and Dade. By F. Rogers, New York, for black, white and tan English setters, one dog and two bitches, whelped Dec. 13, 1885, by Count Noble (Count Wind'em—Nora) out of Queen Meg (Prince Al—Moll).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Warren Lady—Splauger. L. & W. Rutherfurd's (New York) fox-terrier bitch Warren Lady (Warren Jim—Testy) to their Splauger (Dickon—Sutton Veda), July —.

Wrangle—Splauger. L. & W. Rutherfurd's (New York) fox-terrier bitch Wrangle (Belgrave Primrose—Wrinkle) to their Splauger (Dickon—Sutton Veda), July —.

Diana—Splauger. L. & W. Rutherfurd's (New York) fox-terrier bitch Diana (Tackler—Belgrave Viola) to their Splauger (Dickon—Sutton Veda), July 15.

Warren Swansdown—Royal. L. & W. Rutherfurd's (New York) fox-terrier bitch Warren Swansdown (Belgrave Primrose—Swansdown) to their Royal (Echo—Cricket), July 25.

Belle Boyd—Count Noble. Dr. R. I. Hampton's (Athens, Ga.) English setter bitch Belle Boyd (A.K.R. 1277) to B. F. Wilson's Count Noble (Count Wind'em—Nora).

Linda—Duke of Leeds. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Linda (A.K.R. 2552) to E. R. Hearn's Duke of Leeds (A.K.R. 1535), July 15.

Roxy—Rattler III. W. W. Legare's (Demopiis, Ala.) beagle bitch Roxy (Robin—Blossum) to W. Stewart Diffenderffer's Rattler III. (A.K.R. 2798), Aug 4.

Bernice—Apollo. W. W. Tucker's (New York) St. Bernard bitch Bernice (Medor—Diana) to his Apollo (Medor—Bloss), July 24.

Cully—Earl. Chas. E. Taylor's (Bath, Me.) cocker spaniel bitch Cully (Rex—Edith) to A. McDonald's Earl (Obo, Jr.—Black Garrie), July 6.

Kelp—Pride of Dixie. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Kelp (Prince Rob—Kate Jewell) to C. E. Wallin's Pride of Dixie (Gladstone—Countess Druid), July 24.

Belle II.—Pride of Dixie. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Belle II. (Nixey—Belle I.) to C. E. Wallin's Pride of Dixie (Gladstone—Countess Druid), Aug. 6.

Flora—Apollo. Geo. von Skal's (Clifton, S. I.) St. Bernard bitch Flora to W. W. Tucker's Apollo (Medor—Bloss), July 13.

Lady F—Captain Fred. A. Spring's (West Winsted, Conn.) pointer bitch Lady F. (Fuller's King—Lyman's Say) to A. Collins's Captain Fred, June 23.

Judy—Garry. W. T. Reynolds's (Poughkeepsie, N. Y.) Irish terrier bitch Judy (A.K.R. 2199) to his Garry (A.K.R. 2198), June 1.

Editor Forest and Stream: Upon looking up the dates of stud visits, I find I have made an error in the notes given you. Lassie was served July 7 and Lady Dufferin July 17. Kindly correct, and oblige—JAS. MORTIMER, Supt. (Babylon, Aug. 6).

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Countess Floy. W. Tallman's (Tarrytown, N. Y.) English setter bitch Countess Floy (Count Noble—Floy), July —, eight (two dogs), by his Fairy King (Foreman—Jessie).

Jessie. W. Tallman's (Tarrytown, N. Y.) English setter bitch Jessie (Blue Dan—Flake), July 14, ten (eight dogs), by his Mack B. (Dick Laverack—Twilight).

Mollie. W. White's (Newton Highlands, Mass.) pointer bitch Mollie (Don Carlos—Regalia), July —, nine (five dogs), by G. W. Amory's Bob (Price's Bang—Princess Kate).

Regalia. Edwin Stern's (Boston, Mass.) pointer bitch Regalia (Sensation—Whiskey), Aug. 3, nine (four dogs), by G. W. Amory's Bob (Price's Bang—Princess Kate).

Vera. C. A. Parker's (Worcester, Mass.) pointer bitch Vera (Pete, Jr.—Roxy), July 23, nine (six dogs), by his William Tell (A.K.R. 2640).

Ruby Croxteth. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Ruby Croxteth (Croxteth—Seitner's Lass), July 1, ten (seven dogs), by their King Bow (Bow—Taffee).

Flash. Detroit Kennel Club's (Detroit, Mich.) fox-terrier bitch Flash (imported Trojan—Fannie), June 30, seven (two dogs), by ex-Mayor Wheaton's Barney (Sir Peter II.—Fawn).

Sue. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Sue (Hindoo—Princess Bow), July 18, ten (five dogs), by their King Bow (Bow—Taffee).

Early Dawn. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Early Dawn (Nixey—Princess Louise), June 30, seven (six dogs), by Arnold Burges's Dashing Berwyn (Dash III.—Countess Bear).

Graphic (A.K.R. 2411)—Zitta (A.K.R. 1358) whelps. Black and white and ticked pointers, two dogs and three bitches, whelped June 10, 1886, by Frank F. Harris, Portland, Me., to H. F. Farnham, same place.

Barney—Flash whelp. Fawn and white fox-terrier bitch, whelped June 30, 1886, by Detroit Kennel Club, Detroit, Mich., to William Walker, same place.

Fido—Wolga whelp. Yellow, with dark markings, Great Dane bitch, whelped May 15, 1886, by Henry Müller, Stapleton, S. I., to F. W. Fonda, Jr., Albany, N. Y.

PRESENTATIONS.

Trixey B. Irish setter bitch, whelped April 12, 1885 (Jack—Bessy), by Dr. Wm. P. Henry, New York, to Hon. Geo. W. Boyce, Royalton, Minn.

IMPORTATIONS.

Bradford Lill. Blue and tan Yorkshire terrier bitch, whelped June 1, 1884 (Tickle-em—Judy), by P. H. Coombs, Bangor, Me., from Mrs. M. A. Foster, Bradford, Eng.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

BUZ, Wellsville, Ohio.—A pointer dog, one year old, apparently suffering from rheumatism in small of back. When lying down it requires great exertions for him to again get up, and causes him to howl with pain. Trouble appears to be aggravated after he has been in the water. Also very constipated. Ans. Keep your dog out of the water. Change his kennel if now in a damp place. Give two or three doses of the fluid extract of spigelia and senna, a teaspoonful in a dose. Report if there is no improvement.

T. W., Medford, Mass.—St. Bernard, 7 weeks old, seems to have appetite only for sweet cake or meat and has not that vitality and playfulness he should have. General appearance indicative of worms. Ans. Purge with castor oil in a teaspoonful dose. Feed milk only for twelve hours, then give half a dram (30grs.) of powdered areca nut mixed into a ball with lard. This can be readily forced into the throat by depressing the tongue with the fingers of one hand while the other slides the bolus into the pharynx. An assistant must meanwhile hold the puppy.

RANGE AND GALLERY.

CHAMPIONSHIP REST SHOOTING.

IN spite of the unfavorable state of the weather yesterday, fully one thousand people were assembled at the Shooting Park to witness the second of the series of three marksmanship tournaments, the winner of which is to become the possessor of a silver cup valued at $100. The day was considered to be a bad one for good scores, the drizzling rain and shifting wind, combined with poor light, making the bullseye very indistinct.

Thirty-four of the most noted riflemen of Newark and New York were entered, among whom were included a number of the famous Zettler Rifle Club of the latter city. Shooting was begun at 1 o'clock. Previous to the shooting it was generally understood that big scores would be made, but when the wind began to "fish" around from one point of the compass to another, some of the knowing ones shook their heads with a "no good" expression on their countenances, and it was thought that an average score would be enough to obtain a place. Dorrler, the crack shot of the Zettlers, was backed heavily by his friends for first place, but at the finish he barely held fourth. Lober, another Zettler man, was also looked upon as a dangerous one to shoot against, at which the friends of Hayes and Coppersmith merrily shrugged their shoulders and said: "Wait until the match is finished."

The shooting was not concluded until nearly 7 o'clock, when it was almost impossible to see the target plainly. When the result of the match was announced, the New Yorkers felt decidedly disappointed, as their two best men took third and fourth places, while first and second were captured by Newarkers.

William Hayes, of the Newark Shooting Society, secured first place by making the most remarkable score ever shot, scoring 2,211 points out of a possible 2,500 on a German 25-ring target, with a muzzleloading, hair-trigger rifle, at 200yds. The next highest ever made was 2,207, made by Henry Ohls, of the Zettlers, two years ago. Mr. Hayes's score by 10-shot strings was as follows: 222, 216, 224, 220, 221, 237, 222, 212, 214, 223—2,211. The third and last shoot of the series will come off at the Schuetzen Park, at Union Hill, on Sept. 2, and will undoubtedly be the most hotly contested of the series, as the Gothamites are on their mettle and will put forth an extra effort to wrest this one at least from their Jersey rivals.—*Newark Call, Aug. 3.*

There were 10 scores instead of 34, as follows:

Wm Hayes	2211	G Joiner	2080
J Coppersmith	2163	R G Zetter	2072
A Lober	2144	A Begerow	2005
W Dorrler	2126	C Gensch	1981
L Vogel	2084	B Walther	1980

Mr. Hayes writes us: "The score 2211is, I believe, the highest ever made in a regular match of 100 shots. It was made with muzzleloader 33-cal., made by Geo. Schalck, Pottsville, Pa., and has been fired over 10,000 shots without ever having had any repairs whatever, and was fired without once cleaning during the match."

GARDNER, Mass., Aug. 4.—At the last regular meet of the Gardner Rifle Club at Hackmatack Range the new standard American target was used, 200yds., off-hand, with the following result:

G F Ellsworth	75	86—161	F Parker	71	59—130
F E Nichols	82	72—154	C Leland	65	62—127
Geo Warfield	79	74—153	D E Warfield	51	54—105
C N Edgell	68	78—146			

To-day members of the Heywood Guards, Company F., Second Regiment, M. V. M. went out to Hackmatack Range for practice. The distance was 200yds. Creedmoor count. The results were as follows:

C N Edgell	20	20—40	A E Knowlton	17	19—36
H J Black	18	21—39	T A Hunting	16	19—35
C A Hinds	19	20—39	H E Carr	17	18—35
S T Chamberlin	19	20—39	W F Learned	15	16—31
B F Thrasher	19	19—38	C O'Neil	6	16—22
F H Kendall	16	21—37			

BOSTON, Aug. 7.—A moderate number of riflemen attended the Saturday matches at Walnut Hill to-day. Mr. Francis made a clean score of 100 in the rest match, and several 99s were made by Mr. Chase. During the week several fine scores have been made at each of the ranges, and they are given in detail below:

Decimal Off-Hand Match.

H Cushing, D	10	10	8	10	9	6	9	7	6	10	85

Hartfords telegraphed 620.

CAMDEN, N. J., Aug. 2.—A delegation from the Wilmington Rifle Club to-day visited the West Philadelphia Rifle and Gun Club at Stockton Rifle Range, Stockton Park, of which the range forms a part, is being fitted up for all kinds of amusements, including horse racing, rifle and gun shooting, base ball and kindred games, swings, dancing, etc. When completed it will make a fine resort. It is about two miles from the ferry in Camden, and easily accessible. The range is fitted up with every convenience. As the visit was an informal one, the members of both clubs joined in a general practice match, with the following conditions: Massachusetts target, 200yds., off-hand. The following is the full score out of a possible 120 points. The members of the Philadelphia Club are marked with an asterisk:

*P Wood	8	11	10	11	6	10	10	10	8	11—95
H B Seeds	8	10	8	9	12	10	11	8	8	9—93

*—— Oliver	0	2	5	6	6	6	2	8	6	8—49
W Mahler	0	5	0	0	9	4	8	2	2	9—39

To make the shooting more interesting two teams were selected indiscriminately from the two clubs for the second match, of which the conditions were the same as at the first. Teams were selected by W. F. Seeds and W. Twaddell, the former winning by sixty-four points. Twaddell's team started out finely, and at the end of the third round was twenty points ahead, but the gradually lost ground until the end of the match. The following is the score in full:

W F Seeds	8	11	10	10	8	9	5	8	6	9—84
C Heinel, Sr	8	10	8	42	9	8	8	10	8	9—90
H B Seeds	10	9	10	9	7	12	8	9	10	10—94

W Mahler	3	11	11	3	0	5	2	4	2	6—47—824

WILMINGTON, Aug. 5.—Matches for special practice were held by the Wilmington Rifle Club at Schuetzen Park this afternoon. Conditions at first match, National Standard target, 200yds. off-hand. Two teams were selected by Bacon and Simpson, the former winning by 31 points. The score is as follows out of individual possible 100 points, and team possible 500:

W A Bacon	5	4	4	3	4	1	7	2	0	4—34
C Heinel, Sr	9	6	6	9	5	5	8	10	6	7—71
W F Seeds	3	7	9	6	6	5	8	9	10	8—71
H Heinel	4	5	7	8	7	8	2	9	6	10—71
E M Clark	3	3	3	5	1	6	4	3	7	3	2—37—274
H Simpson	2	7	2	7	5	2	5	6	3	2—41
U Fuller	7	7	4	8	4	6	8	9	4	5—58
J E Newman	3	3	4	5	5	5	5	7	5	6—48
W O'Connor	1	9	8	3	5	6	3	4	3	3—45
W Floyd	10	6	3	4	4	7	3	6	3	5—51—243

Conditions at second match, National Standard target, 100yds. off-hand. Two teams were again selected by Bacon and Simpson, and this time the latter won by 27 points. The full score is as follows, out of same possible as first match:

W A Bacon	6	5	6	7	8	6	7	4	6	9—64
W F Seeds	9	6	9	7	8	8	6	7	7	10—76
H Heinel	10	10	8	7	8	9	7	5	9	4—77
W Floyd	5	6	6	10	6	8	9	6	6	8—70
J R Seeds	4	9	8	5	5	6	8	5	9	8—67

H Simpson	4	8	6	5	4	8	6	6	6	6—59
C Heinel, Sr	9	9	8	10	8	9	10	8	10	10—91
U Fuller	10	7	9	7	10	9	10	9	8	7—86
J E Newman	4	7	6	7	8	6	6	9	7	8—68
H B Seeds	7	10	7	9	10	6	9	6	7	8—79
E M Clark	8	9	5	8	5	7	7	4	9	6—68—451

At a meeting held after the close of the matches it was decided to accept a challenge of the Topeka (Kan.) Rifle Club to shoot a telegraph match on Thurday, Aug. 12, 8 men in each team, Massachusetts target, 200yds., off-hand, also to shoot a friendly match with a team of four men from the National Guard of Pennsylvania on Monday, Aug. 16.

ASHBURNHAM, Mass., August 4.—At the recent annual shoot of the Rise Guards, Co. E, 6th Regiment, M. V. M., there was a good attendance and interest. The meet was at Riverside Range. The best totals out of a possible 35 were as follows: Private Edward Brooks 24, Will Harson (6 shots) 23, Capt. Chas. H. Pratt 23, Corp. Ed. Nutting 23, Lieut. Fulford 22. After the shoot there was a supper at the Armory.

THOMASTON, Conn., Aug. 7.—Subjoined are the scores of our weekly shoot, July 24.

W H Dunbar	9	7	9	10	9	7	7	6	6	7—77
G A Lemmon	9	3	5	8	10	9	8	7	6	9—77
E Thomas	7	7	8	10	6	6	7	8	10	4—73
C T Williams	6	6	8	6	7	7	7	6	6	9—68

Scores of July 31.

W H Dunbar	6	5	9	9	7	6	10	9	6	10—77
E Thomas	5	10	8	6	6	9	9	6	8	8—75
G C Gilbert	9	9	6	6	8	8	10	5	7	6—74

F Carr	9	6	5	6	5	6	9	6	4	8—64

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

A MUCH NEEDED REFORM.

Editor Forest and Stream:

In your valuable paper of 5th inst. an article headed "A Much Needed Reform" attracted my attention, and I fully agree with "Reformer's" views in regard to professionals.

Shooting tournaments will never be a success, no matter how organized or under what auspices, so long as the majority of trap shooters feel as they do now—viz., that a few professional pot-shooters are certain to carry off the prizes either by skill acquired by continuous practice, as a matter of business, or by unsportsmanlike combinations. Amateur trap shooters should continue to "taboo" all shooting tournaments, until professionals are barred out entirely or made to shoot in a class by themselves for separate prizes. Then if an amateur feels that he can shoot well enough, he can enter that class and compete with them, he will always be welcome, like the lambs in Wall street, and probably get fleeced just as surely, only it will be optional with him, whereas at present he must either forego the pleasure of shooting in a tournament, or go in, handicapped with the knowledge that the result is a foregone conclusion, and thus he falls an easy prey to the pot-shooters. I trust this matter will be fully ventilated by FOREST AND STREAM and that the managers of future tournaments will consider the propriety of encouraging amateur trap-shooters. ALGONQUIN.

NEW YORK, Aug. 7.

ST. LOUIS, August 1.—An interesting match between the Western Gun and Diana Hunting clubs was shot this afternoon at the Red House, East St. Louis, the Westerns proving victorious, as shown by the following score. The conditions were twenty men a side, to shoot at 20 Peoria blackbirds each, 18yds. rise. The weather was very hot and made shooting rather uphill work, but a pleasant time was had, nevertheless:

ST. PAUL, Aug. 1.—At last week's shoot of the St. Paul Gun Club, Olson won the club badge and Wilson the Macomber badge. The following scores were made: Club badge, 10 single and 5 pair Peorias: Olson 18, Hubert 18, Skinner 17, Bonte 17, Dax 16, Chantler 13, Burkhard 13, Wilson 12. Macomber badge, 15 metal birds: Wilson 11, Dax 11, Olson 11, Burkhard 9, Hubert 9, Skinner 9, Henry 7, Bonte 7, Chantler 6, Bird 5.

ST. PAUL, Aug. 10.—The St. Peter Field and Trap Club opened its first annual tournament at St. Paul to-day; $1,720 will be distributed in cash prizes during three days. Marksmen from all over Minnesota and Iowa have signified their intention of taking part in the shoot during the meeting.

GARDNER, Mass., Aug. 5.—The recently organized Gardner Sportsmen's Association were out to the Hackmatack Range to-day and shot at clay-pigeons. Out of a possible 10 the following are the totals broken: Alex Priest 8, T. P. Perley 7, C. S. Knight 7, E. C. Dodge 6, I. N. Dodge 6, A. F. Eaton 5, G. F. Rogers 5, Ben Holden 5.

FITCHBURG, Mass., Aug.4.—Members of the Fitchburg Rifle and Gun Club went out to the River street Range to-day to break clay-pigeons. Out of a possible 30 the following totals were made: G. W. Weymouth 19, B. W. Mackay 16, A. W. Baker, Jr. 15, E. H. Spencer 9.

HARTFORD, Conn., Aug. 5.—The match between the Rockville and Hartford Gun Club was shot off on the grounds of the latter club this afternoon, and resulted in a victory for the Rockvilles, by the following score:

Rockville Club.		East Hartford Club.	
C Sterry	11110111000101011111—14	C Bur'h'm	01111111010101011000—12
J Burton	00000110p010001001000— 5	H Bur'h'm	01011000111000101000— 8

	74		65

The date of the return match was not decided upon.

COLUMBUS, O., Aug. 6.—Regular weekly shoot of the Sherman Gun Club to-day. Mason, who has held a mortgage on 15 for the past five weeks, settled down to work and captured the badge in Class A; Sprig took Class B badge. Single American birds, National rules governing:

Badge Contest.

Mason	10111111111111111111—19	Hugo	11110101011111111111—17
Siebert	11111011111100111111—17	Ross	11011010011000110001—10
Ward	01111010110111101100—14	Hunt	01100011110100011011—11
Swan	00110110100101011110—11	Miller	01000010110101011011—10
Moone	00101010100110100111—10	Brown	11101101111111011011—15
Fisher	10001110011011101010—11	"Sprig"	11111100010111001101—13
Fink	11001000101111010010—11	Flowers	11101110011011000010—11
Irwin	11011001111111111001—15		

After the badge contest sweepstakes took place, which finished as follows: First event—Siebert and Brown divided first, Ward and Sprig divided second and Mason took third.

Second event—Siebert first, Miller and Fink second and Brown third.

A return match will take place with the Zanesville Club on their grounds at an early date.

MY PADDLE GLEAMED.

RONDEAU.

MY paddle gleamed, the light canoe
The river's waters glided through
With scarce a sound to fret the air.
The sun shone bright, the morn was fair
And from the south soft breezes blew.

O'erhead the swallows darting flew,
Then dropt to earth to brush the dew
From off the tangled grasses there,
My paddle gleamed!

In form as perfect, fresh and new
As when they first in Eden grew
God's gifts, before, lay everywhere,
Behind, the city's toil and care;
Content, I joy's full measure knew,
My paddle gleamed!

INDIANAPOLIS, Ind. WILL MEREDITH NICHOLSON.

THE WESTERN MEET AT BALLAST ISLAND.

CANOEING in the West is growing rapidly, as indicated by the increased attendance at the second annual meet of the W. C. A., held at Ballast Island, Lake Erie, O. This Association has increased its membership during the year to 135, all enthusiastic canoe owners.

An inspection of the boat house, a large building with a capacity to accommodate under cover 150 canoes, showed 27 new boats, all built this year, mostly of Class B size and up to the limit 31½×15. This Association made an experiment of the Tredwen time allowance table, based on the cubic contents of the canoes contesting. The Regatta Committee reports that the rule was a success, giving general satisfaction to all, and that they will recommend to the Association the adoption of it for the all-class canoe sailing races.

The clubs represented this year were the Tippy C. C., of Chicago; Bay City C. C., Bay City, Mich.; Detroit C. C., Toronto C. C., Ruckawa C. C., of Dayton, O.; Jabberwock C. C., of Springfield, O.; Sandusky C. C., Miami C. C., of Cincinnati, O.; Cleveland C. C. and the Cincinnati C. C.

The week of the races turned out to be a grand success, as to wind and bright skies, giving all of the former that could be wished for by the boldest and oldest sailors, but a little too much for the novices, who predominated at the meet and who had not yet learned how to ride their boats in a seaway, and did not know how staunch the little things were. But they learned before the week's races were over, and now they are "vets," anxiously awaiting next year's meet and hoping for plenty of wind and sea that they may show how much they profited by this their first year's experience in a canoe. The following is the result of the races, together with the time of the first and second prize winners.

Wednesday, July 14.—Class B, 3-mile triangular course. Wind from the north, blowing half gale, big sea, 8 starters:

G. Harry Gardner, Cleveland C. C., Mohican canoe.....32 42
O. H. Root, Cleveland C. C., Mohican canoe.....33 10

First mile 9m., second mile, wind free, 6m., third mile, beat to windward in 3 long legs, made in 17m. 42s.

Class A, 3 mile triangular course, 4 starters:

O. A. Woodruff, Ruckawa C.C., Dayton, O., Birdie Kane canoe.53 00

No second was made in this race owing to the wind and sea increasing to such an extent that this class could not weather it and they were picked up and taken out of the wet by the yacht in attendance. The following day the second prize was sailed for by the starters that did finish, and was won by C. J. Bowsfield, Bay City C. C., in a Grayling canoe, in 1h. 5m. 7½s.

Thursday, June 15.—Class I, paddling; ½ mile straightaway course, 3 entries:

A. W. Kitchen, Tippy C. C., Chicago, Douglass canoe.....05 45

Class III., paddling; ½ mile straightaway course, 3 entries:

R. P. McCune, Tippy C. C., Chicago, Douglass canoe.....07 15
G. Harry Gardner, Cleveland C. C., Mohican canoe.....07 18

Class II., paddling; ½ mile straightaway course, 5 entries:

A. W. Kitchen, Tippy C. C., Chicago, Douglass canoe.....05 08
C. J. Bowsfield, Bay City C. C., Grayling canoe.....05 40

Friday, July 16.—All classes, time allowance, 3-mile triangular, no limit sail or ballast, 13 starters:

O. A. Woodruff, Ruckawa C. C., Birdie Kane.....46 17
Geo. B. Ellard, Cincinnati C. C., Princess.....48 03½

A steady light wind with little sea prevailed during this race.

All classes, 1 mile sail, 1 mile paddle and 1 mile sail, 10 starters:

G. Harry Gardner, Cleveland C. C. Mohican canoe..... 0 56 33
R. P. McCune, Tippy C. C., Chicago C. C., Douglass canoe...1 00 52

In this race Mr. O. A. Woodruff of the Ruckawa C. C. came in first in 50m. and 33s., but was ruled out by the judges on account of his lowering his canvas before reaching the first mile stake.

Race, ½ mile paddling, tandem, 3 entries:

A. W. Kitchen and R. P. McCune, Tippy C. C., Douglass canoe.3 32
G. H. Gardner and O. H. Root, Cleveland C. C., Mohican canoe.3 33

In this race the second position was hotly contested for by Messrs. Wood and Woodruff, of the Ruckawa C. C., who lost it only by the fraction of a second.

Upset race:

1. A. W. Kitchen, Tippy C. C., Chicago, Douglass canoe.
2. J. O. Shiras, Miami C. C., Cincinnati, Rob Roy canoe.

Mr. Shiras showed much skill in recovering his position in his canoe, performing the operation in six seconds after the signal was given, but the first place was taken from him by the speed given to Mr. Kitchen's canoe by his strength in paddling.

Saturday, July 17.—Novice race, all classes, 2 miles, with time allowance, 18 starters:

R. P. McCune, Tippy C. C., Chicago, Douglass canoe.....39 31
B. W. Wood, Tippy C. C., Chicago, Princess canoe.....44 34

All classes, 3-mile triangle, time allowance, 12 starters:

W. D. Breed, Cincinnati C. C., Princess canoe.....50 44
Geo. B. Ellard, Cincinnati C. C, Princess canoe.....50 50

Hurry-scurry:

1. A. W. Kitchen, Tippy C. C., Chicago, Douglass canoe.
2. G. Harry Gardner, Cleveland C. C., Mohican canoe.

All classes, 3-mile triangle, no ballast, time allowance, 16 starters:

Geo. B. Ellard, Cincinnati C. C., Princess canoe.....1 08 25
W. D. Breed, Cincinnati C. C., Princess canoe.....1 09 55

All classses, sail 1 mile, paddle 1 mile:

G. Harry Gardner, Cleveland C. C., Mohican canoe.....25 04
J. W. Hepburn, Toledo C. C., Toledo model canoe.....25 37

Monday, July 19.—The event of the meet, the race for the Gardner cup, a beautiful piece of workmanship in silver, of appropriate design, was placed on the list as Monday's sport, the last of the meet. A mistake was made here, as many of those who desired to enter were called home; but, as it was, ten canoes crossed the line in a gale of wind to contest for the cup's ownership for one year. It was a six-mile race, or twice around the regular three-mile triangle. The wind blew so fresh that at the mile stake but three continued on their course, the balance either swamping, capsizing or retiring through some accidents to their rigging. This cup was presented to the Association by Com. Geo. W. Gardner, of Cleveland, O., and is to be retained by the winner's club one year and is then to be returned at the next annual meet to be raced for again. The race resulted this year as follows:

C. J. Bowsfield, Bay City C. C., Grayling Canoe.....1 25 15
C. F. Pennewell, Cleveland C. C., Mohican Canoe.....1 36 24

Mr. Bowsfield showed good seamanship, the result of his early training on the rough waters of Saginaw Bay in this race, and deserves much credit for the manner in which he won it.

Two prizes were awarded in each race in the shape of flags made by the lady friends of the Association. The flags were beautiful pieces of workmanship, and exhibited much taste in their combination of colors and ornamentation.

On Friday night, July 16, a large camp-fire was started in camp, and the members of the Association gathered around to have a pow-wow, elect officers for the coming year to transact all business, with the following results: Meeting called to order by Com. Gardner. The following officers were elected for the ensuing year: Commodore, Geo. B. Ellard, Cincinnati C. C.; Vice-Commodore, A. W. Kitchen, Tippy C. C., Chicago, Ill.; Rear-Commodore, Thos. P. Gaddis, Ruckawa C. C., Dayton, O.; Secretary and Treasurer, James O. Shiras, Miami C. C., Cincinnati, O.; Executive Committee—Geo. A. Warder, Jabberwock C. C., Springfield, O.; O. H. Root, Cleveland C. C.; Chas. R. Melville, Sandusky C. C.

The thanks of the Association were unanimously voted to the ladies who so kindly made and presented the prize flags. Also to Com. Geo. H. Gardner and his associates, members of the Ballast Island Club House, for the use of the island; and to the retiring regatta committee and the judges of the races.

Mr. Harry Gardner, on behalf of his father, presented to the Asscciation the Gardner Cup, stating that it was given to be raced for annually at the meets, to become the property of the club to which the winner belongs until the next annual meet following the one at which it was won, when it is to be turned over to the

Association to be raced for at that meet. It was accepted with unanimous thanks.

The motion was carried that the word American be dropped from the Association name, and that in the future this Association be known as the Western Canoe Association.

The motion prevailed that a by-law be made limiting the membership of this Association to two hundred (200), and that the Ex. Com. be instructed to inquire into the moral standing of each applicant.

SHERBOOKE B. AND C. C. CAMP.—The annual camp of the Sherbrooke B. and C. Club will be held at Beachwood on Lake Memphremagog, two miles south of Georgeville, beginning Aug. 12 and continuing for three weeks or more. The members will keep open house to all brothers of the oar or paddle and will be glad to see as many of their brethren of the New England States as can find it convenient to call. Meals will be furnished by Mr. Beach who gave such perfect satisfaction to his guests last year, at 25c. on the ground. Tent room free in abundance for all. Just bring your blanket and be good. Full information as to railroad rates, etc., may be had by addressing I. H. Walsh, Secretary S. B. and C. C. The Central Vermont Railway Company will carry boats free and issue return tickets at single fare.—THE COMMODORE.

THE A. C. A. TROPHY.—Aug. 7.—*Editor Forest and Stream:* I beg to acknowledge further contributions to the A. C. A. challenge Cup as follows: Jacob L. Greene $1, F. F. Andrews, Ira S. Davis, C. H. Moody, H. M. Stuart, H. L. Ward, C. F. Walters, Rochester C. C., $1 each; Vesper B. C., Lowell, Mass., $15. Previously acknowledged, $252.15, making a total of $274.15.—WM. WHITLOCK, Chairman of Committee (57 West Twenty-Second street, New York).

TIPPY C. C.—The annual regatta of the Tippy C. C., of Chicago, will be held on Aug. 20, starting at 2 P. M. The officers of the T. C. C. are: D. H. Crane, Captain; W. M. Dunham, Mate; A. W. Kitchin, Purser.

LOWELL, Mass., Aug. 4, 1886.—Geo. E. Lull, of the Vesper Boat Club, Lowell, Mass., and his brother, principal of the Milford High School, are cruising for two weeks on Lake Memphremagog.

Forest and Stream Fables.

FIXTURES.

AUGUST.

14. Sandy Bay, Club, Squam.
14. Hull, Open, Hull.
14. Beverly, Cham., Nahant.
14-29. Quaker City, An. Cruise.
21. Beverly, Open, Marblehead.
22. Yorkville Club Regatta.
21, 24, 26. New York Trial Races.
24. Great Head, Cham. Winthrop
25. Hull, Ladies', Hull.
25. Corinthian, Club, Marblehead
28. Hull, Cham. -Hull.
28. Sandy Bay, Open, Squam.

SEPTEMBER.

2. Boston, Cup, City Point.
3. Quincy, Club.
4. Beverly, Open, Marblehead.
4. Corinthian, Champion, Marblehead.
6. Newark, Open.
6. Quaker City Cup, 2d, Class.
8. Great Head, Club, Winthrop.
11. Hull, Cham., Hull.
11. Corinthian, Sweepstake, Marblehead.
11. Sandy Bay, Sweep., Gloucester.
17. Toledo, Pen., Toledo.
18. Sandy Bay, Club, Rockport.
18. Great Head, Club, Winthrop.
18. Quaker City, Review Cruise.
25. Buffalo, Club, Lake Erie.
28. Beverly, Club, Nahant.

YACHTING NOTES FROM BOSTON.

YACHT racing in and around Boston Bay for the last two weeks has been very quiet, only two small races being sailed during that time—the Beverly Y. C. championship, on July 31, at Swampscott and the Quincy Y. C., a club race for cash prizes, off Quincy, Great Hill on Aug. 7. This is not from any lack of interest in the sport, but from its being a time of the yachting season when yachtsmen are enjoying their annual vacations, many taking a two weeks' cruise to the eastward, while others enjoy the mountain haunts or piscatoral excursions up in the Maine wilds. Boston Bay is the center of the great racing events north of Cape Cod. It comprises that sheet of water between the headlands of Point Allerton, Hull, on the south and Marblehead on the north, strictly speaking the Nahant Peninsula, but as Marblehead is not far off, and it has three lively clubs—Eastern, Beverly and the newly formed Corinthian, it may be included. This bay contains the harbors of Marblehead, Lynn, Winthrop, Boston, Dorchester, Quincy and Hull, all of which have at least one yacht club, Eastern, Beverly and Coriuthian at Marblehead, Lynn and West Lynn at Lynn, Great Head at Winthrop, Jeffries at East Boston, Bunker Hill at Charlestown, Chelsea at Chelsea, Boston and South Boston at City Point, Dorchester at Harrison Square, Quincy at Quincy and Hull at Hull, 14 clubs in all, each having a membership of over 100, nearly 8 of them with over 250 active members. These clubs are so situated that a 5 or 10 mile sail only is required to attend each race. It is not a rare case that a yachtsman is a member of perhaps 6 clubs, thereby enabling him to enter all the season races of each club. In this sheet of water 60 races were advertised the first of the season and not one club so far but have carried out their full programme. Racing yachtsmen have their hands full, and it is these friendly and frequent meetings that have given such a standing and great growth to yachting in and around Boston. The boats that sail in the races are all under 35ft., and in a great majority of cases they are sailed by the owners themselves. The rivalry breeds great improvement in models; it is not uncommon that you find an ambitious yachtsman building a new boat every year until his success is obtained.

While racing receives so much attention, the clubs do not lose sight of the non-yacht owners and the ladies. Every club has its ladies' day, when afternoon sails are enjoyed, ending with a supper and dance. Last season the Hull Y. C. inaugurated a ladies' day race, where a certain number of ladies were allowed in addition to the regular crew. It proved of such interest that this season every club had at least one in the programme.

There is one branch of the sport which has received but little attention of late years, and that is cruising. Some fifteen years ago the Dorchester Y. C. always had a cruise, and remarkable they were, and it was not uncommon to see twenty sail in the fleet, but for some reason the interest flagged, the Hull club being the only club of late years that made any pretense. It has been desired by many that the New England Yacht Racing Association should take hold and give a grand union cruise of all the clubs, and this season the Hull club departed from its usual exclusiveness and invited the clubs to join with them. Only seven days preparation was had, but in this short time an elaborate programme was arranged. Invitations were received from all the Eastern clubs, the young club at Rockland, Maine, being particularly desirous of a visit. The time set far the departure of the fleet was 9 o'clock on the morning of July 31, and twenty-five yachts were in readiness at the appointed time, but the want of wind prevented the departure until 11 o'clock, when the following yachts passed in review before the flagship Silvie, Commodore C. V. Whitten. They were the schooners Adrienne, C. B. Lancaster; Altama, J. C. Ayre; Vif, W. H. Crane. Sloops, Active, Charles Kinny; Carmen, Vice-Commodore B. L. M. Tower; Hera, Rear-Commodore George R. Howe; Nimbus, J. J. Souther; Ramaler, J. J. Henry; Optic, G. S. Hutchinson; Zepho, Austin S. Kilburne; Venture, W. C. Cherrington; Helen, S. D. Loring; Nebula, C. W. Jones; Posy, R. G. Hunt; Gisela, Hermdn Aborn. Steamer, Annie S., Fred Pope, and several others from sister clubs. It was nothing but a drift to Marblehead, where the yachts anchored for the night. Here the fleet was increased by nearly a dozen yachts, among the number, schooners Tempest, Tioga and Widgeon, sloops Magic, Eugenia, Freya and Frolic. The lack of wind and pleasure of sailing was made up by a jolly good time visiting the yachts and shore. The Eastern and Corinthian club houses were thrown open to the visiting yachtsmen.

Sunday opened as the day before, no wind. The presence of the Fleet Captain of the Sandy Bay Club, of Rockport, and the elaborate programme of a drive around the cape, a ride which is the most beautiful on the whole coast, made the hearts of the yachtsmen beat with impatience.

With a light wind the yachts got under way about 1 o'clock for Rockport. The yachtsmen were doomed to disappointment again, for soon after leaving the harbor a dense fog shut in, which caused many of the yachts to put back to Marblehead or to seek refuge in the harbor of Gloucester. For those that persevered a pleasant event was in store. At 5 o'clock, when the fleet was abreast Thatcher's Island Lights, the fog lifted and brought in view the much-expected English cutter Galatea, It did not take long for the Commodore's yacht to pass under his lee and welcome the visiting yacht to the shores of America by the booming of cannon and lusty cheers of the whole fleet. It was a fortunate occurrence for the Hull Club to be the first to receive the visitor. Six o'clock saw what there was of the fleet at anchor at Rockport, eighteen sail in all.

Monday the stragglers arrived and the fleet then numbered something like thirty. Rockport could not do enough for the visiting yachtsmen. No money could be spent, every one seemed to outdo his neighbor in attention. The Salem Cadet Band of fifteen pieces filled the air with music from early morn till late at night. At 2 o'clock a grand open regatta was given, in which the whole fleet took part. Liberal prizes were offered, and the winners were Black Cloud, Atalanta, Eugenia, Louette, Petrel, Expert, Em Ell Eye, Victor and Vesper. The Commodore's yacht was used as judges' boat and had as guests seventy-five ladies and the Cadet Band. After the race the Sandy Bay Y. C. invited all to a bountiful supper provided at the Town Hall. In the evening the whole shore was bright with fireworks and burning tar barrels. The day closed with a grand ball.

Tuesday was set for a run to the Shoals, but a double reef breeze from the northwest with a heavy sea, prevented the yachts from leaving port, and those that attempted to reach Squam to participate in another regatta met with mishaps and had to put back. This virtually ended the cruise, one of short duration, but every minute full of gayety and rare sport. If such a success could be obtained with such little preparation, how much more of a success could be obtained by starting and preparing early in the season. Let the N. E. Y. R. A. awake from its lethargy and do something that will make a name for itself.

There have not been many changes in ownership since the yachting season opened. H. L. Johnson has sold out his interest in the cutter Thelga to his partner, B. T. Hull, of Charlestown. The Thelga was a new boat in 1885, built by Eddy, of Marblehead, for A. P. Thayer, of the Hull Y. C., and bought by her present owners this spring.

S. A. Freeman has sold his sloop Thisbe to L. M. Sargent, of Magnolia, who will use her for pleasure sailing only. The Thisbe is well-known around Boston, formerly a catrig, but changed the latter part of last season to a sloop; she has always been a fast boat and a winner of first prizes for the past three or four years.

The sloop Pilgrim, built in 1884 by E. L. Williams, has been changed to a full cutter rig, with 600lb additional ballast inside. She is entered in the coming races, and it is expected that she will make an exceptionally good showing.

The Hull Y. C. will sail its annual open regatta on Aug. 14. Six hundred dollars is offered in prizes, and from the entries that are daily received it is expected that at least one hundred and fifty yachts will start. A grand time is expected; the steamer Rose Standish has been provided for the members and ladies. A collation will be served, and music and dancing will furnish the day's entertainment.

The Corinthian Y. C. has postponed its open regatta to Aug. 21. E. L. Williams of City Point, one of our ablest builders and most enthusiastic yachtsman has designed and will at once lay the keel of a sloop yacht which is destined to wrest the laurels from some of our flyers. She is to be 31ft. over all, 27ft. loadline, 8ft. 10in. beam, 5ft. 3in. draft, freeboard to plankshear 2ft., shear forward 2ft., shear aft 9in., rocker keel cut up well forward, rail 4in. from deck, depth from garboard to bottom of iron keel 2ft. 4in. midships, built of Georgia pine plank 1⅛ in., full length; oak keel, stern, sternpost and frames bent. She will have a small house giving 4ft. 9in. head room, 3 tons outside ballast with 500lbs. inside ballast. A full cutter rig with main mast from deck to hounds 23ft., stepped 9ft. 6in. from stem, topmast from heel to shoulder 17ft., bowsprit outboard 8ft., main boom 27ft., gaff 20ft. Mr. Williams is building her for himself in fulfilment of a long cherished desire and confident that she will be not only a good sea boat, but one that will take a place in the front rank for speed. Mr. Williams came from Lowell some two years ago where he acquired a good reputation as a shell boat builder, and settled at City Point. Coming among strangers he is but little known. He has always had a great love for yacht designing and has spent many years making it a study, what boats he has built have proved fast sailors, but this one he intends to eclipse all.

The long expected arrival of Galatea, together with the excitement attending the last Eastern Y. C. race has set all the old fishermen and fossil residents around Marblehead wonderfully alive and the raising of onion crops has been supplanted by the great interest in watching the movements of our two yachts, Puritan and Mayflower. It is thoroughly desired by all in the East that one of the trial races be sailed off Marblehead, surely no better course could be had than that sailed over on the 29th of June, clear water and always abundance of breeze. EAST WIND.

THE LAKE Y. R. A. ROUND.

KINGSTON, AUG. 2.

THE second regatta of the L. Y. R. A. cruise was sailed on Aug. 2, at Kingston, Ontario, over a 30-mile course for Class 1 and 20 miles for Class 2. The starters were as follows:

First Class.—Ariadne, F. Sinclett, Cape Vincent; Garfield, Dr. C. Curtis, Kingston; White Wings, A. Cooley, Trenton; Cygnet, McGaw and Ewing, Toronto; Norah, J. Bell, Belleville; Aileen, Com. Leys, Toronto; Atlanta, J. Eyres, Brighton.

Second Class.—Laura, T. McKay Robertson, Kingston; Gracie, J. B. Carruthers, Kington; Minnie A., Wm. Byers, Gananoque; Mollie, Dr. Mallock, Hamilton; Iolanthe, W. H. Biggar, Belleville.

The start for the first class was 10:25 A. M., and the yachts crossed as follows:

Atlanta	10 25 00	Ariadne	10 30 00
Cygnet	10 56 02	White Wings	10 30 30
Norah	10 34 12	Aileen	10 39 00
Garfield	10 30 00		

The second class started at 10:43, being timed thus at the line:

Gracie	10 43 20	Mollie	10 46 00
Minnie	10 44 00	Iolanthe	10 46 30
Laura	10 45 00		

The wind was strong N.E. at the start, dropping shortly to a calm, and then blowining heavily from N.W., the sloops lowering topsails, while Aileen held hers easily. Atlanta turned the mark first at 11:37, setting jibtopsail, but before she had carried it long her topmast went over the side. The boats were timed at the Four-Mile Buoy thus:

Atlanta	11 40 00	Aileen	12 06 30
Aileen	11 54 30	Cygnet	12 13 00
Ariadne	11 56 25	White Wings	12 07 45
Garfield	11 57 25		

Soon after Aileen also lost her topmast. The times at the finish were:

Atlanta	3 00 05	Garfield	4 33 00
Aileen	3 51 00	Cygnet	withdrew.
Norah	4 09 00	Ariadne	withdrew.
White Wings	4 29 58		

In the second class Iolanthe also lost her topmast, and Laura carried away the jaws of her gaff, the former finally winning:

Iolanthe	2 11 10	Mollie	3 17 30
Laura	2 51 10	Minnie	withdrew.

In the third class race there were five entries, and the winners were the Reckless, of Gananoque; Puzzler, of Brockville, and the Nameless, of Gananoque.

OSWEGO, AUGUST 4.

A strong N. W. wind and choppy sea were waiting for the yachtsmen at Oswego, and gave them plenty of work all day. The course was a triangle of three mile sides, three rounds for first class and two for second. The start was ordered for 9:05, but the boats were late, starting as follows:

Cygnet	9 14 05	White Wings	9 17 15
Aileen	9	Atlanta	9 22 08
Ethel	9 16 40		

The second class start was set for 9:20, the boats going over as follows:

Iolanthe	9 25 15	Stella	9 29 40
Fascination	9 26 30	Mollie	9 30 10
Katie Gray	9 27 10	Cricket	9 32 08

The yachts were timed at the first mark. The yachts rounded the west buoy as follows:

FIRST CLASS.

Aileen	10 49 08	Ethel	11 12 40
Atlanta	10 55 00	White Wings	11 18 35
Cygnet	11 06 55		

SECOND CLASS.

Iolanthe	11 04 25	Mollie	11 32 00
Katie Gray	11 28 00		

The second buoy was misplaced and some delay occurred in looking for it. The first round was timed:

FIRST CLASS.

Atlanta	11 55 56	Ethel	12 15 25
Aileen	11 59 15	White Wings	12 30 00
Cygnet	12 14 00		

SECOND CLASS.

Iolanthe	12 16 30	Cricket	1 07 00
Katie Gray	12 39 00	Fascination	1 00 30
Mollie	12 55 00		

Atlanta continued to gain on the fleet and finished ahead, the times being:

FIRST CLASS.

Atlanta	6 32 30	Ethel	6 49 26
Aileen	6 40 57	White Whings	6 51 34
Cygnet	6 47 27		

SECOND CLASS.

Iolanthe	5 26 20	Mollie	6 07 10
Katie Gray	6 59 14		

The first prize, $100, was awarded to Atlanta; second, $60, to Aileen; third, $40, to Cygnet. Iolanthe received first prize in second class race, $70; Katie Gray, second, $50; and Mollie, third, $25. The Commodore's pennant was won by Ethel, of the Oswego Y. C. The final race is at Toronto.

THE NEW YORK Y. C. CRUISE.

THE New York Y. C. has always been justly proud of its fleet; always the first in point of size and numbers in the country, and for many years past it has shown each August at Newport an assemblage of yachts that in their day were considered almost beyond improvement. To comprehend, however, the great improvements of the last few years, both in modeling, sparring and construction, as well as the vastly increased range of our yachting, it was only necessary to glance over the fleet in Newport Harbor on Sunday last, and to perform a simple sum in subtraction.

Looking across the harbor the eye is sure to light quickly on three large white hulls standing out from the fleet in virtue of their color, and with two of them from their size in connection with their rig. Less prominent, but still easily seen, are the black yachts of similar proportions and rig. These four boats alone contribute very largely to the appearance of the fleet of 1886, while on them centers the chief interest of the cruise as well as the year's yachting. Their construction marks a distinct era in our yachting—dwarfing as it does the boats once considered famous, establishing a new and larger standard of size and a far higher standard of perfection, and marking a permanent abandonment of the old type. Anchored among them are a few, a very few of the old vessels, unchanged in rig or model, and only a glance is needed to tell the youngest amateur tar the immense difference.

Were any nautical Rip Van Winkle to awaken after a sleep of seven or eight years and wander down to Commercial Wharf for a look at the fleet the first thing that, would attract his attention would be the curious craft whose smooth, shining black sides, long sterns, plumb stems and straight sheers, coupled with many curious features in rig, make such a marked contrast by the side of the faithful few whose form and rig would still be familiar to him. These are the English cutters, once an innovation barely tolerated, now one of the leading features of the fleet.

Down in the Cove is the red-circled flag of Bedouin, one of the finest of the sailing fleet to-day, fast, strong and staunch, and looking in every line of her hull the racer and cruiser which she is. Beside her lies a real novelty to American eyes, the cruiser Cythera, an English yawl, a rig that excites wonder and criticism, much of the latter of an adverse kind, wherever she goes, but her record of an ocean passage in midwinter through the Bay of Biscay, to the West Indies, and thence to New York with ladies and children on board, is a full offset to any lack of speed under the rig alongside of our racers. Further up the harbor are two similar yachts under the blue ensign, Stranger and Clara, the latter, a visitor here last year, standing thus far well ahead of all her class as a racer, and generally acknowledged the fastest of her size in American waters. Not far away lies a smaller Clara, the little Ulidia, also a Fife boat and similar in form and speed. Lead mine, diving bell, foot bath, whatever she and her kind are called, she sailed over the 45-mile course on Saturday, the smallest yacht that finished, and carried a lady passenger on board also. About the harbor are a score of smaller cutters and yawls; Rondina, 30ft. l.w.l., Alga 28ft., White Wing 32ft. 6in., all around from Boston to see the fun; Moya, Heedless, Surf, Windward, Mignonette, Maud, and others of their size. Further than this, the rig is seen everywhere, over hulls of all kinds, varying in proportion from the almost pure cutter rig of Mayflower and Puritan, to the old sloops with no headsails and housing topmasts. Eye could look down in the deep green water we should see further evidences of the encroachment of the cutter on the old sloop in the deep lead keels that help along all the winners.

Another feature that marks the gatherings of the last few years is the steam fleet. The swift Atalanta, the large and stately Electra, the Corsair, the trim and shipshape little Nooya, a marked contrast in style to some of the 18-knot wooden boxes; the newly christened Tillie, better known by her old nickname of "Polinaris;" the inland cruiser Magnolia, the Ladoga, Lucile, and other fast Herreshoff craft, make a most important division of the fleet.

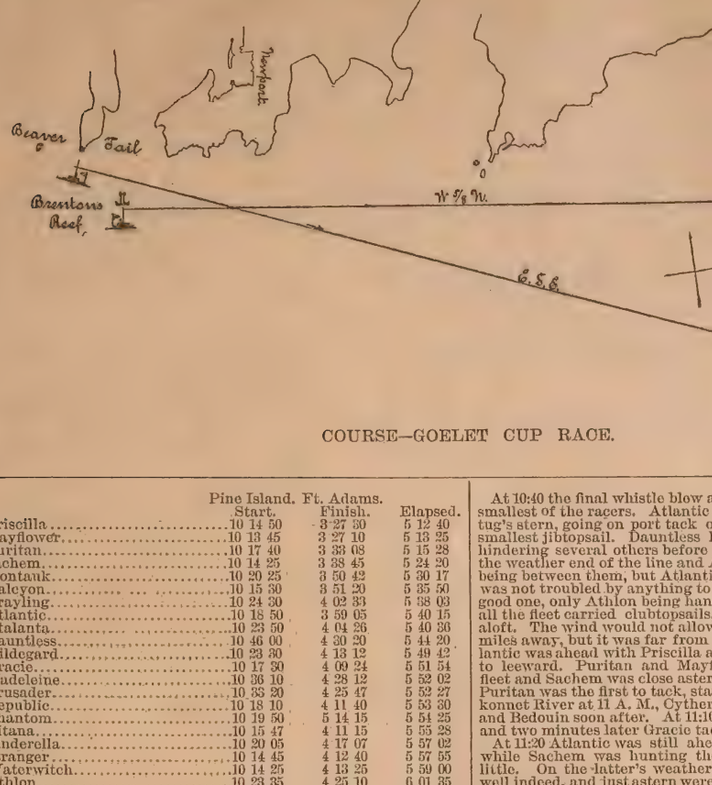
Take away all these new boats and what would the fleet look like even with the addition of the *ancien regime*. There are still the large schooners which once formed the main division, America, Dauntless, Dreadnaught, Resolute, Wanderer, Fleetwing, Atalanta, Estelle, Clio, Sylph, Halcyon, Phantom, Madeleine and Ruth, whose names take us back to the days when yacht racing was schooner racing, to 1870 and '71, when Newport was the scene of battles royal between racers whose day is now over. The schooners now attract but little notice, and when we hear them mentioned the names are not those above, but Montauk, Fortuna, Grayling, Gitana, Mohican and other new ones. Two among the present fleet attract much notice. One the new white flyer Sachem, Mr. Burgess's first venture in a new field; the other, Miranda, the famous two-masted cutter so firmly associated with the name of John Harvey of Wivenhoe. Both have excited much interest, the first for her speed in her first races as well as her resemblance to Mayflower; the other, as a new arrival from across the Atlantic, whose fame has already preceded her, while they have one novel feature in common which many wonder at, the difference in length between main and foremasts.

Now let the spectator take from the fleet the large single-stickers, the cutters and yawls, the new schooners, the steam yachts, and put in their place the old vessels, and at a glance they will would make. Certainly we have progressed greatly in a short time, in size, though that is of little importance; in style, as any one may see who looks from Fanny, Hildegarde, Whileaway, Halcyon, Ruth and Atalanta, to Mayflower, Bedouin, the new Gracie, Cinderella, Clara, Fortuna, Sachem, or Intrepid; and in all good qualities, speed, safety and comfortable accommodations.

The cruise this year promised to be of more than usual importance for several reasons. A number of new yachts were to be with the fleet, Mayflower, Atlantic, Priscilla (altered since last year), Sachem, Miranda and Cythera. The race for the Goelet cups promised an unusually fine entry list, and offered the best trial yet had of the new boats, while the presence of Galatea was eagerly looked to by all.

The rendezvous this year was fixed for August 4, at New London, and at 5 P. M. the flagship Electra steamed in with Com. Gerry, Fleet Captain Wm. Krebs, Secretary Bird and Dr. Asch, Fleet Surgeon, on board. Mr. Geo. L. Schuyler, the surviving donor of the Cup, joined the flagship at New London for the rest of the cruise.

In the evening a meeting was held on board the Electra, and the programme of the cruise partly decided on, to sail to Newport on Thursday, lay at anchor on Friday, when the rowing race would take place; to sail for the Goelet cups on Saturday, and start on Monday for New Bedford. Mr. Bird received the following letter from Lieut. Henn:



MARBLEHEAD, Aug. 2, 1886.—To John H. Bird, Esq., Secretary New York Yacht Club—DEAR SIR: I am in receipt of your letter of July 10, and in reply beg that you will convey my thanks to the members of the New York Yacht Club for their kind and courteous invitation. I fear it will be impossible for me to enter Galatea for the race for the Goelet cups, but I hope she will be able to be ready to join the annual cruise. We have had a slow but very fine passage—light winds and weather throughout. Excuse this hasty letter. Believe me, very truly yours, W. R. HENN.

A large number of yachts, including Puritan, Priscilla and Atlantic were in port, and Mayflower came in during the evening.

NEW LONDON TO NEWPORT, AUG. 5.

The daily runs from port to port are in a sense races, as they are timed accurately and most of the boats do their best; but while in the aggregate they may place the boat fairly, individually they do not give the same test that a set race for prizes does. The fleet is large and includes a number of cruisers which are more or less in the way of the racers if the wind be light, and the starts are often uneven, owing to some yachts having to anchor among the pack and so losing time in working clear, while others drop in better berths. It sometimes happens, too, that owners do not care to risk spars on the eve of a big race, so these runs cannot always be considered as equal to the main race in showing the relative places of boats. This year the Regatta Committee were the guests of ex-Com. E. M. Brown, on his new steam yacht Fedalma, and from her they timed carefully the start and finish of each run. On Thursday morning the wind was very light from S. W., but at 10 A. M. there was a sailing breeze, and the signal for a start was set on board the Electra at 10 A. M., accompanied by a gun.

The fleet were soon under way and past the Fedalma, Mayflower taking a good lead. Dauntless was fouled by a coasting schooner but sustained no injury, only losing a little time. Atlantic was hindered at the start by her position among a lot of small yachts. The wind continued light and the tide ahead all day, while calms and puffs made the chances very uneven. Sachem did some excellent sailing, beating all her class; Priscilla led her class, with Mayflower and Puritan after her, and Atlantic nearly half an hour astern. Cinderella beat Clara by 8m., but the cutter had her boat in tow. The times were:

COURSE—GOELET CUP RACE.

	Pine Island. Start.	Ft. Adams. Finish.	Elapsed.
Priscilla	10 14 50	3 27 30	5 12 40
Mayflower	10 13 45	3 27 10	5 13 25
Puritan	10 17 40	3 33 08	5 15 28
Sachem	10 14 25	3 38 45	5 24 20
Montauk	10 20 25	3 50 42	5 30 17
Halcyon	10 15 30	3 51 20	5 35 50
Grayling	10 24 30	4 02 33	5 38 03

As a test the sail of 38 miles was not conclusive, and its results are of little value, but it was generally conceded that Mr. Burgess's new schooner had shown to great advantage and promised to make a dangerous boat in her class. Thursday night the fleet rested quietly in Newport.

Friday was bright and clear, but the fleet lay at anchor preparing for the great race of Saturday. The white yachts were the center of attraction, and the small boats and Newport's big fleet of catboats were busy carrying visitors past them. In the morning the naval apprentices rowed through the fleet. A meeting of owners was held on board the Electra in the morning. A dispatch was received from Sir Richard Sutton at Cowes asking if the races for the Brenton's Reef and Cape May cups might finish opposite the Royal Yacht Squadron castle at Cowes, coming by the east side of the Isle of Wight instead of through the Needles. Com. Gerry replied that he could not change the conditions, and suggested that Mr. Bennett, the donor of the cups, be applied to. A letter from Lieut. Henn was also read expressing his regret that he could not join the fleet, but stating his intention to leave Marblehead as soon as possible. Com. Gerry's action in inviting Lieut. Henn to join the fleet was ratified by a vote. It was decided to remain at Newport until 10 A. M. Monday, leaving then for New Bedford. An informal meeting of the Cup Committee followed, at which the dates and places for the trial races were fixed as follows: August 21, New York Y. C. course; August 24, outside triangular course; August 26, 20 miles to windward or leeward and back.

At 4 P. M. the races for the Owl and Gamecock prizes were rowed. The course was from the schooner Wanderer around the beacon at the lower entrance, then around the Cythera and return. The gig race came first, being won by the Dauntless crew, with Gitana, Nooya and Phantom in order. The dinghy race was won by Fanny, with Hildegarde's crew second and Athlon's third.

In the evening the fleet was illuminated, the chief feature being the electric decorations of the flagship. A long strip of canvas was stretched from bowsprit end to mastheads and thence to taffrail. To it at intervals of about a foot were sewn electric lamps, making a continuous string of them, with very fine effects. The boats of the Brazilian man-of-war Almirante Barroso, which was anchored outside, formed a procession, each decorated with Chinese lanterns and the leading one carrying a band, and in single file rowed through the fleet. Rockets, colored fire and cannon added to the occasion a Fourth of July flavor, which was heightened when the band struck up Yankee Doodle.

THE GOELET CUPS, AUG. 7.

Yachtsmen owe a great deal to the liberality of Mr. Goelet, who for five years has given the cups which bear his name, until the August race at Newport has come to be the most important fixture of the season. The boats are sure to be in better shape than in the spring regattas, especially the new ones, the Eastern yachts are present in greater numbers, and the course is on open water and far ahead of New York in every way. This year the race possessed an added interest from the fact that of the four large boats three had undergone important changes since they last met, and were again on trial, while as little time intervened for further alterations before the trial races this race was looked upon as a preliminary to the latter and a fair index as to their result. It was also expected that Galatea would be present and perhaps enter, but she did not appear. The rivalry between the leading schooners for the Goelet Cup has always been very active, and this year a new competitor was on the list, the new Sachem, just in from her fast run from New London. It was also expected that Miranda would enter, but her plucky owner was very unfortunate. Arriving from England on Tuesday evening, she was quickly fitted out as far as possible and taken to the sectional dock at New York on Thursday afternoon. She was at once lifted, but owing to some trouble with the keel blocks, had to be lowered, taken off and re-docked, so much time being lost that, with wind and weather against her, she only reached Newport on Sunday night.

Saturday morning broke clear and bright with a light east wind. After some active work the fleet filed out past the Brazilian frigate, where the band played Yankee Doodle, past the heights now black with carriages and people, and out to Beaver Tail Light, where the tug Luckenbach was waiting. With the fleet was the rejuvenated America anxious to try her luck, but not being enrolled in the club she could not enter for the cup. The Regatta Committee however agreed to time her with the competing yachts.

At 10:20 A. M. the warning signal was given from the tug, and at 10:30 the preparatory signal. Owing to an uncertainty about them, Clara, Cinderella and Stranger crossed after the second signal but saw their error in time and turned back. The course signaled from the tug was from off Beaver Tail to the Sow and Pigs Lightship, thence to Hen and Chickens lightship and home to a line south of Brenton's Reef Lightship, about 45 miles. With the wind nearly east this made a long leg out, a reach of four miles and a run home.

At 10:40 the final whistle blew and over the line went Ulidia, the smallest of the racers. Atlantic came for the line from under the tug's stern, going on port tack on the line and breaking out her smallest jibtopsail. Dauntless hung on the line for a long time, hindering several others before she filled away. Puritan crossed the weather end of the line and Atlantic the lee end, the other two being between them, but Atlantic was soon so far ahead that she was not troubled by anything to windward. The start was a fairly good one, only Athlon being handicapped, a matter of 35s. Nearly all the fleet carried clubtopsails, the four big ones having them aloft. The wind would not allow a course for first mark nearly 20 miles away, but it was far from a dead to windward course. Atlantic was ahead with Priscilla astern of her and Grayling a little to leeward. Puritan and Mayflower were to windward of the fleet and Sachem was close astern of her special rival, Grayling. Puritan was the first to tack, standing into the mouth of the Sakonnet River at 11 A. M., Cythera followed at 11:02, Gracie at 11:05 and Bedouin soon after. At 11:10 Priscilla lowered her jibtopsail, and two minutes later Gracie tacked again.

At 11:20 Atlantic was still ahead, with Grayling ¾ mile astern, while Sachem was hunting the latter very closely but losing a little. On the latter's weather beam was Stranger, doing very well indeed, and just astern were Puritan, Mayflower and Priscilla, the former, now on port tack again, to windward. The next pair were Clara and Cinderella, footing evenly, but the cutter well to windward. At 11:27 Sachem went on starboard tack, leaving Grayling and standing on for a long time into the Sakonnet River with a strong ebb tide on her weather bow. At 11:30 Atlantic was still ahead, but with Puritan far to windward.

By noon matters were becoming more exciting, as it was seen that Mayflower was outfooting Puritan, and soon she led her, going to leeward of the latter. To the north a cutter bound in was visible, Mr. Center's new purchase, Medusa, from Marblehead to join the fleet. At 12:15 both Puritan and Priscilla lowered clubtopsails, Grayling having lowered hers half an hour before, as she had all the wind she wanted. Mayflower had still her clubtopsail aloft, and carried it in a way that proved the value of her alterations.

Far to leeward of the leaders was Halcyon with a broken centerboard. Atlantic was doing better as the wind increased, and at 12:45 set her little jibtopsail again. At 12:50 Priscilla, now some distance in the rear, went on starboard tack toward West Island, holding on until 1:05, when she laid her course for the first mark. She had overstood somewhat, as was soon evident, and had lost ground by it; but her chances were gone before she made her first tack. Once on her course, she set a big jibtopsail and was off for the mark. Sachem was now seen coming down from the river mouth on port tack, having thrown away a good deal on her long tack. The rest of the fleet were coming up, Bedouin leading Stranger, Gracie and Fanny together astern of the cutters, and Clara and Cinderella to leeward of the tug, the cutter as usual ahead. With a good breeze blowing, the Luckenbach did not run close to the mark, but stopped to time the leaders and started for home when Mayflower turned the second mark.

At 1:12 Mayflower made her first tack of the day, crossing Puritan's bow and standing for the mark.

At 1:19 Puritan tacked and at 1:23 Atlantic. The times at the first mark, Sow and Pigs Lightship were:

Mayflower	1 19 25	Atlantic	1 32 10
Puritan	1 23 52	Grayling	1 34 15
Priscilla	1 38 35		

Montauk, Bedouin Sachem, Stranger, Gracie and Fanny not timed.

The next leg was a short one, a reach of about 4 miles to Hen and Chickens Lightship, and was quickly run in the same order, the times at the turn being:

Mayflower	1 44 30	Grayling	2 00 30
Puritan	1 47 50	Priscilla	2 05 20
Atlantic	1 58 55		

The elapsed times over each leg were:

	To Sow and Pigs.	Hen and Chickens.
Mayflower	2 34 13	25 05
Puritan	2 42 43	23 58
Atlantic	2 51 10	26 45
Priscilla	2 55 13	26 45

Mayflower, Atlantic and Grayling had covered the entire distance in their first leg, only going on starboard tack when beyond the mark, while Puritan, Priscilla and Sachem had all lost more or less in their exploring trips up the Sekonnet. All had run across under clubtopsails and balloon jibtopsails, and when once around they slacked sheets to port and set spinnakers. Down the wind they came without special incident, the order being much the same. Gradually the sky clouded over, the wind came more from N. E. and the water roughened a trifle, while at 2:50 rain began to fall. At 3:05 the Luckenbach was abreast of Brenton's Reef Lightship and the fleet in full chase after her, each showing a pyramid of white canvas. Up they came in groups, Mayflower and Puritan; Atlantic, Priscilla and Grayling; Montauk, Bedouin and Sachem; Fortuna, Gracie, Fanny and Stranger, and so for an hour. Regina and Gitana did not complete the course. The full times were:

Mayflower thus beats Puritan 4m. 41s., Atlantic 20m. 18s. and Priscilla 21m. 50s. Puritan beats Atlantic 15m. 37s. and Priscilla 17m. 9s. Atlantic beats Priscilla 1m, 32s. In the smaller boats Bedouin beats Gracie 8m. 33s., Clara 9m. 27s., Stranger, 10m. 58s., Fanny 11m. 22s. and Cinderella 13m. 22s. Clara was tenth boat in out of a fleet of 26, and in a breeze which favored the larger boats.

Grayling beats Montauk 7m. 17s., Sachem 14m. 14s., and Fortuna 17m. 11s. America's position is so far astern as to be of little importance, being an hour astern of the leading boats. The example of Mrs. Henn seems to have inspired American ladies with nautical ambition. On Gitana was Mrs. Weld, on Mayflower Mrs. Burgess, while Stranger, Cythera and Ulidia each carried ladies. Mayflower sailed this race with oak battens six feet long and four in number sewn in pockets in the leech of her jib and foresail after the fashion of the canoemen.

The race, sailed in a fair working breeze and smooth neutral water, may be accepted as a good test of the yachts and a fair gauge of their abilities. Mayflower beat Puritan fairly, the latter losing a little perhaps by her first hitch inshore, but not much, and the result justifies our preference of Mayflower last spring as the coming boat. Puritan sailed fast, but Mayflower faster. Her alterations have evidently improved greatly her weak point, a lack of stability, while her sails also are in better shape. Puritan sailed apparently as well as she always does in Crocker's hands, and no fault can be found with his handling of her. Atlantic received a very bad beating at the hands of both, and her record is not much improved if we average the race with Thursday's and Monday's runs. Thus far she has shown little intimation of great speed, and though it may come out, as her friends predict, when she strikes a heavy blow, it is evident that she is not in it with the other three in ordinary racing weather.

Priscilla's performance on Saturday was a surprise to all who know her, as it was far below the average of her performance this year, especially at Marblehead, where, though beaten to windward, she moved very fast down and along the wind. Since then she has undergone no radical change, having received a new and stiffer mast of a little greater weight and sending ashore two tons of lead. Both these changes would tend to lessen her stability, but she apparently was stiff enough and fully able to carry sail, and her very poor performance cannot be laid to this cause.

Grayling was fitted with just wind enough and smooth water, and she travelled very fast, not only beating the schooners but coming in with the rear guard of the big singlestickers, and making up for her failure of last year when she did so badly in heavy weather. Montauk did fairly well, but Fortuna was farther astern than she usually is. Sachem was under the disadvantages due to a new boat in her first race, slack gear, sails not setting properly and a captain and crew unused to her, but she shows every indication of being a very fast boat and in a little time will prove a dangerous rival for Grayling. Her chances on Saturday were badly damaged by an error in holding the long starboard tack. The fleet sailed home in the rain and Saturday night was spent very quietly.

By Sunday morning all traces of the storm had disappeared and a bright sun was shining. Visits were paid among the yachts, and boats of all kinds were in great demand. The signal to dress ship was shown from the flagship and soon the entire fleet was gay with bunting. In the course of the morning a telegram arrived from New York which threw a damper over the fleet, telling as it did of the sudden death of Mr. Chas. A. Minton, for so many years Secretary of the New York Yacht Club. The following order was at once issued from the flagship.

FLAGSHIP ELECTRA, N. Y. Y. C., HARBOR OF NEWPORT, Aug. 8, 1886.—General Orders No. 3.—The Commodore announces with deep regret the sudden death this morning of Charles A. Minton, late secretary of this club, which office he filled for fifteen years. His devotion to the interests of the club and his genial manners endeared him to every member, and his death will be mourned with unfeigned sorrow by all who knew him. Out of respect to his memory the dress flags now flying will be hauled down at 3 P. M. and the club flag will be half masted until "colors" this evening. By order of the Commodore.—WILLIAM KREBS, Fleet Captain.

During the day Galatea and Miranda were eagerly looked for, but neither appeared. Grayling left at 8 A. M. for New York. In the afternoon the following order was issued:

FLAGSHIP ELECTRA, HARBOR OF NEWPORT, Aug. 8, 1886.—General Orders No. 4.—The squadron will sail to-morrow (Monday) morning for New Bedford. A gun will be fired from the flagship not earlier than half-past 9 A. M., with the signal, "Get under way for New Bedford," whereupon the yachts will assemble off the lightship. One hour later a second gun will be fired from the flagship, with the signal, "Start for New Bedford," whereupon the yachts will proceed, passing between the lightship and the steam yacht Fedalma. The time will be taken by the Regatta Committee on board the yacht. The time of the arrival at New Bedford will be taken by the Regatta Committee off Clark's Point. A meeting of captains will be held on board the flagship directly after the arrival. By order of the Commodore.—WILLIAM KREBS, Fleet Captain.

Late in the evening Miranda arrived and anchored below.

NEWPORT TO NEW BEDFORD, AUG. 9.

Monday morning was as clear as possible, with a light S.W. breeze. At 9:30 the signal to get under way was shown from the Electra, and the fleet began to work out of the harbor. Sachem was delayed by fouling her anchor on a telegraph cable, but finally cleared it. Priscilla met with a more serious mishap, as she failed to clear the schooner Gevalia while on port tack and carried away the latter's boom and tore her mainsail, disabling her for the cruise. Com. Canfield telegraphed at once on his arrival in port to Mr. Winslow to send the bill for repairs to him and also invited him and his guests to continue the cruise on the Priscilla.

At 11:05 the fleet was started from the flagship and kites were broken out as the yachts crossed the line. Booms were off the port quarters and balloon jibtopsails set. Fanny was first over with Puritan second and Priscilla third, while Mayflower and Atlantic were even some 5m. later. Puritan led for a time, but Priscilla overtook her, setting balloon foresail at 11:20, and just holding a place on Puritan's weather quarter. Madeleine was near the pair with Moutauk threatening and finally leading her, while Mayflower had left Atlantic and was nearing the other sloops. Sachem was sailing fast and Cythera had set a mizzen staysail that astonished everybody. Spinnaker booms were ready to starboard about 12:30, and at 12:38 Priscilla led around the spindle on the Old Cock, and at 12:55 she and Puritan broke out spinnakers together. At 1:15 Puritan took in her spinnaker for a jibe, her boom going over at 1:18, and 4m. later Priscilla's followed. Mayflower jibed at 1:33 and Sachem at 1:38. Puritan gained on Priscilla in handling her spinnaker and mainboom, but Capt. Cooley had been quite sick all day and unable to take his accustomed place on deck in charge of the canvas. The full times of the run were:

As the fleet entered New Bedford harbor, Galatea was sighted coming through Quick's Hole, and she was soon at anchor with them. The British ensign was run up on the Electra and guns from the fleet saluted the white cutter, while the vessels in the harbor were also dressed. The weather on Saturday had been light and foggy, so Galatea put in to Provincetown on Saturday night, sailing on Sunday morning. In the evening Lieut. Henn and his wife dined with Com. Gerry on the flagship.

NEW BEDFORD TO VINEYARD HAVEN, AUG. 10.

The days's run was a short one, only 25 miles, made with a good S.W. breeze. Galatea hoisted an American flag in the morning, saluting with a gun. At 9:45 the signal to get under way was made, and at 10:18 the starting gun was fired. Puritan led her class over the line, with Mayflower, Priscilla and Atlantic in order. Club topsails were carried, and spinnakers set on the last leg. Sachem again beat all her class, while Mayflower led hers. The times were;

Galatea sailed with the fleet but made no attempt to race. Lieut. Henn was on board the Electra on the run. In the evening a reception was held on board the Electra, at which Mr. and Mrs. Henn met the yachtsmen and their guests.

THE DEADLY CATBOAT.

NOW that the season of summer squalls is upon us, the catboat and shoal sloop are daily coming to the front and rolling up their usual record of drowning disasters. Such occurrences are not pleasant reading, and we have refrained from noticing a number that have happened this season, but since the wholesale murder by the Sarah Craig others have followed so rapidly that it is necessary again to raise a cry of warning against the wretched boxes which are a disgrace to our national yachting. Only last week at Portland, Maine, a catboat in which were an old gentleman and his wife with six small children, was capsized while bound on a picnic excursion in company with a similar boat. One boy was saved by the accompanying boat, the old couple and five children from seven to twelve years old were drowned within sight of their friends and relatives.

On Aug. 1, the yacht Cruiser, of Sarnia, was swamped on Lake Huron as she was returning from a cruise, and her crew of six young men were presumably drowned, the bodies of three being found. We have not the full details at this date, but the boat was probably of the usual shoal, wide type common to that region. At the same time the Sarah Craig was wrecked a small catboat was capsized in Jamaica Bay and the owner and sailor, John Greenwood, with two young ladies, was thrown into the water. Being an expert swimmer, Greenwood carried the ladies, one at a time, to the capsized boat, where he left one, swimming into shoal water with the other and then returning for her sister. They found an uncertain refuge from the rain and wind in the marshes until a signal, a skirt of one of the ladies displayed on a pole, attracted the attention of a boatman who came to their rescue. That they were not drowned was in no way due to the catboat, but solely to the skill and pluck of the ladies and their companion. The first and last of these occurrences serve to emphasize one fact. When ladies or children are taken in a boat they should always be accompanied by an equal number of men who are able to aid them in case of an accident. In the last case the circumstances were such that one man was able to save two ladies who preserved their presence of mind, but the contrary is far too common where a man has to choose which of half a dozen helpless ones he will try to save and which he will leave to drown. The following letter to the *New York Herald* contains so much plain common sense that we copy it for the benefit of landsmen who contemplate a cruise in vessels of the Sarah Craig type:

"Will you permit an old yachtsman to sound a note of warning against the practice, common of late, of employing small freighting craft for so-called yachting cruises along our coasts? When all goes well there is pleasure and health cheaply thus to be obtained, but it is at the risk of life, for the following reasons, easily understood.

"These little vessels are designed and constructed to carry freight, or cargoes, and when properly loaded are stiff and staunch enough to be safe when decently handled by a sufficient crew, though they are generally deficient in the latter respect. When these small vessels, however, are chartered for pleasure parties at the paltry figures they generally get, they are in the condition known as 'flying light'—floating high above their load waterline, with little or no proper ballast, because it would not pay the skipper to buy twenty or thirty tons of pig iron for that purpose, on a short charter of ten days at $10 or $15 a day. Under these circumstances the craft starts out on her pleasure (?) voyage under abnormal conditions for which she was not built. I venture to say in most cases without any additional ballast to speak of beyond what they may have—a light stone or pebble ballast, perhaps—flying light, short-handed, and the deck littered up with a pleasure party. When one of our short summer thunder squalls comes up—during which often for a few minutes the wind velocity is as great as that of any midwinter gale—a shocking disaster is very apt to occur.

"If, in addition to all this, the craft is of the shallow centerboard type, and sail has not been reduced by reefing to the utmost before the squall strikes, a capsize is pretty certain. These vessels are not yachts, and were not designed or ballasted as yachts, and it is often a fatal error to ignore this fact. Yachts, properly so called, are designed to carry no cargo, but in lieu have a very low center of gravity, and consequent safety obtained by proper depth of hull and draught and by an abundance of iron or lead ballast placed low down in the hold or on the keel, and are so brought down to their safe load water line, and in that state would in most instances, excepting very shallow or faulty designs, carry away their sails, even spars, before "turning turtle," because of their great righting power, due to proper and suitable ballasting. I am inclined to think that the late lamentable 'accident' was due to three causes, all avoidable. First, insufficient or no ballast; second, being short-handed, and so not properly reefed down in time, and, third, to being of the shallow centerboard type.

"These 'accidents' injure the good name of legitimate yachting and tend to discourage a safe, innocent and delightful pastime, and, therefore, the truth ought to be known, however unpleasant it may be. OLD YACHTSMAN.

QUINCY Y C. 74th REGATTA.—On Aug. 7 the 75th Regatta of the Quincy Y. C. was sailed off Great Hill in an easterly wind of good sailing strength, the start being made in a fog which soon cleared up. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Echo, E. L. Burwell	25.05	1 33 11	1 07 54
Posy, R. G. Hunt	22.01	1 39 19	1 10 54
Erin, J. Cavanagh	27.02	1 42 08	1 18 16

SECOND CLASS.

Nereid, C. F. Colby	20.07	1 28 00	1 01 43
Wildfire, H. A. Keith	18.02	1 30 50	1 01 56
Crusader, A. Wilson	19.01	1 31 42	1 03 21
Pet, J. W. McFarland	20.01	1 32 48	1 06 00
Diadem, L. Hayward	18.06	1 35 15	1 06 44
Mamie, H. T. Bowers	18.02	1 36 02	1 07 08

THIRD CLASS.

Mirage, G. E. Jordan	17.10	1 25 33	1 00 27
Rocket, H. M. Faxon	16.07	1 28 28	1 02 01
Flora Lee, D. H. Lincoln	17.03	1 29 05	1 03 22
Guenn, W. L. Dearborn	18.00	1 31 42	1 06 45
Nifti, E. F. Linton	17.05	1 32 45	1 07 22

The judges were Messrs. George G. Saville and Perry Lawton.

YACHTING NOTES.—Nydia, sloop, has been sold to the Jeffries Y. C., of East Boston....Mabel, sloop, has been sold by Com. Blayton, Chelsea Y. C., to Messrs. Childs, Boukin, Brooks and Hitchcock, of Newton, Mass.....Whitewing, sloop, has been sold to H. P. Clark, of Boston, by Mr. Nat Goodwin.

SPRITSAIL BOATS AT SCITUATE.—On Aug. 7 the p stponed race of July 31 was sailed at Scituate with 14 entries. The 8-mile course was triangular, the wind was fresh N.E., start was made at 3:30 and E. Edson's boat finished at 4:57 with Geo. F. Edson's second. The first prize was a silver bowl, the second $5, third $4, fourth $3, fifth $2. The judges were Frederick Stanley, John H. Smith and E. J. Jenkins.

BUFFALO Y. C. CRUISE.—The cruise of the Buffalo Y. C. this year will be to Port Dover, the Alarm, Jewett, Sylvia, Curlew, Turk, Emma and Walrus taking part.

LARCHMONT Y. C. OYSTER BOAT RACE.—The Larchmont Y. C. will hold a race for oyster boats on Aug 21, starting at 10:30 A. M., over a 19-mile course from Larchmont around the red buoy off Execution, Matinnicock buoy, a stakeboat off Captain's Island, and finishing between Sands Point and Execution. The boats must be oyster boats engaged in the business and not used for taking out parties. They will be divided into three classes, cabin sloops, open sloops, catrigged boats, the prizes being $75 and $35 in first class, $50 and $30 in second class, $40 and $25 in third class. Entries must be made on or before Aug. 20 to the Regatta Committee at Larchmont, giving exact length on load waterline. One man may be carried for every five feet of waterline length or fraction thereof, besides the captain.

GENESTA AND IREX.—The two cutters have met twice lately, with the result each time that Genesta has been beaten. The first occasion was on July 28, the Royal Western Y. C., over a 40-mile course, in a fresh breeze of increasing strength. The times were: Irex, 4.47.20; Genesta, 4.57.45; Marjorie, 5.08.15. Next day they met again in the Port of Plymouth regatta, over a 36-mile course, in a heavy sea and strong blow, Wendur, May and Neptune, all in Class C, being also in. Irex lead all day, gaining steadily, the finish being timed:

Irex	2 20 40	Wendur	2 41 18
Genesta	2 30 30	May	2 53 05
Marjorie	2 32 40	Neptune	Not timed.

OBITUARY—CHAS. A. MINTON.—On Sunday morning last at his residence in New York, Mr. Chas. A. Minton died very suddenly at the age of 61. Mr. Minton has long been known to yachtsmen as the Secretary of the New York Y. C., which position he held for fifteen years, having been a member for eighteen years. He was also known as a writer and an authority on financial matters, as well as a genial companion and good friend.

SANDY BAY Y. C.—An open regatta was sailed off Rockport on August 2, the course being a triangular one of 6 miles, sailed twice over for the first and second classes and once for the third class. The boats were to start at 1:30 P. M., but the race was delayed half an hour in hopes that a breeze might spring up. The only restrictions were as to sails, mainsail, jib and topsail being allowed for sloops and mainsail only for catrigs. The start was made in a dead calm, but within half an hour a fair sailing breeze from the northwest prevailed, which gradually increased through the race. The following is a summary of the official report of the judges, the reports in the daily papers being incorrect:

FIRST CLASS—25 TO 30FT.

	Length.	Elapsed.	Corrected.
Black Cloud, Brown & Wheeler	25.00	3 08 05	2 29 35
Atalanta, J. R. Thomas	28.04	3 10 40	2 36 12
Eugenia, I. S. Palmer	26.06	3 14 56	2 33 00
Ramble, J. J. Henry	27.00	3 15 09	3 39 09
Venus	27.06	Withdrawn.	

First prize, $12, Black Cloud; second, $8, Atalanta; third, $5, Eugenia.

SECOND CLASS—21 TO 25FT.

Louette, L. M. Haskins	21.08	3 06 02	2 22 44
Petrel, H. H. Paul	21.05	3 07 11	2 23 29
Expert, L. Whitcomb	23.00	3 08 55	2 27 39
Sea Bird, C. L. Jay	23.01	3 09 05	2 27 57
Kitty, E. H. Tarbell	23.08	withdrew.	
Good Luck, J. B. Farrell	21.06	withdrew.	
Silver Cloud, J. McLaughlin	21.06	withdrew.	
Osceola	21.00	withdrew.	
White Wing	21.00	withdrew.	
Posey, R. G. Hunt	22.06	withdrew.	
Adele	21.02	withdrew.	

First prize, $12, Louette; second, $8, Petrel; third, $5, Expert.

THIRD CLASS—UNDER 21FT.

Em Ell Eye, P. M. Bond	19.05	1 47 04	1 23 30
Victor, J. Hildreth	17.05	1 49 51	1 24 18
Vesper	19.08	1 55 05	1 31 45
Lark, McKinney	18.06	2 02 04	1 37 37

First prize, $12, Em Ell Eye; second, $8, Victor; third, $5, Vesper.

Judges—Peleg Aborn, chairman; Chas. H. Maynard Hull Y. C.; Robt. Herne, Melvin Haskell, E. L. Rowe and Henri Wood, Sandy Bay Y. C.

THE RACE FOR THE FORBES PRIZES.—This race, postponed from July 17, was sailed on Aug. 3, in a heavy N. W. wind and rough water, in which many of the yachts were disabled. The race was open to yachts under 28ft., with one class of 20 to 28ft. and one under 20ft. The course was: From judges' boat to flag boat off Stone Beacon, to Squam red buoy, leaving it on port, thence to Essex outer black buoy, bearing west northwest, leaving it on starboard, thence to stakeboat bearing northeast by west, leaving it on starboard, thence to Squam red buoy, leaving it on starboard, thence to Essex outer black buoy, leaving it on starboard, thence to stakeboat, leaving it on starboard, thence leaving Squam red buoy on starboard, to finish line from judges' boat to flagboat. Distance, 14 nautical miles. The race was to start at 11:30 and to be finished at sunset, but it was 12:14 before the start was signaled. Before the start Victor drove her mast through her bottom, and Em-Ell-Eye also met with an accident. The summary was:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Lizzie F. Daly	26.05	2 27 50	2 23 09
Atlanta	28.01	2 14 20	2 12 06
Banneret	25.02	2 25 00	2 18 29
Venus	25.03	2 52 30	2 42 55

Black Cloud, Silver Cloud, White Wings, Petrel, Good Luck, Tyrant, Treposa, Adele, Iola, withdrawn.

SECOND CLASS.

Lark	18.06	3 13 07	3 54 12
Hestia	18.08	3 08 35	2 50 03
Lochiel	19.00	3 09 25	2 51 38

Osceola, Sassacus, Spark, Alpine, Puritan, Sarah, withdrawn.

Atlanta wins the silver yacht, valued at $300, Lizzie F. Daly a $75 cup, and Venus a $40 cup. In second class Hestia wins $15 cash, Lochiel $10 and Lark $5. The Daly protested against Banneret for fouling the Essex buoy, and the latter was disqualified. Tyrant lost her mast, Adele struck the judges' boat before the start and sustained serious damage, and several yachts were nearly swamped. The judges were F. L. Cunningham, F. E. Brown, W. E. Dennis, H. Ward, C. E. Cunningham.

CATBOAT RACING IN BUZZARD'S BAY.—An open race for catboats owned in Marion and Mattapoisett was sailed in Marion Harbor on Aug. 5. There was a triangular course of 9 miles for boats under 18ft., and one of 6 miles for boats under 14ft. There was a strong southwest wind. The eighteen starters were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Mascotte, J. Loring	20.03	Disqualified.	
Calypso, O. Delano	16.11	1 38 17	1 37 34
Music, C. Wing	16.10	Withdrew.	
Grace, W. G. Preston	15.09	1 41 55	1 40 25
Lottie, — Borden	15.04	1 43 51	. . . .
Elsie, J. DeKay	15.04	Withdrew.	
Crab, J. Whiting	14.09	1 38 38	1 36 41
Mist, James Clark	14.08	1 42 15	1 40 02
Juanita, F. & W. P. Robius	14.02	1 39 10	1 36 37

SECOND CLASS.

Nancy, J. Pegram	13.02	1 24 13	Not taken
Angelica, E. Luce	13.00	1 13 05	1 12 40
Skip Jack, W. Austin	12.09	1 12 09	1 11 38
Elf, — Bacon	12.00	1 09 18	1 08 28
June Bug, J. Clark	11.11	1 10 33	1 09 41
Swan, J. Clark, Jr.	11.09	1 09 51	1 08 55
Whisper, J. Austin	11.07	1 10 11	1 09 31

In the first class the Mascotte was disqualified for having fouled both the judges' boat and the stakeboat. The weather was too heavy for Music, Elsie and Juaneleso, so they withdrew after the first half of the race. Juanita took first prize, Crab second and Calypso third. In second class Elf finished first, and Swan and Whisper second and third respectively. The prizes were $5, $3 and $1 in each class.—POTLEAD.

THE CORLETT-TOMLIN MATCHES.—The third race between these boats is off, the owner of the Tomlin declining to sail.

NEWARK Y. C. ANNUAL REGATTA.—The Newark Y. C. will hold its 4th annual sweepstakes regatta, open to all yachts, on September 20, over the regular club course in Newark Bay, starting at Uldrich's Bay Shore House at 1 o'clock. The classes are: First class, cabin sloops; second class, jib and mainsail, 19ft. and over; third class, jib and mainsail, under 19ft.; fourth class, catboats, 17ft. and over; fifth class, catboats, under 19ft. Entrance fee $3 for each class, the winners to take the entire amount. For classification the waterline measurement will be used. In addition to the sweepstakes special prizes will be given by the club as follows: $10 for the yacht making the best actual time; $5 for yacht making second best actual time; $5 for yacht making the worst actual time, and a special prize for the yacht making best corrected time. Time allowance will be one minute to the foot, 10-mile course. There are no restrictions as to sails or ballast to be carried by yachts. All the entries are to be made to Chairman Adams, of the Regatta Committee, before 12 o'clock, on Saturday, September 18, at 746 Broad street, Newark. The Regatta Committee are A. F. Adams, Edward Hinderling and Joseph W. Williams.

SWEEPSTAKES AT LARCHMONT.—On Aug. 21, a sweepstakes race of open jib and mainsail boats under 29ft. will be sailed off Larchmont, the entrance fee being $100 and the allowance 2m. per foot. Entries must be made and stakes deposited with Mr. J. M. Sawyer, 85 South street, not later than Aug. 18.

SHREWSBURY RIVER RACES.—Two races were sailed on Aug. 5 and 6, resulting as follows:

FIRST CLASS.

	Aug. 5. Elapsed.	Aug. 5. Corrected.	Aug. 6. Elapsed.	Aug. 6. Corrected.
Nestle Nigh, Dr. Boyd	1 54 00	1 54 00	2 35 25	2 35 25
Etelka, Fred Degraw	1 54 23	1 54 08	2 32 06	2 31 55

SECOND CLASS.

Fern, Bracken Bros.	1 49 10	1 49 10	2 23 35	2 23 35
Little Spot, F. Smith	1 51 48	1 51 20	2 27 01	2 26 36

COLUMBIA Y. C. SECOND PENNANT REGATTA.—On Aug. 8 the second pennant regatta of the Columbia Y. C. was sailed over a triangular course on the Hudson River, as follows: From a stakeboat opposite the club house at Eighty-sixth street and North River, thence to stakeboat off One Hundredth street, thence to a stakeboat anchored near New Jersey shore, opposite club house, thence to a stakeboat off Seventy-fourth street and thence back to starting point. The following yachts started at 4:10 in a strong N.E. wind, with rain:

CLASS A—CABIN YACHTS.

		Length.
Eldiva	David McGlynn	32.08
Trio	Varley & McKeever	29.00
Julian	Wm. James Greacen	28.03

CLASS B—OPEN YACHTS.

Unit	Dietz & Greer	22.00
Curlew	John N. Lewis, Jr.	21.10

CLASS C—CATBOATS.

Defiance	Christian H. Kruse	19.10
Anna Bella	Geo. W. Pinchbeck	19.10
Daisy	Chas. Russell	19.10

Eldiva withdrew. Julian won in Class A, her time being 1.19.25, the best ever recorded over the course. Trio's time was 1.19.43. Unit won in Class B in 1.26.43 and Daisy won in Class C in 1.22.15. The judges were David M. Holmes, John F. Kimbal, Chas. T. Wells and Chas. E. Simms, Jr.

QUEBEC Y. C. REGATTA.—The races for the Commodore's and Vice-Commodore's trophies of the Quebec Y. C. for yachts under 12 tons, were sailed on Aug 1 over an 18 mile course, 9 miles free to a buoy opposite Baumont, and a heat home. The times at the turn were:

Ined	1 43 00	Osprey	1 44 30
Montagnals	1 43 15	Kathleen	1 44 45
Iris	1 44 30	Iolanthe	1 45 30
Wanderer	1 44 30	Ripple	1 46 00

The times at the finish were:

Kathleen	3 48 00	Ined	3 56 30
Osprey	3 51 00	Iolanthe	3 58 00
Ripple	3 53 00	Wanderer	4 01 00
Iris	3 54 00		

NEW HAVEN Y. C. CRUISE.—The yachts of the New Haven Y. C. were ready on August 7 for a start on the annual cruise, but the bad weather kept them in harbor over Sunday.

RACE AT SEWAREN.—On Aug. 2 a race was sailed over a 15 mile course on Staten Island Sound opposite Sewaren, N. J., with 7 starters, the wind being N. W. a good sailing breeze. Emma and Alice won in Class A, and Laura in class B.

Forest and Stream Fables.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. J. I.—Write to Chas. Gilchrist, Port Hope, Ont.

J. B. F., Baltimore.—A letter for you at this office.

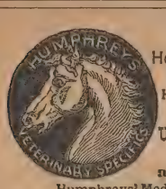
H. B. W., Bordentown, N. J.—Your query is answered in our gun columns.

X. Y. Z., Keeseville, N. Y.—Write to City View Kennel, Box 1369 New Haven, Conn.

RECOIL, Chicago.—The recoil of a gun begins before the projectile leaves the bore.

G. F.—Please inform me when the game law is up on woodcock in the State of Connecticut. Ans. Oct. 1.

R. B., Detroit.—The word grilse should have read grill. The name grilse is applied to the young salmon on its first return from the sea; a grill is a gridiron.



A. F. O., Albany, N. Y.—1. Is there any work giving practical directions for carp culture? 2. Is the carp a good table fish? 3. Does it find ready sale in the markets? Ans. 1. Yes, "Carp Culture," by Peirce, price 50c.; we can supply it. 2. We do not consider it so. It is better than no fish. 3. No.

O. H. K., Evansville, Ind.—We are not familiar with the dam in question, and will say that you will have to learn the best fishing spots from the natives or by experience. For black bass use helgramites, crayfish, frogs or minnows. Find the rocks where the bass lie, if there are rocks, or try the ledges near the dam.

FOREST PRESERVE (X. Y. Z., Keeseville, N. Y.).—The New York forest preserve as named in the law is as follows: "All the lands now owned or which may hereafter be acquired by the State of New York, within the counties of Clinton, excepting the towns of Altona and Dannemora, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan, shall constitute and be known as the Forest Preserve."

S. D. E.—1. I was fishing a few days ago, and, following up the stream until there was scarcely any water in it, I found the trout were small. I hooked three through the head, killing them, and found them full of spawn. Their lengths were 2, 2½ and 2¼in. Would they have grown any larger in the scarcity of water? Is not this rather small-sized trout to spawn? 2. Do rainbow trout, and they only, have a red slash under the neck? Ans. 1. They were small fish to spawn, and possibly would have grown. Small streams produce small fish. These would not have spawned before October or November. 2. The *Salmo purpuratus*, called rainbow trout and other popular names, has a red slash such as you describe.

F. W. R., Fort Shaw, M. T.—1. Will you kindly detail the qualifications which a horse must possess to merit the term "thoroughbred"? 2. A. claims that there are no thoroughbred trotters on the American turf. In how far is he correct? He maintains that the term thoroughbred is applicable properly to runners only. Is he correct in this? 3. What is the meaning (accurately) of the term "standard-bred"? Ans. 1. Strictly speaking, a horse to be thoroughbred must trace in all lines to Oriental ancestors, but for practical purposes a horse is considered thoroughbred in whose pedigree no cold cross nor unknown element appears later than the sixth generation back of him. Of course, the contamination, once started, never stops, but after five generations have elapsed it becomes so diluted that it is not considered to disqualify. 2. The term may be applied to a runner if he possesses the necessary qualification, as above; but not from any record or lineage as a trotter. 3. The Breeders' Association's adopted standard reads: In order to define what constitutes a trotting-bred horse, and to establish a breed of trotters on a more intelligent basis, the following rules are adopted to control admission to records of pedigrees. When an animal meets the requirements of admission and is duly registered, it shall be accepted as a standard trotting-bred animal: First—Any stallion that has, himself, a record of two minutes and thirty seconds (2:30) or better; provided any of his get has a record of 2:40 or better; or provided his sire or his dam, his grandsire or his granddam, is already a standard animal. Second—Any mare or gelding that has a record of 2:30 or better. Third—Any horse that is the sire of two animals with a record of 2:30 or better. Fourth—Any horse that is the sire of one animal with a record of 2:30 or better; provided he has either of the following additional qualifications: 1. A record himself of 2:40 or better. 2. Is the sire of two other animals with a record of 2:40 or better. 3. Has a sire or dam, grandsire or granddam, that is already a standard animal. Fifth—Any mare that has produced an animal with a record of 2:30 or better. Sixth—The progeny of a standard horse when out of a standard mare. Seventh—The progeny of a standard horse out of a mare by a standard horse. Eight—The progeny of a standard horse when out of a mare whose dam is a standard mare. Ninth—Any mare that has a record of 2:40 or better, and whose sire or dam, or grandsire or granddam is a standard animal. Tenth—A record to wagon of 2:33 or better shall be regarded as equal to a 2:30 record,

Canoe and Camp Cookery.
By "SENECA."
A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

KEEP A FULL LINE OF

Chamberlin Cartridge

COMPANY'S

Fixed Ammunition for Shotguns.

SORA.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. The Most Convenient and Best Ammunition in the World. Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

HILLSIDE KENNELS,

LANCASTER,

MASS.

The "Boss" in Stud.

Services limited to ten approved bitches, at $50 each. A. K. R. 2218. His ancestors all champion and show dogs. As a stud dog he cannot be excelled, his get being very large and finely marked.

Boss' Record.—Vhc. at New York in 1885, as a puppy. In 1886, 2d prize N. E. K. Club at Boston. He also took 2d prize in open class *and special prize as the best American bred mastiff* at the Westminster K. C., New York, 1886.

Boss is a large dog, weighing upward of 180 lbs.; is good in skull, with grand body, legs, feet and bone.—*Am. Field, April 8,* 1886.

In mastiffs there was but one new one of any pretension and that was Boss. He possesses length of body with great substance, and is perfectly sound in limbs.—*Sporting Life, March 31,* 1886.

A few choice pups of great promise for sale, sired by Boss out of equally grand females, with best of pedigree and markings.

Also a pair of Great Danes, 5 mos. old, marked alike white and blue; great beauties. Pair $50; others from $15 to $20 each.

J. L. WINCHELL,
jy1,tf. Fair Haven, Vermont.

Gus Bondhu

IN THE STUD.

Imported from Mr. Llewellin's kennels (he is bluest of the blue), by Dashing Bondhu ex Novel. He is also a grand field dog, as his record shows at the late trials of the N. F. T. Club at Grand Junction, beating such noted dogs as Gladstone Boy, Mainspring, Bessie A., Gath's Mark, Trinket's Bang and other fine ones. Fee $35. A. M. TUCKER, 85 Main street, Charlestown, Mass.

CHAMPION LAVERACK SETTER

ROCKINGHAM,

The acknowledged best English setter in America, and a grand field dog. Will be allowed to serve a limited number of approved bitches. Fee $50.

ANSWERS TO CORRESPONDENTS.

BEACH-BIRD SHOOTING.

THE August days are bringing with them to the sandy beaches and wide salt marshes of the Atlantic coast flocks of beach birds on their southern migration. They do not come now in such unnumbered thousands as in the old days, but it is still possible for the man who has unlimited time on his hands and a fair stock of patience to make now and then a good bag.

To many people shore-bird shooting seems very simple and easy. To sit in a blind all day and shoot into the flocks called up to the stools by the whistle does not seem difficult; but there is more than this to a successful pursuit of this sport. If the shooter is accompanied by a skilled bay man to whom he leaves all the details of the work, the part which he has to perform requires but little intelligence or exertion, but to depend upon another is to lose almost all the enjoyment of a delightful sport, since the satisfaction derived from success depends very largely on the amount of skill called into play to bring about the fortunate result.

Success in beach-bird shooting depends upon a number of constantly varying conditions, and this renders the sport uncertain and so exciting. The direction and velocity of the wind will determine the course of the birds' flight, and so the locality where the blind must be built and the way in which the stools must be set to prove most attractive to the advancing flocks. There is a vast deal of art, too, in successfully calling up the birds. Although some species are so simple that they will come to stool at the call of almost any other, still you will not decoy the wary "jack" by the note of the blackbreast, nor the sickle-bill by the whistle of the yelper. The practiced eye must recognize the approaching birds afar off, and the gunner must coax them to him by talking to them in their own language.

Beach-bird shooting requires not only a close knowledge of the habits of the birds, but also a quick eye and a ready gun. It is capital practice, for it is usually possible to see where the shot strikes with relation to the bird, and so to correct errors of judgment and to learn just how to hold most effectively on the many cross shots that will occur during a day spent in a blind on the shore.

Spring shooting has sadly lessened the numbers of our shore birds, and if these species are to be preserved from extinction that pernicious practice must be abolished. The good effect which such abolition would have is shown by the reports received this summer from Long Island where last spring the killing of these birds was illegal, and where the law is said to have been generally observed. It is reported that the flight during the first weeks in August has been much larger than it usually is, and that the birds are much less shy and stool far better than is usually the case. A number of English snipe made their appearance on the meadows early in August, and were, no doubt, bred somewhere not very far away.

The results, as reported, of this good law should not be without their lesson to our neighboring States on the Atlantic seaboard. The crying necessity of protection makes itself more evident each season, and before very long we look to see a change in public sentiment which shall demand universal protection of all our game birds, not only during the season of reproduction, but for several months prior to the commencement of that season.

SPORT AND POLITICS.—The recently proscribed Duc d'Aumale had a magnificent hunting seat at Chantilly, where for many years past the hunting parties have been attended by royal and imperial visitors to France. These meets were made political capital for the Orleans family against the Republic, and it is said were in some measure the cause of the proscription. The forest belonging to the estate comprises some 7,000 acres, and is one of the best stocked in France, having 200 stags and 500 deer. The glory of Chantilly was its pack of hounds, which the whipper-in, with tears coursing down his cheeks, saw knocked down at the auction at prices far below their worth. Among the animals sold was Pélagie, the little mare on which the Duc d'Aumale used to ride when he went afield to shoot, for, being very gouty, he could not stand the fatigue of trudging through turnip fields and stubble, or walking along damp glades, and it is related that Pélagie was trained to stand the noise of the gun; when her rider was firing over her she remained motionless, neighed if the game he aimed at fell, and was credited with taking as much pleasure in his sport as he did himself. She picked up from the dogs their way of setting and pointing, and the Duc d'Aumale grew as fond of the little animal as though it were a pet grandchild. The bidding at the sale was dull, and the apathetic manner in which the friends of the banished nobleman let his horses and hounds go for a song was thought to bode ill for his political fortunes.

REFORM IN TRAP-SHOOTING.—The feeling is widespread that trap-shooting tournaments, as many of them are at present conducted, are not on a right basis. They do not give satisfaction to amateurs who are compelled to compete against contestants who make a business of it. We publish to-day two communications, one from Maine and the other from Ohio, in which the writers propose a change to remedy the present system. The National Gun Association is very properly the body to take charge of such a scheme of classifying trap-shooters. If the Association were to take the matter in hand its action would be supported by at least a sufficient number of clubs to sanction it and give impetus to the desired reform. We invite an expression of opinion on this question from interested parties, for there is reason to believe that sentiment is strong enough and general enough to accomplish something in the right direction if it only be given voice. The sooner such a change of programme is made the better for all concerned, and it cannot be brought about more expeditiously than by the National Gun Association, which possesses the advantage of being an organized body whose proper duty it is to give attention to just such affairs.

OVERDONE.—A love of birds is a most commendable trait in the character of young or old, but it is possible to overdo even so good a thing as this. Boys often love the tender little nestlings, which they lug away in their hats. The large parks in cities are favorite stamping grounds of unfledged small boy poachers. A boy with three young robins in his hat was nabbed by a Prospect Park (Brooklyn) policeman last week, and in the police court fined $10, to the effectual extinguishment of his ornithological bent. Bird love was likewise overdone by the Rochester, N. Y., young woman, who so loved her canary that when the cat devoured it she deemed nothing less than death by starvation a fitting punishment, and accordingly immured the offending feline in an inverted barrel. After five days it was released by an officer of the Humane Society.

THE PRESIDENT'S VACATION.

LAST Monday President Cleveland left Washington for a vacation trip to the Adirondacks. His headquarters will be at the Prospect House on the Upper Saranac Lake. One of his companions is the same Albany doctor who was with him last year. It will be remembered that reports were current of the lawlessness of the Presidential party while in the North Woods in the season of 1885. It was said and believed through that region that Mr. Cleveland and his companion hounded deer, the practice being at that time forbidden by the statute. All through the Adirondacks guides and visitors excused their own lawlessness by the argument that if the President of the United States could break the law with impunity they were justified in following the example set before them. Their belief in the guilt of the Presidential party was not materially affected by Dr. Ward's explanation in the FOREST AND STREAM that the hounds "had not been put out after the deer by the direction of either the President or himself." It was suggested that this reply was evasive, although the FOREST AND STREAM did not, at the time, consider it so. Whether or not deer were driven by hounds into the lake for the President and his companion, it was most unfortunate that there should have been the least ground for the reports. A high official of the government should not only conduct himself as a law-abiding citizen in the woods as well as out of them, but he and his companions should be so jealous of their good names as to give not the slightest shadow of a suspicion of evil-doing.

In view of the unfortunate condition of affairs last year—the President then having been placed in the position of one whose alleged guilt was used as an excuse for the rampant lawlessness of scores of others in the Adirondacks—would it not be a judicious plan for the State game protector of the district in which the Presidential party will disport themselves this year to keep a sharp watch upon them, and observe narrowly their conduct with respect to the game and the statutes made for its protection, to the end that if ugly rumors are again bruited abroad their truth or falsity may be authoritatively determined? It is to be hoped that the game butchers who go to the Adirondacks and buy deer doggers to serve their ends may not be able to urge in self-defense this year the plea that in unlawful deer killing they are only following the example of the President of the United States.

WAYS OF THE RUFFED GROUSE.—A correspondent notes the breeding of the ruffed grouse in an unusual place. The whims of this bird are not all dreamed of in the philosophy of the average observer of her habits. We have known grouse to nest in spots apparently most ill-suited to such use, sometimes being exposed to constant intrusion by human trespassers. In one instance a mother bird succeeded in raising a brood which attained maturity and a normal degree of astuteness only after repeated fusilades by the stone-throwing small boys of the neighborhood. Sometimes a cover, where no grouse have been known for years, will be used by them for a single season only. The gunner who has beaten the ground in vain autumn after autumn some day has his continuance in well doing rewarded by a bird brought to bag, and thereafter the cover will be barren as of old. An explanation of these freaks of nesting grouse may perhaps be found in the theory that the bird having failed to discover just the spot acceptable to her finical taste, and compelled by urgent necessity, perforce puts up with any place at hand; or, to use a homely expression, having gone all through the woods takes the crooked stick at last.

MR W. E. BRYANT'S description of Cerros Island, to be found in another column, will be read with great interest. As a delightfully entertaining account of his exploration of this far away island of the Pacific it is full of attraction for the general reader, while to the naturalist and above all to the ornithologist, the paper is replete with valuable facts and pregnant suggestions.

THE SILLY SEASON is in full blast, and the romancers of the bear-and-baby stripe are hard at it. A thousand polar bears were not long ago marshalled to the front and started on a foraging expedition southward to prey on the starving inhabitants of Labrador. They were quickly followed by the hoop snake, which is now rolling his uncanny form with startling rapidity through the columns of many of our esteemed exchanges.

SAM LOVEL'S CAMPS.—II.

SAM and his partner lounged about camp waiting for the opening of the water, and there was not much to break the dull monotony of those days of waiting. For the most part there was little to do but cook and eat the simple fare, and sit by the camp-fire trimming muskrat bows and tally sticks. Now and then a chopper would stop at the shanty to light his pipe, and if a Yankee, to ask no end of questions; or if a Canadian, to jabber with Antoine till Sam was driven almost wild with the incessant jargon so unintelligible to him. A mile down the creek a party of lumbermen were building a raft of logs upon the ice, and often to pass the time away Sam and Antoine would visit them, and being expert axemen, help them make "knock downs" while they chatted and joked.

One day Sam was hunting about camp for something, and Antoine asked, "What you look see, Sam?"

"I'm a lookin' for a mushrat carkiss. I seen where a mink's ben gallopin' 'raound, an' I want some bait for a trap."

"Wal naow, seh, Sam, you goin' b'lieved what Ah 'll tol' you. 'Tant no use for settlin' bait for minks to heat naow. He 'll goin' sparkin' dis tam year an' he ant cares no more for heat as you does w'en you 'll goin' sparkin'. Set you trap in road where he 'll goin' see *hees* Mamselle Hudleh, Sam, den you 'll ketched it."

"Like 's not you're pretty nigh right, Antwine," Sam said, laughing, "but he might be comin' hum hungry arter his sparkin'. I've knowed of such cases," and having found a bait of odorous muskrat flesh he hung it over a moss-covered trap in a hollow log, and next morning brought in the lithe slender fellow whose brown coat of fur became so fashionable and valuable in after years, though then worth no more than the muskrat's.

Once they went coon hunting in the Great Woods, and after a half day's wallowing through the soft, deep snow, tracked three coons to a big hollow pine stub, and, chopping it down, took out five residents and visitors, whose pelts made a showy if not a rich addition to their slender display of peltry.

Along the winter roadway of ice, now made the most of by teamsters while it lasted, frequent loads of logs and wood or empty returning sleds came and went, crunching in and out of sight and hearing. To the eastward beyond the wide fields, from where the smoke of farmhouse chimneys drifted upward, came sounds of busy life; the jing-jong of old-fashioned "Boston" sleigh bells faring to and fro on the highway, the steady thud of flails in barns, the lowing of cows and the bawling of calves, the cackle of hens and the challenge of chanticleer; at noon the shouts of schoolboys and the mellow blasts of the conch shells sounding for dinner. To the westward were the woods, their primeval solitude almost undisturbed, their silence only broken by the strokes of a far-off axe, followed by the dull boom of the falling tree. At night the gloomy, cryptic aisles resounded with the solemn notes of the great horned owls, and once or twice the trappers heard there the wild caterwauling of a lynx. So forty years ago the narrow Slang was the dividing line between broad fields that had long been cleared and cultivated and a thousand acres of ancient forest.

In this way the days passed, while the snow slowly melted off the fields and the ice slowly rotted. More tawny knolls cropped out in pasture and meadow, gray streaks of ice came to the surface along the creek and Slang, and in the woods the snow sunk lower and lower its winter litter of twigs, shards of bark and slender evergreen leaves, till here and there a hummuck brown with last year's fallen leafage, or a mouldering log bright with ever-verdant moss, came to the checkered sunlight again.

Cold nights and cold days were not infrequent when the saturated snow was crusted hard enough to bear a horse, and a roaring fire was needed at the shanty front to keep the trappers warmed into anything like comfort. But after each "cold snap" the south wind blew warmer than before, more crows came sagging heavily along on it from their winter exile, the woodpeckers sounded oftener their cheery roll, bluebirds and the first robin came, a phebe called sharply for his mate and found flies enough in sunny nooks to keep him busy while he awaited her coming, and a dusky chorus of blackbirds gurgled out a medley of song from the tops of the maples, while the tardy spring drew nearer.

In these warmer days hollow, unearthly moans and roars, rising at times almost to a yell, were heard along the lake, at first faintly from afar, then nearer, till every jagged steep of Split-Rock Mountain echoed with the wild voices, then fading away to a humming murmur in the distance. It was as if some tormented demon was fleeing over the ice, or a phantom host of the Waubanakee was rushing in swift, superhuman haste along the ancient warpath of the dead nations. It was the booming of the lake, a sound strange and almost appalling to Sam who, till now, had never heard it.

At last a great rain came with a strong southerly wind, and the two made quick work of the snow melting, and the brooks poured down their yellow floods till the sluggish current of the Slang was stirred. The ice, for some days unsafe to venture upon, was now honey-combed, and presently was only a mass of loose, slender, upright spires of crystal, undulating when disturbed in long, smooth swells, and tinkling a faint chime as if a million fairy bells were knolling its downfall. Watery patches began to show here and there on the marshes, great flocks of geese journeying northward harrowed the gray sky, and ducks in pairs and droves came whistling down and splashed into the open water to feed and rest.

Then one morning, when Sam and his companion crawled out of the shanty, they beheld the long wished-for sight of marshes clear of ice, and after a hasty breakfast they launched the birch and dugout and loaded them with the traps already strung on the tally sticks, and each with axe and gun they set forth to coast the low shores. The boats kept close together, the pine leading the birch, for Antoine was now to take the part of instructor. Scanning every half-submerged log they passed, he soon stopped his craft alongside a fallen limbless tree whose roots still clung to the bank, while its trunk slanted with a gentle incline into the turbid water. Abundant sign about the waterline showed that the long-imprisoned muskrats had already made the most of their newly gained liberty to swim with heads above water.

"Dah seh, Sam you see he been here, lot of it, an' prob'ly he 'll comin' 'gin. Naow, chawp nawtch in de lawg, so," and with half a dozen strokes of his axe he cut a neat notch in the log just below the waterline, wide enough to hold a trap when set. It was a pine, well preserved, and the chips and notch were bright and fresh. "Naow you see, w'en de nawtch mek it too shone, you wan' put it on some weed, mud, sometings," and he overlaid the cut with a thin layer of sodden water weeds. "Moosrat he ant very cunny, but he lak see ting where he been look kan 'o usual." Then he drove the tally pole firmly into the soft bottom, and set the trap in the notch with no covering but the two inches of muddy water that rippled over it in the light breeze.

"Dah," he said as he resumed his paddle, "if de water ant rose or don't fell, you as' dat trap to-morrow mornin', he tol' you, moosrat, bah gosh!"

At the next promising place Antoine superintended the setting of a trap by Sam, and pronounced it, "Pooty well do, for *bee*-gin." So they fared on through the marshes' floating weeds and bristly thickets of button bush, now over the submerged shore among the trunks and sprouts of willows, water maples and ash that bordered it. Often they were startled by the sudden splash and flutter of frightened woodducks that arose before them and went squeaking away to some undisturbed retreat. Great flocks of the more wary dusky ducks swam safely far out from shore, but at the approach of the boats they too took wing with a tremendous uproar of splashing and quacking. More than once they surprised some strange waterfowl whose like they had never seen before, some resting wayfarer on that great thoroughfare between northern and southern seas. Sam's eyes ranged wider than those of Antoine, who was looking only for places where traps might be set. The tall Yankee laid down his paddle, took up his gun, and after a second's aim at a brown lump that made a scarcely perceptible motion on an insular stump, fired. The lump disappeared at the report of the gun, and close beside the stump the legs of a dying muskrat pawed the air.

"Horhah for horrah!" Antoine cheered, as Sam picked up his game. "Nev' min', Ah show it to you to-naght 'baout sun gone daown haow shoot moosrat! Yas *sah!* Call it raght up, clear 'cross Slang, sah, you see?"

"All right," Sam said, "I wanter see you do it. D'ye shake a dish o' corn at 'em an' holler 'caday!' or whistle 'em up as ye would a dawg, er haow?"

"Nev' min', Ah show you, Ah tol' you truth, jis same always Ah do."

Sam got two or three more shots and then, when the afternoon was well worn away, all the traps they had in their boats were set on logs, bogs and the ruins of houses where the rats had come to feed on the succulent underwater growth they had reft and set afloat, they went home to the shanty. Then they had a hearty supper, a part of which was the roasted bodies of two of the muskrats Sam had shot and which he, much against his prejudices, was forced to confess were an agreeable change from salt pork. When the shadows of the tall trees touched the eastern shore of the Slang the trappers took their guns and went thither in their canoes, which they ran ashore, and there sat in waiting for the game to appear. The fires of the sunset glowed in the western rim of the clear sky, and their mirrored counterfeit shone as brightly in the quiet water below the black reflections of hemlocks and pines and the fine tracery of the water maples' graceful limbs. Presently a shining wake cut the shadows as a muskrat came up from the entrance of his burrow and cruised swiftly along the western shore, whining out a call to his lady love. As Sam watched the point of the lengthening streak of gold and listened to the plaintive impatient voice, so like the whimpering cry of a young puppy, he was startled to hear it repeated close beside him. As he turned cautiously in his seat, cocking his gun, he saw nothing but Antoine with his lips pressed firmly together blowing his breath out between them with what seemed a painful effort, for he was very red in the face and his eyes were bulging from their sockets. But his simulation of the muskrat's call was perfect, and the little swimmer at once shaped his course toward him. The treacherous call was kept up till the poor fool was within four rods of the muzzle of Antoine's musket, which then belched forth its fatal charge. "Dah!" said the Canuck, as he picked up the riddled muskrat, "Ah guess hees hole folks ant be worry for heem be aout sparkin' naghts some more, don't it? Bah gosh, ant Ah tol' you Ah'll call it, hein?"

Shining wakes streaked the darkening water in all directions, and Antoine called half a dozen more deluded victims to their doom before the gloaming thickened to the mirk and gun-sights were no longer to be seen. As they wended homeward, guided by the faint light of their low camp-fire, Sam swore, "By the gret horn spoon, I wish 't I hed the ol' Ore Bed here! It 'ould be fun to pop them swimmin' mushrats with it." (The Ore Bed was an ancient rifle owned by him, bearing a township fame for its shooting qualities, and owing its name to the many pounds of iron in its barrel.) "I wish 't I hed it here!"

"Wal, Ah dunno—probly 'f hole Bahtlett don't usin' hees big hoxens you can sen' lett' an' get heem drawed it daown here; but Ah dunno, sleighin' all gone naow," said Antoine, as the canoe bottoms scraped the landing at the shanty.

As Sam lay on the buffalo skins smoking, between whiffs he practiced the muskrat call that Antoine had taught him till he became so proficient that his tutor called sleepily from his bed, "Dah, Sam, you betteh stop you foolishin', fore fus' you know moosrat come an' bit off you nose off."

A PIGEON FLEW OVER A FIELD.

It happened at Keshena, Wis., last week.
A pigeon flew over a field.
A hawk struck it.
Hawk and pigeon fell to the ground.
A boy with bow and arrow ran after them,
The boy's mother followed him.
She stumbled, fell, and a stick pierced her neck and severed an artery.
The woman bled to death.
A pigeon flew over a field.

"FOREST AND STREAM" FABLES (seven of them with a like number of illustrations) are for the edification of the wise and the instruction of the foolish. In this journal they are advertised for the wise. The foolish we cannot reach. The Fables are sent post-paid on receipt of ten cents.

Natural History.

Address all communications to the Forest and Stream Pub. Co.

CERROS ISLAND.

OF the numerous islands of the Pacific Coast many are known only to the navigator; to the commercial and scientific world they are a blank. Bold, rocky, isolated, often inaccessible, their rugged coasts apparently offer but little inducement to commercial enterprise, but, like mines, their value can be ascertained only by investigation.

With this idea in view a party of capitalists obtained from the Mexican Government a concession of land which included the island of Cerros. This island, lying just north of latitude 28° and about fifteen miles from the west coast of Lower California, was chiefly desirable, from a commercial point of view, for the stock of goats by which it was inhabited. In order to form an estimate of the number of goats on the island and to obtain samples of the skins, the company having chartered the steamer Edith for the purpose, sent an investigating party to the island on the first of January, 1885. Having received an invitation to accompany this party I gladly accepted, that I might explore the island in the interest of science and make a collection of natural history specimens.

On her way south the Edith touched at San Pedro, Cal., for water. Taking advantage of the opportunity to go ashore, I collected a few specimens of the large-billed sparrow (*Ammodramus rostratus*), which were common about the wharf and along the railroad track, nearly all that I shot being found among the wheels and axle gear of box cars standing on a side track. The birds were not shy, but so quick in their movements, flitting about under the cars, that they were not easy to shoot. Being routed from their position they alighted upon higher objects; no less than thirteen were counted at one time upon the ridge of a neighboring cottage. Numbers of Western gulls (*Larus occidentalis*), a bird which had continually followed the steamer, hovered about the town of San Pedro, alighting on the roofs of houses or searching for food in a slough beside the main street. A flock of about one hundred was seen circling over the hillsides back of the town, probably working a plowed field in quest of worms, grubs, etc., turned up by the plow, thus doing no little benefit to the farmer. I have seen a few gulls more than a mile distant from water following a furrow as persistently as crows.

Soon after leaving San Pedro the steamer was several times obliged to stop and reverse her engine to clear the propeller of the gigantic masses of kelp with which the entrance to the bay is obstructed. From San Pedro we steamed to Todos Santos (port of entry for Mexico), and anchored half a mile from shore. The whistle soon awoke the apparently sleeping town, bringing the Custom House boat out to us. This was launched through the surf by four Mexicans, on whose hat bands were gilded the words "Resguardo Maritima." Our sudden appearance off the quiet town had created quite a flutter among the inhabitants, many of whom were sure that the place was to be immediately bombarded. The Captain of the Military had donned his uniform and called out his company of half-breed soldiery, clothed in blue and white, with sandals to protect the soles of their feet, and was parading the street with this formidable array. By the time we arrived on shore we found quiet reigning supreme over the town, as the Custom House officials had already certified to the harmless character of our craft. The warlike captain (a most villainous looking Mexican) had resumed his citizen's clothes, but still wore in his belt a large Colt's revolver.

While we waited for clearance papers I strolled about the town, "seeing the sights." In the rear of a small hut some chickens were gathered in the warm sunshine and I was greatly interested in noticing in their company a tame road-runner (*Geococcyx californianus*). He was standing with his wings slightly spread and his tail drooped until it rested on the ground. The feathers of the interscapular region were raised in a ruff back of his neck, allowing the warm rays of the sun to fall upon the downy feathers of the back, thus giving him the full benefit of a sun bath. He turned his head complacently from side to side, and moved away only when I stooped to pick him up.

After "doing" Todos Santos we returned to the beach, took off our shoes and stockings and rolled up our trousers preparatory to chasing a receding wave down the beach, that we might scramble into the boat which awaited us, before the next wave surrounded it. The feat was accomplished successfully, and when a huge wave lifted the boat we pulled for the steamer. As the surf was light at the time we fortunately escaped a ducking.

In the middle of the afternoon of Jan. 5 we cleared for Cerros Island, a young man being sent with us from the Custom House, perhaps to see that we did not carry off the island. The next morning we were well out to sea, the coast line being scarcely visible through the haze. At half past three in the afternoon Cerros Island was sighted, an indistinct point on the horizon, visible only from the upper deck. At sunset the island was plainly in sight and presented the appearance of two islands with high peaks in close proximity to each other. In reality the island is one mass of broken ridges, interspersed by numerous deep gorges and barren ravines cut by heavy rains. The dawn of the following morning found us off the southern end of Cerros Island, where preparations were immediately made to go ashore for the day. Before us lay a land about twenty miles in length and eight wide and having an altitude of 3,955ft.

Upon reaching shore we followed the beach a short distance, and then turning inland began an arduous climb up the mountain, following the course of a ravine. Half a mile from our starting point the member of our party who was in possession of the lunch basket gave out exhausted, and was obliged to return to the beach. Constant sea-sickness during the trip had left him in no condition for mountaineering. It has since occurred to me that he passed the most pleasant day wandering along the beach, picking up shells and curios, and in possession of a lunch basket provisioned for five. In the meantime we were climbing higher and still higher, seeing but few birds and startling slender lizards that ran swiftly from one bush to another, and vanished at our approach. A ground owl

flew across a ravine and disappeared under a boulder before a gun could be brought to bear on him. Fish hawks (*Pandion haliaëtus carolinensis*) circled above our heads, keeping guard over their massive nests which were built on the edge of the bluffs back of the beach. They were careful, however, to keep well out of range of our guns. Two ravens (*Corvus corax sinuatus*) followed our party at a distance, uttering hoarse croaks of disapproval at our intrusion.

Our progress was much impeded by the rough nature of the country, broken as it is by ravines and deep arroyos, which give striking evidence of the rushing torrents which the rainy season brings. Huge boulders, torn from their resting places, have been hurled far down the cañons by irresistible waters. Rolling stones in our pathway and at times deep sand rendered our advance slow and difficult and called for numerous halts. It was during one of these frequent stops that we saw the only deer that was seen by us while on the island. Startled from his resting place by the rocks which we sent bounding down the hillside, and thus driven from the friendly shelter of a ravine, he beat a hasty retreat over the nearest ridge, some eighty yards distant. As Cerros Island is only about fifteen miles from Pt. Eugenio, on the mainland, and with the low barren island of Natividad, two and a quarter miles long, between, it is easy to account for the presence of deer on Cerros Island.

Although we saw many tracks and signs that indicated the presence of goats, we scarcely expected to find any on that portion of the island, especially as at that season of the year vegetation here was scarce and in places wholly wanting. But notwithstanding the almost total absence of feed we sighted a few small bands of goats, one of which the captain of the Edith and myself successfully stalked. The goats of Cerros, although running wild over the island, are a tame, short-haired species which have bred there for years. Not knowing how wild they might be, we made a long detour to get above and to leeward of them. Cautiously climbing a sandy ravine we proceeded on our hands and knees toward the crest of a hill overlooking the spot where the goats were gathered. As we neared the summit we dropped flat to the ground and stealthily crawled to a position from which we could observe the band. The goats were nearly a hundred yards away, and as they were at rest and closely watching the others of our party on a distant hillside, we were allowed an opportunity to rest for a few moments to recover breath. According to agreement the captain selected a gray and I a black one and at a given signal fired simultaneously. The captain was armed with a .50-caliber Whitney rifle and I with a .44-caliber repeater. Being able to work a lever more rapidly than he could a hammer and breech block, I had somewhat the advantage of my companion, securing five goats by the time he had scored three. One of his victims and one of mine required a second shot. Well satisfied with our success we allowed the remainder of the terrified flock to depart unmolested. Our companions having joined us we hastily dressed the game, and then following the course of a dry arroyo we set out on our tiresome march to the beach. There was a slight degree of satisfaction in the fact that the goats were thin, for, as it was, we found them quite heavy enough before we laid them upon the beach. The lunch-basket and its guardian now appeared, the former we were particularly glad to see, having had nothing to eat or drink since breakfast. While waiting for the boat from the steamer which we had signalled, I employed my time prying abalones from the rocks with the blade of my hunting knife. In this way I secured half a bucketful of small ones, which were served up for our breakfast the next morning. We found the flavor quite palatable, but I must say the creatures were exceedingly tough. Arriving on board the guns were put in order for the morrow, and by 10 o'clock that night I had prepared the last of the specimens taken during the day.

At daylight the next morning I went to the rail in anticipation of an invigorating plunge into the cool sea, but the suspicious appearance of several large fins cutting the phosphorescent surface of the sea forced me to content myself with a bucketful of water drawn over the side. Whether these sharks would attack a man or not I did not know, and my curiosity on the subject was not sufficient to induce me to try any experiments. Be that as it may, their occasional presence close in shore was not at all welcome, especially at times when the surf was so heavy that in going ashore we were in great danger of being capsized. Moreover, the two metallic lifeboats carried by the Edith, unfitted as they were for surfing and with a crew of sailors unaccustomed to such work, rendered our landing and departure often hazardous. On this day we landed through two lines of breakers with great good fortune, for we escaped being wet, although the mate and sailors who returned with the boat to the steamer were well soaked. Our landing was made further along the beach than on the previous day, thus saving ourselves a tiresome walk, which, when the tide is high, has to be accomplished over coarse gravel and loose stones, the firm sand of the beach being entirely covered by the waves.

Following the course of a dry river bed, which varied in width from fifty to eighty yards, we found better walking and a more direct route inland. The country here was more thickly covered with vegetation than the ground traversed the day before. Small trees, bushes and cacti were quite numerous. Here I found birds more common but strangely shy. Two or three cotton-tail rabbits were the only wild mammals seen.

Three or four miles from the beach the arroyo narrowed to a rocky pass, where we discovered a rivulet of clear water with a perceptible taste of alkali. Passing through the cleft we reached the higher ground beyond, and continuing our ascent gained the summit of one of the highest peaks on the island. From this elevation we could command an excellent view of the southern end of the island, which had a bare and parched appearance. Far away to the northward on the summits of less broken ridges were dark forests of pine. Half way down the slope of one of the peaks could be seen a small reddish-colored lake, its smooth surface in striking contrast to the rugged background of the hills, and it formed the center of a picture long to be remembered.

Several bands of goats were seen during the day, nearly all of which were black. These bands, ranging in numbers from five to thirty, did not aggregate more than two hundred. In places huge boulders of marble were found, and where a ravine had cut into the hill the ledge of marble showed on either side. In these marble cañons we found the purest and coolest water, without a taste of alkali, with which nearly all of the springs of Cerros Island are impregnated. By the time we had reached the beach night had overtaken us. The dark form of the vessel, but dimly outlined through the gloom, assured us that we had not mistaken our bearings. Two shots fired in quick succession were answered by a light waved on the steamer. Guided by a fire which we kindled on the shore, the boat soon reached us and once more bore us safely through the surf. The numerous water birds at rest on the sea had no fear of the boat in the darkness which enveloped us, and merely swam aside in an unconcerned manner, without attempting to use their wings. One gull, even less watchful than his fellows, was actually struck by the backward stroke of an oar. The sailor who had been detailed to carry our lunch basket was pretty well fatigued, and emphatically declared that he could not be compelled to follow us another day.

Two days was thus spent tramping through rocky gorges, obstructed by loose stones, and over irregular broken hills whose steep sides were a decided impediment to rapid progress. In spite of difficulties we continued to collect whatever objects of interest were to be found. Having thoroughly investigated this vicinity, we weighed anchor early one morning, and steamed around to the eastern side of the island, anchoring a quarter of a mile off shore. The water deepens rapidly on this side and the anchorage is not very good. As there was comparatively little surf, landing was easily accomplished. We trudged along the narrow beach over coarse gravel and well worn stones to a large arroyo, up which we traveled as long as it led in the supposed direction of the lake we had seen the preceding day; then, climbing through a steep and rocky ravine, we reached a more level piece of ground, over which were strewn small, irregular-shaped pieces of reddish rock, showing the effect of some great heat. Further to the north and in the track of one of the wide washes was a considerable area of alkali soil, and the banks along its course were of the same chalky appearance. A few interesting geological specimens were collected on our march. Numerous small pieces of quartz were found scattered over one locality, but having no value save as specimens.

About noon we came suddenly to the little lake of which we were in search. It proved to be much smaller than we had supposed, being not more than one hundred and fifty yards long and fifty wide. It was quite shallow, probably drying up entirely in summer. The water, although of a light reddish-brown color, was not disagreeable to the taste. A peculiar cactus on a hillside near the lake differed entirely from any other that we saw. It is a single, tall, round shaft, appearing at a little distance to be flat. The lower half is gray in color, and the upper a light green color, perhaps because of more recent growth. Midway of the stalk a single short branch projects like a huge thumb.

Walking entirely around the little pond, I found in a clump of cacti (*maguey*) the nest of a woodrat built to the height of 3ft. and composed entirely of dry leaves of the cactus. Because of its structure and position it was impossible to tear it to pieces, and I finally succeeded in driving out only one rat (*Neotoma*). Very few birds could be found and all seemed quite wild. A shrike which I endeavored to shoot would not allow me to approach nearer than three gunshots. During the day we saw less than fifty goats and I was surprised to find these in a locality where there was absolutely no feed, save a few scrubby bushes. In places the earth was just beginning to yield to the first green shoots of spring. Perhaps more plentiful feed toward the extreme northern end of the island had enticed the goats thither.

As usual, in returning to the beach, we selected the dry track of an arroyo in preference to the rough hillsides, aiming for a point as near the boat as possible to avoid the extremely fatiguing walk along the beach.

On the following morning the steamer moved to the "Watering place" on the eastern side of the island, where the day was spent in filling the water casks. The water, which contains considerable alkali, flows from among some dark green reeds close to the shore. This was a famous watering place for whaling vessels in former years. The walls of several stone huts occupied in past years by small prospecting parties are still standing. It was here that one night in the winter of 1861-2, our captain, then passing the island in a sailing vessel, rescued the two survivors of a prospecting party of four. They had been drinking and having a fierce fight, two of the party being killed and a third badly mutilated with an axe. The dead were buried near the beach and a pile of stones placed over the graves. There are few of the islands on this coast but could tell of dark deeds done. On Cerros Island, near the mouth of an arrayo, on the eastern side, is a grave marked by a finely carved slab of English oak, bearing the following inscription:

HERE LIES THE BODY OF
JOHN ANDREWS,
17 years of age,
Late apprentice on board the ship
Latona,
CAPT. DENNEMAN,
of
LONDON,
Who was treacherously murdered in the night of 21ST OF OCTOBER, 1819,
In this Bay,
By a Spanish Negro.

We found on the beach a small crucible and an old boot, probably the relics of some late prospecting party.

The last day of our stay on the island we visited the forest of pines on the ridge. The trees, none of which appeared to be more than fifty feet high, and from four to eight inches in diameter, bore a small cone. The branches and trunks were hung with long, gray moss. Returning in the afternoon to the beach, we came across the tracks of a burro in the sand of a large arroyo, and soon we found the little fellow, a buckskin-colored animal with a dark stripe down his back. He seemed greatly pleased to see us, but would not allow himself to be caught. This cañon is marked on recent maps as the Arroyo del Burro.

In this locality I found the only snake seen on the island, and also caught a tarantula and some grasshoppers. Dead and bleached land shells (*Helix areolata*, var. *veatchii* Newcomb) were found everywhere; and among some cacti near the top of the island a few live specimens were taken.

This was the last opportunity I had of collecting on the island, as the remainder of the party had completed their work of inspection and were ready to leave the following day for Guadalupe Island. An account of the visit to this "lone isle of the sea," as it has been called, will form the material for a subsequent paper now being prepared.

In April, 1881, Mr. L. Belding spent twelve days on the Island of Cerros, and has given us an annotated list of twenty land and water birds found by him. This list was subsequently edited by Mr. Ridgway, in the Proceedings of the U. S. National Museum, and furnishes the first information we have of the ornithology of the Cerros.

Of the following twenty-seven species taken or seen by myself in January, sixteen are not mentioned in Mr. Belding's list, and such are designated by an asterisk. The nomenclature is that recently adopted by the A. O. U.

1. **Æchmophorus occidentalis*, Western Grebe.—One bird seen.

2. **Colymbus nigricollis californicus*, American Eared Grebe.—A female was found washed ashore dead.

1633	♀	Jan. 7.

3. **Urinator*.—Several loons were seen in South Bay and often heard calling in the early morning, but their shyness prevented a specimen being secured.

4. **Cerorhinca monocerata*, Rhinoceros Auklet.—Two specimens taken, one shot in South Bay, at the edge of the surf, and the other caught alive on the beach before it could flap to the water's edge. This is the most southern record yet given for this species.

1634	♀	Jan. 7.
1650	♀	Jan. 8.

No. 1634. Iris brownish yellow. Feet of a light greenish color, with dark webs. Not at all fat.

5. **Ptychoramphus aleuticus*, Cassin's Auklet. Rare. Not previously recorded from further south than San Diego.

1700	♂	Jan. 10.

Iris yellow, with tinge of brown.

6. **Larus occidentalis*, Western Gull.—A few seen loitering about the steamer. I saw one while flying scratch his neck with his foot. A specimen was caught during the voyage down with a hook and line. They soon learned on which side of the Edith the galley door was (starboard), and while a score could be counted following on that side not one could be seen, except at a distance, on the port side. I threw pieces of meat into the air which were caught before reaching the water. I then tried them with small bits of coal which they usually caught in the air, but of course did not swallow. Sometimes a piece would strike the water when a gull would plunge in, going entirely under and usually appearing with the coal only to let it fall again. Two beefsteaks were stolen by the gulls from a basket on the hurricane deck. They repeatedly lit on the masthead and after rail to rest.

7. **Larus argentatus smithsonianus*, American Herring Gull.—In company with *L. occidentalis* and *L. heermanni*. They lit near the boat when we first anchored in South Bay, dipping their bills in the water and making a peculiar sound, acting more like young birds than adults. A specimen was killed by the engineer with a piece of coal. The heads, wings and feet were saved for identification.

8. *Larus heermanni*, Heermann's Gull.—More common than either of the two foregoing species. None were seen in adult plumage. I prepared the head of one having the bill as bright as in summer plumaged birds.

9. **Pelecanus californicus*, California Brown Pelican.—A few were seen every morning fishing along shore, invariably followed by one, two or three Heermann's gulls flying a short distance behind. As soon as the pelican plunged for a fish the gulls closed in, usually alighting close before him. Sometimes one would perch on his head, in eagerness to seize the fish. I have never seen them succeed in robbing a pelican; but they follow him persistently, taking wing soon after the pelican rises and coming on at a convenient distance to be near for the next plunge.

10. **Branta nigricans*, Black Brant.—About a dozen birds were seen on the eastern side of the island swimming with necks craned forward and uttering croaks at intervals. This species has been taken at San Quentin Bay, Lower California, by Mr. Belding. Their presence at Cerros Islands increases the southern range over one hundred miles.

11. **Calidris arenaria*, Sanderling.—A flock of about fifty birds lit on the beach in South Bay and two specimens were taken.

1640	♀	Jan. 8.
1641	—	Jan. 8.

12. *Heteractitis incanus*, Wandering Tattler.—Two solitary birds were met with among the rocks on the beach.

1632	♀	Jan. 7.
1651	♀	Jan. 10.

13. **Hæmatopus*.—A pair was seen on the rocks in South Bay the first day on landing. They were very wild, making a long flight every time they were started.

14. *Cathartes aura*, Turkey Vulture.—Common along the beach.

15. *Pandion haliaëtus carolinensis*, American Osprey.—The birds were tolerably common and very wild. A great many of their bulky nests were seen on the edge of the bluffs above the beach. Several were examined, but no eggs found, although in a number of instances a bird would be seen standing upon the nest.

16. **Speotyto cunicularia hypogœa*, Burrowing Owl.

—A single bird was seen on the southern part of the island.

17. *Trochilus costæ*, Costa's Hummingbird.—A few were found about flowering bushes growing in the dry bed of large arroyos.

1636	ad. ♂	Jan. 8.
1646	ad. ♂	Jan. 8.
1647	im. ♂	Jan. 8.
1639	♀	Jan. 8.*
1645	ad. ♀	Jan. 8.
1661	ad. ♀	Jan. 11.

*No throat scales. Throat colored with yellow pollen.

18. *Trochilus anna*, Anna's Hummingbird.—Less common than *T. costæ*. No females were seen.

1648	♂	Jan. 8.
1653	♂	Jan. 11.
1659	♂	Jan. 11.
1660	♂	Jan. 11.

19. *Sayornis saya*, Say's Phœbe.—Less than half a dozen were seen along the banks of arroyos, near the beach.

1638	♀	Jan. 8.

20. *Corvus corax sinuatus*, American Raven.—Three or four birds seen. Two followed us one day, keeping far out of gunshot and uttering their hoarse croaks.

1635	♂	Jan. 7.
1652	♀	Jan. 10.

No. 1652. Shot on beach. The forehead, throat and feet were dusted with yellow pollen from the flowers of the cactus (maguey).

21. *Carpodacus frontalis rhodocolpus*, Crimson House Finch.—Only three or four were seen, and like nearly all the birds found on Cerros Island, they were difficult to approach.

1654	♂	Jan. 11.

22. **Ammodramus rostratus*, Large-billed Sparrow.—Three birds only were found upon the beach.

1629	♂	Jan. 7.
1643	♂	Jan. 8.
1642	♀	Jan. 8.

23. **Zonotrichia gambeli*, Gambel's Sparrow.—

1657	♀?	Jan. 11.

24. *Amphispiza bilineata*, Black-throated Sparrow. As common as any of the small land birds. Their only note consisted of one or two faint chirps.

1637	♂	Jan. 8.
1630	♀	Jan. 7.
1631	♀	Jan. 7.

25. **Lanius ludovicianus excubitorides*, White-rumped Shrike.—Two or three seen. They were the wildest birds of the size I have ever met with.

26. *Thryothorus bewickii spilurus*, Vigors's Wren.—Three pale-colored specimens in poor plumage were collected among bushes on the edge of large arroyos. In the absence of more examples in better plumage they are referable to this species.

1662	♂	Jan. 11.
1628	♀	Jan. 7.
1663	♀	Jan. 11.

27. **Polioptila cærulea*, Blue-gray Gnatcatcher.—But two birds of this species were seen.

1656	—	Jan. 11.

Oakland, Cal. Walter E. Bryant.

THE AUDUBON SOCIETY.

WITHIN the first six months of its existence the Audubon Society has attained a membership of more than eleven thousand. The movement has won the warmest indorsement from the press. There is ground for much satisfaction with the actual results of the Society's efforts to awaken public sentiment upon the subject of right bird protection. But much as has already been accomplished, more remains to be done, and it is the purpose of the Forest and Stream that the Audubon Society shall be permanently established on a sound basis as an agency to complete the work undertaken. As one step in this direction the Society has been incorporated, the certificate being as follows:

CERTIFICATE OF INCORPORATION

OF THE AUDUBON SOCIETY FOR THE PROTECTION OF BIRDS.

George Bird Grinnell, Edward R. Wilbur, Charles B. Reynolds, Joel A. Allen and William D. Page, whose names are hereunto subscribed, and all of whom are citizens of the United States and also citizens of the State of New York, being desirous of forming themselves into a Society, under and pursuant to the act of the Legislature of the State of New York, entitled "An Act for the incorporation of societies or clubs for certain lawful purposes, known and designated as Chapter 267 of the Laws of 1875, and the act or acts amendatory thereof and supplementary thereto, do hereby certify:

First—That the name or title by which such Society shall be known in law is "The Audubon Society for the Protection of Birds."

Second—That the particular business and objects of such Society are as follows:

To protect American birds not used for food from destruction for mercantile purposes; to secure and publish information to show the extent of the present enormous destruction of birds for millinery, decorative and other purposes; to point out the injury to the agricultural interests of the land which must follow the decimation of insectivorous birds;

To discourage the killing of any bird not used for food, the robbing of any bird's nest or the destruction of its eggs, the use of any wild bird's plumage as an article of dress or ornament.

Third—That the number of trustees to manage such Society shall be five, and the names of the trustees for the first year of its existence shall be as follows:

George Bird Grinnell, Edward R. Wilbur,
Charles B. Reynolds, Joel A. Allen,
William D. Page.

Fourth—That the office of such Society shall be situated in the City, County and State of New York.

In witness whereof, we have hereunto set our hands and seals this sixth day of August, A. D. 1886.

Signed in the presence of Walter G. Scott.

Geo. Bird Grinnell.
Edward R. Wilbur.
Charles B. Reynolds.
Joel A. Allen.
William D. Page.

State of New York, City and County of New York. } ss.:

On the 6th day of August, A. D. 1886, before me, at the City of New York in the State of New York, personally came George Bird Grinnell, Edward R. Wilbur, Charles B. Reynolds, Joel A. Allen and William D. Page, to me personally known and known to me to be the individuals described in and who executed the foregoing instrument, and they severally acknowledged to me that they executed the same for the uses and purposes therein mentioned. Walter G. Scott, Notary Public, Queens County. Certificate filed in New York County.

In a communication relating to the destruction of birds for millinery purposes, Mr. Ernest E. T. Seton calls attention to the work of the American Ornithologists' Union, and the Audubon Society recently founded by the Forest and Stream of New York city. The members of the Audubon Society are pledged to do all in their power to suppress the killing of birds for any purpose except for food, and all persons are invited to join and extend the work. These societies, Mr. Seton adds, are distributing among legislators and leaders of opinion throughout the country, magazines and pamphlets relating to this subject, and already the results of the movement are so encouraging that the progress toward extermination is strongly checked.—*Century Magazine for August.*

The Sea Serpent Again.—A Boston correspondent writes: "Here is a mate for your sea serpent article in Forest and Stream. I am acquainted with Mr. Putnam and know him to be a square, practical and common sense man, principal of a Boston grammar school, and also ex-superintendent of an orthodox Sunday school, so his statement ought to carry some weight, at least." Mr. Putnam's relation is as follows: "On Thursday afternoon, about 1:15, the son of Calvin W. Poole was seated upon the rocks near the "Linwood," when something in the water attracted his attention. He immediately ran to his father, who was surveying near by, and pointing to the object called out, 'The sea serpent, the sea serpent.' Mr. Poole brought his powerful transit to bear upon it, and was at once satisfied that it was the veritable serpent. He was about one-fourth of a mile from the shore, and about two miles from where he was seen last month. He was moving slowly in a northerly direction. It was a dead calm, a smooth sea, with a bright sun shining, so that there was the best possible opportunity to observe his motions. The distance passed over was at least a mile, and the time occupied not far from twenty minutes. Mr. Poole called my attention to his snakeship at once, and as he passed directly by my cottage I was able with an excellent marine glass to observe his movements, which corresponded very fully with those described by Dr. Sanborn last month, as well as those given in *Harper's Monthly* some years since, and the accounts given of one seen in Gloucester harbor about 1817. The head was frequently raised partially out of water, and the movement was a vertical one, showing some 10 to 15 ridges at once. I should say that he was at least 80ft. in length. There were perhaps 50 persons who witnessed the passage, in part at least, among whom were Samuel Bullock, master of the Bunker Hill School, Boston; Professor Stephen Emery, of the New England Conservatory, with his family; Captain Jackson, the artist; James Hurd and several guests at Linwood, as well as four members of my own family. After he had disappeared, and while we were still looking, a school of porpoises passed, so that we had a chance to compare their appearance with that of the serpent. I speak of this, as it has often been said that the former was mistaken for the latter. I shall never doubt that the sea serpent is a fact."

Occurrence of Turkey Buzzard on Long Island.—*Editor Forest and Stream:* While woodcock shooting on August 2, 1885, at Flushing, Long Island, N. Y., a turkey buzzard (*C. aura*) flew over me, with the graceful motion characteristic of that bird. I tried him with No. 8 shot, but the small loads were powerless and the only effect was to make him soar somewhat higher. I have never before seen the bird on Long Island, though stragglers have frequently been reported. I have in my collection a specimen of the black vulture (*C. atratus*) killed at Sandy Hook some years ago.—Robert B. Lawrence.

Forest and Stream Fables.

Wolves in Colorado.—At a recent meeting of the Bent county (Colorado) Stock Association, Major Towers brought up the subject of the depredations of wolves on the range, deploring the fact that the Legislature had suspended the bounty law. He asserted that it would be economy to pay fifty cents a head for wolf scalps and thereby save an immense amount of property, as one wolf was capable of destroying hundreds of dollars in young stock. W. W. Jones agreed, and related the killing of five heads of grown stock in his herd by wolves. On motion it was decided that members to the State Legislature be requested to introduce a bill authorizing the State to pay a bounty of $1 for gray wolves and fifty cents for coyotes, and that the secretary be directed to correspond with other associations, and request them to coöperate in having a bill of that description become a law.—*Exchange.*

Destitute families are saddeningly plentiful; but they would be much fewer if the fathers while living had invested a few dollars in the Life and Accident Policies of The Travelers, of Hartford, Conn.—*Adv.*

AN INCIDENT AT CRO'S NEST.

Editor Forest and Stream:

I should have added to my letter last week that diligent inquiry of the oldest fox hunters in the vicinity failed to elicit any information whatever regarding the existence of three pines at the runway so named. Uncle Mose remembered asking the same question many years before, but obtained no evidence to show that even a single pine had ever stood there. This I have found to be the case in very many instances; and I have often met with disappointment when trying to trace the origin of the name of some oddly christened locality.

There was old Cro's Nest, right in the middle of a barren sandy plain that could not within the memory of the oldest inhabitant boast a single shrub, to say nothing of trees large enough for crows to build their nests in. Why foxes should make the particular point in the dreary waste thus designated one of their principal highways is beyond my ken; but from time immemorial all well-behaved foxes that were jumped within reasonable distance were sure to visit the place at least once during their run. It was indeed historic ground, and a large proportion of the fox stories told at the old store had to do with old Cro's Nest; and many a brilliant run was finished at the well-known stand.

There was a character, haunting this runway, who was deservedly held in the utmost contempt by every fox hunter in the whole region. Sam Butts, better known as "Old Butt-er," from his habit of "er" drawling his words, was a cross-grained, unkempt-looking genius, without a single spark of fox hunter's fire in his composition. He hunted, however, but with the sole object of gaining a little filthy lucre by the sale of the peltry. I verily believe that the grandest burst of music that ever fell upon his ear never caused a single responsive throb from his withered old heart; and, almost worse than this, he was guilty of the crime of adding to his ill-gotten gains by means of the trap. His shooting and appropriation of the legitimate game of others could, in a measure, be overlooked, but the lack of music in his soul and his use of unfair means to capture his victims were deadly sins; hence his name was a by-word and a reproach. Old Sam lived near Cro's Nest, and was therefore frequently first at the runway, which he generally managed to hold; and often he got the fox, which he mendaciously retained in spite of law or decency, unless some one chanced to witness the proceedings, when he was forced to relinquish his claim.

Taking an early start one morning I arrived first at the runway, but had not long to wait before Old Sam came up and claimed the stand. Finding that this plan would not work, he tried to induce me to go to the "Hog Back" about a mile away, stating that it was a better stand but his "rhumatiz" prevented him from going. Although a mere lad at the time, I refused to budge; and he sullenly sat down a short distance from me, and we silently awaited the return of the dogs, who had gone out of hearing. After a weary wait I spied the fox some thirty rods away coming up the path toward us; and, determined that my companion should not have a shot, I covertly moved my gun so that the glint of the sunshine upon the barrel would cause the fox to swerve from the path. He continued on nearly the same course, however, but I saw with satisfaction that he was not coming near enough for a shot. Old Butt-er saw him when he came opposite us about fifteen rods away, and with a muttered oath drew up the old gun and "cut loose." Some of the shot must have struck ahead and beyond the fox, for he turned and came nearly toward us. Just as he reached the path, about eight rods away, I "let go" and tumbled him.

"Thar," said the old man, "that's what I call a shot-er, an' I hit em hard, tew, fer he didn't go mor'n six rod after I pulled-er." Then turning to me he added, "Jess yew stan' still till I see how manny steps it is-er."

The stupendous cheek of the old sinner completely paralyzed me, and I stood spell-bound while he walked away. Going about two rods beyond where the fox had been, he made a mark in the sand with his heel, and then with shortened strides commenced stepping the distance. When he arrived at the home plate he turned toward me with the most guileless expression imaginable upon his countenance and exclaimed, "I declar' if it ain't a hundred and fourteen steps—twenty rod good and strong-er; now, that's what I call a shot-er." Then assuming a more business-like look and tone he added, "Wal, I guess I'll take my fox and git along-er."

"Hold on," said I, "you ought to know the law. That pelt belongs to the first dog up."

This staggered him; his sour looks returned; and growling to himself he turned on his heel and departed. Although I had come out ahead, I still felt a grudge against the old man for the discomfort he had caused me. The next time I met him, however, I had fun enough to square the account and still leave a handsome balance in my favor.

A few mornings after the Cro's Nest episode I was on my way to a meet, when I came upon the sacrilegious old sinner busily engaged in digging out a fox that had been run to ground by the hounds the evening previous and stopped in by him. He had run a long stick into the hole to obtain the direction, and was busily engaged sinking a shaft, having got down so that his shoulders were about on a level with the ground. My blood was boiling, all the more furiously because I knew that I was powerless to put a stop to the nefarious proceeding. While watching him throw out the dirt, there came along a big, ungainly cur that belonged to a neighboring farmer. After sniffing around a bit he wagged his short stump of a tail, and whining with evident joy at the prospect of sport, trotted up to the pit and was on the point of jumping when the old man begged me to hold him. My good angel whispered me just then, and I seized the dog by the scruff of his neck and drew him away a few feet. Then, every time the old man's head went down, I would alternately push my charge toward the pit and draw him away; and then, hissing "Sick 'em!" in his ear, repeat the performance. The brute appeared to be game, and I soon had him keyed up to the proper pitch. About this time the spade went through into the burrow, and old Sam stooped to make an examination. As the fresh scent struck the nostrils of my friend I shoved him toward the hole and, in my heart, bade him God

speed. In less than a second the aforesaid good angel was amply vindicated, and my wildest dreams were more than realized. Amid the frantic screaming of the excited dog there came—as sweetest music to my ears and choicest balm to my feelings—the heartfelt grunts and splutterings of Old Butt-er. Usually I could keep my countenance straight when any fun was going on, but this was more than I could stand; and I was obliged to take two or three rolls on the grass before I could face the music. When finally I recovered sufficiently to approach the scene of operation the old man had lifted the dog to the edge of the hole, and as I came up he administered a sounding whack to his ribs and dismissed him with an energetic "Git!" that could have been heard a mile. Just then the fox bolted, and popping out of the hole vanished like a ghost. This filled the old man's cup full to overflowing, at all events he "boiled over" most decidedly. Making a frantic spring to get out of the hole he missed fire and went back all in a heap. As he rose to it the second time I caught the glitter of his eye and incontinently took to my heels and did not stop until I had put a safe distance between us. When I glanced back to see how things were working Old Butt-er was wildly capering around that heap of gravel and cutting up some of the queerest didos it was ever my good fortune to witness. After a very careful review of all the circumstances and a most enjoyable study of his eccentric evolutions, I somehow became impressed with the notion that, to use one of his expressive phrases, "He was-er takin' the rest on't out in cussin-er." O. M.

REINDEER IN ALASKA SNOWS.

THE following extracts from a letter written by J. W. Johnson, who is connected with the Signal Service in Alaska, to his father, A. M. Johnson, who resides at Rockport, Ill., will be found interesting:

NUSHAGAK, ALASKA, April 7.—Spring has commenced to appear, though the country is still covered with a heavy coat of snow. I was informed this morning that a ship had been seen down on the seacoast. The islands and upper part of the river are covered with ice, though I expect a few good warm days will raise the ice and carry it out to sea. This spring is very backward, more so than usual. Yesterday and to-day have been very warm and pleasant.

Perhaps a little moose or reindeer hunting adventure would interest you. I will tell you about a trip with a Russian, from which I returned a few days since. The Russian started the day before I did, and fished up the river some twenty miles for a small fish found there—a kind of smelt. The next morning I overtook him, and we started over the Tundra, or level and rolling country. We had not gone far—some two or three miles—before we sighted something far out on the tundra. After a few minutes watching it proved to be a herd of reindeer, and they seemed to have seen us about the same time, for they made off over the country. So Paul, for that is his name, a young fellow about my age, and I started for the deer on snowshoes, with our Winchester repeating rifles containing twelve or fourteen cartridges in the chambers. We traveled for over two hours and at last got sight of them. We found they had been running in a circle quite around us. We soon started afresh after them. They ran off two miles or more and we headed for the sleigh. We found the deer were going the same way we were, so we thought we would wait for the sleigh to come up. We had gone down into a little gully and by the time we got out on the level again the deer had come back to us and were within a third of a mile of us. As Paul and I were separated some thousand yards and the deer were so near we thought our chances favorable for shooting some of them. He went one way and I the other. I tried hard to get near them, but could not—only falling heels over head in trying to creep with my snowshoes on. Just then the deer separated—three going toward Paul and seven toward me, or rather passing before me, though at about 800yds. range. They began to run, for Paul had commenced to shoot. They passed within 100yds. of him, though he never hit one. I had better luck. I saw I could get no nearer, so after I fell I concluded I would sit where I was and shoot. I raised the rifle sight to 900yds. and fired low, killing one the first shot. He ran 150ft. and fell dead, shot through the small of the back. I fired some two or three times more, but did not stop any more of them, though I am confident I hit another, as one lagged behind. Paul picked up the bullet in the snow. It passed through the deer without touching a bone, and it is not defaced in the least. That night we slept in a deserted sod house, whose tenants had flown. It was just the thing, for it was dry and comfortable, and had a cook stove and two couches to sleep on. Snow set in, and it snowed all night. I told Paul to have the Esquimaux take the bait for foxes and set them back in the woods, so that the dogs would not be likely to get any of them, as I used strychnine on the bait. This precaution was without avail, for one dog soon came back and keeled over in front of the door. The next morning the Esquimau brought in a fox and at night one more dog—pretty good luck so far. The first dog was a magnificent specimen; in fact, the finest I ever saw, exactly like a wolf. We stayed at this house for three days, as rain set in on the second day and it looked as though we were going to have a soft spell, but it grew colder during the night.

In the morning we set out. I was on Paul's sleigh with him. The morning was cloudy, but in the afternoon it cleared up, and while on the way up the river we ran across a moose track. It was about time to stop and feed. We soon made a fire and had tea, and were ready for the moose chase. The track was an old one, but that made not the least difference as long as we could follow it. We followed it for half an hour, and it just happened that where the winds had not sifted the snow we saw the track of snowshoes. Of course that was enough. Esquimaux up the river had been after him. So we went back and ran across another leading back to the woods. After losing and finding the track a good many times, at last we found it in the woods, and then it ran over hills covered with spruce and through ravines, the most zigzag course an animal could take. It scrubbed alongside of trees and between everything it could in order to elude us and hide from man or beast. It was quite a job to follow it, as the dogs and sleigh were along. We followed it, however, all that day, but the track grew but little fresher. We camped that night. The day had been beautiful, bright and sunshiny. We passed through several beartiful groves of spruce just like parks. It reminded me of the Golden Gate Park at San Francisco. That night we sat round the camp-fire talking over the events of the day and of what the morrow would bring forth. The first thing in the morning was breakfast—reindeer steak and toasted bread with tea. That over, camp was broken and we were off. The day promising to be fine we traveled over hills and hollows, through dense woods, going down hills at break neck speed, and sometimes the dogs could not keep from being run over by the sleighs. At last the moose started out on the Tundra as his track plainly showed. After following it a few hundred yards we discovered where another had met it and turned back into the woods again. That was more encouraging. After following the track for a half mile or so we came to where they had stopped to browse on the trees, and they seemed to think nobody would be likely to disturb them. The tracks were very distinct though not very fresh. The snow was about 3ft. deep and we were quite certain they would not move far. We unloosed four of the best dogs, told two of the Esquimaux to stay by the sleighs and took the third, who was the oldest, with us. He had a single-barrel shotgun. We had been gone some half hour and Paul and I had got separated a hundred yards or so, when all at once I saw the dogs throw up their heads and run. I knew well what was in the wind and started on a run, but one cannot run very fast with snowshoes on in the woods. I heard the dogs bark and knew they had come upon the moose, but could not see them. Paul was quite close to the animals, and pretty soon I saw the big fellows tearing through the woods, paying no attention to what was in their way. They sank down in the show at every step three feet or more, while the dogs ran on the snow without breaking through only now and then. As soon as the dogs got a chance they would nip the moose in the flank, and that would cause them to turn around. When we caught sight of them we fired at them while running through the brush. As soon as we fired they turned and came back. We both ran to get a shot at a two-year-old with small horns. I fired at him as he turned to charge on the dogs, and broke his right hind leg, and down he went. I heard the dogs baying at another, and as I had stopped the first I thought I would try and stop the other also. I got a running shot. So did Paul. This moose was a big fellow. His back was higher than my head. He turned and ran between the Esquimaux and us, and Paul thought he was coming for him. I kept a tree between myself and his highness. I threw back the lever of my gun and saw there were no cartridges in the magazine. The moose still stood in the dense group of spruce and the dogs were baying him. Poor Paul had no more shells either. He said we had better climb a tree as the moose might charge us. We could see the great long bristles on his neck standing erect like a wild boar at bay, and every few minutes he would growl or groan and chase the dogs from his retreat, striking at them with both front feet with great swiftness. Paul climbed up a crooked birch tree, and said the moose would go for us. I told him if he did he would see me go up a tree quick enough as I had sent the Esquimaux back to the sleigh for more shells. Just then I pushed down the lever of my rifle, and to my surprise saw two cartridges in the chamber. The moose was mine. I raised my rifle and fired, the ball striking him in the shoulder and lodging there. The animal still stood on his feet. I then walked up and shot him behind the ear and he dropped. The moment he fell the dogs sprang upon him like so many wolves and tried to tear him to pieces, but made no impression on his tough hide. From the other moose I picked out a buckshot which was barely through the skin and shot at fifty yards. The last moose was an adult and had shed its horns last fall. It was all that Paul and myself could do to turn him over one end at a time after we had skinned and cut him up. We started for the other, leaving the Esquimaux to draw the meat out to the edge of the woods so we could cache it or hang it up in the trees. One moose was as much as both teams of dogs and men could haul. The animal weighed nearly 1,000 pounds. The first moose was lying down as if alive.

To-day is the first calm day for a week. The wind has been blowing steadily from the northeast and strong. Though it has been sunshiny every day, the snow melts very slowly. It certainly will be June before it is gone. It is up to the tops of the fences now. J. W. JOHNSON.

HABITS OF RUFFED GROUSE.

Editor Forest and Stream:

For two or three seasons past I have noticed ruffed grouse in unusual places, as, for instance, two or three haunting all one fall a patch of nursery trees run wild. This season, on two isolated ledges, where probably no ruffed grouse but stragglers have been for thirty years, a brood has evidently been raised on each. To me this is a very encouraging hope for the continuation of this finest of our Eastern game birds. It looks as if they were accepting the situation, and accommodating themselves to circumscribed limits, for in neither of these places have I ever seen, till this year, any ruffed grouse but the occasional stragglers that are found every fall in all sorts of unaccustomed spots. Has any other reader of FOREST AND STREAM seen the like?

House wrens disappeared from these parts many years ago, long before the fashion of wearing birds' skins was thought of by any one but savages. Has their disappearance been noted elsewhere? AWAHSOOSE.

VERMONT, August.

WOODCOCK NOTES.

Editor Forest and Stream:

In issue of July 15 your correspondent, "A.," after relating the discovery by him of a woodcock's nest, says:

> The next morning I called to take another view of the young innocents, but they were gone. Probably the parent removed them during my absence, and if so, how? Or did they gain strength (which seemed to me improbable) and follow the mother to a new and more secluded home? Or were they devoured by hawk or fox? are queries I never could answer satisfactorily to my own mind. I have always had the impression that the parent bird in some way removed them.

The explanation is easy. The mother bird carried off her young one by one in her legs. I have seen it done. In the case which came under my notice the young were already half grown, and the mother dropped one of them several times in her anxious efforts to flutter off with it. But she succeeded. J. A. H.

ROCHESTER, N. Y.

THE PRAIRIE CHICKENS.

THE open season for prairie chicken will begin in this State August 15, and for those that are prepared the shooting will be above par. Several things have been much in this bird's favor. The season has been unusually favorable for breeding, as the heavy rains that usually cause such sad havoc among the young birds were not very prevalent, and fine coveys are reported from many localities. Good hunting dogs have been scarce here for several years, and are very scarce again, and you frequently hear the question asked, "Where can I get a good hunting dog?" Owing to the absence of dogs many coveys from time to time have matured, so we have a fair supply of this estimable bird.

We need in this State a law prohibiting shooting until September 1. The writer has frequently seen young birds brought in that were not much larger than Bob White. Very often the nests are made in cornfields which are not plowed until May, and again they are made on fall plowing that is intended for corn, and then they are almost always destroyed. When such is the case, the old bird, if she rears a brood, must look up a new home, which takes time. I think this is the cause of there being so many small birds when the season opens. Some years ago I was breaking down corn stalks late in April with a drag to which two horses were attached; an old hen grouse was on her nest and remained sitting although the horses passed on each side of her, and the first known of her presence was when she was fluttering under the drag, from which she emerged almost denuded of feathers. Her nest contained fourteen fresh eggs, part of which were broken. This was an unusually early laying; they commonly commence to lay about May 5 or 10, and if the nest should be destroyed and another complement of eggs laid, the chicks will be so small by Aug. 15 as to stand a poor showing before the breechloader.

Bob White of late years is very scarce here and is but seldom seen. I know of three pairs of old birds near town, and they are very tame, allowing you to approach very close. These are not accompanied by any young this year, their nests probably having been destroyed. The cold winter's deep snows and ruthless mass of hunters are too much for little Bob. We have a few ruffed grouse left and they are not much hunted, as they are a little "too previous" on the wing for most of our hunters.

Like all other localities ours is cursed with a few would-be sportsmen who have no respect for game laws, and kill prairie chickens out of season. There has been some of it done already this season. A sharp watch will be kept and all offenders, when caught, will be promptly dealt with. H. A. KLINE.

POLO, Ill.

BETWEEN MIDNIGHT AND DAWN.

AFTER supper, feeling quite tired, I wrapped myself in my blanket preparatory to going asleep. I lay for some time but was unable to close my eyes. At length I arose, and putting aside the curtain of the tent, looked out. It was midnight. The moon had just risen, peering over yonder mountain top, and its light, reflected on the waters of the lake, lit up the forest around as if a thousand torches were blazing within it.

All was still save the occasional hoot of an owl and the cry of a loon, which broke in upon the stillness of the night like an intrusion. In the distant mountain glade could be heard the moose calling for his mate; in the swamp the cry of the whippoorwill. The camp-fire had nearly gone out and a few embers were still smoking. It was then that nature seemed most grand and beautiful. Giving up all idea of again seeking sleep, I woke one of the guides and bade him paddle me out upon the lake. Never shall I forget that night if I live to be a hundred years old. Words cannot describe it. Grand seems but a tame word to apply to it. I sat in the bow of the canoe gazing in wonder and admiration on the scene before me. The light birch glided silently over the water, the paddle being wielded in the skillful hands of the Indian. Not a word had been spoken by either of us since we left the shore, each being occupied with his own thoughts. Indeed there seemed to be a solemnity about the scene that made one abstain from speaking lest all should vanish like a dream.

Toward the further shore, directly in the ray of the moon, stood a deer drinking from the lake, his slender figure standing out plainly from the dark forest behind. I tried to raise my rifle but could not lift it; it seemed as if it had become an immense weight that could not be moved. Thus I gazed upon the picture before me, hardly knowing whether I was awake or in a dream.

The flight of time was unheeded. Suddenly the spell was broken by the cry of a loon. One by one the stars had disappeared from the sky. The east was already aglow with gold and purple clouds. The moon had sunk in the west just as the sun made its appearance announcing the approach of another day. Silently we paddled back to camp.

As I sat down to breakfast, I could hardly believe that I had not wakened from a dream. A mist seemed before my eyes, beyond which was the picture of that beautiful night. Y.

BANGOR, Me.

RIFLED CHOKEBORES.—New Orleans, La., Aug. 11.—*Editor Forest and Stream:* Your number of Aug. 5 contained an article concerning the new "choke-rifled" gun barrel, which Lieut.-Col. Fosbery claims as being his own invention. I do not have the least doubt that this gentleman is acting in perfectly good faith, having probably never heard of another similar device. However, it is a fact, that the same device in shotgun barrels was invented and applied several years ago, by the eminent gun maker, H. Pieper, in Liege, Belgium. I have under my eyes a catalogue of Mr. Pieper, dated 1883, printed in French, giving the price of "choke-rifling" as twenty-five francs per barrel. Although Pieper's guns have won a great fame all over our country, it seems to me that his invention of "choke-rifling" is till to date known to a few professional men only. My catalogue is at the disposal of Col. Fosbery to furnish him the proof of my saying, and if addressing to Messrs. Schoverling, Daly & Gales, in New York, Pieper's agents for the U. S., these gentlemen will likely fully confirm my above statement. In fact the system of "choke-rifling" is neither a new nor an American invention, and I publish these lines solely for the sake of truth, to give honor to whom honor belongs.—F. R., AMBUEHL (P. O. Box 129). [Col. Fosbery is of the British Army.]

A TARGET RECORD.—Marion, Ind., July 15.—*Editor Forest and Stream:* I want to give to all shooters the result of a gun trial we made here last Friday. A few days ago I received a new automatic hammerless gun from the Lefever Arms Co., Syracuse, N. Y. I shot the gun at a tournament at Peru, Ind., last Wednesday and Thursday and every one remarked as to the manner in which targets were broken by same. One member of our club here shot it and won more money than any other man. We came home and on Friday afternoon Wm. Jones and myself loaded six brass shells with 4½drs. King's quick shot powder, 3 black-edge wads on same, 1½oz. Tatham's selected No. 8 chilled shot with cardboard wad on same. Our target board is made as follows: A sheet of iron 1yd. square with 30in. circle cut out is hung on hinges to a 2in. backboard and so arranged as to place paper underneath and fasten at bottom with buttons. We measured off 40yds., placed target in position and made as follows: First target with left barrel contained 539 pellets. Second target with same barrel, 498 pellets. First target with right barrel, 490 pellets. Second target with right barrel and No. 7 shot with paper shell had 401 pellets. The targets were made in the presence of six members of our gun club, and all acknowledged that they have never seen them equaled. I desire to say to Mr. W. H. Cruttenden that I will oblige him at any time he will make it an object for me to do so with a gun that will average 400 pellets in 30in. circle at 40yds. and meet him at any convenient point for trial. After targeting gun our blue rock trap was placed in position and several birds were broken by Jones at 60yds. from shooter's position.—C. S. BROWN, President Marion Gun Club.

ARKANSAS NOTES.—Beebe, Ark., Aug. 10.—Prospects for a good hunting season never better, partly owing to the partial protection by our game law last year, and its ample protection this. For quite a number of "game butchers" (who were indicted for killing game out of season) found law-abiding citizens even in Arkansas, where game is plenty. The mast promises to be abundant and game will be in good condition. Young deer and turkey can be seen almost any time three miles from the railroad, and quite a number of young bears have been captured within 20 miles of here. Good quail shooting can be found around almost any plantation, and squirrel shooting along almost any creek. Black bass fishing is fine, also quite a supply of trout is reported. The deer and turkey season opens Sept. 1, quail Nov. 1, prairie chickens Sept. 1. There is no protection on any other game.—N. E.

PRESERVING DEAD GAME.—*Editor Forest and Stream:* Your correspondent, W. L. P., asks for a method of preserving dead game. If he will try Humiston's preservative, known as "Rex Magnus," of the brand called "Viandine," he will find it perfectly efficient. Let him pick and draw his game, as for immediate cooking, and submerge it in a solution of the preservative, and he may be assured that it will keep perfectly sweet for a month, and at the end of this time needs only to be rinsed in cold water to be prepared for cooking. The writer has kept a beef steak for that length of time in midsummer, and when cooked the most fastidious critic could not distinguish it from beef freshly killed.—G. W. D.

A CLUB AT SPIDER LAKE, QUEBEC.—A club has been organized to take possession of Spider Lake, Quebec, and other territory in Quebec and Maine. The membership will include Canadians and Americans, a number of Boston and New York gentlemen having already joined the club. The club house will be at Spider Lake, and a small steamer will be put in the lake. The club will rigidly protect the game and fish on its territory. Dr. Heber Bishop, of Boston, is one of the active workers in the enterprise.

MR. SMITH'S LION.—New York, August 12.—*Editor Forest and Stream:* May I extend, through your columns, to Mr. Griffin Smith, of Longmont, Col., my congratulations. The incessant warfare that he is waging on the mountain lions of Little Thompson shows him to be a man of pluck. His weekly contribution of 9ft. of solid lion must in time make the Little Thompson a safe place for timid mortals to visit.—CHESTNUTS.

UNCLE LISHA'S SHOP.—Auburn, Me., Aug. 9.—*Editor Forest and Stream:* I am much pleased that the author of "Uncle Lisha's Shop" is to give us some more of the same sort. Am afraid the excellent character and vernacular portrayals in those papers were not well understood. In point of absolute naturalness, they were simply unapproachable.—G. G. G.

QUAIL IN CONFINEMENT.—The Newark (N. J.) *Call* records that ex-Marshal Leggett, of Princeton, caught a pair of quail alive last fall, and has kept them in roomy quarters ever since. The hen laid eighteen eggs during June and hatched out sixteen chicks in July, after setting twenty-four days. The mother and children are doing quite well.

WATERBURY, Conn., Aug. 14.—At a meeting held Aug. 12, for the purpose of forming a club for the protection of game and fish, an organization was effected and the following officers elected: President, N. Wallace; Secretary, F. W. Whitlock; Treasurer, I. L. Atwood.—F. W. W.

"SHORE BIRDS" is a little paper-covered series of articles descriptive of the migratory game of the beach, giving haunts, habits, methods of capture, etc. If you are going out for snipe or plover, read "Shore Birds," and take it along in your pocket. Price 15 cents.

LAKE KOSHKONONG, Wis.—Club House, July 27.—Prospects were never better for fall shooting than at present. Teal, mallard, wood duck, jacksnipe, prairie chickens, etc., are plenty. The water is low and everything is favorable.—B. W.

HERE IS A NEW WAY OF PUTTING IT.—A Cresco, Iowa, correspondent says: "The music as played on pinnated grouse will soon sound the keynote."

ROCHESTER, N. Y., Aug. 13.—A fair supply of woodcock were found on the first, and several good bags were brought in by city men.—E. R.

ROBINS AND MEADOW LARKS are protected at all seasons in New York State.

Camp-Fire Flickerings.

"That reminds me."

186.

ONE night as we lay around the camp-fire, toasting our shins, somebody asked Uncle Dan to tell us about his narrrow escape from the biggest bear in the Coast Range.

"Well," he answered, "it was just this way. I was hunting along the East Fork, one wet day late in the fall, when I saw a bear up on the sidehill nosing around in the leaves after what few acorns had been left. I was sure from his size it was the "boss" that all the boys had been after so often, so I just says to myself, 'Old boy, if I can get a bullet into you out of Crazy Jane I'll have b'ar ile to lend sure.' I flickered away, and saw the bullet strike right under him; and the next thing I see was him coming down the hill toward me to see who made all that fuss. I knew it was no use trying to load, so I dropped my gun, skinned off my shot-pouch and powder-horn, and shinned up a young fir. Old boss got there just as I made the first limbs, and when I had settled comfortable like in a crotch, I looked down and see him settin' there lookin' and thinkin'.

"Pretty soon he commenced smelling around the gun, and then a new idea came into his head and he run to the shot-pouch, picked it up and put it on like a man; and picked up the gun and proceeded to load it. Gentlemen, when I tell you that was the most knowing bear ever in these woods, you may not believe it, but he was. He proceeded to load that rifle just as if he never got his meat at anything else. He first half-cocked it, knocked off the old cap, and blowed into the muzzle to see if the tube was clear; and finding it all right, looked up in the tree with a knowing wink at me, as much as to say, 'You keep this gun in a mighty good fix, partner; wait a minute and I'll show you how it shoots. Then he poured out the powder, struck the charger against the side of the barrel to make sure he had enough, put in a little more to make good measure, and poured it in, and pulled off a patch and went into the shot-pouch for a bullet. Gentlemen, I always thought what was good enough for me ought to be good enough for anybody; but, sir, that cussed old black bear was so particular about loading that gun that he looked over every bullet in that pouch before he found one that suited him; and when he put it on the patch in the muzzle and put the ramrod on it, it went down so slick and smooth that that old bear just danced, he was so pleased to find the gun in such fine fix inside.

"When he got her loaded, he put on a cap and then commenced trying the triggers, and sighting at knots and spots on the trees and letting it drop down by his side careless like, and then jerking it up quick like he seen something he wanted to shoot powerful bad. I knowed from the way he was handling it that it wouldn't take two shots to bring me out of that tree; but it was some comfort to think he would do it up neat and not make a botch of it. Finally he got the triggers to suit him and got used to the sights, stepped back, raised the hammer, and brought her up to his shoulder. Then I began to beg, but he didn't seem to pay any attention to it, and I made sure my time had come, when click went the hammer. I see in a minute what was the matter. He had got the caps off of the leather on the corner of the shot-pouch, and the rain that morning had wet them so they wouldn't go. He tried every cap on the string, but they were all wet; and after fumbling in the shot-pouch and not finding any, he set the gun down in a dry place, raised the ramrod an inch or two, took off the shot-pouch and powder-horn and hung them on the muzzle, and then stood against a tree thinking. All at once he started up and run off as though in a powerful hurry.

"Well, gentlemen, I slid down that tree, grabbed that gun, and shanked it home about as quick as you ever see anybody go, for I believed that bear had went off to borrow some dry caps, and if I'd been there when he got back it would have been bad for Uncle Dan."

Here some of the boys asked him why the bear didn't climb the tree.

"My boy," said Uncle Dan, "that bear wasn't a pot-hunter. What game he got he killed in a fair, sportsman-like manner; and sonny, let me tell you something else, when you see a fellow elbow his way into a crowd and try to spoil the poetry and romance of a story by asking questions out of his natural history book, you look out for that fellow—he'll catch trout with worms, he'll shoot both barrels into a bunch of quails and ground-sluice as many as he possibly can kill, he'll shoot a duck on the water, he'll"—but here Uncle Dan looked up and found his young friend had gone. LOLO.

UMPQUA FERRY, Oregon.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

MORE DEEP-SEA FISHING.

ANGLESEA, N. J., Aug. 12.—It is my dear and Rabelaisian friend, Tobe Hodge (Chas. McIlvaine), the author, who thinks the intense love for the sea, the deep attachment to the joys of forest and stream something akin to rabies. Tobe is right. Thus I was asked to take part in some summer festivities with "the boys" at the New Columbia hostlery on Tuesday evening last. I, unreluctant, consented, well knowing that a greater pleasure awaited me than listening to the lah-de-dah girls on the piazza thrum the light guitar and sing:

> "Row gently here my gondolier;
> Take day and night from woman's love,
> What angels we would be."

I felt sure that I could find my old piscatorial paradise (only nine miles from Cape May), where the matutinal cocktail might not irrigate the parched throat of the "strayed reveler," but where Capt. Ludlam, of the Life-Saving Service, awaited me with his darling Eva (she's a sloop), to skim the ocean blue out toward the Jesse Diverty, "where the black bass do creep." Alas for those who go down to the sea in ships (N.B.—That sounds like the Bible to me), for the Diverty is a wreck, a year old, a sailing vessel, cut down by a steamer; and for months the son of the Captain searching for news, took a sailboat out of Anglesea Harbor, and there he beheld the masts of his father's sloop, which he had helped to build, the hull of the vessel in thirty feet of water, and no soul ever came up to tell the fate. When the sea gives up its dead what a reckoning there will be. If fish have souls—don't Madame Blavatsky and Olcott say so?—I may get sight of some of the sharks who have swallowed my sinkers by mistake, thinking it a bladder fish. But to be serious—as if Montaigne could be expected to be serious during the dog days—I must return to my second advent at Anglesea.

When the festivities at the New Columbia were ended my horse awaited me and I started for a drive of fourteen miles across the "dreary, dreary moorland" toward Holly Beach (where the houses looked by moonlight like Dickens's Bleak House) and Anglesea. And such a ride. There were fourteen million mosquito bills presented during that ride—at least a million a mile. Over three miles of the road some adventurous reformers at Holly Beach have built a corduroy road over the moorland meadows at a cost of $40,000. (The fool-killer has been absent from Holly Beach lately.) Bumpety-bump, we went, while Hereford lighthouse (at Anglesea) looked like a pale, asthmatic light, one hundred miles away. That memorable ride ended at 3 o'clock in the morning, and I nearly broke down the doors of the Hereford House before the sleepy but jolly landlord, Weeks, got out of his shell and let us tumble into bed, where our visions were of bass, six pounders, and of mackerel by the thousand. When I rose the sun rose, or *vice versa*. I felt like a "daisy dipped in dew," and Ludlam says, "Where did you come from?" little expecting to see J. M. S. at that witching hour. By 7 o'clock it was "up killick and away." He who holdeth the winds in the hollow of His hand, never gave a joyful piscator a better day, and in one hour by dint of a little rowing and a semi-occasional capful of wind, we struck the bass ground, or rather the Captain said "Hard a lee," paused and let the sneakbox go over the side, as we spied two big corks which answered for a small buoy to mark the spot for the eye of skipper Ludlam alone.

Some ichthyologist must tell me why, in such a spot, there are millions of bass, while one has to go to Atlantic City for another such a spot, twenty miles away. Ludlam says it is because the bottom is of mud and gravel, and perhaps of coral, and the mollusks and crustacea do here most abound; on these the fish feed. The water is sixty feet deep and the bait menhaden, cut up and cured with salt. My line touched bottom. I felt something gulping down my bait and I yanked up the line, and on two hooks I found seven pounds of blackfish.

I beat Skipper Ludlam in the counting, modesty bids me say, chiefly because he had to cut bait, while I gained on him by reason of having the most time. We started out to fill an immense fish basket holding two hundred bass. We filled it in one hour by the clock with ten minutes for lunch. Whisky is tabooed by our deep-fishing clubs, and beer tolerated in moderation only. We had six hard-boiled eggs, six sandwiches and three bottles of Tannahauser beer; not Dr. Grau (the great temperance advocate) nor the late lamented Gough would seriously object to this. My objection to strong stimulants in deep-sea fishing is a serious one. To professional men unused to exposure to the sun, on such a terribly hot day as to-day even a moderate use of stimulants is injurious, in my opinion. The ozone in the sea air is like balm in Gilead to me. Why then hanker after Gibson, or Overhotz, or "P.'s pure malt?"

Skipper Ludlam, the soul of honor, and like all true disciples of good old Izaak, innately a gentleman, "pointed with pride" at the ponderous fish basket, full to overflowing and gently said, "Let's seek the boys!" But at the first flirt of the dory's oar over went one of the iron row-locks—and the Eva a mile away. Ludlam suggested that I paddle on one side while he rowed on the other. I reluctantly consented, but my too solid flesh (223lbs. in the Turkish bath) began to wet and at the end of the first half mile I threw down the oar-paddle and said: "Ludlam, this is too much like work for me; I call a halt!" He smiled a Jersey smile, a little sickly, and like Paolo Fransesca, "I rowed no more that day."

The sea was as smooth as glass and the stalwart sloop, the beautiful Eva, looked like a painted ship upon a painted ocean. Upon clambering over the vessel's side I lay down from sheer exhaustion, too much black bass. But imagine my pleasant surprise to see the deck covered all over with the shiny sides of the fresh mackerel, which after five years' absence had come from far Massachusetts down to the Jersey fishing banks thick as gravel in a fountain in July. The lure we caught them with was a small lead squid with a minute particle of mackerel bait, a piece from the white belly of the mackerel preferred.

Then I saw a sight I never saw before.

The sun shot down its rose-play of rosy light and "the scared flocks of sea gulls seaward flagged screaming," and far down in the crystal depth of the sea we could see ten thousand blackfish and as many mackerel, plain to the naked eye, struggling for the coveted morsel of bait. And I am bound to say the bass had the best of it, and the little mackerel shot, swift as the sun's rays, from the angry "spines" of the voracious and multitudinous sea bass. We fished till tired nature might have cried, "Wind up you lines." Wind 'em up we did and sailed for home. Net result of the day:

Of black (sea) bass	375
Of mackerel	231
One 9ft. shark (killed with a navy revolver)	1
Bladder fish	5
One 10lb. rock	1
Flying fish	12
Porgies	33
Total fishes	658

This I unhesitatingly declare to be my best day's outing in five years, and forever, in my mind, fixes Anglesea as the piscator's paradise, where I propose to piscate many days twixt now and Oct. 1. Sept. 15 the king of the ocean comes, the big and gamy channel bass, or red drum, which in a square fight beats a salmon every time.

Anglesea has besides Weeks's Hotel ($2 a day) Mrs. Blakemore's Weldy Cottage, and at either place fishermen can have special rates at $1.50 a day. I am not interested in any hotel, but I would willingly guide the weary man of the world where he can enjoy nature, drink in the sea and find a fishing paradise. J. M. S.

Forest and Stream Fables.

BLUEFISH AND MENHADEN.

THE fact that the bluefish is largely dependent on the menhaden for its food is so well known to all who know anything of our salt-water fishes that no argument is needed to sustain the assertion. It is very curious, however, to see the different positions taken by the local papers on Long Island in regard to the destruction of the menhaden by the steamers which capture them by the hundred millions for their oil. The Greenport *Watchman* is one of the organs of the oil men, and often tries to prove that the capture of the menhaden in vast quantities has no effect on the food fishes, and other papers deny that the latter are ever taken with purse nets and either pressed in the oil factories or sent to market. In a late issue the *Watchman* tells of "a small quantity" of bluefish being taken by the steamer Sterling, which averaged less than a pound each, and were brought to Greenport and delivered to Capt. Willard Griffing, of the smack Eastern Star, by whom they "were barreled in ice and shipped to Fulton Market."

The *South Side Signal*, in commenting on this says that this is a little circumstance which the *Watchman* would rather not speak of and "instead of setting down the number taken as 'a quantity' it would have been a little more satisfactory if our friend had named about the number of wagonloads of fish that were taken in that innocent and accidental little 'haul.' No doubt there was 'lively work' with the steam scoops hauling them on board; no doubt there was 'lively work' in shipping them off; no wonder this 'quantity' of fish (of course presumably small) glutted the market and broke the price from 15 cents to 3. Yet in another column of the same issue of the *Watchman* we are gravely told that 'purse-nets do not take any considerable quantities of edible fish' * * * 'that the fishermen do not get enough of such fish to supply their own tables.' We have it on the authority of men who have been employed for years on the menhaden steamers that the catch of edible fish in the purse-nets is often enormous; that frequently weakfish, bluefish and sea bass are taken by the ton, and that not one-tenth of these fish so taken can possibly be marketed, and when it is possible to reach a market the fish are in such poor condition as to be almost worthless; that not one 'catch' in ten is ever reported; and that generally it pays better to let them go in with oil and manure stock and say nothing about it. It is time—high time—there was something said about it; it is high time this outrageous and cruel waste was effectually stopped!"

The *Signal* is doing good work in this matter of preserving the fishing of the Great South Bay, and of our coast generally, and naturally excites the ire of those whose interest lies in converting a valuable little fish, upon whose existence our market fishes are dependent, into oil and fertilizers, and it thus defines its opinions on this subject: "First, let the fish come into the bay; second, give them a reasonable chance to spawn; third, keep the inlets and lower channels free from every kind of obstruction, whether it be bunker steamers, old mowing machines or nets; fourth, then let the fish be free to whoever can take them. This, in our judgment, is the only way to break the present lock-out and put an end to the rapid depletion that threatens a total stop to fishing if it continues. With these simple and reasonable observances, there will be plenty for all, and every fisherman will get his share. Has the *Watchman* any better plan to propose?"

This is sound logic and will be approved by every one who wishes to see our bays and harbors swarm with the valuable fishes for which they were once famous, and it will be opposed only by those who have a pecuniary interest in the oil factories and menhaden steamers which are destroying the food on which the better fish thrive, and for which they seek our shores in the summer season. Shylock puts the case squarely before those who would rob and ruin him when he says: "You do take my life when you do take the means whereby I live," and this is what the oil men are doing to our best migratory fishes.

ST. LAWRENCE ANGLERS.

ALEXANDRIA BAY, Aug. 10.—[*Special*]—The annnal meeting of the Anglers' Association of the St. Lawrence River was held in the parlors of the Crossmon House, Alexandria Bay, with President J. J. Flanagan in the chair. Thirteen names for membership were presented. The report of the Secretary, W. W. Byington, of Albany, was presented in writing. An abstract is given below: "During the summer of 1885 it was deemed best to aid the State game protectors by employing a special protector to act under the direction of the officers of the Association, and Daniel Starring, of Alexandria Bay, was employed at a salary of $50 per month, with actual expenses. He makes weekly reports of all his movements. Prior to three years ago there was some excuse for violations of the law. People along the river were in almost total ignorance of the laws, but at present all residents, tourists, guides and net fishers know perfectly well what the law is. The law is now never violated except by men who intend to break the laws of the State. The time has come when more attention should be paid to prosecution, but it is difficult in waters so extensive and varied as those of the St. Lawrence to actually prove crime on the murderous net men. We know who they are, but it is difficult to get sufficient information to prosecute. We should employ skilled detectives from time to time to apprehend men who are so determined to ruin the river. The whole number who have paid money to the Association as members is 248. During the Association year of 1885, 163 paid annual dues, and since the last annual meeting 63 new members have been added to the list."

The report of William Story, of Albany, Treasurer, showed a balance of $408.61 in the treasury Aug. 10, 1885. There was received during the year $873.99, and the expenses amounted to $586.71, leaving a balance Aug. 4, 1886, of $495.89.

The Chairman of the Executive Committee, John M. Quimby, of Albany, made a brief report, after which the President stated that Gen. Rodney C. Ward, of New York, had offered the member of the Association taking the largest small-mouthed bass this season a first-class fishing rod.

After remarks by H. S. Chandler, of New York, upon the necessity of Canada's co-operation in regard to fish protection in order to secure the best results, the following was adopted: "Resolved, That a committee of two be appointed to confer with the Canadian Commissioners of Fisheries and ask them to co-operate in preventing net fishing in the St. Lawrence River, to make the open season for bass fishing begin June 1, and to assist in all matters pertaining to the preservation of fish in said river."

M. B. Hill, of the Clayton Fish Hatchery, stated that 4,000,000 fish, including trout, whitefish, salmon trout, California trout, wall-eyed pike, ciscoes and a cross between brook and salmon trout had been hatched this year. California trout to the number of 400,000 had been put in the river this year. The meeting elected officers as follows for the ensuing year: President, J. J. Flanagan, Utica; First Vice-President, Andrew C. Cornwall, Alexandria Bay; Second Vice-President, Gardner M. Skinner, Clayton; Secretary, W. W. Byington, Albany; Treasurer, Wm. Story, Albany. Executive Committee—John H. Quimby, Albany, Chairman; Charles W. Crossmon, Alexandria Bay; C. J. Hudson, R. H. Southgate, H. S. Chandler, Wm. J. Cassard, A. D. Williams, Wm. C. Harris, Geo. T. Hasbrouck, New York; R. P. Grant, Clayton; W. H. Thompson, Alexandria Bay; E. H. Britton, Toronto, Ont.; James Eaton, James C. Greenman, Utica; George L. Crandall, Binghamton; Wm. Hayden, Columbus, O.; H. H. Warner, Rochester; James T. Story, Albany; H. E. Morse, Clayton; Hon. Irving G. Vann, Syracuse; Judge D. C. Labatt, New Orleans and Louisiana Point; H. R. Heath, Nobby Island and Brooklyn; Advisory Counsel, Hon. Franklin M. Danaher, Albany. Messrs. Chandler, New York; Clarke, Jersey City, and Britton, of Toronto, are a committee to obtain the co-operation of the Canadian authorities with the Anglers' Association and other organizations in the matter of fish protection on both sides and the adjustment of dates for the close and open seasons.

The annual excursion of the Association was the sensation of the week and the most successful of the series of enjoyable reunions. This year the management was for the first time in the hands of the Alexandria Bay anglers. The excursion party started from Alexandria Bay and took in all the landings on the American side, and then they went to the picnic grounds at Island Mary via the Canadian Channel. This point is at the foot of Wells Island and is made an island by the little canal or shute dug by the oarsman through a low point to save three miles or more rowing in crossing from the American to the Canadian channels. It is a spacious and beautiful place. Tables 180ft. long with seats accommodated over 230 guests. Additions to the party from small boats, steam and sail yachts, increased the number of the party to about 450 people.

Editor Covert, of the Cleveland (O.) *Leader*, Judge Lebatt, a venerable jurist from New Orleans; Congressman Gilfillian of Pennsylvania; the Messrs. Hayden, the millionaire coal and iron men of Columbus, O., and Fairyland; Hon. N. W. Hunt, of Rye Island and Brooklyn; Vice-President Townley, of Round Island Park Association; Dr. Morris, of Albany; Capt. Doran, of Rochester; Capt. Matthews, of Toronto; Charles W. Crossmon, Manager Clemmes, Mrs. Hopkins, of Leavenworth, Kansas; and many other ladies and gentlemen who know how to give and to enjoy happy excursions of this kind, took pains to thank and compliment Messrs. Cornwall and Thompson and the offcers of the Association for the pleasures and good management of this reunion and excursion. Better still, a large number of new members were gained by the trip, and all are more interested than ever in the fish protection movement. At 2:30 P. M., over $3,000 worth of nets, captured by protectors Steele and Starring, were fired on a high point of rocks, under the direction of Chairman Quimby, of the Executive Committee. Fish pirates cannot stand many more heavy drains of this kind upon their costly but contraband gill, fyke, hoop and other forms of nets. Hereafter in addition to the confiscation of their nets they will be subject to fine and imprisonment. The members of the excursion party started for their various stopping places at 5 P. M., very happy and very weary with the day's exertions. The management of the excursion and reunion reflects great credit on the Alexandria Bay anglers.

MR. HIGH'S SALMON.—The following letter received yesterday by the Hon. W. H. Harper is sufficiently explanatory: "MIC-MAC SALMON CLUB—Dear Harper: I sent you by express a 30-pound salmon which I killed today in the Restigouche River after an exciting contest of two hours and three-quarters by the watch. He was hooked in one of the ventral fins, having missed the fly in rising, which gave him full play with all his strength. You may infer something of the nature of the contest when I tell you that he pulled my canoe, containing myself and two Indians, three miles down the river before he was brought to gaff, and fish and fisherman were almost equally exhausted when the struggle was over. I have had him frozen, and hope he will come through in good shape. Please distribute him among my friends on Prairie avenue, and if possible let them see him before he is cut up. I am fully persuaded that a man who has killed a 30-pound salmon has not lived altogether in vain. I trust that you may make as good a race for Congress as the fish did for the Atlantic Ocean.—JAMES L. HIGH. P. S.—He measures 41 inches in length."—*Chicago Tribune, Aug. 11.*

MASTIGOUCHE FISHING CLUB.—Montreal, Aug. 13.—A gentleman and his wife from New York, who have just returned from the Mastigouche lakes, where they have been staying for the last four or five weeks, report fine weather, very few flies or mosquitoes, and excellent sport with the trout. The lady succeeded in capturing one afternoon last week, four fine trout that aggregated 11½lbs. The largest weighed a little over 4lbs. Their weights were 4lbs., 3½lbs., 2½lbs. and 2lbs. They were caught in Lake Munroe, one of the reserved lakes belonging to the Mastigouche Fishing Club. The largest trout caught there this season previously was taken by Mr. Sinclair, of New York, and weighed 3½lbs. I was the fortunate recipient of the handsome 4lb. trout caught by Mrs. S., and can speak appreciatingly of its fine qualities. I leave for the lakes this P. M. to try and find its mate.—HENRY W. ATWATER, Secretary M. F. C.

INDIAN POINT, Chateaugay Lake, N. Y.—Trout fishing is fairly good, the guests of the house catch all they want to eat. A gent just came in from Plumadore Pond, and brought as a result of two hours' fishing with one rod (fly-casting) 23 trout weighing 8lbs.; they saw three deer. Deer are numerous here at the lake, and people are preparing to hound them in September.—R. M. SHUTTS.

THE CARP AS A GAME FISH.—Mt. Sterling, Ky., Aug. 6.—*Editor Forest and Stream:* Some time ago, a year or more, I saw an article from "Little Sandy," showing up the Guinea fowl as a game bird. Now I want to place on record the German carp as a game fish. Yesterday Rev. H. H. Sneed and myself drove out to a pond that I stocked with carp four or five years ago, when Kentucky had a fish commission. We wanted to try some of the new fluttering flies (and they are fine). We caught twenty-eight black sunfish and one German carp weighing 1¼lb. Mr. Sneed called out, "I have a large fish of some kind, come with your net." I rushed to his assistance and soon had him in the landing net. I saw at once it was a carp, and found the fly well hooked inside of his mouth. He made a powerful resistance and did not seem to get weary in a two minutes' struggle, when I scooped him in. The pond was constantly resounding with their splashes breaking after black flies. I think they will afford good sport if cultivated some. I hope "Little Sandy" will try them.—BIG SANDY.

AN ODD TRIO.—Chatham, N. Y., Aug. 12.—Certainly the curiosities of angling will never end, nor the most improbable fish stories cease to be told. The last is the true tale of R. H. Finch, a member of the Forest and Stream Club of this place. With a few angle worms he baited a line to which were attached three hooks, and cast them into the papermill pond near here. In a few moments he was surprised with the following trio: An eel 26in. long, a trout 11½in. long and a rock bass 5in. long on one line and at one haul.—A. J. F.

THE MOST SOUTHERN TROUT.—I owe to my friend, Professor Lupton, two specimens of a black spotted trout from a locality far south of any which has hitherto yielded *Salmonidæ*. They are from streams of the Sierra Madre, of Mexico, at an elevation of between 7,000 and 8,000ft. in the southern part of the State of Chihuahua, near the boundaries of Durango and Sinaloa. The specimens are young and have teeth on the basihyal bones, as in *Salmo purpuratus*, which they otherwise resemble.—*E. D. Cope in American Naturalist.*

A GOOD TROUT.—A brook trout weighing 2lbs. 3oz. was taken at Big Indian, Ulster county, N. Y., within half a mile of the hotel, last Saturday, by Mr. William Dubois. This is a large trout for those mountain streams and is therefore remarkable. Mr. Dubois sent the fish in to Mr. Charles T. Austin, who sent it to Mr. Blackford, on whose slabs we saw it last Monday. It was a male trout, and its protruding lower jaw indicated that many years had elapsed since it had absorbed its yolk-sac.

DENVER, Colo., Aug. 13.—Messrs. L. B. France and Geo. W. Kassler, of this city, have just returned from a month's fishing in Middle Park, Egeria Park and the head waters of White and Yampa rivers. They report having had a grand outing and found all the trout they could wish. They visited the noted, but almost unknown Trapper's Lake, the mountain-locked head of White River.—B.

ILLINOIS RIVER.—Lacon, Ill., July 24.—Sportsman's pleasures are quiet here at present. Our fish laws were better enforced this spring than ever before, with the result that we are having fine sport with the rod. A better string of fish can be taken to-day in the Illinois River than at any time for thirty years past.—BYRNE.

CAPE VINCENT, N. Y.—Mr. Thomas J. O. Donohue, of New York city, caught the largest pickerel of the season, 18lbs. 2oz.—J. O. P.

THOMAS L. PRITCHARD, well-known as an expert fly-caster, died last week at his home in Brooklyn, N. Y., aged 23 years.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. A. W., Toronto, Can.—We are unable to give the offsets of the canoes at present.

W. D. A. JR., Montclair, N. J.—Petrel was illustrated in the FOREST AND STREAM of Nov. 20 and 27, 1884.

HENRY, Phila.—A yacht 40 by 12ft. would cost upward of $3,000 if properly built and equipped. The Coot is 21ft. long, the Pilgrim is 21ft. waterline.

DICK DUBIOUS, Indian Point, N. Y.—Which is the proper term to use when speaking of the adornments of a deer's head, a pair of horns or a pair of antlers? Ans. The latter.

W. O. W., Charlottesville, Pa.—In the U. S. Fisheries reports I find this remark: "Fishculturists have made many efforts to hatch the eggs of the black bass and have never succeeded." Is that correct. Has not that art been discovered yet? Ans. It is correct. There is no inducement for practical men to try to take the eggs of black bass artificially, because they watch their nest and their eggs hatch well in a state of nature. Where waters are to be stocked with bass this can be done by introducing the fish themselves.

R. B. S., New York—1. The trout season in the State of New York closes on Sept. 1, except in the Adirondacks, where it is open until the 15th. 2. You may find black bass fishing near Stevens Lake, but we do not know of any. For these fish you need either a bait-rod or a fly-rod according to your style of fishing, although the latter can be used for bait in still-fishing but cannot cast a frog or minnow. Use a reel and silk line, bait with helgramites, minnows or frogs; see our reply in Aug. 5. 3. The party mentioned we cannot recommend.

CATBOAT WAVE.—The positions are not given definitely enough on the diagram to decide the point. B should have given way in time if possible, but if he was near the shore on port tack, without water to luff when A came on his quarter, then he could have hailed A to go about and give him room. Port tack must give way, and the fact of a collision is proof that the boat on the port tack was not far enough ahead to justify an attempt to cross, but no boat has a right to force another ashore, and if hailed in time A must give room to B to clear the shore.

F. L. C., Brooklyn, N. Y.—I claim that pickerel very seldom grow over 6lbs.; my friend that they often have been caught weighing 15lbs.; who is right? Please tell difference between pike and pickerel. Ans. Both of you may be right, as no doubt you are speaking of two species of the pike family. The names "pike" and "pickerel" are so applied to different fishes that it is difficult to say what fish is meant unless we know the locality where the fish is found. See "Adirondack Fishes," by Fred Mather, in our advertised book list, you will find this matter gone over at length.

A SOFT, VELVET TEXTURE is imparted to the skin by the use of Glenn's Sulphur Soap. For skin diseases it should be used freely. Never take a bath without it. It is also especially useful as a means of bleaching and purifying woolens, cotton, etc. Hill's Hair and Whisker Dye, black and brown, 50 cents.—*Adv.*

THE AMERICAN FISHERIES SOCIETY.

REMARKS AND DISCUSSION.

MR. FAIRBANK—Mr. President and gentlemen, I thought it might be of interest to say a word or two to the gentlemen here in relation to the matter of planting fish in waters where they are not indigenous. We have made very great strides in artificial propagation of fish, and have mastered all the difficulties of hatching fish, procuring the eggs, hatching and obtaining the young fry, and a great deal of work and a great deal of money has been expended in planting fish in various waters in all of the States. We started off with a degree of enthusiasm eight or ten years ago that was worthy of a better outcome than we have had, but it was done with more zeal than wisdom, I think. We have planted shad, for instance, in the Calumet River here, which empties into Lake Michican, and we have planted trout in the Kankakee River and brook trout in the streams of Iowa, and lake salmon in all the little lakes in Michigan and Illinois, and wherever there was a little stream we thought at that time all we had to do was to hatch the fish and put the young fry in there and we would have an abundance of fish. It is needless to say, at least I have not heard of any instance where any of these efforts have been successful. I was anxious to demonstrate the fact, and I decided to make an experiment in Lake Geneva, Wisconsin, which I did on a large enough scale to demonstrate thoroughly whether it was practicable. Lake Geneva is a lake about eight miles long and from half a mile to three miles wide. It is a very pure body of water, as blue as Lake Michigan. It is 185ft. deep, I have found in some place, but it averages 100ft. deep all over it, bold shores and very clean. There is not a bulrush or a lily-pad in it, and in every way is particularly adapted to the salmon-trout, because it seemed in all its characteristics just like the small lakes of New York State in which the salmon trout are indigenous—Onondago Lake, Cayuga Lake, and several of the lakes there. Not feeling sure about it, I wrote to Mr. Seth Green, who was an old friend of mine, to come out and spend a week with me, which he did, because I wanted his judgment in the matter; and we sounded the lake and found the depth of the water and we dredged the bottom. We caught all the small varieties of fish to see what food there was for the salmon trout. Lake Geneva is somewhat celebrated for abounding in the small fish known as the cisco. They are in that lake and one or two other small lakes of Wisconsin, and they are there in great abundance, living in deep water. The cisco is the natural food of the lake trout, and we therefore very naturally came to the conclusion that Lake Geneva was particularly adapted, if any lake on the face of the earth was, for planting and growing the Mackinaw trout, or lake trout. So I built a hatching house and I employed one of Mr. Green's men, Mr. Welcher, who was afterward superintendent of the Wisconsin fish hatching establishment, and went to work. The first year I bought the eggs from the New York State Commission, 250,000, and after that Mr. Welcher went every fall to Lake Michigan and took the supply of eggs. I have laid in about 500,000 each winter, and I pursued that faithfully and put in about 500,000 good, healthy fry in the lake every spring for five years; but I have never seen, and no one else, as near as I can find out, has ever seen the shadow or sign of a salmon trout in Lake Geneva, large or small.

A MEMBER—How deep is the water?

MR. FAIRBANK—About 150ft. or an average of 100ft.

QUESTION—And what is the temperature?

MR. FAIRBANK—It is a cold lake. I don't know.

THE SECRETARY—They ought to be there, Mr. Fairbank.

MR. FAIRBANK—Well, they are not there. Mr. Green said "They are there, but you don't know how to fish for them. They are in deep water." "Well," I said, "you come out and spend another week with me and we will fish for them." He said he was not able to come, but replied, "I will send my son out. I offered to pay all his expenses, and his son came out. I think that was two years ago, and he spent a week with me, and we spent the week fishing faithfully in the deep water with Mr. Green's methods, with a heavy sinker and leaders, and we fished the lake thoroughly and Mr. Welcher came down with some gill nets—that was three years ago. We set gill nets across the lake in four or five different places, and followed that up for a week, and we never took or saw one sign of a salmon trout. Now, the reason of it is this, and that is the reason I call the attention of you gentlemen to it. It is a subject we have got to look at fairly, and it is the main thing in planting fish, and that is, what food is there in the waters where you propose to plant the fish for the young fish or fry? Salmon trout would live in Lake Geneva if they could come to maturity. The cisco is there in great abundance, and would furnish a most excellent and natural food—the fish that they live on in Lake Michigan, but in looking at it I was satisfied that was the trouble, that all the young fish died. The fry starved to death because their food was not there. Now, in looking at it you will see what the trouble is. The salmon trout breed in the Great Lakes wherever there is a reef, and there you catch them in three, four, or five hundred feet of water, or less, wherever there are extensive reefs of rock there the gill nets are set and there the salmon trout are taken. Here are the Racine reefs, you sail over those reefs any time in the summer and throw out a trolling line and you take salmon trout. My theory of it is that on the face of that rock there is some animal life, animalculæ that the young fish stick their noses in and feed on until they are old enough to eat other fish. Lake Geneva has no reefs of rock. Where there are stones at all it is a boulder bottom, or it is a mud bottom, earth and clay, covered largely with leaves. It is surrounded to a great extent with timber and the leaves blow in every year. You try it and you will find on the bottom of Lake Geneva to be a layer of dead leaves, so there is evidently nothing there for the young fry to feed upon and the fry have all died, and that has been the case in hundreds of other instances. I have sent them to Crystal Lake. Mr. Dole who lives there is a friend of mine, and I have sent several hundred thousand for two or three years. I always gave him a lot to put in there. That is a small deep lake of perhaps three or four hundred acres, very pure water, and very clear, but there never has been a young fish seen and I think it is money and work thrown away and that it is utterly useless to hatch fish and put them in waters unless we know to a certainty that the food for the young fry is there. I made still another experiment in the same line by going into one of the neighboring lakes near by in Wisconsin, and taking a large amount of the spawn of the wall-eyed pike and I brought those down and hatched millions of them, and put them into Lake Geneva, and there never has been a wall-eyed pike seen there. Evidently there is nothing for those young fish to live upon. They breed and live and thrive where all the conditions are right for them, or in trout lakes where they are indigenous and there is something for the young fish to live upon. You may take the fry and put them into waters where there is no food for the young fish and you will never have any result. This is a thing we might as well look in the face and understand that that is useless work. Now, see the work of the Iowa Commission, and they did a great deal, they took a great deal of spawn, salmon trout, I don't know where they deposited them—all over Iowa—but I have yet to learn that one has appeared. The same way I did with whitefish. I took about an equal number of whitefish as lake-trout, taking the spawn the same time of year and hatched about as many. I suppose I put into Lake Geneva 2,500,000, both of whitefish and lake trout. I was determined to make the experiment thorough enough to demonstrate that one question, whether these small lakes could be stocked with the better classes of food fishes where they were not indigenous to the waters. I knew that of course by putting a few thousand in a lake occasionally, or every year, five to ten or twenty thousand, was not enough to demonstrate it. They could easily be destroyed; but by putting enough in, piling them in year after year, it would demonstrate it, and I spent ten or twelve thousand dollars in the experiment. I think this is a question that is very vital for us to consider in our work hereafter—what there is in the waters where we propose to put fish for the young to live upon, and I apprehend there is not much to be gained in trying to plant fish in waters where they are not indigenous, or where they have not been some time. I also procured from Professor Baird and hatched perhaps half a million of California salmon the same seasons that I was hatching the others, which I deposited in the lake; but there is a little stream entering Lake Geneva—the lake is fed by streams. There is really no inlet to it except the springs around it, but at the upper end of the lake there is about a mile of low land, and the springs running down through make a little creek. I deposited the young California salmon in those little streams, little springs, and they ran down into this creek. Some of them I kept—perhaps fifty to one hundred thousand, about half of the amount I hatched, I kept from the streams until they were yearlings, and then turned them out, and we have taken occasionally a California salmon, but they are not at all plenty. For the last two years there has not been any taken. Three years ago a boy took one, a very fine fish, which weighed twelve and three quarter pounds, as handsome a salmon as I ever saw anywhere—showing that salt doesn't enter into the question at all as to the life of the salmon; that they will grow just as well in fresh water as in salt if they have enough to eat. There is an abundance of food there, and the California salmon are a very hardy fish. I have no doubt if I had put as many California salmon into Lake Geneva as I did salmon trout that we would had more of a result from it, still I don't apprehend that they would do much. I think a lake of that size and purity of water, and with all the food there for the maturing of fish, the California salmon might be made to flourish there if we had two or three miles of good gravel bottom stream in which they could spawn. I found in this little stream which runs up through the marshy meadow, very low ground—it is only a small stream, and the bottom is mud and the water is very cold but sluggish—I found in there one day four or five large salmon that would run 8 to 10lbs., splashing around up in there—it was evidently their spawning season—looking for a place to spawn; but if they did lay their eggs they sank down in the mud and were lost. There is no place there for them to hatch. I couldn't get any spawning ground for them. I also made an experiment in brook trout in these little streams, springs around those hills, and in this creek running down there, and established a fish farm up there, quite a trout pond, and stocked this little stream. That is eminently successful, because in the stream, in the weeds and growth in the bottom they are alive with the natural food of the brook trout, the little fresh-water shrimp, and now that mile and a half of stream running through this marsh is full of brook trout, as fine trout as I ever saw. In fact, I never saw fatter and finer brook trout than I find in there. I can go in there any time and take twenty-five or thirty trout in an hour or two. That experiment has been eminently successful, because the food is there for the fish. I thought I would give you gentlemen the benefit of my experience. I have never written anything about it, because it was a good deal of a question in my mind whether I ought to do it and whether I ought to discourage the attempts that might be made; but I am so thoroughly satisfied that it is utterly useless that I think it should be made public.

MR. DUNNING—Mr. Chairman, I would agree with Mr. Fairbank in regard to Geneva Lake. He has taken a great deal of pains in stocking this lake, and it is as beautiful a lake as you ever saw in your life, and it is true, as he says—I have been there—that it has bold shores, deep water, and it would seem as though it was the most perfect place that ever was made for lake trout, but it is also true that they are not there. I am intimate with Mr. Fairbank and know about this matter, and there was no success whatever in the experiment, and it was very discouraging. Mr. Fairbank has done more to stock the inland lakes than any man I know of in the country, but I am satisfied, and I think Mr. Fairbank is, that it is not the fault of the water, but it is the want of fish food. Now, Mr. Forbes in this State, Professor Forbes, told me, in a conversation with him at our place in Madison, we had a great epidemic among our fish there the summer he was there and he came there to investigate it, the perch died by the hundreds of thousands, and when he was there we were talking about this same thing, and he dredged in our lakes to find the fish food, to see of what it was composed, to see if that was the cause of the epidemic in the fish. In the conversation he said to me, "Mr. Dunning, I find in dredging in one haul more fish food than I would in Lake Geneva." It is mere nothing there, and the cause of the fish not doing any better I think is for the want of the food. Now, Mr. Fairbank, in the lake you speak of, you will find your fishing is rather crude for a body of water as large as that.

MR. FAIRBANK—There is good black bass fishing there.

MR. DUNNING—They are not as plenty as they should be and they lack food, and it is a lack of the food more than anything else.

MR. FAIRBANK—Oh, there is an abundance of food for the black bass and for the other fish that are indigenous to the place.

MR. DUNNING—Now, in our lakes, Madison, we are surrounded by lakes there, we have had the lake trout annually and they were put in. We got discouraged because they were put in in unlimited quantities and we didn't see any result, but we continued to put them in and they began to show themselves. A year ago last season, and this last season, and this winter they have been caught in quite good numbers because people have learned to know how to fish for them. There have been a great many of these fish caught by people who didn't know what they were and they put them back, supposing they were dogfish, not being a fish they had been in the habit of seeing in our waters. Last fall during the spawning season of the trout I took as many as five that were partially digested from the stomach of a pickerel from half a pound to nearly a pound. I took five. Now I account for that in this way. The trout were spawning at the time and the fish took advantage of it and took them.

MR. FAIRBANK—Have the fishermen taken any salmon trout of any size in your lakes?

MR. DUNNING—Oh, yes, weighing 3lbs. to 3½lbs.

MR. FAIRBANK—That is very encouraging, but your lakes there bear out what I said. I think you have some lime formation and rocks.

MR. DUNNING—Yes, and some sandbanks. So I want the convention, as well as Mr. Fairbank, to think that Wisconsin inland lakes will produce fish—that is, the trout. There is no question about it.

MR. FAIRBANK—I have no doubt there are lakes where the food will be found. As I say, you find a lake where the proper stone formation exists and you will undoubtedly find food for them; but I think in the majority of the small lakes it would be utterly useless to put lake trout in them. I have never heard what the success was there at the Madison lakes. I knew something had been done there, but not the result. So, if you have succeeded there you ought to go on and put in a very large amount of them every year.

MR. DUNNING—As remarked, it requires different fishing to fish for the lake trout than for the salmon.

MR. FAIRBANK—Yes, you have got to fish for them in deep water.

MR. MATHER—Mr. President, there is one thing that strikes me that is a little singular about Geneva Lake, and that is this, as I understand it, the food of all these young fishes belonging to the salmon family, including the brook trout, the lake trout, etc., which are all grouped in one family, there are only three classes of food which they feed upon; one is the small crustaceans, another is the insects and flies on the surface, and the third is the larvæ of those flies and worms in the water, and they all feed upon that class of food, and if there is food in Geneva Lake for the brook trout and for the California salmon, I do not know why the lake trout should not be found there also.

MR. FAIRBANK—The brook trout and the California salmon were put into this little stream up above, and there is where they found their food. There is insect life of course that the cisco feeds on. The young of the cisco find their food there. I don't know what it is.

MR. MATHER—It rather surprises me that there is food for all these and none for the lake trout.

MR. TOMLIN—Up within a few miles of Duluth some years ago some very wise men petitioned for the deposit of two hundred of these salmon trout, just as Mr. Fairbank speaks of—seven years ago. Now, I have been up to the lake several times and fished there, especially to see if there was any chance of getting these fish, and I was puzzled beyond my comprehension to understand why in seven years there had not any of them turned up. I thought surely in that seven years there would have been some young ones taken. As Mr. Mather said, I think the salmon family live all the way through on the same kind of food, and if there was food for the brook trout there would be for the salmon trout. Now, after the first plant of two hundred and fifty thousand was put in, the next year they put in another plant of two hundred and fifty thousand, so there has been five hundred thousand put in there. This lake I speak of has all the properties of a good lake for fish, except the limestone formation. It is boulders there, but any quantity of lily-pads and what are called fresh water plantain, and in addition there are millions of chubs or shiners, and just as soon as you get the small fish over the preliminary stage of their existence there is plenty for them to live upon. But in that seven years I have yet to hear of one salmon trout being caught. I have wondered a great many times why it is so.

MR. FAIRBANK—I think you have got to have the rock formation.

MR. CLARK—I think there is one point that they all overlook—something I have been working on two or three years, and perhaps other fishculturists, and that is we are planting our brook trout, salmon trout, young salmon and all of that class of fish in new waters too young. They should be grown or partially grown before we plant them. Another point which goes to prove that you get results quicker is, that wherever you have a hatching house on a stream that trout will live in it at all, you will get that stream stocked ten times quicker than any that you plant with fry, because your partially grown fish are always getting away. Now, to stock new waters which are not trout streams proper, I think the way is to put the fish in from from four months to six months, up to a year old; then you have a good stout healthy fish that has got something to live upon until it can accustom itself to the new class of food.

MR. TOMLIN—I would like to ask Mr. Clark to come back to the subject which Mr. Fairbank started on—is it possible to stock waters which are not indigenous to salmon or trout with trout or salmon, and make it a success?

MR. CLARK—Certainly it is possible, because it has been done.

MR. MATHER—In regard to this matter which Mr. Tomlin has just brought up and the question which he asks Mr. Clark, about stocking with fish which are not indigenous to the water, I will say that within the past few years this lake trout, whose natural habitat is the great lakes and the small lakes of New York, has been introduced into Virginia. Col. McDonald has had success with them at Wytheville, and all of us who know anything about the distribution of this fish, know that our lake, or salmon trout, never existed in Virginia in a state of nature. I am now hatching for Professor Baird one hundred and fifty thousand of these lake trout, which he has requested me to keep on Long Island for four or five months, in accordance with Mr. Clark's theory, and then distribute according to his order in the fall, and he tells me that Col. McDonald says that these lake trout will bear warmer waters than any of our salmon. That is not my experience. I have always believed them to be the most delicate in regard to temperature of any of our fishes, and have believed they require colder water; at the same time I am trying it, I am anxious to see if they will live in our warm waters on Long Island. Col. McDonald has raised them in Virginia, where there is not much difference in temperature.

MR. CLARK—I have one hundred and fifty thousand that we are keeping for the United States Commission to-day from the same lot that Mr. Mather speaks about. Mr. Mather's one hundred and fifty thousand came from Northville. That is the purpose of the United States Fish Commission from now on. Now, one remark that Mr. Dunning just spoke to me about—he thought that if you keep them in the troughs too long they become too much domesticated. Now, there is the point—you want to keep them long enough until they grow so that you have a good healthy fish, I mean a fish of two or three months about. Keep them there as long as you see fit and put them in your pond and feed them. That is my idea of it, keep them until you get a good healthy fish. We have had at Northville probably twenty-five thousand trout from a year old and upward, and next week shall probably plant one half of those fish. Some of them are probably at least a foot long.

MR. FAIRBANK—I have no doubt that these fish, kept until they become a mature fish, say a year old, will live in Lake Geneva, because there is enough food for them there, minnows and young fish that they can eat; but I don't believe that if they spawn there that the young fry which they hatch would ever come to maturity, because I don't think there is any food in that lake for them. The object of my making these remarks is that gentlemen when selecting a lake to put trout in should look to the matter of the food for the fry, the young fish, and look particularly to the rock formation, the stone formation about it. I think that is the secret of it, and if you put your young fish in, keeping them until they are six months or a year old and then put them in a lake where there is no food for the fry, it will never amount to anything. These mature fish will grow, but there never will be a second generation.

MR. MATHER—What Mr. Fairbank has said about planting fish in suitable waters is no doubt true, and what Mr. Clark says about raising these young fish is also true, but it has been my experience that a young lake trout would prefer to have the tail of his brother or a fin from his brother to anything you can offer him. These little devils eat each other up.

DR. HUDSON—I would inquire if there are any more papers to be read? if there are not, of course the more discussion we have, the better.

Forest and Stream Fables have been reprinted with illustrations by the author, "Awahsoose," whose sketches are as felicitous as the text of the fables themselves. There are seven of the Fables, each with a full page picture, and specially designed cover and title page. Postpaid, 10 cents.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE WINTER MEET OF THE CANOEMEN.

RESPECTFULLY DEDICATED TO "FOREST AND STREAM."

A SONG I sing, and a call I ring
To the brethren bold and free,
Who swing their blades by the cypress shades,
Or the foam of the surging sea.

Whose trim craft glide on the sluggish tide
Where the white magnolia gleams;
Whose paddles flash where the currents dash
Of the Northland's crystal streams.

Whose shadows lie where the brook trout fly
In the still, dark pools to hide;
Who, deep in the brakes of the Southland lakes,
In their long, light "cooners" glide.

By rough ice-pack, in the frail kayak,
Or in tropic swamps who search;
Who the waft display of the A. C. A.,
Or paddle a Micmac birch.

To each and all I would send my call,
Who cruise in the light canoe;
To breeze or gale who can trim the sail
Of a craft that is staunch and true.

Then list ye all to the sounding call,
As it rings from land to land,
Through the mystic rites of the press and types,
And the arts of the printer band.

'Tis a call to meet when the snow and sleet
Of the storms whirl wild and high;
When the white waves roar on the sounding shore,
With the wild winds shrieking by.

And fear you not for a dreary lot,
When answering back my call;
For the noble meet of our mighty fleet,
There's a camp that is known to all.

Our flag, that flies 'neath the gladsome skies,
O'er the foam of the bounding wave,
We vail to the blast, when the winters cast
Their snow on the summer's grave.

By wave or wood, we have sought the good
Which comes to the outer's call;
When the snows shall beat, there's a rousing meet
In FOREST AND STREAM for all. K.

JUNE 18, 1886.

THE A. C. A. AND THE CRUISERS.

THERE is of course a great difference of tastes among canoeists as among all other bodies of men, and while the majority of canoeists hold some articles of faith in common, they are divided by the line, largely imaginary, which some draw between cruising and racing. It is the firm belief of some of our most energetic cruisers that the aim and the end of the A. C. A. is racing, and though they will not visit the meets and see for themselves how prominent the cruising feature is there, though the racing naturally makes more show on paper, they are none the less positive in their position. Naturally at a meet the racing attracts all the attention. A crowd are waiting on the hillside to see a man come in ahead in a race and not one of them cares to go over to the grove beyond and see the snug white tents and smoky fireplaces. If they did there is nothing special to attract attention, nothing but what they have often seen, nothing to write about and nothing to wave their hats and hurrah over. Some thirty men do all the racing, but there are in camp six or eight times that number who are enjoying the best part of canoeing, the quiet social side that we all go to camp for, even if we do enjoy a few days of friendly racing.

For the next three or four weeks our columns will be full of the meet, and naturally the racing, in view of the international contest, will monopolize a large part of the space. No doubt this will bring some protests from the absent cruising men, and the annual complaint against racing and racing machines will be heard. Now, before we come to the races we will try to show what the A. C. A. is doing, and chiefly through the Commodore of this year, a man who owns a racing canoe and who is following up the work done by last year's Commodore, also a racing man. The following directory of water courses has been compiled by Commodore Rathbun from the list of last year, with new routes added. The list is headed by the following notice:

The following list of cruises and references is hereby published for the benefit of the Association. The members mentioned have consented, in so far as they are able by correspondence, to give information regarding the cruises to which their names are appended. Applications to them should specify in concise form the information desired, and must have the A. C. A. membership number appended thereto. All members who may have had experience of cruises other than those named, and who are willing to give information regarding the same, will report to the Commodore. Many references and minor cruises in addition are on record, and will be furnished on application to the Commodore. All members are especially urged to forward for reference the name of any cruise they may make hereafter, and it is hoped that the manifest benefit to all cruisers may induce all unattached canoeists to enroll themselves under the A. C. A. burgee.—F. S. RATHBUN, Commodore A. C. A. (Deseronto, Ont., June 1, 1886).

CRUISES AND REFERENCES.

Adirondack Lakes.—Henry A. Harrison, Newburgh, N. Y.; I. F. West, Watertown, Dak.; Frank A. Jones, Box 1317, New York city.

Allegheny River.—James K. Bakewell, Washington, D. C.; E. D. Wetmore, Warren, Pa.; Geo. A. Howe, 110 Diamond street, Pittsburgh, Pa.; W. H. Rea, 134 Water street, Pittsburgh, Pa.; J. P. Jefferson, Warren, Pa.

Atlantic Coast—North.—A. S. Flint, U. S. N. Observatory, Washington, D. C.; R. B. Burchard, 24 West Fortieth street, New York city; C. Murphy, Salem, Mass.; S. R. Stoddard, Glens Falls, N. Y.

Atlantic Coast—South.—N. H. Bishop, Lake George, N. Y.; Dr. Chas. A. Neidé, Schuylerville, N. Y.

Black River and Lake.—J. C. Wilson, Watertown, N. Y.

Blackstone River.—E. M. Clarke, Box 351, Providence, R. I.

Bog River.—L. P. Hale, Canton, N. Y.

Central New York Lakes.—A. H. Siegfried, 47 Tribune Building, New York city.

Chaleur Bay—Rivers Emptying Into.—R. F. Hemenway, 38 Fourth street, Lowell, Mass.

Champlain Lake.—William W. Cooke, Whitehall, N. Y.; Wm. H. Falkner, 36 Tulpehocken street, Germantown, Pa.; Dr. Charles A. Neidé, Schuylerville, N. Y.; Walter H. Larom, Stafford Springs, Conn.

Charles River.—John Boyle O'Reilly, Boston, Mass.; Chas. S. Clark, 8 Oliver street, Boston, Mass.; E. M. Clarke, Box 351, Providence, R. I.

Chateaugay River.—W. H. Rintoul, 6 Hospital street, Montreal.

Chautauqua Lake.—George A. Howe, 110 Diamond street, Pittsburgh, Pa.; J. P. Jefferson, Warren, Pa.

Chemung River.—A. H. Siegfried, 47 Tribune Building, New York city.

Cœur D'Alene Lake and River, Idaho.—Lucien Wulsin, Queen City Club, Cincinnati; Frank N. Beebe, Columbus, O.

Concord River.—John Boyle O'Reilly, Boston, Mass.; F. H. Pullen, Lowell, Mass.

Connecticut River, Upper River.—John Boyle O'Reilly, *Boston Pilot*, Boston, Mass.; T. J. Hand, Jr., Sing Sing, N. Y.; L. Q. Jones, Hartford, Conn.

Connecticut River—Springfield to Sound.—Dr. George L. Parmele, Hartford, Conn.; C. M. Shedd, Chapin National Bank, Springfield, Mass.; F. A. Nickerson, Box 1296, Springfield, Mass.; W. B. Davidson, United States Bank, Hartford, Conn.; Emil C. Knappe, Springfield, Mass.

Cumberland River.—Orange Frazer, Wilmington, O.; R. S. Withers, Fairlawn, Lexington, Ky.

Cuyahoga River.—W. H. Eckman, Cleveland, O.

Delaware River and East Branch.—Grant Van Dusen, Rondout, N. Y.; Charles C. Hitchcock, Ware, Mass.; William M. Carter, Trenton, N. J.

Delaware River and West Branch.—James L. Greenleaf, School of Mines, New York City; Robert Shaw Oliver, Albany, N. Y.; R. W. Gibson, Albany, N. Y.; W. B. Greaves, East Orange, N. J.

Florida Waters.—S. D. Kendall, Tarpon Springs, Fla; C. Kirk Munroe, 140 Nassau street, New York City; Dr. C. A. Neidé, Schuylerville, N. Y.; H. L. Willoughby, Newport, R. I.

Gananoque River and Lakes.—G. O. Totten, 431 Broad street, Newark, N. J.; G. G. Hutcheson, Brockville.

Genesee River.—Matt. Angle, Rochester, N. Y.; H. L. Ward, Rochester, N. Y.

George Lake.—Wm. W. Cooke, Whitehall, N. Y.; Dr. Charles A. Neidé, Schuylerville, N. Y.; Robert J. Wilkin, 148 Henry street, Brooklyn, N. Y.

Georgia—Gulf of (British Columbia).—J. C. Haines, Seattle, Washington Territory.

Georgian Bay.—B. W. Richards, Brockville, Ont.; J. L. Weller, Peterboro, Ont.; J. E. Watson, Fourth and Holden aves., Detroit, Mich.

Grand River—Ontario.—J. N. McKendrick, Galt, Ont.; Collin Fraser, 28 St. Mary street, Toronto.; Edwin Fowler, 729 Sixth ave. New York City.

Hackensack River.—Robert J. Wilkin, 148 Henry street, Brooklyn, N. Y.

Housatonic River.—Wm. L. Aldin, *Times* Office, New York City. A. Jarratt Lewis, 267 Newburg street, Boston, Mass.; G. Livingston Morse, Box 700, Yonkers, N. Y.

Hudson River.—Fort Edward to Albany.—Dr. Charles A. Neidé, Schuylerville, N. Y.; Nate L. Smith, Newburgh, N. Y.; W. B. Wackerhagen, Albany, N. Y.; F. L. Mix, Albany, N. Y.

Hudson River—Albany to Newburgh.—Grant Van Dusen, Rondout, N. Y.; Nate L. Smith, Newburgh, N. Y.; C. Bower Vaux, 34 Cortlandt street, New York City.; W. G. Adams, Albany, N. Y.

Hudson River—Newburgh to New York.—E. A. Hoffman, Jr., 4 Warren street, New York City; Jas. L. Greenleaf, School of Mines, New York City; C. Bower Vaux, 34 Corlandt street, New York City; R. J. Wilkin, 148 Henry street, Brooklyn.

Ipswich River.—Clarence Murphy, Salem, Mass.

James River.—Lucien Wulsin, Cincinnati, Ohio; A. H. Siegfried, 47 Tribune Building, New York City.

Kennebec River.—Dr. Chas. A. Neidé, Schuylerville, N. Y.

Kentucky River.—R. S. Withers, Fairlawn, Lexington, Ky.; N. B. C. Comingo, East Liberty, Pittsburgh, Pa.

Long Island Sound.—Wm. Whitlock, 37 West 22d street, New York city; R. B. Burchard, 24 West 40th street, New York city; W. P. Stephens, Box 562, West New Brighton, S. I.; Walter H. Larom, Stafford Springs, Conn.; Dr. G. L. Parmele, 17 Haynes street, Hartford, Conn.; Emil C. Kappe, Chicopee N. Bank, Springfield, Mass.

Maine "Wilderness."—Chas. C. Hitchcock, Ware, Mass.; Dr. C. A. Neidé, Schuylerville, N. Y.

Memphremagog Lake and Tributaries.—Wm. Whitlock, 37 West 22d street, New York city; Wm. L. Alden, *Times* Office, New York city; Jos. G. Walton, Sherbrooke, P. Q.; G. Livingston Morse, Box 700, Yonkers, N. Y.

Megantic Lake.—Dr. Chas. A. Neidé, Schuylerville, N. Y.; Jos. G. Walton, Sherbrooke, P. Q.

Menominee River.—I. F. West, Watertown, Dakota.

Merrimac River.—John Boyle O'Reilly, Boston, Mass.; C. F. Smith, Box 188, Lawrence, Mass.; Sigourney Butler, Quincy, Mass.; Clarence Murphy, Salem Mass.; Frank H. Pullen, Lowell, Mass.

Mexico Gulf—North Shore.—S. D. Kendall, Tarpon Springs, Fla.; Dr. Chas. A. Neidé, Schuylerville, N. Y.; R. S. Withers, Fairlawn, Lexington, Ky.

Miami River—Great and Little.—Lucien Wulsin, Cincinnati, O.

Minnetonka Lake.—A. A. Siegfried, 47 Tribune Building, New York City.

Minnesota Lake.—E. H. Moulton, Minneapolis, Minn.

Mississippi River.—Lucien Wulsin, Cincinnati, O.; A. H. Siegfried, 47 Tribune Building, New York city.; F. D. Shiras, Dubuque, Ia.; Emil C. Ruff, Dubuque, Ia.

Mississippi River—Main.—Dr. Chas. A. Neidé, Schuylerville, N. Y.; S. D. Kendall, Tarpon Springs, Fla.; Geo. W. Gardner, Cleveland, O.

Mohawk River.—Chas. E. Bell, Amsterdam, N. Y.; Dr. Chas. A. Neidé, Schuylerville, N. Y.

Morris Canal.—W. M. Carter, Trenton, N. J.

Muskingum River and Tributaries.—W. A. Sprague, Newark, O.

Muskoka Lakes.—Hugh Neilson, Bell Telephone Company, Toronto, Can.; Dr. C. M. Douglas, Lakefield, Ontario, Can.; W. B. McMurrich, Toronto, Ont.

Mystic River.—Chas. S. Clark, 8 Oliver street, Boston, Mass.

Navesink River.—Robt. J. Wilkin, 148 Henry street, Brooklyn, N. Y.; W. P. Stephens, Box 562, West New Brighton, S. I.

New Brunswick Waters—Northern.—R. F. Hemenway, 38 Fourth street, Lowell, Mass.

Niagara River.—E. L. French, 224 Jersey street, Buffalo, N. Y.

Nova Scotia Waters.—J. M. Geldert, Jr., P. O. Box 144, Halifax, N. S.; Dr. C. M. Douglas, Lakefield, Ontario, Can.

Ohio River.—Dr. Chas. A. Neidé, Schuylerville, N. Y.; R. S. Withers, Fairlawn, Lexington, Ky.; A. H. Siegfried, 47 Tribune Building, New York city.; Emil Ruff, Dubuque, Ia.

Oneida River.—Verne W. Poole, Fulton, N. Y.

Ontario Lake—North Shore.—Hugh Neilson, Toronto, Can.; J. L. Weller, Peterboro, Ont.; F. M. Nicholson, 29 Rose street, Toronto, Can.

Ontario Lake—South Shore.—Matt. Angle, Rochester, N. Y.; Dr. Charles A. Neidé, Schuylerville, N. Y.

Oswegatchie River.—J. C. Wilson, Watertown, N. Y.

Oswego River.—Dr. Chas. A. Neidé, Schuylerville, N. Y.; Verne W. Poole, Fulton, N. Y.; J. B. McMurrich, Oswego, N. Y.; W. G. Thrall, Oswego, N. Y.

Otonabee River.—J. L. Weller, Peterboro, Ontario, Canada; E. B. Edwards, Peterboro, Ontario, Canada.

Ottawa River.—R. W. Baldwin, Privy Council Office, Ottawa, Ont.; Andrew Devine, 130 C street, Washington, D. C.; H. Wicksted, Port Arthur, Ont.

Passaic River.—I. F. West, Watertown, Dakota; A. S. Pennington, Paterson, N. J.

Ponchartrain Lake.—Dr. Chas. A. Neidé, Schuylerville, N. Y.

Potomac River—Lower.—A. S. Flint, U. S. N. Observatory, Washington, D. C.

Puget Sound.—J. C. Haines, Seattle, Washington Territory.

Quinte Bay.—J. L. Weller, Peterboro, Ontario; F. S. Rathbun, Deseronto, Ontario.

Raritan River.—I. F. West, Watertown, Dakota; W. P. Stephens, Box 562, West New Brighton, S. I.; E. A. Pennington, Paterson, N. J.

Rice Lake.—J. L. Weller, Peterboro, Ontario; F. M. Nicholson, 29 Rose avenue, Toronto.

Rideau Canal.—R. J. Drummon, Perth, Ontario, Canada; B. W. Richards, Brockville, Ont.; G. G. Hutcheson, Brockville, Ont.; G. S. Brough, Interior Department, Ottawa, Ont.

Sacandaga River.—Chas. E. Bell, Amsterdam, N. Y.

Saguenay River and Tributaries.—Dr. C. M. Douglas, Lakefield, Ont.; R. J. Wilkin, 148 Henry street, Brooklyn, N. Y.

Saratoga Lake and Tributaries.—Dr. Chas. A. Neidé, Schuylerville, N. Y.

Saskatchewan River.—Dr. C. M. Douglas, Lakefield, Ont.

Schuylkill River.—A. H. Siegfried, 47 Tribune Building, New York city; W. P. Stephens, Box 562, West New Brighton, S. I.

Scioto River.—A. H. Siegfried, 47 Tribune Building, New York city.

Severn River—Ontario.—Edwin Fowler, 729 Sixth avenue, New York city.

Shenandoah River.—F. R. Webb, Staunton, Va.

Shrewsbury River.—Walter Dormitzer, 27 East 74th street, New York city; G. Edward Wood, 37 West 54th street, New York city.

Snake River.—A. B. Taylor, P. O. Box 210, Minneapolis, Minn.

Spokane River.—Lucien Wulsin, Queen City Club, Cincinnati, O.

Stillwater River.—E. H. Coolidge, West Sterling, Mass.

Stony Lake and Connecting Chain.—J. L. Weller, E. B. Edwards

J. M. Roger and J. Z. Rogers, Peterboro, Ont.

Superior Lake.—A. B. Taylor, P. O. Box 210, Minneapolis, Minn.; J. E. Watson, Fourth and Holden avenues, Detroit, Mich.

Susquehanna River.—John Boyle O'Reilly, Boston, Mass.; Edward Hickey, Athens, Pa.; B. Fernow, Albany, N. Y.; C. Bowyer Vaux, 34 Cortlandt street, New York City.

St. Clair River and Lake.—J. E. Watson, Fourth and Holden aves., Detroit, Mich.; J. W. Hepburn, Toledo, O.; G. W. Gardner, Cleveland, O.

St. Croix River.—E. H. Moulton, Minneapolis, Minn.

St. Francis River.—Joseph G. Walton, Sherbrooke, P. Q.

St. John's River, N. B.—J. M. Geldert, Jr., Box 144, Halifax, N. S.

St. John's River—(Richelieu).—Wm. L. Alden, *Times* Office, New York City; Wm. H. Falkner, 36 Tulpehocken street, Germantown, Pa.; Dr. Geo. L. Parmele, Hartford, Conn.

St. Lawrence River—Upper.—B. W. Richards, Brockville, Ont.; L. L. Coudert, 3 Broad street, New York City; C. M. Shedd, Chapin Bank, Springfield, Mass.; J. C. Wilson, Watertown, N. Y.

St. Lawrence River.—R. B. Burchard, 24 West Fortieth street, New York City; Dr. C. M. Douglas, Lakefield, Ont.

St. Mary's River and Tributaries.—J. E. Watson, Fourth and Holden avenues, Detroit, Mich.

Taunton River.—Chas. Clark, 8 Oliver street, Boston, Mass.; John S. Wright, New Bedford, Mass.

Thousand Islands and Cruise to New York.—Warren L. Green, 66 Church street, New York; R. W. Gibson, Albany, N. Y.; Dr. C. A. Neidé, Schuylerville, N. Y.; L. L. Coudert, 3 Broad street, New York city.

Trent River.—E. B. Edwards, Peterboro, Ont.; Collin Fraser, 28 St. Mary street, Toronto, Ont.

Wabash River.—F. R. Webb, Staunton, Va.

Wallkill River.—R. W. Gibson, Albany, N. Y.

Welland Canal.—J. N. McKendrick, Galt, Ont.

White Bear Lake.—A. H. Siegfried, 47 Tribune Building, New York city.

Winnepissogee Lake.—Chas. F. Smith, Box 188, Lawrence, Mass.; J. J. Brainard, Laconia, N. H.

Wisconsin Waters—Northern.—I. F. West, Watertown, Dakota.

Wisconsin River.—Chas. E. Hitchcock, Ware, Mass.

Two points are noticeable in the list, it includes a very large portion of the waters of North America, and incomplete as it is, it forms a very valuable guide to the cruiser. The second point is that the names of all our racing men are found in it; Vaux, Gibson, Whitlock, Oliver, Van Dusen, Neidé, Weller, Munroe, Burchard, Nickerson. These men alone fill a large part of the list. On the other hand there are a great many real cruisers in the country who are conspicuous only by their absence. If they want to benefit cruising and aid other cruisers, the way is plain to them through such additions as each can easily make to the list of cruising waters. In this connection we quote the following letter lately received from a cruiser, not a member of the A. C. A., however: "You will please discontinue the FOREST AND STREAM when my present subscription expires. Formerly when the canoe columns contained many pleasant accounts of cruises I greatly enjoyed it, but now when I find them given up to notices of new clubs, rules and regulations, prizes, etc., I find nothing to interest me."

Some three years since the writer of this letter, contemplating a cruise in the South, wrote to the FOREST AND STREAM for information, which was furnished. Later on he reached New York and was taken ill on the eve of sailing, leaving his canoe here and returning home. At his request the FOREST AND STREAM attended to the canoe, taking it from the storehouse and reshipping it to the owner. This is a simple instance of the aid which cruisers, even though not members, receive from the A. C. A. and those associated with it in the promotion of canoeing. There may be others who would make the same complaint. To them we can say that though just now much space is required for A. C. A. business and races, later on they shall have accounts of cruises. Let the cruisers come forward and aid the A. C. A. and the FOREST AND STREAM with their logs, ideas on camping and their cruising information, and they will have no cause to find fault for any neglect by either.

NEW YORK C. C. CUP RACES.

MR. WALTER STEWART, R. C. C., who comes in place of Mr. Tredwen, bringing the latest Pearl, is now at Grindstone as the guest of the N. Y. C. C. On Sunday morning Mr. W. Baden Powell, R. C. C., arrived in New York on the Celtic and was met by Com. Munroe, Vice-Com. Stephens and Mr. Vaux, who escorted him to the club house. The fleet were already under way and Mr. Powell joined them in the Nethla, using the deck seat for the first time. Nethla, Psyche, Lassie, Kittiwake, Wanderer, Sea Urchin and two other canoes sailed down the Bay and along South Beach, some of the canoeists camping out, while others dined at Petler's. In the afternoon they sailed home, arriving at 6 P. M. On Monday night Mr. Powell started for camp in company with Vice-Com. Stephens.

Com. Jones, of Hartford, has been obliged to decline the place awarded him as one of the defenders of the Cup, and Messrs. Vaux and Whitlock will sail against Messrs. Powell and Stewart. The races will be held on Sept. 3, at 3 P. M. At 8 A. M. on the later day there will be a parade of canoes off the club house.

ROME C. C.—The Rome C. C. organized lately and elected the following officers: Commodore, W. R. Huntington; Vice-Commodore, E. Z. Peckham; Secretary and Treasurer, John S. Wardwell; Executive Committee, W. R. Huntington, E. Z. Peckham, John S. Wardwell, C. E. Williams and A. K. Adams. T. H. Stryker, J. M. Barton and T. J. Hook were made a committee on constitution and by-laws. W. R. Huntington was elected a delegate to the meeting of the American Canoe Association, which will soon begin on Grindstone Island, St. Lawrence River. The Executive Committee was instructed to complete the organization.

FIXTURES.

DOG SHOWS.

Aug. 24 to 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. Geo. H. Hill, Manager, P. O. Box 76, Cincinnati, O. Entries close Aug. 14.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Fred Hoey, Secretary, Box 2017 New York. Entries close Aug. 21.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville. Entries close Sept. 1.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, 14 Murray street, New York. Entries close Sept. 1.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel. H. W. Wilson, Secretary, St. John, N. B.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4006.**

CHIEFTAIN AND WANDA.

THE deerhounds Chieftain and Wanda are well known to all who attended any of the principal dog shows the past season. Both are magnificent specimens of the breed, and their owner, Mr. John E. Thayer, of Lancaster, Mass., may well be proud of them. Chieftain was whelped November, 1881, and is by champion Bevis (Paddy—Lassie) and out of Heather (Harry—Hilda). His winnings in Britain are 1st, Maidstone, 1882; 1st and cup, Warwick and Sheffield; 1st, Aston and Colchester, champion Crystal Palace; 1st, York, Darlington, Southport, Henley-on-Thames; and 1st and medal, Dundee, 1883. Champion Crystal Palace, 1st, York, Hull and Liverpool; 1st, special and medal, Edinburgh; 1st and special, Dundee, 1884. 1st and cup, Liverpool, and champion Crystal Palace, 1885. In America, 1st, Newark; 1st and special, New Haven, Boston, Hartford and New York, 1886.

Wanda was whelped June, 1884. She is by Gunnar (Hector—Leona) and out of Sheila (Torrum—Meg). Her winnings in England are 1st and cup, Liverpool, 1886. In America, 1st, Newark; 2d, New Haven; 1st and special, Boston, Hartford and New York, 1886.

CO-OPERATIVE BREEDING.

I HAVE often considered the question of co-operation in breeding dogs, by mutual agreement between amateurs, without the formalities and consequent expenses incident to the formation and carrying on of a club. There are ladies and gentlemen who loving the dog for the dog's sake, have neither the time nor the inclination to enter into the excitement of exhibiting, or, if desirous of doing so, are debarred by one or other of many various circumstances of a private nature. Those whose tastes lead and circumstances permit them to take part in the exciting life of the exhibitor, have the prospect before them of coveted prizes and reimbursement of heavy expenses in fancy prices for the produce of their kennels and in extravagant stud fees. I have not a word to say against those with the desire to compete at public shows for prizes, and have the time and means to indulge the fancy. On the contrary I consider the emulative spirit called forth in such competitions altogether admirable.

There is, however, nothing human that has not its drawbacks, and the conditions of shows seem to me rather to check than encourage breeders of a speculative turn of mind, who would be disposed to attempt the production of new varieties and the resuscitation of old ones but for the consideration that it would not pay. But even the "would not pay" argument is, I think, an error; the truth being that the profits would be deferred, for there can be no doubt that with the establishment of a variety possessing distinct characteristics it would be a mere question of placing it favorably before the public to insure its popularity with a very considerable section, for new varieties possessing merits of beauty of form or color, or of great usefulness, never fail to secure admirers.

The flat-coated retriever may be said to have been established by the late J. D. Hull, and improved upon by Mr. S. E. Shirley, the chairman of the Kennel Club, by the infusion into the strain of a double dose of the Labrador blood; and I doubt not the results have been profitable to both, and what is doubtless of far greater consequence to a gentleman in Mr. Shirley's position, the gratifying fact that as a breeder he has succeeded in establishing a variety of very distinct character, equally handsome and useful, and with which his name is honorably and indelibly associated. A deep interest attaches to the development of plant, bird, or animal toward a point previously determined on, and even the failures in our endeavors to reach it, although momentarily discouraged, really form incentives to further effort to the speculative breeder who has a clear conception of the end to be reached, and the will and unflagging determination to reach it. The dog is, of all our domestic animals, the most easily moulded in the direction of new varieties, from the fact that, widely different as they are—as is evidenced by the collection at the Royal Aquarium this week—yet those most divergent from each other breed freely together. There are not merely new varieties to be produced, but neglected breeds to be taken in hand, and very many foreign breeds, handsome and interesting, that by the mutual, though informal, agreement of amateurs, might be encouraged here, and bred by us till we have made them as English as we have the St. Bernard and the Newfoundland.

All I conceive necessary is that half a dozen or a dozen dog-loving people agree each to keep one or more dogs of a kind or kinds to be agreed upon for breeding purposes, the mating of them to be a question for friendly consultation and not regulated by any hard-and-fast rules of a committee of direction; for the object to be attained having been clearly defined and agreed upon, the only question left would be the best means of attaining it, and in the consideration of these means I think it is not unreasonable to expect that a multitude of counsellors would bring wisdom. There would of course be no kennels in common, but there would be no stud fees, and the selected progeny for further breeding would be kept among this association of breeders in aid of the general purpose, the other pups being disposed of at the will of the actual breeder.

Coöperation is a necessity in experimental breeding, except to the few who, by their wealth, can carry out theories of breeding on a large scale. In the case of the resuscitation of the Irish wolfhound, Captain G. A. Graham, working at first in friendly conjunction with General Garnier, was by circumstances compelled to carry on the work alone for many years, and partially succeeded in his object. If he had had a dozen earnest coadjutors the object would have been long ago attained.

I am aware I may be, and will be, called a theorist and a visionary, and so be it. I am content to believe that there are men who keep and breed dogs for love of the dog, and who take a fancier's and a scientific interest in breeding, and who can carry on the work without the incentive of gain, or the honors of the show ring; and, if I am right in my conjectures, I hope that such of your readers as entertain similar views to mine will express them in your columns, or if diffident about rushing into print, will communicate with me privately through you, if I may be so bold as to anticipate this courtesy from you.

There is no opposition in what I propose to any established institution whatever. On the contrary, such experimental breeding as I suggest would eventually prove a valuable source of increase to the diversity, and the interest and value, of existing clubs and shows.—*Glympicus, in Fanciers' Gazette.*

THE CACHE CREEK HUNT.

FORT SILL, Indian Territory.—*Editor Forest and Stream:* This club is organized on true sportsman principle, the dogs being of first importance, the horses next; while the riders (the officers and ladies of Fort Sill) get an immense amount of pleasure out of it, and claim the brush, which we hang upon our walls "to point a moral and adorn a tale.

The deerhounds, Douglas, Bruce and Hilda, are the pride of the garrison, as well they may be. Their royal lineage speaks in their proud step, their fine form, the perfect union of strength and grace, their wonderful eyes, soft as a deer's or flashing with the fire of excitement. Blood will tell; they disdain all association with curs of low degree, taking assured possession of a gentleman's fireside as though claiming their hereditary right as the descendants of a long line of illustrious ancestors.

Oscar, the father of Douglas and Hilda, was imported by Gen. W. H. Jackson, of Belle Mead, Tennessee, having been bred by H. S. Lucy, Esq., of England, from his famous dog Morni, whose mother, Hilda, was by Cole's Kieldar, Kieldar by Prince Albert's Hector. Mr. Cole was head keeper at Windsor Castle. The father of Morni, Old Torrum, was from the kennel of Gen. Hugh Ross, of Glenmoidart, the old Glengary strain. Morni was one of the three deerhounds entitled to be called "champion" by the number of his prizes, winning first at Birmingham, at Crystal Palace, Nottingham, Edinburgh, Manchester, etc. The father of Bruce was a Scotch wolfhound, and his neck, with muscles like iron, and his savage fighting qualities prove his fierce blood. With these Scotch deerhounds we have Hector, Topsy, Buck and Nellie, English greyhounds. They have great swiftness but hunt entirely by sight, while the Scotch deerhounds find a scent and follow it until they start the game, then run it by sight. They answer perfectly Plato's description of a good hound, "quick to see, swift to follow, brave to attack."

THE DEERHOUND DOG "CHIEFTAIN."—Owned by Mr. John E. Thayer, Lancaster, Mass.

The horses are trained for the hunt. When a wolf is started, at the shout of the leader, with a bound they are after the hounds. Through tha rushing air, over the sweeping hills they gallop, double with the dogs and head off, needing no bridle rein to guide, no spur but the excitement of the chase; all the rider is expected to do is to keep his eyes on the game and his seat in the saddle.

But the most important actor in this drama is the wolf. We may have our fine dogs, we may mount our fleet horses, and ride over the hills, but without finding a wolf it is like the play of Hamlet with Hamlet left out. These wolves (the coyote) used to abound in Indian Territory, but they are now fast disappearing. Their skins being valuable, they have been poisoned in great numbers. They are fast following the buffalo into the regions of the past. They are a prairie wolf, larger than a red fox, they are good runners, not so fleet nor so sagacious as the fox or the jack rabbit, but when brought to bay they are splendid fighters; only the bravest dogs will attack them, even when down, while many torn, bleeding evidences of their ferocity are borne from the fight.

The country around Fort Sill is well adapted for a chase. Broad sweeps of open prairie rise into hills and sink into broken valleys. Our meet is in front of the officers' quarters, where in the fresh morning air the dogs and horses are eager for the start. Here comes the master of the hounds, Mr. Horace P. Jones, the Indian interpreter; and we start off, the quick beat of galloping feet keeping time to the laughter that is half excitement, and to the snatches of song that some enthusiast gives us. But when we get into the field, all this is changed. We are deployed as skirmishers, riding at an easy trot, everybody silent and watching the dogs running a little in advance, their heads up, every sense seeming concentrated in the gaze of their bright eyes. Douglas puts his nose to the ground. He has a scent. Quickly the dogs and horses follow. One moment of intense surprised excitement. Then a shout, a bound, a mad rush of flying feet. All danger is forgotten. Watching the flying game and the pursuing dogs there is the intense interest one has in looking at a fine horse race, and added to that the exultant feeling. "All of it I saw, and part of it I was," Pell-mell over the prairie we follow until the wolf is brought to bay; then gather round silent spectators of the last act. The bleeding wounds of the dogs test their nerve and prove the wolf a worthy foeman. Then the hold upon its throat tightens; the tense muscles relax; the fierce light fades from the shining eyes, the lips close over the cruel gleam of the white teeth.

When a wolf cannot be found a jack rabbit is started to give the dogs and horses a run. They are swifter than the wolves and wonderfully cunning. How can they keep their wits about them, flying over the ground like an arrow from a bow, the terror of pursuing dogs following faster and faster? But cunning and strength and breath never fail. They double and dodge, give a quick turn when the dogs are almost upon them, gain ground, and you see that all this doubling and twisting has been a sharp trick to tire out the dogs, the cunning animal all the time having an objective point, at a distant hill; up it darts and is out of sight; but the dogs lose breath and drop behind.

We rest a few moments, giving our horses time to breathe, and refreshing the dogs' dry throats with water from the canteens carried for them. Then a start is made for fresh fields, and we ride back toward the Post, bringing our trophies with us. At least we always bag a charming morning ride and the exhilaration that exercise and fresh air give. And so we bid one another, and you readers of FOREST AND STREAM, a good morning, and may we meet soon again.

CHAI-NA-NETH-KIT; OR, ONE WHO HUNTS THE WOLF.

ENGLISH KENNEL NOTES.

XXXVI.

JUDGING from the decrease in the number of entries, exhibitors dreaded showing their dogs in this tropical weather at the summer show of the Kennel Club in the Royal Westminster Aquarium. This building is roofed with glass and the heat was quite up to hot-house form. One poor animal, a bulldog, expired on its bench. The arrangements were thoughtlessly carried out, the little dogs were benched in the cool annex, while the big breeds—St. Bernards, mastiffs, boarhounds, etc.—lay panting in the stifling atmosphere of the body of the building. There was more cavilling at the awards than usual even. This show will be recollected for the marvellous resuscitation of the Irish wolfhound. Eighteen entries made a good result for the labors of a specialist club that has in fact created a new breed and established a prize called the Irish Wolfhound Club's Challenge Shield, value £43. Taken as specimens they were a fine lot, colors all sorts, in appearance like large, massive deerhounds; in fact, this breed and Great Danes seem to have been drawn largely upon for material.

The shows come with dreadful haste after each other, and this must unfavorably affect the entries, as owners of prize kennels are not likely to bang their dogs about from show to show; it must tell in the end. This explains the comparatively small entry at Norwich, and to that another cause can be added, viz.: the excessive time it lasted—four days. It is too long to keep dogs on the bench in this weather. Of course, the show authorities promise that each dog shall be taken off the bench daily, but I have been to a good many shows and have never seen it done. For instance, who believes that this merciful regulation was carried out at the Aquarium, or at the Crystal Palace, where the show is held in the galleries? I don't. Here would be an opportunity for the Society of Prevention of Cruelty to Animals to interpose to some purpose. If not taking a dog off his bench for four days be not torture, then must such minor offenses, as cat-killing, crippling, etc. be termed comparative kindness.

The Prince of Wales' entries and visit to the show gave Norwich an extra interest. In most cases the Royal exhibits only got cards. This seemed to fearfully confound a foreign gentleman who was present on Wednesday. He informed his friends that if a distinguished personage honored a show in this manner on the continent and had his dogs treated with such disrespect, he would forthwith and forever withdraw his patronage. Fortunately that is one of the few things that we order better in this country.

Mr. C. C. Laurence's young bloodhound bitch, Chesterton Duchess, followed up her Brentwood success. The collie men were in a state of ferment about the winner in the open class being trimmed. Well, really, this righteous indignation is very proper, I dare say, and—but I was going to tell you some time back I bought a young collie from a Scotch breeder and exhibitor who was highly respected at that period. He showed me how to trim him for exhibition: it consisted in pulling out hairs from his head, ears, hocks, etc. Now at Norwich a dreadful fuss was made about this Angus Craig because the same operation had been performed with a pair of scissors, which, after all, said some, must have been less painful for the dog than plucking. What is the difference—what is an exhibitor to do? I like my dog very much, and I like winning prizes, but it seems I can't accomplish the latter and indulge in gentle treatment at the same time. My neighbors always know when my dog is going to a show.

The ten guinea special presented by H. R. H. the Prince of Wales at Norwich was given under original conditions. It was to be awarded to the exhibitor who obtained the greatest number of points, which were counted in this way: First prize 9 points, second prize 6 points, third prize 4 points, vhc. 3 points, hc. 2 points, c. 1 point.

The highest was obtained by Mr. Walker of Dewsbury. He had twenty-three entries. The Norwich classes would have filled still more poorly but for the glamor that hung round the royal cup.

I forgot in speaking of the Aquarium show to mention the first appearance of the brightest star in the collie firmament. Some twelve months ago, Sir John Gilpin Pirie, as his friends (and in the doggy world there are many well affected to him for his plain unvarnished integrity and sound character) please to term him in good-natured allusion to his equestrian feats, claimed at the Birmingham show a magnificent black and tan collie bitch named Matchless, by Rutland out of Beck, for £100! Soon after the pup sickened for distemper, and day by day the hasty bargain assumed a gruesome aspect. She pulled through with her life, but as

she has not been seen on the bench since, I fear her *beaux yeux* were left in the infirmary. She was mated to Eclipse, and when a beautiful litter was born her owner's heart was gladdened, and the "geuid" man was comforted in his conscience for the purchase money. About this time a friend rendered him "a good turn," and with impulsive and laudable generosity Mr. Pirie sent Captain Phipps one of the pups as an acknowledgment.

The giftling grew and thrived, and unostentatiously, without a *fanfare* of friendly approval and prepared press notices was benched, judged and won! Her owner had, with comical suggestiveness, named her Pitch Dark (Eclipse out of Match-less). She is a good-colored sable, with a coat in texture, fullness, undercoat and straightness that can only be called perfect. No sculptor could chisel a more collie-like head and ears. The prize lists of future shows lie at her mercy. It was common expectation that she would be claimed at her catalogued price (£100) before the show closed, and the only doubt was who it would be. It was Mr. Megson, the owner of champion Rutland. He is the pluckiest buyer of the day, and I doubt if he ever got better value for his money.

The collie rage has not yet abated, and it is quite probable that Mr. Megson's presence in the breed has something to do with keeping up the prices. He offered Mr. Bissell £250 for Pitch Dark's grandsire, champion Charlemagne, but it was refused.

Writing of collies reminds me that I have an inquiry lying by me from Mr. Clarence Bryant, of Hartford, U. S. A., who says he owns a collie by a dog named Ben Ledi, by champion Chance. Being desirous of extending the pedigree, Mr. Bryant says that he wrote to the breeder of Ben Ledi, a certain Mr. C. D. Nairn, "but for some reason the letter was returned." Mr. Bryant remembers I have referred to Chance in my notes, and asks me to "put him on the right track."

I will try. Chance appears in Vol. VII. of the K. C. S. B. under the number 9,419. Owner, Mr. A. Patrick, Narrowgate, St. Alnwick; color, black and white. Pedigree unknown. Second prize, Blaydon-on-Tyne. This entry is the only time that Chance appears in the K. C. S. B., and this is in 1880, by which time, as stated, Chance had won one prize. If he ever won prizes at shows held under K. C. rules after 1880 he should have been entered in subsequent volumes of the Stud Book. In Vol. XII. there is an entry of Chance III., the property of Mr. C. D. Nairn, Morton House, Lothianburn, Midlothian. Pedigree, by Chance (9,419) out of Blink Bonny. In 1884, I think it was, Chance, under two judges (Mr. Panmure Gordon was one of them), at Edinburgh beat some of the best dogs of the breed—Eclipse, Cocksie, etc. The award was ridiculous, as Chance at his best was never up to that form. Apart from the deplorable lack of judgment displayed, rumors of awkward import bearing upon the machinations of a certain exhibitor were met with throughout the town, and even found expression in anonymous letters.

Not long after this show it was announced that Mr. Panmure Gordon had purchased champion Chance, as he was called, at a high figure—some such fabulous price as £200 was given out for the *gobemouches* to swallow. Mr. Gordon probably felt he was called upon to back up his opinion and chose this manner of eating his award.

Mr. Panmure Gordon exhibited champion Chance at Brighton in June last year, "not for competition," but simply for advertisement, judging from the character of the entry, which occupied nearly a whole page of the catalogue. It began by giving Chance a pedigree of the Jack out of Jill style; but even this was better than nothing at all, and it was the latter I have shown he had in the official stud book. This is it: "Chance, by Rover out of Jess (!), is a most beautiful black and white; a splendid head, full of collie character; the smallest and best carried ears of any collie living. (That's modest!) He has an *immense long frill* (the italics are not mine), grand heavy coat, tail carried to perfection, well-built body, powerful loins, rare quarters, perfect legs and feet. He is also one of the best working collies in Scotland." One seems to hear the voice of a cheap-jack bawling this out and concluding: "Now then, ladies and gentlemen, likewise you blokes and blokesses, not forgetting little miss in the perambulator there, whaat price shall we say this lot!"

But he continues, "Winner of sixty-nine first and second prizes, including the following"—and then follows a list of tin-pot shows such as Glanton, Netherton, Cornhill, etc. Upon this he gives a list of successful progeny.

Well, the southern collie fanciers were pleased to see the dog, for his triumphant career had been carefully confined to the north. He was just a fair collie and nothing more, not by many points a first-rater. What Chance is worth is of no account to his owner, who is a wealthy man and can afford to please his fancy.

Other sufferers will enjoy Mr. Bryant's, "for some reason the letter was returned." The reason is all to plain, Mr. C. D. Nairn had fled—"goned avay in de evigkeit," and for manifold reasons, *bien entendu*, had left no instructions for forwarding his letters. He was what I heard an Italian organ-grinder describe a passer-by, who under the pretense of stroking his monkey's head took the halfpenny out of its mouth, "Ee vart you call vun 'wrong 'un!'"

I am much afraid I have not acknowledged a letter I received, I dare not say how long ago, from the Secretary and Treasurer of the American English Beagle Club. The contents have satisfied and pleased me. I have some beagle notes in one of my commonplace books, I will look them up and work them into one of my letters. This means of expressing my thanks and interest will, I know, please the Secretary.

With regard to the bulldog Tom Ball, Mr. Wm. Graham's statements regarding price, etc., are perfectly correct. Further than that I don't believe any statement made by Mr. Graham in a dog transaction could ever be described otherwise. To most exceptional opportunities for hunting up good dogs he adds the capacity of knowing them when he sees one. In this particular instance I am aware that Tom Ball's owner refused several offers of £100, asked one man £200 and later on rigidly stuck out for £150. When I in a previous letter said Tom Ball could be bought for £100 I was not speaking "without the book." Mr. Lyell probably changed his mind. After the cheap enormous advertisement he obtained by his clap-trap challenge and subsequent match with Rustic King the value of Tom Ball naturally assumed a different aspect and not even that most persistent of hard bargain drivers, Mr. W. Graham, could get him for a hundred.

On my last visit to the great "methropolis" I was dined by a doggy denizen of the masher's domain. After a perfect little meal at the Roman's and a fair share of "boy" (I am getting on well in this argot), we walked down the Strand to the Gaiety to see Miss E. Farren in "Little Jack Shepard." As we entered our box the curtain rang up on Act II. and the chorus sang:

Lillibulero! Lillibulero!
Since the time is growing shorter,
Lillibulero! Lillibulero!
For the king who's over the water.

I stepped back, picked up my hat, took in with a glance the distance to the door of the box, when—"Hulloo, where are you off to?" recalled my presence of mind and I dropped into a corner chair, conscious of a pair of eyes curiously and suspiciously fixed upon LILLIBULERO.

MASTIFF CHARACTER.

Editor Forest and Stream:

As a mastiff lover and mastiff keeper, I am no tyro, though as a breeder and exhibitor I am not entitled to being called "an old hand." My first specimen was anything but a prize winner. She had some doubtful sort of lame pedigree, which by hook or by crook managed to work itself up to Old Turk, center of rotation of all suchlike canine extracts. Turk, like Brigham Young, could not deny the claim of paternity, no matter where the call or application proceeded from. This bitch, which then I considered a clincher, had a very fair body and very bad head. The greatest feature of her legs was their wonderfully semicircular appearance, but she had a big heart, and "Love being blind," as she was attached to me I loved her. Distemper extinguished this first flame. "Away from sight, to memory dear," proved true for once. Her loving and generous nature had gained my heart to the breed, and I set to work to find one in her place. The ball was set rolling and I followed it up. I wanted to know more about the mastiff, and got every obtainable work and information on the subject. This, however, had to come by dip bits and fragments, as no general work had ever been published in connection with this breed. The blank struck me, and I resolved to fill up the deficiency. For ten years or more I had now been engaged on this task, gleaning and gathering up materials for the sake of making my noble friends known in their true and national light by a work on the "Old English Mastiff," when a few weeks ago I noticed an advertisement announcing a "History of the Mastiff," by M. B. Wynn. I knew this gentleman's name from his letters and articles on the subject, and deeming him far more competent than poor self, I lowered my colors to him and hailed the happy event. He, not I, was the man for the work. I at once bundled up my snips and scraps, and resolved to shelve them till further news.

Wr. Wynn's book has now appeared and I have it here before me. The criticism of the work I leave to better judges, satisfying myself with admiring a great deal the author's patience, zeal and deep research; but it has one great defect to my mind; its utter absence of soul, that is, want of appreciation of the mastiff's noble character.

When reading up for my own work, it struck me all round that whereas every writer gives credit to the mastiff for his courage and gentleness, and that every mouth that knows him never tarries in praise of him, no one has ever widely gone into the subject of his social character. "Stonehenge" is the only one who has deigned or dared to say a few words for him. In my manuscript notes I possess a number of facts showing his grand and noble disposition, which in my work I had arranged under the heading of a "Forgotten Chapter." As Mr. Wynn's book—much as we value it—also remains silent on this point, and as I am not now likely to produce any of my efforts before the public, may I ask you, dear sir, to give space in your columns to this chapter of mine?

My whole volume was, by kind permission, to be dedicated to my good and much valued friend, Dr. J. Sidney Turner, of wide-famed mastiff reputation, and I would beg to be allowed that I might now offer this solitary chapter to him instead of that whole volume.

THE FORGOTTEN CHAPTER—HIS CHARACTER.

"Do now call away that big brute! People ought to be ashamed of themselves to bring out such ferocious beasts. They ought to leave them chained up at home!" Those and many other equally as tender expressions have time after time assailed me and other mastiff lovers, when about the streets with one or more individuals of the noble breed. It is curious to notice how every old and young maid will anxiously call her half-bred pug or King Charles to her, and hurriedly snatching up the waddling muff, raise it high up in her arms or closely press it to her bosom.

Being a bit of a philanthropist, as well as a staunch upholder of the rules and intentions of the Humane Society, I never fail to warn these timid and injudicious persons against giving expression to their fears and anxiety in that fashion, but rather to leave their little companions alone, calling upon my long-standing experience and their own, to show that big dogs hardly ever bite little ones. And this is almost universally the case with the pure bred English mastiff.

I had prefixed this chapter by the motto *Fortiter et lenitor*, "brave yet gentle," and no words or sentence could be more correctly expressive of the mastiff's character than that well known armorial legend.

I have kept not a few mastiffs, and I never yet had one in my possession that was dangerous to any member of my household, or to any ordinary visitor of the family. We have certainly had them such that they would not have given up the things of the house to the nightly burglar, or even that it would not have been very safe and prudent for a stranger to come by himself and take a stroll in the yard where they were housed and let loose for exercise. But then, what would be the use of any dog if every fresh comer might prowl about his master's premises as he liked? Dogs and children are the best judges of man's character, but a mastiff, let us say a dog in general, does not always find it convenient to apply his power of discernment at every given moment, and will at times punish a vagrant innocent for a vagrant vagabond; but between doing his duty indiscriminately of position or rank, and biting persons all round, there lies a vast field of difference. What I contend is that the mastiff is not the "beastly brute" that is of no use except for biting people, worrying cattle and killing cats, that, on the contrary, he is man's noble and loving companion, generous life and property protector, a helpful friend in need, and a faithful and ready servant at all times.

I had a thoroughbred mastiff bitch, not exactly an exception, who died three years ago. She was one of the truest and most disinterested friends I can boast of, either among the higher or lower order of creation. Her name was Vera, and as she had such very decided views concerning any unlawful attempts to seriously meddle with herself or master, I had dubbed her Vera Sassulitch. She came from Penshurst, in Kent, where many a good one was bred, and proved so far blue-blooded that her sister of the same litter, Sybil, took first prize in her class at the summer Palace Show, in 1879, and an extra prize as the best puppy of any breed in the whole exhibition. No judge ever pronounced sentence of assent or dissent on Vera's physical points, for her master most jealously wished to keep her entirely to his own unbiassed appreciation; and till her sad last breathing hour she remained a free lance. She was, however, a very fair specimen of the breed.

Children used to ride on her back, pull her about by tail and ears, drag her along roped and collared, she never made an attempt to injure them in the slightest degree. I do not say that she did always follow her little tyrants, or would guarantee them a secure seat on her saddle, but she never bit or snapped (though she would at times growl them a bit out of the way when mischief went too far), no matter how much provocation she received from them.

You will say: "Vera was an exception." I think not. About the same time, I knew in my immediate neighborhood, Blythe House, Tulse Hill, Brixton, another mastiff bitch. She bore the distinguished name of Bess. Every day her master's children sat on her back and drove and rode her round the lawn. Spills, of course, plenty, but bites or even snarls, none. Ask mastiff men whether this surprises them. I feel sure that they will say "no."

I am here, of course, talking of the "pure breed," not of the cross-cur or mongrel mastiff, for the reliance on whose temper you cannot any more depend than you can vouch for his correct bodily points and markings, but the pure bred English mastiff is in old as well as in young age, the to-be-trusted playmate of childhood. In this he differs from the St. Bernard and Newfoundland, who, though first-rate nurses and guardians in the spring of life, get grumpy, cranky and quarrelsome, and cannot be relied upon as they get on in years.

Some six years ago, a little niece of mine between four and five years of age, used constantly to be sent down the country to me, and frequently to stay with me for several days at a stretch. Having no regular nurse to look after and bother her, she took to Vera and Vera to her. Whenever you wanted the child you had only to whistle for the dog, they were sure to make their appearance together. One time that no answer came to my call I made for the kennels, and there, indeed, on the boarded floor lay the pair of truants. The dog was awake and wistfully looked wagging her tail, while "Baby" had fallen asleep, with her fair curly head and fresh ruby cheeks on the brute's flank, holding a hind leg with her little bare arms. Vera, the ever ready to welcome me, did not stir from her apartment on this occasion, deeming, I expect, that a move on her part would disturb the innocent little sleeper. Many and many are the times that I have witnessed the dog on the lawn gnawing a bone, and all the while the child tramping on and about her, tressing garlands of daisies, and squatting in front of the beast's grinding jaws and placing a crown of flowers on her friend's head. Woe to the grown up visitor or to any living adult, barring self and keeper, who would have dared to approach and handle her like that when she was picking her bone! Then you should have seen the animal with a whole swarm of children about her. Didn't she cock her tail and give paw after paw right and left all around, until I wondered that she did not get tired of the game. Once, and only once, did I hear of a misunderstanding between the two friends. "True love never runs smooth" all the way, and specks will pass before the sun on the brightest days. I was just leaving my library, when the child came up with a pair of pink pouting lips, half-swollen eyes, and a most decided gait. "Maratje", said I, "where is Vera, and what is the matter?"

THE DEERHOUND BITCH "WANDA."—Owned by Mr. John E. Thayer, Lancaster, Mass.

"Vera has been very rude, uncle," she sobbed, "she is very naughty." I afterward learned that the child had been hard at work all the afternoon brushing, cleaning, dusting and scrubbing Vera's box, and that the affectionate playmate had, inadvertently, no doubt, just licked or kissed her a trifle beyond what the little body thought proper. And who could find a heart to blame the loving companion. However, I soon succeeded in restoring good feeling, the protocols were signed and undisturbed peace reigned supreme ever since. Not ten minutes later did I find them at their gambols on the lawn, rolling head over heels and playing as if there were neither difference nor distance of rank, character or species between them. HENDRIK VAN DORNE.

ENGLAND. [TO BE CONTINUED.]

MASTIFF TYPE.

Editor Forest and Stream:

After carefully considering Mr. Wynn's letter in your issue of July 29 I can see very little to take exception to. That he and I would not agree was a foregone conclusion, for as I stated at the beginning he is *par excellence* the enthusiast on head, and of the ultra bulldog type of head at that.

Beginning where he says, "awarding prizes to undersized specimens, etc.," he gives the very soundest advice to our judges and the only exception I can take to it is his dictum that badly-reared, crooked-limbed specimens should win. However, the next time a judge puts a dwarf like Homer over Hero II., or asserts that a no-loin, no-quarters dog like Ilford Caution should beat Baby, Boss, or Ilford Cromwell, he will please do it on his own responsibility and not shelter himself under "It is so English, you know." Mr. Wynn has demolished that shady retreat.

I cannot agree with Mr. Wynn as to crooked-limbed dogs being entitled to honor, and his invitation to "grasp this," is much like asking Tantalus to take a drink.

A prize winner should be the dog we wish to breed. Do we wish to breed cripples? The true course for a judge in such a case is to withhold first prize, there being nothing clearly up to the standard we wish. Mr. Wynn's statement that "layback" is characteristic of the group will be apt to mislead those who remember the circumstances about which this discussion arose, and fortunately I can prove, by Mr. Wynn himself, that Mr. Haldeman and I are right on this matter.

Remember that the layback we spoke of was that of Ilford Caution. Now note that Mr. Wynn writes of Old King as unbeatable, but for lack of size. Then take the group of mastiff heads published in *A. K. R.* and FOREST AND STREAM. The picture called Governor is really one of King, and that the likeness is good is proved by Mr. Wynn himself noting the blunder, and writing me that King's picture was printed for Governor. Now compare King's head with the picture of Ilford Caution in *A. K. R.* Do you see any such layback in King as in Ilford Caution? So if King was unbeatable, how is the frightful layback of Caution characteristic? Undershot is one thing, very few square-muzzled dogs are level-jawed, but layback is quite another, and it is the undershot of King, Turk and such, that Mr. Wynn is referring to as characteristic. Another excellent piece of advice is that Mr. Wynn gives in commending Dr. Perry's courage in giving prizes as he thought best. Too many of our judges are too thin-skinned on criticism, and too afraid of offending or controverting authorities. Ilford Cromwell was a sufferer by this, and but for Mr. Mason's independence at the "refreshing independence" show, would have remained as a fourth class in public estimation.

I must ask Mr. Haldeman's pardon for trenching on his preserves in the layback characteristic, but although his hand is abundantly able to keep his head, I had such a complete chain in Mr. Wynn's recognizing King's head when under the name of Governor, and the comparison of the pictures of King and Ilford Caution, that I couldn't hold in.

HULTON, Pa., Aug. 7. W. WADE.

THE NATIONAL FIELD TRIALS.—Cincinnati, O., Aug. 16, 1886.—*Editor Forest and Stream:* I am glad to inform you that Hon. John S. Wise, of Richmond, Va.; Mr. William H. Key, of Florence, Ala., and Dr. Rawlins Young, of Corinth, Miss., will judge in the Free-For-All Stake, at the trials at Grand Junction, Tenn., next December. Mr. Wise having an entry in the Derby, Mr. H. W. Fuller, of Richmond, Va., will judge with Messrs. Key and Young in the Derby, and should there be more than one of the judges in the Free For All absent, Mr. Fuller will judge in that also. Mr. C. W. Paris, of Cincinnati, O., has been appointed alternate, and will act as judge in the Free For All or in the Derby, should any of the regular judges be absent. Major J. M. Taylor, of Cleveland, O., has been asked to act as marshall, with such duties as may be assigned to him by the Executive Committee. The reports which we receive from Grand Junction, are to the effect that there never were so many birds at this time of the year, as there are at present. The Club is perfecting arrangements now, which we believe will make these trials the best and most satisfactory that were ever held in this country.—W. B. SHATTUC, President.

ST. JOHN BENCH SHOW.—St. John, N. B., Aug. 10.—*Editor Forest and Stream:* It is proposed to hold our fifth annual bench show in this city Oct. 19, 20, 21 and 22. Formerly our shows have been held in January. October is a very pleasant month with us here. We hope to have a large addition in the entries of outside exhibitors. The premium list we expect to have ready by Sept. 1. Diplomas will be offered as regular prizes, but in addition we hope to be able to offer a large and valuable list of special prizes. The entrance fee will be placed at a very low figure. The American and Intercolonial Express Companies will carry dogs to this show at half rates. The committee have secured one of the largest buildings in the city, the Landsdown Rink. It is well lighted and ventilated, and is the most suitable building for a show of this kind possible to imagine. The fanciers in and around St. John extend a cheerful invitation to all outside exhibitors to be present in force with their dogs, and will use them as well as possible. All information, premium lists and entry blanks will be cheerfully furnished by—H. M. WILSON, Secretary.

THE TOLEDO DOG SHOW.—We have received the premium list of the first annual dog show of the Tri-State Fair Association to be held at Toledo, O., next month. The prizes are for English setters $10 and $5, puppies $5 and $3, black and tan setters the same, Irish setters the same, pointers the same, all other classes $5 and $3, with no puppy classes. Classes are made for mastiffs, St. Bernard, Newfoundlands, greyhounds and deerhounds, foxhounds, collies, Yorkshire terriers, Scotch terriers, black and tan terriers, Skye terriers, pugs, bull-terriers, bitches with litter of puppies (any breed) and miscellaneous. The secretary writes that the list of specials will be valuable, and that the managers will probably be able to double the premiums in nearly every class.

THE HORNELLSVILLE DOG SHOW.—*Editor Forest and Stream:* The prospect for a good show is very bright. We have decided to have two champion classes for beagles, and an extra class for beagles under 12in. There will be a kennel prize of $20 for smooth-coated St. Bernards, also champion classes for bulldogs and deerhounds.—J. OTIS FELLOWS, Superintendent.

THE WAVERLY DOG SHOW.—*Editor Forest and Stream:* Classes for Yorkshire terriers and beagle puppies will be provided at the Waverly show if owners promise to give support (say four or five dogs to each class). Let us hear from them promptly. Mr. N. Elmore, of Granby, Conn., will judge beagles.—A. P. VREDENBURGH, Sec'y.

Rifle and Trap Shooting.

RANGE AND GALLERY.

A SMALL-BORE PROTEST.

Editor Forest and Stream:

The programmes for the Creedmoor fall meeting are out. A casual glance of the marksmen would hardly detect much change from the usual order. But the expert in small-bores, that is, the any-rifle marksman, the shooter who does not care much for the military, one reason for its mulish propensities, another reason its lack of fine accuracy, on account of its necessitated ammunition and shooting to rule—this off-hand shooter looks over carefully to see what inducements are offered to tempt him individually to Creedmoor. He finds one match in the sixteen on the programme, No. 6, Continuous match. This has a goodly array of cash prizes, but what are the conditions? "Rule II., Section X, Shooting. No rifle shall be cleaned nor wiped out except between ranges unless specially allowed by the terms of the match." The off-hand marksman here finds that he cannot clean after each shot as has been his custom, his rifle must only be cleaned at the end of his score, hardly then unless between ranges." And he has also to give these military experts 12 points if he competes for either of the first five prizes. Now what are the chances on these first five prizes? He shakes his head, well knowing the difficulties of making a perfect score at Creedmoor. Looking further, to the Short Range Team match No. 10, the terms of the match does not allow cleaning only as per the rules, "between ranges." Match No. 3 is the only one in which cleaning after each shot is permitted by the terms of the match. It is well known that nine-tenths of the off-hand small-bore shooters all clean out their rifles after each shot, and it is rather poor encouragement for this class of marksmen to handicap the shooter by compelling him to use a dirty rifle and also to give 12 points to military rifles, and in Match No. 10 even 20 points must be allowed the military. It may be desirable by the N. R. A. to crowd out the off-hand target rifles in favor of the military at Creedmoor, but it is not the opinion of

BRATTLEBORO, Vt. A CRANK.

WILMINGTON, Del., Aug. 12.—The Wilmington Rifle Club met at Schuetzen Park this afternoon, to shoot a telegraph match with the Topeka (Kan.) Rifle Club. Two general practice matches were held first, Massachusetts target, 200yds. off-hand:

First Match.

C Heinel, Sr.	10 9 11 12 11—53	H B Seeds	10 8 9 8 9—44
W Fuller	12 10 11 11 7—51	J E Seeds	9 7 10 10 8—44
W F Seeds	10 11 7 9 10—46	J E Newman	9 7 7 5 10—38
J B Bell	10 9 9 8 8—44		

Second Match.

C Heinel, Sr.	19 8 12 10 9—49	J B Bell	8 6 9 8 7—38
S J Newman	10 10 11 10 7—48	J E Newman	9 6 4 4 5—29
J E Seeds	10 9 12 10 6—47	C Smith	4 2 7 7 9—29
U Fuller	9 8 11 10 7—45	H Simpson	10 7 5 4 0—26
W F Seeds	9 11 9 7 8—44	W A Bacon	4 6 3 3 6—20
H B Seeds	7 7 9 8 10—41		

The team was then selected for the telegraph match, 8 men, 10 shots each, Massachusetts target, 200yds., off-hand:

Telegraph Match—Wilmington Team.

J B Bell	10 10 11 11 12 12 11 8 9 11—105
W Fuller	8 10 10 9 11 10 10 12 10 10—100
C Heinel, Sr.	12 6 10 9 8 12 6 9 12 10— 94
Wm F Seeds	11 10 6 12 9 7 10 10 9 10— 94
J E Newman	9 10 7 8 8 10 11 8 8 11— 90

S J Newman	10 9 7 6 9—41	C Smith	6 3 retired — 9

Aug. 13.—The regular weekly shooting of the Wilmington Rifle Club was held at Schuetzen Park this afternoon. A pleasant feature was an unexpected visit of W. H. Haines, E. S. Pierce and J. J. Rheinhardt, three fine shots from Dugdale, Pa. The conditions of the first match were: National standard target and 200yds. off-hand. Bacon and Simpson selected teams, the latter winning by 29 points. The following is the score, out of individual possible 100 points and team possible 600:

W A Bacon	4	3	4	4	3	5	7	1	3	5—39
C Heinel, Sr.	5	7	4	7	5	5	7	7	10	7—84
W H Haines	3	3	8	9	4	8	6	8	10	3—62
U Fuller	10	5	5	6	9	10	5	7	5	9—71
E M Clark	1	5	3	4	7	4	3	10	2	3 42
J E Newman	4	6	3	4	4	3	3	7	2	9—45—323
H Simpson	9	6	7	2	6	4	5	3	4	7—52
W F Seeds	6	8	4	4	7	7	7	9	7	7—66
H Heinel	7	6	6	7	6	4	5	8	10	4—63
J Rheinhardt	8	8	7	7	8	7	3	5	7	7—67
S J Newman	5	5	6	4	4	5	6	3	5	4—47
E S Peirce	7	6	5	8	4	3	4	4	7	6—54—349

At the second match the conditions were National standard target and 100yds. off-hand. Bacon and Simpson again selected teams, and the former won by 45 points. The score is as follows out of same possible as first match:

W A Bacon	9	8	10	6	6	4	1	10	6	9—69
J Reinhardt	8	10	3	7	9	10	9	8	8	8—85
W H Haines	7	10	10	10	10	8	9	9	9	7—89
U Fuller	8	10	10	7	10	9	6	8	10	7—83
E S Peirce	9	3	9	5	8	9	1	9	10	7—73
E M Clark	4	5	7	6	7	5	8	10	10	9—71—470
H Simpson	7	5	4	5	4	9	8	5	4	9—60
C Heinel, Sr.	7	7	3	6	9	7	8	7	10	7—71
W F Seeds	9	6	9	8	6	5	8	10	7	8—76
S J Newman	8	7	8	6	6	6	7	9	6	7—70
W Heinel	7	4	8	8	9	9	10	9	8	6—78
J E Newman	8	4	4	6	8	8	6	9	7	10—70—425

Aug. 16.—A good time was enjoyed by the Wilmington Rifle Club in the two matches at Schuetzen Park this afternoon. Conditions at first match: Massachusetts target, 200yds., off-hand, individual possible 120, and a team possible of 840. Bacon and Simpson selected the teams:

W A Bacon	6	2	9	9	7	5	2	2	7	9—58
C Heinel, Sr.	10	8	9	12	9	10	10	11	11	10—100
J B Bell	11	8	10	11	10	11	9	10	7	9— 96
U Fuller	12	9	7	6	9	10	4	11	10	10— 88
J E Newman	7	9	4	10	9	11	12	12	10	8— 92
I W Seeds	4	9	7	8	7	6	4	9	4	6— 64
W O'Connor	5	8	9	5	6	0	5	2	7	3— 50—548
H Simpson	5	3	7	2	12	9	12	5	4	10— 69
W H Haines	10	8	11	10	8	10	11	12	9	8— 97
W F Seeds	10	11	8	8	7	9	10	11	9	7— 90
T Jones	8	8	7	7	6	9	9	6	10	6— 76
H Heinel	11	11	8	12	9	12	8	9	7	10— 97
E M Clark	9	9	12	5	7	9	12	11	5	8— 87
C Carleton	5	8	5	8	4	8	9	10	6	10— 76—50_2

At the second match Bacon and Simpson made a new selection of teams. Conditions, same target at 100yds., off-hand. The score is as follows out of an individual possible 120 points and a team possible 960:

W A Bacon	9	6	6	11	10	11	12	11	12	10— 98
J B Bell	10	12	11	10	12	9	11	11	12	11—109
U Fuller	12	8	11	10	11	12	11	12	9	9—104
H Heinel	12	11	9	10	12	11	10	12	10	11—108
C Carelton	11	8	10	11	12	10	11	12	9	12—106
T Jones	7	11	8	10	9	7	8	11	9	11— 91
W O'Connor	11	8	10	9	7	9	10	10	12	12— 98
J E Seeds	11	11	12	11	10	12	11	10	10	11—103—823
H Simpson	9	11	6	10	10	11	12	10	11	10— 99
C Heinel, Sr.	12	11	12	11	11	11	10	12	11	10—111
W H Haines	11	12	12	10	10	11	11	10	12	12—111
W F Seeds	12	9	10	12	11	8	11	12	10	12—107
J E Newman	12	7	12	12	8	10	12	12	9	10—104
E M Clark	11	8	6	10	9	10	11	9	12	10— 96
I W Seeds	11	8	7	9	12	11	10	10	11	12—101
S J Newman	11	10	12	9	11	10	10	11	12	11—107—836

HAVERHILL, MASS., RIFLE CLUB, Aug. 14.—Record match.

J Busfield	9	8	9	9	10	9	7	9	6	6—82
S E Johnson	6	10	10	7	7	9	8	10	6	7—80
F Merrill	4	7	10	5	10	5	6	8	8	6—69
J P M Green	5	4	3	6	9	4	4	5	8	7—58

TOPEKA, Kan., Aug. 12.—The Topeka Rifle Club shot a match by telegraph this afternoon with the Wilmington, Delaware, Rifle Club, and again the western marksmen were victorious, adding the fourth to their unbroken score of victories against out of town clubs. A different target than is usually used by the club in its regular matches was adopted on this occasion and 120 instead of 100 was the possible score. First score:

J L Paine	12	11	9	11	9	11	11	11	9	9—103
G I Royce	12	11	9	10	8	10	10	11	11	8—100
R Thompson	12	9	12	10	11	8	9	10	12	6— 99
J T Williams	9	8	9	10	10	9	10	10	10	11— 96
F H Martin	10	9	8	11	9	11	11	5	10	8— 92
L H James	10	9	11	10	10	8	8	8	8	10— 92
C C Trimmer	10	10	8	6	10	8	10	9	9	10— 90
R McCarter	7	11	6	7	10	4	8	7	11	11— 83—755

Second Score.

F H Martin	8	10	9	11	11	10	8	9	9	11—96
L H James	10	10	9	10	9	10	11	8	9	10—96
Robert Thompson	9	9	7	10	10	11	9	11	9	11—96
J L Paine	11	9	9	7	9	8	11	9	10	10—93
J C Trimmer	10	8	6	10	11	9	10	8	10	7—89
Reed McCarter	8	10	11	6	10	6	8	10	8	9—86
J T Williams	4	8	11	10	8	12	8	6	10	9—86
G I Royce	9	11	9	8	11	7	5	8	8	4—80—722

Third Score.

G I Royce	7	9	11	9	11	9	7	10	11	10—94
L H James	11	10	9	9	10	8	9	9	11	8— 94
J L Paine	7	10	9	10	9	9	9	9	12	7—91
J T Williams	10	9	10	9	8	9	10	10	7	8—90
Robert Thompson	4	11	10	10	9	11	11	9	5	9—90
C C Trimmer	6	12	11	6	7	6	10	10	11	6—85
Reed McCarter	10	8	10	8	9	4	9	10	10	6—84
F H Martin	10	9	10	8	7	9	8	7	7	8—83—712

The first score was counted in the shoot and the totals for the match were as follows:

Wilmington.....719 Topeka.....755

NEW HAVEN, Aug. 6.—The Union Armory Rifle team at Quinnipiac range, to-day, the score being as follows:

Armory Team.			Sarsfields.		
	200yds.	500yds.		200yds.	500yds.
Walker	3445344—27	5353456—30	Callahan	3324353—24	3043622—19

BOSTON, Aug. 14.—The Saturday matches were shot as usual, though the attendance was below the average. The weather conditions were very poor, and good scores were correspondingly scarce. C. A. Parker of the cadets has won the second class badge in the 500yds. military match on scores of ten 45s. Following is the record of the best scores during the week:

Decimal Off-hand Match.

J Francis (mil.), C	8	8	6	7	9	10	10	10	10	6—84
John Gunn, D	8	5	7	9	5	9	10	8	9	10—80
W Henry (mil.), D	8	7	10	5	5	7	10	8	10	3—71
A S Brackett (mil.), A	6	10	6	9	3	5	8	7	6	10—70
C W Hodgdon, A	7	7	8	8	8	6	6	5	3	5—63

Rest Match.

C B Edwards, A	10	10	10	10	10	10	8	10	8	10—96
S Wilder, F	9	10	9	10	10	10	9	9	9	10—95
J Hurd	8	9	10	10	9	9	10	10	10	10—95

500yd. Military and Practice Match.

W Charles, E (mil.),	5545545555—48	C Williams, E	4455544555—46
Wilder (sporting),	A5555455545—48	C A Parker, D	3455565445—45

State Militia Match.

A S Brackett	23	21	21	F W Reynolds	20	20	19			

GARDNER, Mass., Aug. 11.—Gardner Rifle Club at Hackmatack Range, standard American target, 200yds., off-hand: Geo. E. Warfield 77 77—154; F. E. Nichols 69 78—147; C. N. Edgell 64 69—133; C. Leland 62 63—125; F. Parkhill 60 61—121.

TOPEKA, Kan., Aug. 9.—The Topeka Rifle Club shot a friendly match to-day with Minneapolis (Minn.) Rifle Club. The conditions were a team of six men selected from each club, to shoot a score of 10 shots. This is the third successive victory for the home team, it having won from Springfield, Mass., Springfield, O., and Minneapolis, Minn., the above-named clubs being three of the best in the country. The following is the aggregate score of Friday's match: Topeka Rifle Club, 436; Minneapolis Rifle Club, 398.

CALIFORNIA SCHUETZEN CLUB.—The shooting festival of the California Schuetzen Club will take place Aug. 15 and 16 next, at Harbor View Park.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

REFORM IN TOURNAMENTS.

Editor Forest and Stream:

I have read with deep interest the various communications and editorials in your issues of July 29, Aug. 5, Aug. 12 on the subject of a much needed reform in the management of shooting tournaments as regards the barring of professional trap-shooters and the handicapping of the most proficient amateurs, who have established their expertness by a public record. Two distinct elements will be benefited thereby.

First—The "consumers" or amateurs who will thus be enabled to enjoy the keenness of a competition with brother sportsmen from a distance, at the same time feeling assured that their relative chances are on a par and that they and their competitors alike are shooting, not for the dollars and cents, but for the pure love of the sport.

Second—The producers or manufacturers of guns, ammunition, targets, etc., who will be benefitted by increased consumption due to the facts that there will be more shooting on the part of the amateurs and that thereby a public interest will be excited, which will greatly increase the number of shooters by drawing into the ranks of the latter the large and increasing class of men of means and leisure found in every community.

Now, presuming that we are agreed upon the subject of this reform, how shall it be effected? The National Gun Association at its meeting at Springfield, O., May, 1885, adopted a resolution to classify shooters into three classes, A, B and C, the higher grade not being permitted to shoot with the lower. Combining this arrangement with their system of handicapping by distance, as indicated in their rules, and we have an approximately perfect method of meeting this question. All that is required (and here comes the most difficult part of the subject) is an appropriate committee to properly classify and handicap contestants from records furnished by their home clubs or made in public contests. If shooters would support the National Gun Association such committees could be readily organized, and with sufficient data and "backing" to enable them to carry out their objects.

The first radical question to be decided would be, who should be barred from amateur tournaments? Without at all reflecting upon the individuals named, most all of whom we know to be gentlemen of character, I would suggest the following, *i. e.*, men who practically earn their living at the trap or through a business which requires them to shoot constantly, as for instance:

(1) Managers and employes of target manufacturing companies, as L. Kimball of Peoria, Ill., and J. E. Miller of Cincinnati, O.

(2) Traveling agents and practical exhibitors of shotgun manufacturers, as S. A. Tucker (Parker gun), McMurchy of Cincinnati, (Smith gun), Penrose of Cincinnati (Lefevre gun).

(3) Men who hunt game as a business and in the tournament seasons follow up the tournaments for the money there is in them, as Stice of Jacksonville, Ill., Teipel of Covington, Ky., Brewer of Philadelphia, Pa.

(4) Those objectionable to the Executive Committee for other reasons not included in above.

In the the fourth class above I would include any man who has ever been known to take an unfair advantage at any shoot, such as bribing trappers or making underhand bargains with latter, or arrange in class shooting to intentionally drop into lower classes with the view of obtaining the prize money therein; or who is boisterous or noisy or quarrelsome on shooting grounds.

The following should be handicapped, and not barred: Recognized champion shots to whom none of the above objections apply and who have made their records at public tournaments, such as C. M. Stark, North Dunbarton, N. H.; Whitney of Syracuse, N. Y., and also such as Al Bandle, of Cincinnati, and J. von Lengerke, of New York city, who are in the retail gun business and through constant practice have become practical experts. (Query—Should not the latter class be barred altogether?)

Now, in order to give this movement practical effect, amateurs everywhere should publicly announce their opinions and experiences, especially through the press. Future committees on tournaments will thus be enabled to arrange tournament conditions to the satisfaction of the large majority of amateurs. NEMO.

CLEVELAND, O., Aug. 14.

Editor Forest and Stream:

In your issue of Aug. 5, a letter from "Reformer," on the subject of some needed changes in trap-shooting tournaments as regards the small attendance of strictly amateur sportsmen, was read by me with great satisfaction, and the editorial also. I am glad some one has broken the ice in this matter, for, while shooting tournaments are both enjoyable and of benefit to the participants, if properly conducted, it is plainly evident that the ordinary shot will not attend the shoots in question, knowing that he is, generally speaking, simply a contributor to purses for a few experts to shoot for. I have no envy nor hard feeling toward those fortunate fellows who constitute the "expert" class of shots who attend such tournaments. But the fact is, that most of us will not be able to see any fun in simply constituting the "bank" for the experts, who many times do nothing else but shoot, to draw upon. It is evident that it is a somewhat difficult problem to solve, to satisfactorily adjust this matter; but I will advance the following as a "starter":

Nearly every State has a State sportsman's association. Now let the national organization take cognizance of these State organizations, and let every tournament conducted by national, State, or local association become a matter of record, and class the shooters by that record. That is to say, after the lapse of a sufficient time, one year say, the members can be placed in classes according to the skill manifested during the year past, and purses arranged for classes of different degrees. In a word, adopt the plan of the National Trotting Association as far as practicable. Thus, if a man shoots at any tournament, his score, or scores, constitutes his "record," and bars him from entering to shoot in classes with men whose "record" shows them to be less skilled in the use of the gun than himself; but at the same time does not bar him from entering classes made for those who had showed greater skill previously. This may be objected to on account of the time and labor involved, but something must be done, or we shall have no grand tournaments.

We have here in the east the New England Trap-Shooters Association, and several tournaments were well attended, a dozen or so did all the winning, and the tournaments can not now command but a meagre attendance. I believe the plan to be feasible, because just. There are many men of good sense, who are interested in trap-shooting, and they can readily invent some plan. But I venture the assertion, that no plan will apply better than the one I mention. NOR'EAST.

AUBURN, Me., Aug. 9.

CLEVELAND CARTRIDGE TOURNAMENT.

Editor Forest and Stream:

Will you kindly grant us space in your columns to explain some matters that seem to have been somewhat misunderstood, relating to the rules and conditions that are to govern the tournament of the Cleveland Cartridge Co. this year. In our contest last year, the prizes went to the highest score sent into us by contestants. In this year's contest, the scores sent in simply indicate the classes in which the contestants are entitled to compete.

For example, the prize money is divided into three classes, known as the 90 class, the 80 class, and the 70 class. The prizes appropriated to the 90 class will be divided into 50, 30, and 20 per cent., to those who send to us scores that are 90 or better. Under this condition some have supposed that if scores were sent in respectively 98, 99, and 100, that the money appropriated to this class would go to those three scores. Such is not the case. A person sending a score of 90 will shoot in the ties to divide this money on a par with a person sending a score of 100. In other words, all persons having scores of 90 or better, will shoot in the ties at Cleveland to decide the division of the $1,000 in the 90 class. In the 80 class all persons having scores of 80 and less than 90, will shoot in the ties in Cleveland to decide the division of the $850, in the 80 class. In the 70 class all scores of 70 and less than 80 will shoot in the ties in Cleveland to decide the division of the $700 in the 70 class. The advantage of a high score sent to us simply applies to the *extra money* added in each class for the best score made in each class.

In plain and simple terms our tournament, as arranged this year, amounts to a sweepstake contest, where the money is divided into three classes, namely, one class for the best shots, one class for the medium shots and one class for beginners, with a condition that each contestant shall decide before coming to Cleveland in which class he desires to compete by sending to us a score which we presume represents his ability as a shooter. On receipt of these scores we place all those whose scores are 90 or better in the 90 class, those whose scores are 80 and less than 90 in the 80 class, and those whose scores are 70 and less than 80 in the 70 class.

We have heard some complaints that our rules and conditions were not equitable. For instance, one correspondent says he is a beginner and should not be compelled to compete with Stice, Teiple and others of that class. We answer that he is not compelled to compete with these men. Both Messrs. Stice and Teiple by reason of their scores made in our tournament last year, are placed in the 90 class, and no beginner need compete in this class unless he feels competent to do so. He may enter in either the 80 class or the 70 class, as he chooses, by sending us scores that properly place him in these classes. We think these conditions to be equitable and just. Our prizes are extremely liberal. Our prizes aggregate $3,000, while the entrance fee is only $5. This is a lower entrance than was ever before known for a like amount of prizes. There is no pro-rating and no condition that there shall be a certain number of entrances, or anything of that sort, and all the prizes will be paid in full, regardless of the number of ties in the several classes. THE CHAMBERLIN CARTRIDGE CO.

CLEVELAND, O., Aug. 12.

GALVESTON, Aug. 6.—The grand shooting tournament which is taking place just outside of the drill grounds, is not proving as great a success as was anticipated, from the fact of its being more or less overshadowed by the Interstate drill. About 30 sportsmen were in attendance, and yet some of these are considered the best shots in the State. Winners of prizes at the shoot yesterday: Shoot No. 1, 31 entries at $2.50—Erichson first, Stuart second, Reese third, Worfs fourth. Shoot No. 2, 37 entries at $5—Erichson first, Holland and Parkinson second, Wheeler third. Shoot No. 3, 29 entrie sat $3—Holland first, Dollarhide second, Warren third, Reese, Warden and Given fourth. Shoot No. 4. 30 entries at $7.50—Holland and Givens first, Pettit and Erichson second, Crawford third, Downey and Dustan fourth. Shoot No. 5, 18 entries at $3—Downey, Stuart and Warden first, Leicht second, Holland, Yoacum and Erichson third. Shoot No. 6, 28 entries at $7.50—Holland, Erichson and Reese first, Dollarhide, Wheeler and Downey second, Ellis and Henkell third, Pettit fourth. There were 6 sweepstake shoots running from $1 to $5 entrance.

THE NATIONAL GUN ASSOCIATION.—Macon, Ga., July 27.—*Editor Forest and Stream:* Will you kindly publish for the National Gun Association the following in regard to the proposed International American Championship contest for the diamond badge donated by the Ligowsky Clay Pigeon Company. The National Gun Association is pledged to redeem this badge for $250, and accepted the offer of the Ligowsky Clay Pigeon Company as the simplest means of fulfilling its pledge, and at the same time adding an interesting feature to the tournaments to be held under its auspices. However, the conditions of the contest do not seem to strike the trap shooters favorably, for, in spite of a very liberal distribution of circulars, etc., the entries have been so few in numbers as to make it virtually no contest, and the executive committee has decided to withdraw the offer and make this match a special feature of an International Tournament to be held at Boston in May, 1887, of which more hereafter.—F. C. ETHERIDGE, Secretary. [The foregoing was inadvertently omitted from an earlier issue.]

MANCHESTER, Conn.—The East Hartford Gun Club shot a return match with the Manchester Club on the grounds of the latter Aug. 10:

Manchester.		East Hartford.

CRESTLINE, O.—The Crestline Gun Club will hold a tournament on their grounds, McGuire's springs, Aug. 25-28, artificial targets, N. G. A. rules and live birds.

JAMAICA PLAINS, Mass., Aug. 12.—Match between the East Boston and Jamaica Plains Gun Clubs, on the grounds of the latter. The day was fine and the shooting was exciting to the finish. At the close of the match a friend of the club presented them with an elegant sign for their new club house, which is nearly finished. The club has been very successful since its organization for amateurs; they have shot five matches and won four. Clay-pigeons, 18yds., four in notch:

Jamaica Plains Gun Club.		East Boston Gun Club.

GENESEE SPORTSMEN'S CLUB.—Rochester, N. Y., Aug. 13.—The Genesee Sportsmen's Club yesterday finished the fifth and concluding contest in a series where the prizes were valued at $200, 10 Peoria blackbirds. Evershed 80, Fleischer, 81, Stowell 75, Ditmar 74, Williams 73, Green 70, Mason 69, Peck 69, Hill 66, Adams 63, Reissinger 62, Jersey 62, Gray 57, Burns 55, Rickman 54, LaForce 54, Richmond 51, Hicks 40, Hickman 32.—E. R.

AUGUSTA, Ga., Aug. 13.—This afternoon a good crowd assembled to see the gun club practice. Great interest is taken in the club, especially on account of the grand tournament which is to take place at the park of the Athletic association on the 19th, to be participated in by two clubs from Savannah, one from Jacksonville and one from Millen. The tournament will bring together the finest sportsmen in the South. To-day's contest shows a marked improvement in shooting. The following is the score:

Team No. 1.		
Denning	1000001110—4	10 00 11 11 01—6
Moore	1111010101—7	10 10 10 00 00—3
Hunt	0100101101—5	00 10 11 11 10—6
Dutcher	0001000101—3	00 00 00 10 00—1
Stucker	0001010000—2	10 00 10 10 10—4
John Sancken	0000000000—0	00 01 00 00 01—2
Nurnberger	0010110000—3	00 00 00 00 00—0
Jackson	1001001011—5—29	01 01 10 10 01—5—27
Team No. 2.

BALTIMORE, Aug. 6.—The Baltimore Gun Club to-day visited Westminster, where they succeeded in winning from the Westminster Gun Club two clay-pigeon matches and one glass ball match. The ground where the shooting was to take place was a meadow about half a mile south of the town. The Baltimore Club selected a team of 10 men, but allowed their opponents to select 12 men to shoot, and from the 12 to select the 10 highest scores. The first match was shot at 10 clay-pigeons, 18yds. rise, with the following result:

Westminster Club.		Baltimore Club.	
H Roberts	1010110001—5	C S Wertsner	1111110011—8
J Reifsnider	0110000111—5	J Williar	1111110011—8
J Long	0101110001—4	D Franklin	1001111111—8
R Gist	0001110100—4	W Evans	1011011110—7
R Frizzell	1010110011—6	W Buckbee	1111010111—8
T F Englar	0100011010—4	S Wilson	0011110001—5
V Reese	1110111111—9	Bill Linthicum	0100101111—6
W B Thomas	0010111011—6	Wm Fieles	1011011111—8
Sam Roop	1111011100—7	Wm Norris	1110010010—5
H Gist	0101110011—6—56	Cleveland	1101001111—7—70

The second match was at 10 glass balls each, same distance and same teams. In this match, for the Westminsters, Mr. Roberts broke 7, Reifsnider 4, Mr. Long 7, Mr. R. Gist 7, Mr. R. Frizzell 6, Mr. Englar 9, Mr. Reese 7, Mr. Thomas 8, Mr. Roop 9 and Mr. H. Gist 9, making a total of 70 out of a possible 100. For the Baltimore Club Mr. Wertsner broke 8, Williar 8, Franklin 10, Evans 9, Buckbee 5, Wilson 8, Linthicum 7, Fieles 8, Norris 10 and Cleveland 8, making a total of 81 out of a possible 100.

The third and last match was at 5 clay birds each, same teams. In this match Mr. Roberts, of the Westminster Club, broke 2, Reifsnider 3, Long 2, R. Gist 3, Frizzell 2, Englar 2, Reese 2, Thomas 2, Roop 3 and H. Gist 5, making a total of 26 broken out of a possible 50. Of the Baltimore team, Mr. Wertsner broke 3, Williar 4, Franklin 3, Evans 3, Buckbee 2, Wilson 3, Linthicum 2, Fieles 4, Norris 0, Cleveland 3. Total 27.

ST. LOUIS, Aug. 12.—The shooting match to-day at Winstanly's Park between Jerome Winstanly, of the St. Clair Rod and Gun Club, and J. Bridges, of the Indian Lake Club, at Peoria blackbirds, created great interest:

Bridges.		Winstanly.	
1	0100000101—3	1	0010011111—6
2	0110010010—4	2	0111111111—9
3	0110000100—3	3	1000111111—7
4	0000010001—2	4	1110000010—4
5	1010111101—7	5	1010001010—4
6	0100111009—4	6	1111101001—7
7	1001101101—6	7	1101110110—7
8	0001001100—3	8	0101110010—5
9	1011100110—6	9	0111100110—6
10	0110101101—6—44	10	1111000111—7—62

PARIS, Ill., Aug. 12.—The Paris Gun Club gave a shooting tournament to-day. Peoria blackbirds and clay-pigeons were used in the morning shoot, and live birds were used for the afternoon programme. Indianapolis and Paris won most of the prizes.

FITCHBURG, Mass., Aug. 11.—A few of the members of the Fitchburg Rod and Gun Club were out to the River street range to-day. Out of a possible 30 clays the best shots were as follows: E. N. Cummings 27, G. W. Weymouth 22, A. W. Baker, Jr., 17, G. A. Colony 13. The club at a meeting held this week voted to hold a two days' tournament on Aug. 30 and 31. The committee of arrangements is Messrs. C. H. Brown, G. W. Weymouth, E. N. Cummings, W. I. Fox, H. I. Wallace, A. W. Baker, Jr., and Dr. D. S. Woodward.

WINCHENDON, Mass., Aug. 11.—Winchendon Gun Club went to the club range. The totals out of a possible 10 clays were as follows: H. Lawrence 8, E. M. Whitney 7, J. Sutherland, Jr., and L. F. Earle each 6, P. S. Davis, C. Houghton, A. Lawrence and A. H. Felch each 5.

ST. LOUIS, Aug. 12.—A large number of members of the Excelsior Gun Club and their visitors were present at Rinkleville this afternoon at the monthly shoot of the club. Joe Pope acted as referee and scorer. The competitions for the medals was keen and resulted in Jack Schaaf having to give up the two golden trophies which he has held for three months past. Henry Griesedieck won with a clean score. The shoot-off for the silver medal took but little time, Schaaf's bird perching on the shed roof when full of shot, and Weiber killing. Sweepstakes followed as shown below. A half hurricane from the northwest closed proceedings very summarily at about half past 5 o'clock. The club medal, 10 live pigeons, 26yds. rise, 10 miss and out at 31yds. Three medals:

J G Schaaf	1111100111— 8	Nolting	1110110011— 7
G Rinkel	1111111011— 9	Fink, Sr	1111001100— 6
Krueger	0011100111— 6	H Griesedieck	1111111111—10
Loerke	0011111001— 6	Petker	1110011010— 6
McDowell	0100110100— 4	Rosch	1000011011— 5
Fisher	0010011101— 5	L Spelbrink	1111000111— 7
J Weiber	1101101111— 8		

H. Griesedieck first gold medal, G. Rinkel second gold medal J. Weiber silver medal.

Second shoot, 5 live pigeons, 26yds. rise, 3 moneys, ties at 21yds.

Schaaf	11101—4	J Weiber	11100—3
G Rinkel	11111—5	Griesedieck	00111—3
Kruge	00111—3	Spelbrink	11110—4
Loerke	11111—5	Ittel	10111—4
Fischer	01011—3	Herman	00111—3

Rinkel and Loerke divided first, Ittel second, Griesedieck third.

Third shoot, 5 Peoria blackbirds, 18yds. rise, 3 moneys.

Pettiker	11000—2	McDowell	00011—2
Fink, Sr	00110—2	Dieck	00111—3
Staley	01010—2	Gross	01001—2
Nollker	10010—2	Reiffert	10111—4
Fink, Jr	01010—2	G Rinkel	10101—3
Strop	01100—2	Schaaf	01010—2

Reiffert first, G. Rinkel and Dieck divided second, Schaaf third.

STILLWATER, Minn., Aug. 11.—The Stillwater Sportsmen's Club held a double shoot this afternoon for the gold badge and the Willman cup. C. W. Hitchcock won the badge and R. M. Anderson and W. C. Masterman tied for the cup. It required two shoot-offs to settle the tie, Anderson proving the winner. In both matches Macomber birds were used, 15 angles and 5 doubles, at 18yds. rise for singles and 15yds. for doubles. The following are the scores in detail: Badge shoot—

Masterman	9	7—16	Monsel	2	0— 2
Castle, Ira	11	7—18	McPherson	4	2— 6
Heisel	11	6—17	Nenquist	13	7—19
Anderson	13	6—19	Hitchcock	13	7—20
Pennington	9	7—16	Weisel	10	7—17
Holcomb	11	4—15	McKusick	12	6—18
Carli	8	6—14	Butler	12	6—18
Willman	9	9—18			

Cup shoot—

Masterman	13	9—22	Butler	12	7—19
McKusick	11	9—11	Nenquist	10	9—19
Pennington	10	5—15	Castle, J N	11	9—20
Carli	13	6—19	McPherson	7	4—11
Anderson	14	8—22	Monsell	4	0— 4

ST. PAUL, Aug. 9.—At last week's shoot of the St. Paul gun club both the club and the Macomber badges were won by Pfister. The scores made were: Club badge, 10 single and 5 pairs Peorias:

Pfister	10 7—17	Cummings	9 6—15
Olson	9 7—16	Wilson	7 7—14
Dox	9 7—16	Biggs	3 1— 4

Macomber badge, 16 metal birds: Pfister 14, Cummings 12, Wilson 6, Hardup 8, Biggs 8.

CANOEING.

(*Continued from Page 69.*)

OAKLAND C. C.—LADIES' CRUISE.

FOR a long time there has been a mild, though positive protest from the wives of some of our canoemen. These little skips up the creek with the young ladies and a night or two camping at Goat Island with the boys has sharpened the senses of the better halves to the point of insisting on being taken along the very next time a cruise was on the tapis. So when the gallant skipper of the Shadow proposed, a few days ago, to take a run over to Goat Island his frau put her foot down, "Well I'll go too." The commodore also found a positive female determined to brave the perils of the bay, and thus the "ladies' cruise" took sharpe. The fleet consisted of the Mystic (flagship), Flirt (vice-commodore), Shadow and Falcon, all canoes, and the yawls Nettie and Nautilus. Six bold mariners, and each with a wife, or a sister, or a cousin, making an even dozen. The understanding was that we should start prepared to camp out, take a sail down the creek, and if the bay was reasonably smooth, run over to Goat Island and spend the night.

As usual, there was much delay in getting off, and instead of leaving the boat house at 10 o'clock, as proposed, the start was made at 11. There are two drawbridges just west of our boat house, about 250yds. apart, and we have generally (unless we are lucky enough to find a steamer or large craft going through) to paddle under these with sails all down and rig up in midstream below them. In this case both wind and tide were against us, and it was fully half an hour before we were ready to fill away. Then the Flirt met with a mishap. The breeze having freshened materially, her mainmast snapped, and she had to put back for repairs. The Shadow, Nautilus and Falcon were making slow progress down the creek, and the crews of the Mystic and Nettie were invited on board the U. S. steamer Hasler to await the return of the Flirt. The officers of the Hasler were very polite and hospitable, and the hour spent on board slipped away very quickly.

Finally, between one and two o'clock the Flirt hove in sight with another mainsail, and the three started to catch up with the leaders. As a general order is in force for no fleet from the canoe club to leave the creek and go out upon the bay until all the stragglers should come up, so that the fleet may be compact and the canoes handy to render assistance if required, we were certain to assemble at the mouth before attempting the run to Goat Island. About four o'clock the belated ones arrived and found the others awaiting them. The tide had turned but the wind was still ahead, so that there was some little sea, but the breeze was moderate and it was quickly decided to go on. The distance from the mouth of the creek is about two miles and a half, and we had a very pleasant trip, all hands landing at five o'clock. And now we found the great advantage of having ladies in camp. While the men were engaged in hauling up the boats beyond the high water mark, setting the tents and making all secure for the night, the ladies busied themselves in getting supper ready, and it was, to put it very mildly, a great convenience to be spared the pangs of cookery, washing dishes, etc., to say nothing of the great improvement of our bill of fare. And then the time saved. We had finished a most sumptuous repast, had wood gathered for a camp-fire and the tents all set, beds made and time for a nice walk over the island before dark. Then a roaring camp-fire, songs and anecdotes, with milk punch, candies, etc., for refreshment. Not quite as much rollicking as we had been accustomed to perhaps, but jolly enough for all well-minded canoeists. About 10 o'clock the eyelids began to get heavy, and the problem of stowing away for the night was solved. In the Mystic two sweet little damsels, just in their teens, were snugly tucked in just like sardines. In the Flirt two more, of maturer growth, found plenty of room by pillowing the heads at each end of the well under the deck and mixing the feet a little in the middle. In the Nautilus the planks which served for a table were transferred to the thwarts of that noble bark, and covered with cushions made a splendid couch for the matrons of the party. At each end of the camp a canoeman was snugged away in his usual den—as protectors—while the rest of the mariners spread a tent up on the hill overlooking the beach, and soon there came a great calm.

At daylight next morning the younger men aroused from their slumbers and tramped over the island to the northern beach, where they took a delightful plunge in the bay. At least, they said it was delightful, although blue lips and chattering teeth suggested a chill in the waters not altogether the thing for comfortable bathing. About 8 o'clock we had breakfast of chops, ham and eggs, with stewed onions and tomatoes, coffee, and et ceteras too numerous to mention, and a powerful appetite to make it all taste well. By the time the meal was finished and the camp kit cleared up the tide had set fair for a good run home, so the order was given to break camp. By 10 o'clock all preparations were completed, the boats packed and launched, and with a fair wind we set out on the return trip. It was all plain sailing, and we arrived at the boat house in an hour, after a delightful run. To say that the ladies enjoyed the cruise is but a faint expression. They had no idea how jolly canoeing is, and express a determination to go hereafter on all occasions. It is probable that the married members will be obliged to keep two canoes instead of one from this time forward.

THE A. C. A. MEET.

GRINDSTONE ISLAND has waked up again, and the hillside is once more bright with white tents and gay flags, while the quiet grove is filled with a busy camp. The attendance this year promises to be very large, though many will not arrive until the latter part of this week. Com. Rathbun, Vice-Com. Wilkin and Rear-Com. Parmele with Dr. Nodé are in camp. Pittsburgh, Knickerbocker, Brooklyn, Crescent, Oswego, Kingston, Mohican, Brockville, St. Lawrence, Hartford, Vesper, Philadelphia and New York are represented, and other clubs are coming in daily. The wind thus far has been fresh and steady. Squaw Point is rapidly filling up. Vice-Com. Parmele and his wife are now camped there, with parties from Canada and New York.

A BIT OF EARLY HISTORY.

IT is always a pity to spoil a good story, but as truthful historians of the early days of the A. C. A. we must correct the following imaginary yarn now going the rounds:

"A canoe may cost anywhere from $1 to $200; the last named craft is of Spanish cedar or other hard wood, an eighth of an inch thick, with decks, compartments and lockers of the same material, copper fastened throughout, the whole finished as finely as the most elaborate bit of parlor furniture, with cleats and all other work of brass or nickel, and standing rigging as perfect as money can buy. The $1 variety is made of three boards of light wood—one for each side and the other for the bottom. It was a canoe of this dollar description which won the first paddling race of the American Canoe Association—a club containing several hundred members, nearly all the States being represented. A lot of 'crack' paddlers, each intent upon taking the conceit out of all the others, had started at the word, when the starter saw one boat beyond where the right of the line had been, so he shouted: 'Are you in the race?' 'I'd like to be,' a thin voice replied. 'I'll take your time, then,' said the starter. 'Go!' Off went the unknown, and he soon overtook the rear of the fleet; then he passed one expert after another, and finally crossed the line in advance of all. The defeated men clustered around him, complimented him, and one tried to explain his own defeat by saying he was paralyzed by the outlandish, coffin-like appearance of the winner's boat as it passed him. The discomfiture of the 'cracks' was not diminished by the victory that the victor was not only not a canoe club man but a Vermont preacher—the Rev. Mr. Cressy—who had taken to canoeing to pick up some health."

There were no "crack paddlers" at the meet in 1880, but two dozen cruising men who met to form the Association and incidentally to enjoy a few little races for which no prizes were offered but in one or two races. Among the cruisers was the Rev. Mr. Cressy, a tall powerfully built men, who had done a good deal of cruising and paddling in a 14ft. canoe only 26in. wide and of the lightest construction, while he swung an enormous ash paddle of great length and weight. Mr. Cressy was well-known to all present before the races, and his chances were discussed with the others. Referring to the original notes taken at the time we find that he entered three races and won only the final one, a long distance race of five miles, under a hot August sun, beating two tin canoes and two heavy 14x30 boats, in his little racing machine. In those days there were no rules and classification was unknown.

A TANDEM TRIP ON THE DELAWARE.

"MIDGET ahoy." "Helloa." "Come alongside, will you?" "Be there in a jiffy." "Be busy next week?" "No." "Well, I'll have three or four days on my hands, and I want to get a taste of canoe cruising; suppose we take a trip in the Comet up to Trenton?" "Agreed."

The above dialogue took place one pleasant morning on the Delaware, between the crews of two of the canoes composing the little fleet of the (then) K. C. C., which was bound for Tacony, a pleasure resort thirteen miles up the river. The canoe referred to, and which the hailer and his mate occupied at the time, was a 14×30 canvas canoe fitted to be used tandem. Her well was oblong in shape, 7½ft. by 20in., and she was a very roomy and steady boat for her size.

Wednesday morning was the time agreed on for starting, and about 9 P. M. on that day the canoeists were on their way to Cooper's Point ferry, and the amount of duffle they carried might have created the impression that an Irish family were moving into Jersey. Arrived at the club house, some time was spent in stowing, unstowing, and restowing the cargo, in which operation the two would-be cruisers were greatly assisted (?) by a brother canoeist who had kindly agreed to see them started on their way.

At last, after several forgotten articles had been procured at a near-by grocery, the well-loaded Comet was trucked to the end of the slip and gracefully slid into her native—no, mud. Yes, tide was almost dead low, for the crew of the Comet had determined to start at the beginning of the flood tide, but unfortunately they had been a little premature, for there was yet an hour of ebb tide left.

At length, after much exertion in the way of pushing, splashing, wading and grumbling, in which they were greatly encouraged by the laughter of their kind friend who, in his light-draft paddler, had soon reached deep water, the two illustrations of perseverance conquering all things (mud bars included), succeeded in escaping from their dilemma, and started up the river under paddle, accompanied for a short distance by the kind friend who, bidding them a pleasant voyage, left them to their fate and started back to the club house.

An hour's amusement with the double blade caused the inner man to begin growling and the two canoeists to seek a shady spot on the near-by shore whereon to prepare their noon-day meal. Tide being low, water is scarce, but is soon made too plentiful by an untimely shower, which cools the ardor and the bodies of the canoeists and soaks them to the skin. The shower over, a cold dinner is eaten, and a start made under a broiling sun, which, however, is not minded, as it dries the wet clothing of the canoeists.

A landing is made about 6 o'clock on Burlington Island. A nice place for a camp is found which, however, has one drawback, mosquitoes. There is nothing modest or bashful about them; they do not wait for an introduction, but make a vigorous attack on the bare calves of the new comers. The smoke from the camp-fire, however, affords a temporary relief from their annoyance.

Supper is soon cooked and spread on a piece of oilcloth, and the crew of the Comet enjoy it as only tired canoeists can. The meals over and the dishes washed and stowed, the two stretch themselves on the grass and pass the time watching the stars come out and spinning yarns until bedtime, when both turn in, one in the canoe and the other rolled in a blanket on the grass. But the mosquitoes have not yet been satisfied and a long and silent battle is fought until, as it seems to the man on the grass, it must be near morning, so he cautiously inquires the time of his companion. A match is struck and the watch consulted. "Half past nine! Oh! it's stopped; listen: tick-tick, no; well I'm blessed!"

Another attempt is made, and the mosquitoes being at length satisfied the two are soon sleeping soundly. Sunrise finds them awake and shivering, but a plunge in the warm water of the river warms them up, and their breakfast is got underway and is soon disposed of.

The Comet is then launched, and as the crew feel lazy and a light wind is blowing the two small sails that were brought along are set and they lie back and take it easy, watching the landscape slip by like an ever-changing panorama. As they pass close by the boathanding of one of the many fine residences on the river bank, a fine Irish setter dog runs out to the end and stares at them in canine amazement, evidently not knowing what to make of the novel sight. Not being satisfied with the first scrutiny he runs to the next landing and repeats the performance there and for every one for at least a mile when his further progress is barred by a stone wall, and he gazes longingly after the Comet as she disappears from his sight.

The light wind holds until Florence Heights are reached, which looks much like the pictures of the Hudson and is the prettiest bit of scenery on the Delaware between Philadelphia and Trenton. As it is then about noon, the canoeists conclude to land on the pebbly shore and have dinner, which is accordingly done. When they are ready to start again there is no wind and the thought of paddling in the hot sun is not pleasant. But the cook has a bright idea; the two masts are stepped and the ends of the small shelter-cloth are tied to two spars to spread it, and it is then hung between the masts and the corners stayed, forming, when rigged up, a complete shade from the sun, under which it is a luxury to sit and lazily paddle.

But this fun is soon changed to fun of another kind. A sudden puff of wind strikes the awning, snaps the stays, and turns it completely over. But the crew isn't mad; oh no! They get in the awning as quickly as possible and set the sails, and they go humming along before a steady breeze. Bend after bend is shot around at steamboat speed (three to the left make them think they are sailing in a circle). Bordentown, N. J., is passed shortly and then a straight stretch is ahead. The Comet handles like clock-work, no hanging out or shifting about to do; this suits the lazy crew immensely.

The steersman, with his feet firmly on the foot yoke and two turns of the main sheet around his hand, keeps his weather eye open, however, but the after man is stretched out deeply absorbed in Nessmuk's "Woodcraft." Suddenly the steersman sees ahead what he takes to be a bank of reeds. It is right in his path, but he does not steer out of the way, as he intends to sail right through them. Suddenly a sharp grating sound is heard along the keel, and the Comet is brought up all standing on a gravel bar. Nothing is left to do but to get out and drag the canoe over the bar, which is accordingly done, and she is again put upon her course.

After this the steersman is more careful, and no more trouble is had until Trenton is reached, where some difficulty is experienced in landing safely, on account of the rocks and crowd of boats. One of the crew goes after some groceries, and when he returns the canoe is pushed off and headed for the mouth of a little creek across the river, up which the canoeists were informed they might find a suitable camping place. But the place will not do, so the Comet is turned around and headed out of the creek, and as a storm is threatening and the crew wish to show the crowd how fast they can go, a little extra steam is put on and the canoe sent along at a good rate.

Suddenly at the mouth of the creek a rumbling sensation is felt, and the Comet's bow rises a foot in the air on the top of a smooth sunken rock. She is soon lifted off and headed down the river. A landing is made about two miles below Trenton and preparations begun for supper, which are suddenly interrupted by the bursting of a storm of wind and rain in all its fury. It catches the canoeists all unprepared, but a shelter is soon rigged by aid of the mainmast and a paddle, over which is thrown the tent, sails and oilcloth, to keep out the rain which comes down in sheets. The Comet's cockpit is rather close quarters for two to lay out in, but the crew are warm and comfortable and they sleep soundly until daylight.

Nothing but wet wood is found and so no fire can be made; but a cup of hot coffee is brewed over an alcohol stove, and this with some bread serves to warm them up and dull the edge of their appetite. A start is made under paddle, and as the crew have agreed to try to reach Philadelphia by nightfall, a fast stroke is struck and kept up until Florence Heights are reached, when a bend of the river brings the light wind which had sprung up on the starboard bow.

The sails are trimmed in and the crew have it easy until Bristol, Pa., is reached when the wind comes out dead ahead and strong enough to kick up quite a sea. The paddles are again plied until a good place for making a fire is seen on the shore and a landing is made. As the canoeists are pretty hungry, having had no breakfast or supper of any account, the cook determines to display himself on the dinner. The compartments are ransacked and the cooking grate set up. It consists of two pieces of flat iron about 3½×18in., to the ends of which are riveted rod iron legs of the same length. The legs are turned at right angles to the flat pieces, and the two are then pushed in the ground about 6in. apart. Cross rods are then pushed through holes in the flat pieces. When not in use the whole may be bundled together and tied with twine. A fire is started and the dinner cooked and spread out on the grass. The menu consists of fried flitch, eggs and onions, boiled potatoes and coffee, sliced tomatoes and onions in vinegar, and bread. The crew manage to dispose of nearly all of it, but some has to be left for supper. While they have been ashore the tide has begun to flood, and a long paddle against tide and wind is in prospect. But they are greatly refreshed and by hugging the shore closely make good time down river. At Bridesburg the tide again sets in their favor and just at dark they land safely at the boat house slip tired and sore, but proud of having come the 36 miles between Philadelphia and Trenton in one day, about 25 miles of the distance having been paddled in 8 hours, most of the time against a strong wind and tide. T. W. B.

RECKLESS RHYMES.

A white-winged yacht;
Its name was Dacht;
He sped to a sequestered spacht;
The day was hacht;
Exceeding hacht:
Enough to roast a hachtentacht.
Of skill he'd nacht
A single jacht,
But like an arrow out he shacht;
He knew not wacht
Would be his lacht
Until his sailboat went to pacht.
Now in his cacht,
All is a blacht—
He'll never go again I wacht!—*Tid Bits.*

LAKE Y. R. A. CRUISE—TORONTO RACES.

THE finish of the L. Y. R. A. round this year was at Toronto, where two races were sailed, the Toronto Y. C. on Aug. 10 and Royal Canadian Y. C. on Aug. 11. In the first class the wind was E. at start, shifting toward S. later on and blowing fresh. In first class the starters were Aileen, Atalanta, Cygnet, Verve, Whistlewing; and in the second Molly, Laura and Iolanthe. All the first class were badly handicapped. Atalanta led at first buoy, but soon after she lost her topmast. The weather was hazy and both Atalanta and Cygnet missed the third buoy. Whistlewind found it, finishing 17m. ahead of Cygnet, the others all giving up. The second class met with the same trouble, Molly being first to find the buoy. This mishap spoiled the race in both classes.

On Aug. 11 there was a fine S.W. wind at the start. The course was from the club house through the western channel to the bell buoy in the lake, thence to buoy No. 3 off Victoria Park, thence to buoy No. 4, thence home through the western channel to starting line. Atalanta, Aileen, Verve and Cygnet started in first class, and Mischief, Meteor and Pilot in third. The order for a time was Atalanta, Aileen, Cygnet and Verve, but out in the lake a S.W. squall struck in, and Verve left Cygnet easily. Atalanta won in first class, Laura in second and Pilot in third.

HULL Y. C. OPEN REGATTA, AUG. 14.

THE open regatta of the Hull Y. C., sailed on Aug. 14, brought out a large number of entries and furnished some good sport for a part of the time, though the rain was followed by a calm that spoiled the finish. The courses were from a line to westward of Peddock's Island, as follows:

First Class—Leaving Hunt's Ledge and Point Allerton buoys on starboard, Harding's Bell Boat on port, Graves' Whistling Buoy on port, Ram Head Buoy, Lovell's Island and Fort Warren on port, Gallop's Island on starboard, to and across line between judges' boat and flagboat.

Second and Third Classes—Leaving Hunt's Ledge and Point Allerton buoys on starboard, Harding's Bell Boat on port, Martin's Ledge Buoy on port, Shagg Rocks on starboard, Hunt's Ledge Buoy on port, to and across line between judges' boat and flagboat.

Fourth and Fifth Classes—In through Hull Gut, leaving flagboat one-half mile southeast on starboard, H. Y. C. barrel off Prince's Head on port, H. Y. C. barrel off northwest end of Bunkin Island on port, flagboat before mentioned on port, H. Y. C. barrel off Prince's Head on port, H. Y. C. barrel off northwest end of Bunkin Island on port, through Hull Gut, across line between judges' boat and flagboat.

The classes were as follows: First class, centerboard and keel, measuring 31 and less than 40ft. salling length; second class, centerboard and keel measuring 24 and under 31ft.; third class, centerboard and keel measuring 21 and less than 24ft.; fourth class, measuring 19 and less than 21ft.; fifth class, less than 19ft.

The start was set for 12 o'clock, with a preparatory signal at 11:30 to get into line, but it was 11:50 before the first whistle was sounded.

The wind was S.W., strong and squally, with some sea, so double reefs were turned in by some. At 2 P. M. came a rain squall, followed by a calm, so that the yachts found great difficulty in reaching the finish. The times were:

Many protests were entered but were disallowed by the judges and the prizes were awarded as follows:

First class centerboards—First prize, $50, Shadow. Second class centerboards—First prize, $40, Eva; second prize, $20, Folly.

Second class keels—First prize, $40, Ione; second prize, $20, Echo.

Third class centerboards—First prize, $35, Posy; second prize, $20, Nora; third prize, $15, Louette; fourth prize, $10, Tyrant.

Third class keels—First prize, $35, Kitty; second prize, $20, Volante; third prize, $15, Carmita; fourth prize, $10, Fearless.

Fourth class—First prize, $30, Tomcat; second prize, $20, Em Ell Eye; third prize, $15, Crusader; fourth prize, $10, Thrasher.

Fifth class—First prize, $30, Wildfire; second prize, $20, Zoe; third prize, $15, Flora Lee; fourth prize, $10, Lark; fifth prize, $5, Mischief.

The judges were Messrs. Charles V. Whitten, B. W. Rowell, W. A. Cary, F. M. Griffin, O. A. Ruggles, Peleg Aborn, W. K. Millar, C. F. Loring and J. B. Forsyth.

The steamers Admiral and City Point followed the race and carried the ladies and guests of the club.

After the race a supper was served at the club house, followed by music and dancing.

A series of matches was arranged after the race by the owners of Tomcat and Em Ell Eye, to be sailed on Aug. 18, 19 and 20, best two out of three.

NEW ROCHELLE Y. C. LADIES' RACE.—On Aug. 14 the New Rochelle Y. C. sailed its first ladies' day regatta over a course from the club house round Execution reef and back, two rounds, 6 miles each. The yachts were to sail in cruising trim, each carrying one lady or more. The times were:

Madeleine	3 32 35	Not timed.		
CLASS III.—CABIN SLOOPS.				
Letitia	3 18 45	5 22 15	2 03 30	2 03 30
Amazon	3 18 10	5 29 00	2 10 50	2 08 22
Curlew	3 14 42	5 24 30	2 09 48	2 09 36
CLASS IV.—OPEN SLOOPS.				
Lively	3 56 00			
CLASS VII.—OPEN SLOOPS.				
La Perichole	3 25 55	5 31 20	2 05 25	2 05 25
Adele	3 21 45	5 30 10	2 08 25	2 08 10
CLASS VIII.—CAT-RIGGED.				
Kate	3 21 00	5 41 40	2 20 40	2 18 02
Olive N.	3 21 45	Dismasted.		
Ellen	3 21 50	Not timed.		
Gracie L.	3 19 20	Not timed.		
Nettie	3 27 30	Not timed.		
Dolly	3 20 30	Not timed.		

All went off pleasantly except that Lotus grounded on the reef and Olive N. lost her mast. Each lady on the winning yachts received a souvenir. The regatta committee were Messrs. Muller, Gouge and Jenkins.

THE END OF THE CRUISE.

ON Wednesday, Aug. 11, when the fleet left Vineyard Haven, its numbers were greatly decreased, and by the time that it emerged from a heavy fog at Newport still fewer yachts were left. The wind was S. W. and there was a very heavy fog all day, so that navigation was difficult and dangerous. Puritan remained at Naushon, Priscilla put into Tarpaulin Cove, and Gracie went east to Marblehead. Atlantic came through the fog, steering a good course, but Mayflower led her, while Sachem headed the schooners. The times were not accurately taken. The fleet at Newport were Sachem, Montauk, Miranda, Crusader, Dauntless, Wanderer, Mayflower, Atlantic, Whilcaway and Fanny. Galatea came in later. The fleet was disbanded at Newport that evening.

Galatea arrived at New York on Aug. 16. Mayflower and Puritan will be here this week, and on Aug. 21 the first trial race will be sailed, over the New York Y. C. course. On Aug. 23 the second trial race will be sailed, probably over a triangular course, and on Aug. 25 the third, 20 miles out and back. The races for the Cup are set for Aug. 7, N. Y. Y. C. course; Sept. 9, 20 miles and back; Sept. 11, triangular.

FAIR PLAY IN THE CUP RACES.

Editor Forest and Stream:

I have just been shown by a friend your issue of 5th inst., in which you reprint with some comments my letter from the *Field*, and while I cannot but feel flattered at the no doubt involuntary compliment, I shall be still more delighted if you grant me a small portion of your valuable space to reply to one or two of the remarks to hang which on, my communication was evidently used as a convenient peg.

And firstly, let me express my gratification that as to the real matter in dispute you are of the same mind as myself. The chief object of my letter was to show the objectionableness of New York Bay for the coming yacht races, and I certainly could not expect any American, and especially one located on Manhattan Island, to take the same view of the matter and uphold it with more zeal and discretion than you yourself have shown. In passing you say that the figures I quote, however, prove absolutely nothing, as the race I referred to was all flukes and drifts. Why that is just what I wanted to show and to let the people on the other side of the water see it could hardly be otherwise occurring where it did. Well, since you yourself admit this concerning the bay, why should you think it the spirit of mischief in me, a Britisher, to carry your premises to a logical conclusion and say the match should not be sailed in such unsuitable waters?

Of course every one knows, and I assumed this to be so, that there are two races to be sailed just outside—at least two races may be sailed outside if the second is necessary—but every one also knows that the inside race is a foregone conclusion and might just as well be held as already sailed and counted to the Yankee. This was evident last year, although Sir Richard Sutton was too much of a gentleman to grudge you the chance of crowing over a barren victory. This being so leaves practically one race only outside, as all the probabilities of the weather would favor the Yankee yacht. Even if it should be necessary to sail twice outside it would be highly improbable that the outter would get weather to

suit her on both occasions. No, it is as I said, the Galatea will be like the Genesta, handicapped all the way through, partly of course naturally, but much more so by the race arrangements. You say it is too expensive for the New York Y. C. to go to Marblehead or Newport. Now this is something wonderful. The wealty yacht club of the most opulent city in these United States cannot afford to venture so far off for a race as Marblehead or Newport, while a private gentleman, such as Sir Richard Sutton or Lieut. Henn, thinks nothing of coming all the way from England and submitting to what must seem to him the extortionate charges of this great and glorious republic.

Surely your daily contemporary the *World* might start a subscription, or, if its whole energies are required for the obtainment of the golden hatchet for Gladstone, I am sure the Britishers of New York would gladly subscribe the small sum required for the absolutely necessary expenses connected with the races, and so help the poor yacht club out of a difficulty. Of course it would cost each member of the club a little more to go to Marblehead than down to the Scotland Lightship; but each would feel the money was expended exclusively on himself, and no *arrière pensée* would remain as did in the case of the dinner so generously tendered to Sir Richard Sutton by the club. I feel I ought to apologize to myself even for speaking of the making or saving of money in connection with any, much less a so-called international, yacht race. It savors too much of the shop altogether, and when such an agreement is put forth on behalf of a great yacht club, it may indeed be very well said, "*Qui s'excuse s'accuse.*" But, even so, expense need be no object. The great Atlantic rolls majestically right in sight of the upper stories of your higher city buildings, and if you choose, nevertheless, that the most important of the three races be sailed in that dumping ground called New York Bay, you must not be surprised that—all your protestations to the contrary notwithstanding—Britishers should feel that just a little bit of the cloven hoof was being shown them.

You say that the races will be sailed in September when there should be plenty of wind. Well, perhaps there should, but unless my memory fails me it took several attempts last September before wind enough could be whistled up to blow the Puritan and the Genesta along. However, we don't complain of the weather. That is a thing neither side can control, though it may be partly calculated on, but unless what can be controlled—viz., the place of sailing—is properly fixed, there will remain in the minds of all true sportsmen, even after you have again proved you mean to hold the cup, a wish that after all such large openings had not been left for hostile criticism or even mere suspicion. In conclusion, there is no spirit of mischief in speaking out boldly for the right and fair play. There is no use mincing matters and pretending that we Britishers are pleased with the arrangements, though, of course, we have to submit, as the game is in your own hands. I am a British citizen, but were I an American I trust I should have honor enough left to be ashamed that my country possessed a trophy which requires such tactics to insure its retention, and it is only because I hope yet to see the issue fairly and squarely decided that I have felt called upon to interfere in the matter at all. DAVID REID, JR.

ROSELLE, N. J., Aug. 13.

[The chief object of Mr. Reid's first letter seems to be to prove that the Genesta races last year were "engineered all through" to secure a victory for the American boat, an expression which, used in this connection, implies to all racing men that unfair and dishonorable methods of winning were resorted to. This statement is entirely unjust to the New York Y. C. and to the gentlemen to whose charge the races were intrusted. We condemned the choice of the inside course then as we do now, and believe that it is bad policy to select it; but those who saw the races must admit that they were fairly and honestly conducted. If we read our correspondent's first letter correctly, what he wanted to show by figures was not as stated above, that "the race referred to was all flukes and drifts," but that a cutter beat the sloops over the New York course. This is not proven by the times he quotes, as we all know that Bedouin, Gracie & Co. have no place beside the big ones in a good race, and that they cannot save their time. If he considers it proven that Bedouin can beat the others over this course, why cannot Galatea do the same? Our objection to the course as laid out for this year is that it is really too lucky and uncertain to give the same chances to both boats, rather than that it militates against either one in particular. Had Genesta led two or three minutes at the Lightship last year and the same at the Hook, it would have been Puritan and not she that was fifteen minutes astern at Buoy 15. There is no need of going to Marblehead with the whole Atlantic at our front door, and, in spite of Mr. Reid's arguments, there are many reasons against it. As custodians of the Cup, the club naturally want the races where their members can see them. The challenger is, of course, at some expense, but less probably than that of a season of twenty or thirty races at home. The club, on the contrary, have been called on for two years in succession to hold an expensive series of trial races, to build one yacht, and to pay for two series of cup races with the many incidental expenses, and while they have done this as a matter of course without complaint, they may fairly object to a demand that they shall greatly increase the expense by going to a strange part several hundred miles distant. The races here, even with a day intervening between each, makes serious inroads on the time of a man whose duties on the Regatta Committee or whose interest in yachting lead him to follow them, and it would be still worse had the lie to go away entirely for a week or more. As far as we know the owners of the boats which, it is likely, will compete do not want to sail over the inside course. Lieut. Henn certainly does not, and all who are interested would be better satisfied by three races outside. The New York Y. C. will do a graceful thing and one that will in all probability cost them nothing, by giving up this point and selecting an outside course for the first race, a course that will be in every way fairer and safer for both competitors. With the fleet of steamboats and ocean steamers which will accompany the race in any case there will be little probability that an outside race will be less easily seen than an inside one, so that the claim that one race should be held over the club course to accommodate the club members and ladies amounts to nothing. On the other hand must be considered the serious chances of damage to one or the other of the competitors, not of necessity to the cutter, from the uncontrolled mob of tugs, steamboats, yachts, oysterboats and craft of all kinds that will crowd over the confined waters of the Lower Bay. Once on the broad ocean this danger disappears, and we hope that those intrusted with the selection will see the propriety of a charge in the present programme.]

Editor Forest and Stream:

I see from Mr. David Reid's letter, which you published in your letter of Aug. 5, Mr. Reid says in substance "that it was by a mere prearranged class division that the other flyer, the Priscilla, was not also placed after the cutter (Bedouin) in the late regatta of the New York Y. C." Permit me to correct this by stating that the prearrangement was that Bedouin's entry was accepted by Mr. Chase, the Chairman of the Regatta Committee, subject to remeasurement. Bedouin, after the race, was duly and officially measured, and this measurement placed her beyond a doubt in the first class. That she won fairly in that class is a matter of fact and record. Yet the first class prize was awarded to Priscilla.

ARCHIBALD ROGERS.

ON BOARD THE BEDOUIN, off Beverly, Aug. 16.

AMERICAN Y. C. REGATTA.

THE Regatta Committee of the American Y. C. have just issued the following report of the late regatta, giving a complete summary of these most important steam yacht races. The A. Y. C. may well be proud of the races of 1885 and '86 as the finest contests between steam yachts that have yet been held; and also of the fact that it is the only club in the world devoted to steam yachting, and that though of recent formation its success has been marked by such contests. The entries this year were less numerous than at first expected, but the fleet was equal in other respects to any that has preceded it, in fact the work of the club in the past three years has done much to raise the standard in steam yachting, though there is still a very wide field for improvment both in style and efficiency.

It has often been contended that steam yacht racing could not be interesting, but this seems completely disproved by the experience of the A. Y. C., and their regattas attract hardly less attention than many of the salling races. It is rather too soon to expect after three seasons trial any great discoveries or marked improvements in steam yachts, but the club has every reason thus far to be proud of its success, and guided by an able and energetic regatta committee it may look to still greater results in the near future. The full report of the committee is as follows:

NEW YORK, July 26, 1886.—*American Y. C.—Gentlemen:* Your Regatta Committee respectfully presents the following report of the third annual regatta of the club with results: The run was over the club course, from Larchmont to New London, passing lighthouse off Stratford and Light Vessel off Bartlett's Reef to the southward and eastward, terminating abreast of the Pequot House pier. Length of course 80 knots. The start from Larchmont was arranged by classes and a different time of starting was fixed for each class with the result that the longest and shortest yacht competing, respectively 228ft. 9in. and 52ft. 9in. on waterline, finished off the Pequot House pier within 30sec. of each other.

The yachts were signalled to start as follows: Those of 85ft. and under at 8:20 A. M., from the flagship Lagonda. Those over 85ft. and under 150 at 10:51 from the committee's steamer Cygnus. Those of 150ft. and over at 12 noon from the Larchmont flagship Schemer.

The wind during the course was fresh on the starboard beam. It was high water at New London at 9:38 A. M. and at the starting point, Larchmont, at 11:22 A. M. The third class yachts were not as much favored by the tide as were the first and second classes. Five cups were offered for competition over the club course. One was presented by Com. J. C. Hoagland for the shortest time over the course, irrespective of time allowance, and another was presented by ex-Rear-Com. W. E. Connor for the winning boat under the Haswell time allowance.

The following table shows the results under the respective time allowances as adopted for this year's regatta and also the result of the race for the Commodore's Cup.

Distinguishing Number.	Name of Yacht.	Entered by	Hulls. Length on Water-line.	Hulls. Beam Moulded.	Hulls. Hold.	Tonnage. Gross.	Tonnage. Net.	Boilers. Steam Pressure.	Boilers. Sq. Ft. Grate.	Boilers. The yachts racing under time allowance proposed by C. E. Emery, Ph.D., were divided into three classes. This time allowance is based on the rule that the speed of a yacht in knots per hour should equal 2 7-10 times the cube root of the length of the yacht in feet on the waterline.

Under the time allowance proposed by Mr. Charles H. Haswell, $\sqrt[3]{\frac{G.\ C.}{T.\ \frac{2}{3}}}=V$. The velocity of a vessel is assumed as the cube root of the quotient of the product of the area of her grate surface, and the constant due to the character of combustion, divided by the cube root of the square of her gross tonnage. The constants being for: Natural draught, 1; jet, 1.25; blast and exhaust, 1.6. G.=Grate surface in square feet. C.=Combustion. T.=Gross Custom House tonnage.

The Atalanta won three cups, but under the rule that no yacht shall be awarded more than one prize, and the owner having elected to take the commodore's cup, your committee award the prizes as follows:

Commodore's cup.....Atalanta.
Cup under Haswell time allowance.....Inanda.
Cup under Emery time allowance, for first class.....Yosemite.
Cup under Emery time allowance, for second class.....Lagonda.
Cup under Emery time allowance, for third class.....Nereid.

The Meteor was disqualified for not going the course.

The record for fastest time over the course is as follows:

1884. Larchmont to Pequot House.....4 42 57
1885. Larchmont to Pequot House.....4 53 50
1886. Larchmont to Pequot House.....4 34 57

Shelter Island races, July 10, 1886, Steam Launch Race—Manning Cups.—Henrietta, owned by Mr. Normal L. Munro and Surprise, owned by Mr. Jay Gould, entered for cup presented by Mr. Thomas Manning. The course laid out was from red buoy off Fanning Point, Greenport, to and around black buoy off Bug Lighthouse, turning the buoy from port to starboard and return—a total distance of 4.75 knots. Both launches were ruled out; Henrietta for turning black buoy from starboard to port, and Surprise for finishing on opposite side of stakeboat from which the launches were started. The stakeboat was anchored. The estimated average speed of the above launches was as follows: Surprise, 9.8272 knots per hour, Henrietta, 16.5094.

Naphtha Launch Race—Alley Cup.—The first of a series of naphtha launch races was inaugrated for a cup offered by fleet Captain W. S. Alley. Course from judges' boat off Prospect House to and around stakeboat anchored off Manhanset House and return. The following shows the entries, etc., and the winner:

	Start.	Finish.	Elapsed.	Min. on W.L.	Length Knots pr. hr.
Tillie's launch	3 58 05	4 20 21	0 22 16	22 26	21.6 6.14263
Orienta's Launch	3 58 25	4 21 40	0 23 15	23 25	18.6 5.88283
Lagonda's Launch	3 58 30	4 23 23	0 24 53	24 88	18.6 5.49669

Won by Orienta's launch, distance 2,2796 knots.

Steam launches of 50ft. on waterline and under, and also naphtha launches were raced under the rule for time allowance proposed by Chief Engineer B. F. Isherwood, U. S. N. The rule being: "The speed in knots per hour divided by the cube root of the length on the waterline of the yachts respectively; the quotients represent relatively the merits of the different yachts."

Small boat race over a one mile course for badges to the winning crews. Dingy race, one pair sculls; won by Yosemite. Cutter race, two pair sculls; won by Inanda. Gig, four oars and coxswain; won by Atalanta.

Bateman challenge cup, presented by Vice-Com. A. E. Bateman to the owner of the yacht whose cutter crew succeeds in winning for three seasons in succession, now held by James A. Baker, Esq., goes to Capt. E. M. Field, of the Inanda.

The iron steamboat Cygnus was chartered for July 15, 16 and 17, for the convenience of the members and guests. A daily collation was served on board and a band of music provided. The thanks of the club are due to the officers and members of the Larchmont Y. C. for courtesies extended, and also to Vice-Com. Charles A. Stevenson and Rear-Com. Gerald M. Barretto of the same club for special services kindly rendered. The thanks of the club are also due to Benjamin Willis Jerome, Esq., for superintending the arrangements at Sarah's Ledge buoy. Also to Rear-Com. Charles H. Osgood, for reception given to members and guests on the evening of the 15th on arriving at New London Harbor. Also to Com. J. C. Hoagland, ex-Rear-Com. W. E. Connor and Fleet Capt. W. S. Alley for cups presented for competition. (Signed) George W. Hall, Thomas Manning, E. S. Connor, Thamas L. Scovill, Edward S. Innet, Regatta Committee.

LARCHMONT Y. C. OYSTER BOAT RACE.—The programme for the race of oyster boats on Saturday is as follows: There will be three classes: I. Cabin sloops, II. Open sloops, III. Catrigged boats. Entries must be made in writing on or before Friday, Aug. 20, 1886, and addressed to the Regatta Committee at Larchmont, N. Y., specifying the exact measurement on waterline. The sails in this race will be restricted to jib, mainsail and working gafftopsails for sloops, and single mainsail for catrigged boats. A working gafftopsail is understood to mean the one ordinarily used. Each boat will be given a number on the morning of the race, together with the sailing regulations. All boats will be allowed to carry one man for every 5ft. of sailing measurement or fraction thereof, in addition to the captain. No ballast nor article of weight can be taken in or put out, nor shall any article of weight be shifted after the signal to start, and boats must bring back the same crew with which they start. Start—The start shall be a flying one for all classes. The starting line shall be an imaginary one drawn from the easterly pagoda on the shore at the entrance to Larchmont Harbor, to a stakeboat flying the club flag and anchored in a southeasterly direction from the pagoda. Course—The course for all classes shall be from Larchmont, to and around the Red and Black horizontal striped buoy at the west end of Execution Reef, passing the same on the port hand; thence to and around the black buoy off Matinnicock Point, passing same on port hand; thence to and around a stakeboat anchored south of Captain's Island, passing the same on the port hand; thence to the finishing line, which shall be between Execution Light and Sands Point buoy, about nineteen nautical miles. Competing boats must not pass between any of the buoys on Execution Reef and the lighthouse on the reef, nor to the westward of Whortleberry Island, nor between the buoys on Hen and Chickens Reef, and must keep on the proper side of all buoys not above specified. All competing boats must be oyster boats regularly engaged in that business. Boats used for taking out pleasure parties will not be allowed to enter. The allowance in Classes I. and II. will be ½m. to the foot, Class III. 1½m. to the foot. The measurement for all time allowance will be length on waterline. This measurement should be carefully taken, for no prize will be awarded to any boat until after she has been measured by the club measurer. Should any owner's measurement be found to be less than the boat actually measures she shall forfeit all claims to the prize. All boats intending to compete must be anchored off Larchmont club house at 9:30 on the morning of the race, to receive instructions from the Regatta Committee. The Regatta Committee reserve the right to refuse any entry, and to rule out any sail not in accordance with the rules. There will be no restrictions as to the time in which race shall be sailed. The prizes are: Class I.—First prize, $75; second prize, $35. Class II.—First prize, $50; second prize, $30. Class III.—First prize, $40; second prize, $25. No prizes will be paid on the day of the race. Checks will be sent to the winners as soon as possible thereafter, and the result will be announced in the daily papers. All protests must be made in writing to the Regatta Committee at Larchmont before 6 o'clock P. M. on the second day after the race, Aug. 23, 1886. Should the finish be after dark, all boats must cross the line near enough to the stakeboat (which will be anchored close to Sands Point buoy and marked by a red light), to be hailed and give their respective numbers. W. J. Greacen, John T. Fisher, Stuyvesant Wainwright, Augustine Monroe, A. Bryan Alley, Charles A. Stevenson, Regatta Committee.

CAROLINA Y. C. REGATTA, AUGUST 6.—The regular August regatta of the Carolina Y. C. was sailed over the usual course on Aug. 6. On account of bad weather and sickness of owners but six yachts competed, and started in following order:

Glide, R. B. Cameron.....1 30 00
Restless, J. McR. Cowan.....1 30 05
Lulie, W. Atkinson.....1 30 10
Lillian Florence, H. M. Bowden.....1 30 58
Rosa, W. L. Smith.....1 31 43
Ripple, Norwood Giles.....1 33 13

The wind was from S. S. E., and at first moderate but freshened during race. The finish was as follows:

Ripple	2 53 33	Restless	2 55 25
Glide	2 54 37	Lulie	2 55 57
Lillian Florence	2 55 04	Rosa	2 56 00

The Ripple takes flag in first class and Glide in second. Time of Ripple 1h. 20m. 20s., the best on record in club. The race was interesting and exciting throughout, as the yachts hung close together all the time.

ACCIDENT TO THE KATIE GRAY.—About midnight on Aug. 7, as the yachts Katie Gray and Cricket were passing Nine-Mile Point side by side, carrying balloon sails, the masthead shroud hook pulled out of the Gray and was immediately followed by the dismasting of the yacht. The Cricket immediately hove to and after the wreck was cleared towed the Gray to Oswego. A new spar which has been on hand in case of accident was stepped at once.

"NESSMUK" SAYS: Please give full reports concerning the "Big Four." I will gamble myself all away that Britain can't furnish four cutters that, in an ocean race of 100 miles, can beat them on aggregate time. "Lucky accidents?" Scarcely. Lightning don't strike so many times consecutively in one place. No matter what is required, in war or peace, a cheese box or a racing yacht, we seem to get there.—NESSMUK.

BUFFALO Y. C. CRUISE.—On Aug. 10 a race was sailed at Port Dover over a 15-mile course, in honor of the Buffalo Y. C. fleet in port on their cruise. The starters were Alarm, Silvia, Curlew, Jewett, Vera, Turk, Emma, Growler. Alarm won in first class with Vera second and Curlew third. Turk won in second class, with Growler next. In the evening a ball was given in honor of the visitors.

ANOTHER CAPSIZE.—Our list last week has been increased by the capsize of the centerboard sloop Frolic, in Boston Harbor, with a list of four or five drowned. If we are not mistaken this craft is of the same family as two other notorious death traps, whose records are only too well known. Can any of our correspondents say where the Frolic was built and when?

STILL THEY COME.—It is not improbable that Marjorie, Lenore and one of the flying fives may soon "go west," while Kriemhilda will fly an American ensign and hail from New York soon.

NO ACHING ARMS or broken back with Lake's Steerer. See second page.—*Adv.*

LAUNCH OF THE SCHOONER ORIOLE.—On Aug. 7 the new schooner Oriole, built for Mr. George Gooderham, of Toronto, from designs by Mr. A. Cary Smith, was launched at Toronto. The Oriole is 87ft. 6in. over all, 73ft. load waterline, 20ft. 3in. extreme beam, 7ft. 9in. draft, 2ft. 9in. freeboard and 11ft. 6in. overhang aft. On her keel are 18 tons of lead, with 17 inside. The headroom is 6ft. 2in. under deck beams. The room below is large and well arranged and the Oriole is the finest yacht of her rig on the lakes. Most of the building was done under the supervision of J. J. Driscoll, of New York, who went to Toronto for that purpose. As the schooner touched the water Miss Violet Gooderham, aged seven, broke the wine over the bows.

BEVERLY Y. C.—The races of Aug. 7 and 14 were postponed to Aug. 21, when the 112th and 113th regattas will be sailed. On Sept. 4 the 114th regatta will be sailed, followed by the great open regatta, 115th on the same day.

SLOOP VS. CUTTER.—To those who, while not thoroughly conversant with the technicalities of yachting, are still interested in the great races soon to take place, and wish to understand more about the issues involved, we can recommend the little pamphlet lately published by Vincent & Joy, New York, entitled "Sloop vs. Cutter." The author explains clearly, by means of simple diagrams, the differences in hull and rig of the two classes, and a short history of the races of last season are also appended, with dimensions of the large boats of this year, making a very compact and useful little handbook.

A RACE AROUND BLOCK ISLAND.—On Aug. 14 a race was sailed between two catboats, Puck, 27ft. long, and Lookout, 28ft., over a course around Block Island. Capt. W. T. Dodge sailed the Puck and Capt. David Rose the Lookout. There was a strong breeze and Lookout soon carried away her forestay and later on her gaff gave way. Puck won by 3m., her time being 2h. 28m. Another race will be sailed.

A VERY LIGHT DRAFT LAUNCH.—Messrs. Chas. P. Willard & Co., of Chicago, have just completed for J. E. Porter, Esq., Ottawa, Ill., for use on the Illinois River above the head of navigation, a twin screw launch 33ft. in length by 8ft. beam, which draws, loaded, only 14in. of water; is fitted with a vertical steel boiler, two 4½×5 engines, and two 20in. propeller wheels, which are only a little more than half submerged. The arrangement of the machinery is rather exceptional, the engines being placed forward of the boiler, and the propeller shafts passing on each side. She is built on a guaranteed speed of 9 miles an hour when drawing 14in. of water, and on trial fulfilled the conditions in every particular. These light draft boats are extremely useful for hunting purposes, where they are compelled to run up little streams.

YACHT RACES AT NEWPORT.—The citizens of Newport have subscribed nearly $2,000 toward prizes for races to be sailed next month by the large yachts off that port. A committee has been appointed to confer with the N. Y. Y. C. and arrange the dates and course.

THE SHREWSBURY RIVER.—On Aug. 13 the last race of the series was sailed on the North Shrewsbury in a good south wind. The winners were: Class I.—Etelka, F. Degraw; Nestle Nigh, Dr. Boyd. Class II.—Little Spot, Ferman Smith; Ettie R., C. James. The winners in the series of races are: Class I.—Etelka first, Nestle Nigh second. Maud I. third prize. Class II.—Fern first, Little Spot second. The champion pennant of the river was also sailed for in the final race, being won by Red Head, J. P. Smith.

THE CAPE MAY CUP.—On August 14, Irex and Genesta started for the Cape May Cup won by the latter last year. The full details of the race have not yet been received here, but Irex won easily by four hours. The weather was light with calms.

GEVALIA.—Mr. Winslow's schooner made her way to Boston with a mainsail purchased from a fisherman, after her collision with Priscilla at Newport. She is now at Lawley's for new goff and boom, while Wheeler & Gurney are making a new mainsail.

AN EXCITING CRUISE.—The schooner yacht Rambler has been chartered by Mr. E. A. Buck for a month's cruise in which he will be accompanied by Mr. Henry Irving and Miss Ellen Terry. The yacht will be accompanied by a tugboat which will take her in tow whenever desired.

JERSEY CITY Y. C.—On Aug. 14 the Jersey City Y. C. fleet sailed down the Bay with a party of ladies on board, returning to the club house for a supper in the evening.

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.
MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR
Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.
All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.
This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellencies are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible point the liability of kinking the line.
If your dealer does not keep our goods in stock, or will not order them for you, send 50 cents for our 128-page folio illustrated catalogue.

HARDER'S Patent Breech-Loading Rifle and Shotgun.
With Over and Under Barrels.
These Guns are unequalled for Accuracy, Range, Safety, Workmanship, Balance, Style and Material.
This gun can be used for any purpose that any other two guns are used for. For the farmer, the marksman and the hunter, for both small and large game. They are made of the finest materials, with steel rebounding locks, low hammers, set trigger to rifle barrel that may also be used as a single trigger. Weight, 9 to 12lbs., checkered pistol grip, oiled or varnished stock, fine engraving. .32, .38 and .44-calibers kept in stock; using Winchester cartridges, 12, 16 and 20-gauge shot barrels. Price, $45 for any length barrels. If pistol grip and engraving are not wanted price will be $5 less.

Pat. June 9, 1885.

SCHOVERLING, DALY & GALES.

Charles Daly Hammerless.

THE BEST HAMMERLESS GUN IN THE WORLD.

WHY.

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "kill dead."

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the gun last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

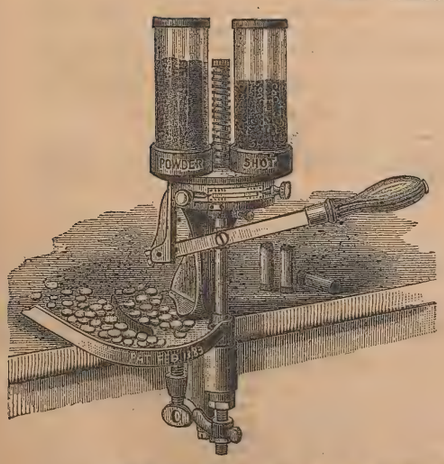
THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardson and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG BODY IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY IS A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.



While in sales every other Hammerless Gun has fallen off at least 50 per cent. this season (which has been a dull one in gun trade), the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

The Rapid Machine Loader,

For which we are sole agents, is giving the best satisfaction.

Since July 1st we have shipped a large number of these loaders. In every case they have given the best satisfaction, and there is NO QUESTION that after using one NO ONE WILL EVER USE ANY OTHER. It is so compact, substantial and convenient, at once the merits of it are recognized. Order one at once; it will save one-third of your time.

The RAPID is adapted to all gauges, viz.: 10, 12, 14, 16 and 20. Additional cost for more than one gauge, $1.00 per size. To change the gauge it is simply necessary to exchange shell barrel and plunger head.

Capacity of Charg { 2½ to 5 Drams. / 1 to 2½ Ounces.

Price of Loader, $12.00.

Chamberlin Cartridge

COMPANY'S

Fixed Ammunition for Shotguns.

SORA.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely on the powder and shot. Rammed with uniform pressure. Beautifully and securely crimped. Packed 25 in a pasteboard box, 20 boxes in a case. The Most Convenient and Best Ammunition in the World. Highest scores on record made with these cartridges. Persons who use them in the field are constantly speaking in their praise. WOOD POWDER has shown its best results in these goods. PIGOU, WILKES & LAURENCE POWDER does its best work in Chamberlin cartridges. Any of the leading brands of paper shells or powder may be had. THE VARIETY OF CARTRIDGES FOR TRAP SHOOTING IS NOW COMPLETE. WADDING ONE SIZE LARGER THAN BORE OF GUN for such guns as require this style of loading.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 26, 1886.

VOL. XXVII.—No. 5. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

BLUEFISH AND MENHADEN.

IN another column we publish a letter from Mr. Daniel T. Church, who is connected with the firm of Joseph Church & Co., manufacturers of menhaden oil, guano and fertilizers. Mr. Church sends us a bottle of young herring upon which the bluefish are now feeding, and cites this as a proof that the bluefish do not feed upon menhaden to any great extent. All salt-water anglers know that the appearance of a flock of gulls hovering over a place and feeding there denotes that a school of menhaden is near the surface, and that the bluefish are below engaged in cutting them in pieces. All anglers have seen the bluefish disgorge parts of menhaden on the decks of their boats, and all have used the menhaden as bait. If there is any one fact well established it is that the bluefish eat menhaden, herrings and other small fish, and in the report of the United States Fish Commission for 1877, Mr. G. Brown Goode estimates that "three thousand millions of millions (3,000,000,000,000,000) of menhaden are annually destroyed by bluefish in the waters of the United States alone."

While it is possible that man does not destroy as many menhaden and herring as the other enemies of these fish do, it is certain that his efforts, added to those of the beasts, birds and fishes, must interfere with the balance which existed before the purse-net and the steamer were put out after them. A few years ago it was thought that the supply of buffalo on the great prairies was sure to last for centuries, but the skin-hunter has practically exterminated them. The wild duck of Labrador has become extinct through the love which the sailor has for ducks' eggs, and yet this bird was found in enormous flocks a generation ago. The wild turkey and the pinnated grouse have gone from New England, the bobolink is disappearing from our meadows, and but for artificial propagation the shad would have followed the salmon and been seen no more in our rivers. All these changes have occurred within the memory of men now living, and we believe that unless our bays and harbors are protected from the rapacity of nets, several valuable food fishes will also disappear.

If the purse-nets and menhaden steamers can be kept at a distance from shore, say two miles, and the pound-nets kept out of Long Island Sound and the bays, there may be an increase of fish which would benefit the oil men as well as others, but the oil factories seem to want the last menhaden, heedless of what follows. Even the oil men have bemoaned the scarcity of the little fish they have worked so hard to exterminate, and are using their purse nets on other fishes, as stated by Mr. Church.

It may pertinently be added that the menhaden fishermen are themselves not fully agreed that the efforts of man have no effect upon the supply of sea fishes. Mr. Oscar O. Friedlaender, the Secretary of the United States Menhaden Oil and Guano Association, has a notion that while the work of the steamers cannot affect the supply of menhaden or bluefish, they can seriously impair the ranks of preying sharks, and he thinks that for this important service the Legislature of New Jersey or Congress should subsidize the fleet. His argument is this: "The greatest enemy of all fish is evidently the shark, and their destruction by the menhaden fleet should not be underrated, as it destroys at a low estimate 50,000 during the fishing season. To give your readers an illustration of a shark's appetite, I mention that which I witnessed with my own eyes last year when we opened one of these monsters of the ocean at our dock at Barren Island. We discovered two young sharks of about fourteen inches in length, all alive and jumping when exposed to freedom; then we discovered two undigested skulls of sheepshead, next four bluefish, and finally 325 menhaden, which were swallowed by the monster without a scratch. Take it for granted that half of the 50,000 sharks caught would give birth to two young ones every year, and these young ones would again thus multiply, there would be to-day an addition of 102,350,000 sharks to the present stock if the menhaden steamers had not destroyed that number every year for the last ten years. I need hardly say that the above-mentioned contents of a shark's stomach indicate that in such case there would probably be a scarcity of food fish now; so the menhaden steamers should, if anything, be considered protectors of food fish, and not their antagonists."

A PROPOSED NEW NATIONAL PARK.—Mr. W. O. McDowell, whom some of our readers may remember in connection with an abortive effort to secure funds for a Frank Forester monument at Greenwood Lake a few years ago, as the promoter of a cheap sportsmen's tent scheme at Greenwood Lake, subsequently, we believe, merged into a Summer School of Christian Philosophy, and later as playing the part of the mysterious Lone Fisherman in the Powderly-Gould negotiations in this city at the time of the railroad strike, has conceived the project of converting the Greenwood Lake district into a grand national park. He suggests that there are hundreds of square miles of territory unfit for farming and valuable only for iron mining. This territory, belonging to the States of New York and New Jersey, he proposes to have ceded to the National Government, and by the latter converted into a people's pleasure ground and maintained as such. The project savors slightly of the Utopian, but we hope no unkind individual will for that reason seek to discourage Mr. McDowell. Meanwhile, if that philanthropist really yearns to benefit his fellow men, let him induce the States of New York and New Jersey, or the National Government, or all three combined, to employ a corps of engineers to make such changes in the topography of Greenwood Lake as shall mitigate the malarial influences which are more noxious there to-day than when Frank Forester complained of them years ago.

TROOPS IN THE PARK.—In consequence of the failure of Congress to make any appropriation for the care of the Yellowstone Park, Superintendent Wear and his assistants have resigned, and the protection of the Park now devolves on the authorities of the War Department. The transfer will take place at once, and Company M, First Cavalry, has been detailed for this service, and as soon as possible will establish its headquarters in the Park. This company has been stationed at Fort Custer, and is under the command of Captain M. Harris and Lieutenants Hein and Tate. The service of this considerable body of men will admit of a very thorough patrolling of the Park, but it will be some time before the soldiers can become very efficient as police, for they have all their duties yet to learn. It is satisfactory to know that the War Department has acted promptly in ordering troops to the Park. A sharp lookout must now be kept upon the lawless individuals who are constantly awaiting the opportunity to despoil this pleasure ground, and will imagine that it will be an easier matter to elude the vigilance of the troops than it has been to escape the civil officers.

THE SEA SERPENT.

WITH the coming of summer we expect the usua tales of the sea serpent and are seldom disappointed. Cape May, Newport and Nahant are the places where the monsters have disported in former years, and the landlords at these fashionable resorts have been suspected by some of getting up either the stories or the serpents in order to call attention to their seaside locations. Be this as it may, this year the monster, or monsters, have appeared at the old fishing town of Gloucester, on Cape Ann, where there is no inducement for fashion to follow and smell the drying codfish. Several times this year we have had accounts of the appearance of some unknown animal near Gloucester, and these reports come from well-known and reliable men who are familiar with the animals which frequent that coast. It is usual for the newspaper humorist to append to the account of a monster having been seen some remark which reflects on the character of the whisky sold at the seaside; but this is not a fair view to take of the case, for too many sober, reliable men have seen an animal unknown to science to allow of a doubt that there is some sort of foundation for their reports.

It is true that there is no evidence that the animal which periodically appears on our coast is a sea serpent, but it may be believed that there is some basis for the stories. Last Sunday several intelligent and reputable men saw a monster off Gloucester, which was not 300ft. away; and they estimated its length at nearly 100ft. They could even see its eyes, and it will not be surprising at any time to learn of the capture of some hitherto unknown monster and its classification by the Fish Commission. It is worthy of notice that the Gloucester monster agrees with the description given by the Rev. Paul Egede, a missionary to Greenland, in 1734, of a creature which went down tail foremost, as did the one seen at Gloucester. For nearly a century the "Kraaken" of Bishop Pontoppidan, of Norway, was considered a myth, but a dozen years ago the whalemen brought in pieces of the arms of a giant squid. A number of individuals were afterward secured by the Yalle College Museum, and in 1876 the New York Aquarium procured a complete specimen 40ft. in length.

STATE SPORTSMEN'S ASSOCIATIONS.—There are indications which point to a revival of State sportsmens' associations. These organizations were numerous and active ten years ago. Since that time they have decreased in size and number, until now the survivors of the original societies may be counted on the fingers of one hand. Various causes have contributed to this decline; the members who had at heart the protection of game and fish gradually lost faith in the State societies as efficient agencies to secure such ends; and the members who were chiefly concerned with the annual trap-shooting tournaments were compelled to forego their sport because of the decrease of the wild pigeon. It is quite possible that a sufficient force of new men may now come to the front to take the places of the game and fish protectors; and as for the tournaments the perfection and variety of artificial targets have filled the place of the pigeon. We reported the other day the movement of Georgia sportsmen looking to a State organization, and in another column to-day is announced the formation of a Tennessee Association.

SUBSTITUTION.—In the two bird lists noticed elsewhere, it is recorded that in certain localities quail and other game birds have become extinct and their place is now taken by the English sparrow. This is a substitution almost as infelicitous as that of the same English sparrows which do duty in reed bird guise and at reed bird prices in many restaurants. If people are willing to swallow sparrow for reed bird, why may they not be educated to appreciate sparrow as sparrow.

THE CANOE MEET AT GRINDSTONE ISLAND is in its attendance and the interest manifested significant of the rapid growth of the sport. The form of the Association has been somewhat modified, being divided into Eastern and Central divisions, the former embracing New England and the latter the rest of the country.

MR. HENRY P. WELLS has returned from his salmon angling trip to Canada, and reports a poor season. The salmon fly was so seldom taken that the anglers perforce had to give their attention to trout to relieve the monotony of casting day after day without a rise.

The Sportsman Tourist.

TRAVELS IN BOON GAH ARRAHBIGGEE.

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

Editor Forest and Stream:

In the fall of 1882, on my voyage home from England on board the Cunard steamer Oregon, I had for one of my fellow passengers a very eccentric and interesting gentleman who strangely attracted me toward him. He in turn took a great liking to me, as he frankly confessed, and on all occasions sought my society, which I only too willingly granted, as he, having been a great traveler, had an endless store of anecdote of adventure to communicate.

That, however, which interested me most of all his narratives was the relation of his explorations in an utterly unknown country, situated in an inland sea in the very heart of Australia. He often complained of an internal disorder, the result of one of his many encounters with wild beasts in that unknown land. Before the voyage was half over we became very intimate and he very confidential, the result of which was, to come to the point, as I have not space to dwell on this part of his history at present, that one day he called me into his stateroom, where he was lying in his berth very pale and haggard, and told me that he felt certain symptoms which he feared augured the worst; and he begged me in case of his death to take charge of his effects, particularly his diary and sketch books, and give their contents to the world in any shape I might deem best for the interests of mankind and his own reputation. He told me that he had no family nor any relatives about whom he cared two straws, though he had some distant relations living in his native State of Ohio. He said I was one of the very few men for whom he had formed a real attachment, and he wished me to be his sole legatee. He did not desire his real name to be known in connection with his writings at present, for some private reason, which he communicated to me, and also because the distant relations of whom he had spoken might embarrass me about what little property he would leave behind him.

A few mornings after the steward knocked early at my stateroom door, telling me that Mr. Goater was too ill to leave his berth and desired to see me. Hastily pulling on a pair of pantaloons and covering the rest of my body with a large overcoat, I hurried to his stateroom. A glance made it evident that he had not long to live, still he was collected and calm.

"My dear boy," he said, in a whistling whisper, "hold my hand, hold it tight. I am off for the happy hunting ground. Wait a—wait a—just one minute, till I—draw my—my—breath—then send for—the—the Captain and the—Doctor. All right. Now some papers there, in that—small box."

I opened the box he indicated with his thin hand, and took out several written sheets of letter paper.

"All—right—wait a minute, hold my hand—hold me tight—I must not go yet—do not leave me—call the steward."

I summoned an attendent and bade him go and call the captain and doctor. Both these gentlemen presently coming, the latter administered some stimulant, under the influence of which my poor fellow passenger rallied for a short time. Then in a few faint words he explained the object of the summons, which was to witness his last will and testament, and also a bill of sale of all his effects made out to me, added to which was another paper, signed by himself, authorizing the captain to make over to me all his baggage and possessions on board. To attend to these matters did not take a very long time. When done the captain left. At my request the doctor remained for some time, until Mr. Goater, making it manifest by signs that he wished to be alone with me, he also retired.

After this the dying man spoke no more articulate words, but held my hand firmly in his own for more than an hour. Then came two or three convulsive struggles, and then the end.

The following day we buried him in the deep green waters. To the present day the whole occurrence seems less real to me than many a dream I have known. The intimacy was so sudden, so quickly ended, and I left with a man's life's labor full of marvellous and mysterious revelations, as a solemn and onorous trust.

For a long time after landing, owing to a press of business and ill health, I was unable to thoroughly examine the cargo of baggage he had left behind him, and have now, I fear, executed my task, with reference to his diary, in but a slovenly way. But I feel the matter therein of so startling a nature that I can no longer justify myself in delaying their presentation to the public, or at least some portions of them, simply to inform the world, as it were, of their existence. If I find that these narrations excite as much interest as I think they deserve, I shall then set myself to the by no means easy task of arranging the rest of his travels and adventures in proper order and so give them to the public in more extended and orderly form.

I must here state that this gentleman, whom I shall call Joseph Goater, a *nom de plume* of his own, started out from Melbourne, Australia, with a thoroughly equipped party for the purpose of exploring the heart of the fifth quarter of the globe. After six months of traveling, adventure and hardship, he reached a large lake or inland sea, in the center of which he discovered an island, which he estimated to be as large as Great Britain. This island himself and followers reached by means of large rafts made of a peculiar light timber indigenous to the country. It is his journeyings in this island that are described in the following chapter, which I take at very little more than random from a mountain of MS. that I have not by any possibility been able to find time to examine. The drawings that accompany the text are copied from, or I should rather say compiled, as faithfully as it has been in my power to do it, from the rough sketches and memoranda in Mr. Goater's collection. A few of the more perfect sketches I give in fac-simile, deeming that, where at all intelligible, they will have more interest than any copies could possibly possess.

F. H. Temple Bellew.

New York, June, 1886.

EXPLORATIONS IN BOON GAH ARRAHBIGGEE.

* * * WE had now proceeded nearly sixty miles up the right fork of the Yacka River, which my guides called the Boochtee or Yacka Bochtee, though they had evidently never explored it, being as unfamiliar with many of its features as myself. The river had become so shallow that we found it impossible to proceed with our large thatched boat. We therefore resolved to leave it behind in charge of the faithful Dope Yenkta and push on with one of the lighter canoes. Taking three of the small-bore rifles and two of the dogs, with a suitable supply of ammunition and other necessaries, we started early in the morning of the 13th, with a small sail set and two paddles, hoping to get over a good deal of space before noon, as we contemplated going ashore and resting during the hottest hours of the day. The country was becoming now more and more lovely as we advanced. From the dense forest and tangled jungle intermixed with swamp and marsh at our place of starting, near Pluckella, 100 miles below, the landscape had been gradually opening up, until now the banks resembled an English park, with fine lawns sloping down to the water's edge, with here and there clumps and groves of the majestic Mosomea tree, its graceful branches bending down and almost touching the ground. These, interspersed with the towering spires of Phitka, produced a most illusive resemblance to English rural scenery, with numerous Gothic country churches pointing their fingers heavenward.

After sailing and paddling until 11 o'clock, and finding the sun had grown excessively hot, we made a landing under a grand old tree whose dense foliage effectually excluded the rays of the sun. Here we gave the dogs a run, as they had grown restive under the restraint of the small canoe, and set ourselves to preparing our noonday meal of dried deer meat, wodda peas and rice. While so engaged we were surprised by a great commotion and barking in some bushes not far off. Seizing my lightest rifle and signing to Poptie to take another and follow me, I rushed over the open plain to the scene of the disturbance. Here I found the dogs had got hold of a strange animal, somewhat resembling a raccoon, only larger and with much longer legs. It had backed up against a tree, showing vigorous fight, and was obviously well qualified to take care of itself in a fair encounter, taking an ugly gash in Juno's left cheek, from which theblood was flowing profusely, as *prima facie* evidence. Bringing my rifle to bear, I despatched the creature with a shot in the forehead. When brought to our temporary camp the natives evinced the most unwonted delight, rubbing their stomachs and pointing to their mouths to signify that we had captured a great gastronomic delicacy. They set to work to skin and prepare it for cooking, filling the inside with savory grasses, and swathing the whole in the broad leaves of the mayaya, and then covering it up with hot ashes and brushwood. It was truly a delicious morsel, with whose equal I think I have scarcely ever met, being in flavor and texture something between grouse and mountain mutton. The natives gave the name of this animal with a peculiar click of the tongue impossible to convey by any European alphabet, but clucktcluck is as near as I can come to it.

After our meal, a siesta, and a pipe, we again took to our canoe, and before sundown had covered twenty-five miles of our voyage, and were in the most enchanting country I ever beheld. We chose for our bivouac the bank of a certain part of the river where it broadened out into the proportions of a lake. This lake was filled with small islands so close together that the limbs of the majestic Mosomea trees growing upon them interlaced overhead, making the most exquisite winding corridors and chancels of foliage. Here we found innumerable wildfowl, many of them entirely new to me and of great beauty. One particularly struck me, a small scarlet duck, so tame that it allowed us to stroke its back as it sat on its nest by the water's edge. Another was a monstrous heron of snowy whiteness with jet-black head and wings. We found a most delightful camping ground, in a very cloister of foliage, where, after an excellent repast off the remains of the cold clucktcluck, we passed a comfortable night, entirely free from any annoyance from the marsh gnats that had troubled us so lower down.

Early on the following morning, when the bosom of the lake was dotted with the plumage of the scarlet ducks, like red berries on a silver salver, and the little bays and inlets were fairly alive with vari-hued waterfowl, above all towering in solemn silence small groups of the black and white heron, when the sun was just beginning to stain the eastern sky of the pale hue of some Rhenish wine, when the woods were filled with strange cries and song of birds, and all nature seemed to be awakened to the glory of a new day, we started off inland to reconnoiter. Nothing ever impressed me so much as the beauty of that morning, with its adjuncts of scenery and animal life, and to this day I can never recall it without feelings of emotion. Accompanied by two attendants with rifles, and the two dogs I strode across a velvet turf with the elastic step of a young doe. The landscape was slightly undulating, and dotted with clumps of trees and shrubs, some of the latter loaded with tempting crimson berries which at that time I did not dare to touch, though I afterward learned to fully appreciate their gustable virtues.

Having walked I should judge about four miles we come to a gentle declivity, where my attention was attracted by seeing some strange-looking objects of about the size and shape of a football rolling and ricochetting with great velocity down the incline, and as they went scattering small particles of something like the sparks from a catherine wheel, or drops of water from a mop twirled by a scullion. My first momentary thought was that they were boulders that had become in some way loosened and were being carried along by their own momentum, or it might be some light substance blown by the wind; but before I had time to form a second thought, to my great surprise they turned back and rolled up the hill with almost equal velocity. I was at once satisfied that there must be animal life, as certainly nothing vegetable could propel itself in that way.

I called Juno and pointed out the quarry. She pricked up her ears and eyed the strange game for a moment with a look of surprise, and then her lithe form laid itself along the ground in great undulating leaps. In a few moments her nose had touched the object; and the next she was flying in the air as though blown up by dynamite. Then coming down all of a heap she struggled convulsively. Two or three times she attempted to rise. At last succeeding, she staggered and reeled as though in a state of intoxication, and with an unsteady gait slunk back to my heel with her tail between her legs. My curiosity was now fairly aroused by this anomolous production of nature, and I resolved to solve the mystery if a solution were possible. So taking a rifle from one of the servants I waited patiently until these balls ricochetted past again, when with a well directed shot I had the satisfaction of seeing one of them apparently explode and then fall a helpless mass to the ground.

I approached it with some caution, having Juno's experience fresh in my memory. Getting close, I perceived a strong pungent, smarting or stinging odor, somewhat of the quality of hartshorn and red pepper combined, though not at all nauseating, as I had half expected, for I did not know whether to attribute the shock Juno had evidently received to some overpowering stench or to electricity. Nothing could induce Juno or any of the natives to approach the thing, and I must confess I had no great fancy to touch it myself, but it would never do to evince any signs of timidity before any of my followers or I should lose that full control over them so necessary to the successful carrying out of exploration. So calling one of the men to bring a basket, I boldly seized the creature with my hand and threw it in. There was only the faintest shock and slight discharge of air, and had I

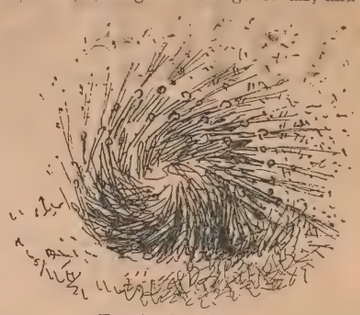

Fig. 1. In Motion.

waited until the body had become cold there would have been none at all. I discovered subsequently that electricity was the chief force brought to bear by these animals as a

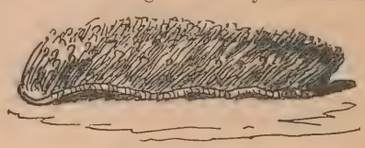

Fig. 2. At Rest.

weapon of defense. I found this creature to be in its dead state no longer a ball, but a long object like a wood louse, flat underneath with a rectangular head, having two small eyes, one at each corner, after the manner of some insects. Its mouth was underneath like that of a shark. It had no legs, but the abdomen was corrugated and its mode of progression (when in search of food) like that of a worm. When moving this way its pace is exceeding slow, but fast enough for the purpose of grazing. The drawings I annex (Figs. 1, 2, 3) will probably give a better idea of it than any amount of description. The length of the body of this specimen measured by my rifle barrel that I had regularly marked in feet and inches, I found to be 13½in.

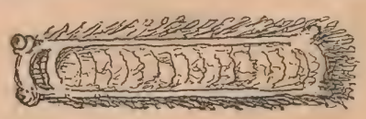

Fig. 3. Abdomen.

It was covered all over with long, flexible, hollow spines, through which it had the power, owing to a peculiar arrangement of muscular sacks under the skin, of ejecting powerful puffs of air which, with a certain motion of the spines acting on the ground, caused it to rotate, and so progress with the velocity I had seen. And I now discovered that the particles thrown off by the animal when in motion, of which I have spoken, were seeds, sand, and minute pieces of grass and earth sucked into the tubes during the act of inspiration, and then ejected by expiration. It had, too, the power of giving violent electric shocks, but whether this aided its locomotion or not is more than I can determine, probably yes. All these facts I discovered by subsequent observation and dissection. I also discovered that the animal to be very gentle and easily tamed. When kindly treated it would emit no electric shocks, reserving those only as a weapon of defense against enemies. My efforts to catch one alive were attended with a great deal of difficulty, and it was not until I had caused the natives to construct a long net of the gobwich plant and stake it down in the form of the letter V and drive the animals into it that I succeeded. My first attempt to stop them with a cloth held in the hands I found entirely abortive. They seemed to possess some power, akin to that of the bats to detect the presence of an obstacle in their path when five or six feet off, with the power of changing their course instantaneously, no matter at what speed they might be going.

Fig. 4.

It was now time to return to our camp for a repast. On reaching it I found that my men had not been idle. They had caught a number of fish from the lake, which they were now engaged in cooking, among others a species of long, flat eel about four inches wide and from three feet six to five feet in length, with a broad, flat tail, larger than a man's hand and resembling it very much in appearance, and having the power to grasp objects with great force. This I christened the fist fish (Fig. 4). They had also discovered a peculiar kind of biped crustacean, that had the power of walking at the bottom of the lake, and as I afterward learned, of traveling considerable distances on land. These were

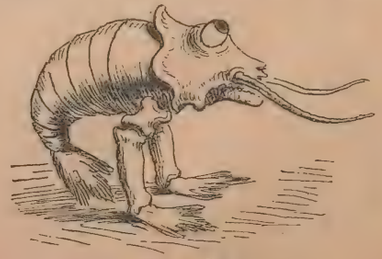

Fig. 5 Biped Crustacean.

quite palatable, and contributed toward making a very satisfactory repast.

[The gobwich mentioned in the foregoing is described in an earlier part of the manuscript, and I insert the description here.—F. B.]

The gobwich is a most wonderful plant, and is used by the natives for all manner of purposes. It produces a pod somewhat like that of the cotton plant, but the fibers are long and silky, having the singular property when plucked green and exposed to the sun of adhering together; so that when once set no heat nor moisture can subsequently separate them. In this respect they have some of the properties of albumen. Out of this material the natives make rope, twine and all their textile fabrics. Their process for manufacturing the latter is very simple and very expeditious. They prepare a smooth, flat floor of clay exposed to the sun, on which, when baked quite hard and dry, they lay the fibers of the gobwich in more or less

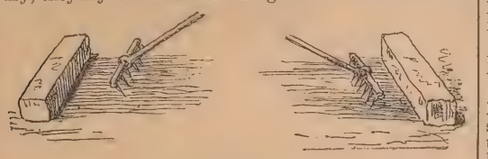

FIG. 6.

parallel lines. They first lay down the fiber by hand, placing a heavy, square log on one end and rake out the filaments with a fine wooden rake. Then they reverse the process, placing the log on the other end and raking the other way. When they have gotten one section pretty regular by this process, they add more fiber to it, end to end. This you may call the warp. The woof is made in the same manner, only on a flat board, which is then turned suddenly over at right angles across the woof and pressed firmly down. This has the effect of expressing

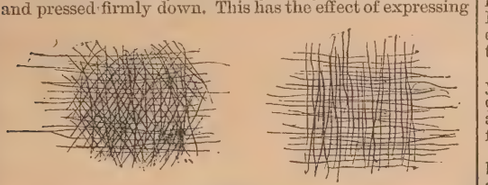

FIG. 7.

some juice from the green fibers welding them all together thus making a most soft and flexible fabric. Sometimes they will cross and recross the fibers three or four times to produce a stronger and thicker material. The annexed diagrams will give an idea of the appearance of these fabrics under a microscope.

SAM LOVEL'S CAMPS.—III.

THE quiet water shone like a broad floor of silver in the early light, when the canoes left the landing next morning and began to crinkle the reflections of banks and trees and reddening sky. The few new-comer robins sang their loud *cheer up*, here and there a blackbird called *shoo-glee* from the shores, and the loud nasal *quank! quank! quank!* of the dusky duck resounded from distant swampy coves, as Sam took his course up stream where the fewer traps were set, while Antoine coasted down stream along the flat cape that lies between the Slang and Little Otter.

Each made frequent stops to examine the traps, some of which were undisturbed; but the greater number were off the places they had been set on, and out of sight under water. Such, when fished up with the trap hook, brought with them a drowned muskrat, his soft fur plastered to his body by long soaking, and his scaly tail curved like a cimeter; or a foot, the ransom a captive had paid for his freedom; or, as valuable as this to the trapper but not so satisfying to his pride of skill, the sprung trap's jaws full of sodden weeds. In one Sam found a wood duck, his bright eyes wild with pain and fright. He eased the jaws carefully from the leg, which was not broken, and after admiring his beautiful prisoner's gay spring attire, while perhaps there was a little debate between a soft heart and a pork-surfeited stomach, he said, "Wal, I'll be darned if you aint the harnsomest creetur 'at ever I see—too harnsome to kill in col' blood! Good-bye, an' keep off 'm all lawgs this time o' year," and tossed the bird gently aloft. As it went whistling and squeaking out of sight between tree trunks and branches with twists as dexterous as a woodcock's among the alders, Sam said after a long breath, "Wal, Sam Lovel, like 's not you're a dummed ol' chickin-hearted fool! *I* shouldn't wonder."

Once in the still, sunny forenoon he stopped a moment to listen to a voice that came from far across the water, shouting something that was meant for the song of "Old King Cole." "Humph!" he grunted as he sent his boat forward again, "As Joel Bartlett's Irishman said when he heard the ol' man tryin' to sing when he thought the' wa'n't nobody in hearin', 'If that bees singin', cryin' bees mournful!'" Then clear and tuneful the long-drawn cadences of an old Canadian song came echoing along the woody shores. "That's Antwine," Sam remarked. "Suthin' like singin', only it's the tune the 'ol' caow died on.' 'F he only hed some words, 'n' hed 'em sot to a white folkses' tune, Antwine c'ld sing." The song stopped as suddenly as if the singer had heard this disparaging criticism.

A little after noon he had made the rounds of his traps and was back at camp, where shortly afterward the Canadian appeared with a cloud of gloom shadowing his usually cheerful face, the more unaccountable that a goodly pile of muskrats lay in the bow of his canoe. After dinner, as they were skinning their catch, Antoine unburdened himself, breaking out suddenly after a long silence, "Bah gosh, seh, Ah'll see dat mans to-day what come mak it sass on de ice dat tam, you rembler. Bah gosh! he'll bruse me all up, wus Ah never was 'fore, seh!"

"Bruised ye, Antwine? Why, I don't see no marks on yer face. Did he kick ye, er what?"

"Oh, no-na-no, no! He ant tawch me. He 'fraid for know better 'n dat. He bruse me wid his maouths; he call me more as forty Canuck! Tief! Peasoup! Evreeting he mos' can't tink of it! He bruse you, too; call it you 'Gum Chaw.' He tol' me, 'Haow much gum tek it for keep dat long chap 'live all day?' He askit me we settlin' crap where he b'long to it. We tief! Oh, bah gosh! Ah can' tol' all of it. If it ant for one ting, Ah come pooty near leek him, Ah b'lieve so, seh!"

"What was't saved the poor creetur's hide, Antwine?" Sam asked, as he tossed the last disrobed muskrat on to the gory heap of carcasses.

"Wal seh, Ah tol' you," Antoine replied, waving his bloody knife impressively, "Ah'll be so mad Ah'll 'fraid 'f Ah'll beegin Ah ant never stop 'fore Ah'll keel heem all dead! Den Ah be hang, jus' for littly ting lak dat! Den who goin' tek' care of it Ursule an' all dat chillens, hein! No, seh; Ah ant goin' dirty dat nasky Bastonien* wid ma finger. You wan' hear it talk, sing, too, bah gosh, dat mek you laff't at it; can' sing more as pigs—you go dat way to-morreh, Ah go todder way—Oh, Sam, too!" he cried, suddenly remembering an important bit of news, "Peekrils beegin play! Ah'll see tree, four of it! If he be good day to-morreh, we have it some fun shoot it, an' more of it heat it. You'll see any?

"Wal," said Sam, considering, "I did see wakes of two three fish a skivin' away f'm the shore, but I do' know what they was."

"Dat peekrils, Ah bet you head!" and he discoursed at length on the sport of pickerel shooting, while they stretched the skins of the twenty-five or more rats their traps had yielded and hung them to dry on poles. As they lounged about the camp waiting for the evening shooting, they heard a loud call on the opposite shore a little above a cove where two brooks contributed their waters to the Slang, and the long drawn-out call, "Sa—am—will! An—twine!" was presently followed by the dolorous howl of a dog. "If that haint ol' Drive's hoot, I never heard it," cried Sam, his heart beats quickening at the old familiar voice, "an' I'll bate that 'ere 's Peltier a hollerin'!" and running down to the landing he stooped and pulled the bushes aside, and peering out saw the unmistakable, lank, clothes-out-growing form of his young neighbor, and sitting close beside him on the clayey bank Drive, with uplifted muzzle and ears drooping to his elbows, while his sonorous voice awakened lowland echoes that it had never stirred till now.

"All right, Peltier!" Sam answered, "I'll be over arter ye torights," and called back to Antoine as he set the dugout afloat, "I'll take your canew, it's stiddier 'n mine," and in five minutes the craft ran its nose up among the floating rushes at Pelatiah's feet.

"I swan! I never thought o' seein' you here yit awhile, but I'm almighty glad to," said Sam heartily as he stepped ashore and grasped the hand that was stretched out to him a half foot beyond the shrinking coat sleeve. "An' you too, you blessed ol' cuss," as he bent down and patted the jubilant hound's hooped sides with resounding slaps, and pulled his long silken ears, while he looked into the face whose furrowed, sorrowful lines were lighted with an unwonted sunshine of joy. "What on airth brung you here? Can't you git along 'thaout me, ye dummed ol' critter, hey? Come Peltier," cutting short the hound's caresses, "git right in wi' your duds, if you 've fetched any, an' we 'll go over to the pallis an' git supper 'fore the roas' beef an' turkey an' things gits cold. Git in here, Drive, an' lay daown." And Pelatiah stumbled up the bank, turning toward his friend a puzzled face as he went, and returned with a great half-filled carpet bag of once gorgeous but now faded colors, which he handed to Sam, and then made another trip, bringing down this time the famous old Ore Bed. Sam's eyes shone with delight when he saw the ponderous piece, it's long octagonal barrel cased to the muzzle in the "curly maple" stock, its trimmings, hooked heel plate and patchbox of brass that glistened like gold where hand or shoulder had brightened it with wear.

"Just ezackly what I was a wishin' for yist'd'y," he said as he laid the cherished weapon in the canoe, pillowing it on the carpet bag. "How come ye to think o' bringin' on 't? But there! I'll bate you never brung a bullit ner moulds ner lead, 'n' 'taint no more use 'n a club."

"Wall, naow, I did," Pelatiah drawled, combing out his words through a broad grin, " 'n' the hull three on 'em 's in the v'lise."

"Good boy!" Sam said approvingly, "naow git right in an' squa' down right there, an' set still, for this 'ere ol' holler lawg hain't quite so stiddy 's the scaow on the millpond." That ancient square-built vessel, as incapable of capsizing as of speed, was the only craft Pelatiah had ever boarded till now, and he took his allotted place in the canoe with no little trepidation, the obedient hound crouching trembling and whimpering behind him. Grasping either gunwale with a firm grip he pulled lustily on the one which dipped the lower to right the long narrow boat as she backed careening from the shore. "Le' go the sides an' set still," said Sam sharply, as he headed her for the shanty, "erless ye wanter spill the hull caboodle on us int' the drink!" And Pelatiah minded, not even speaking, and scarcely breathing till he felt the land under foot again. Then regarding the Slang and letting out his pent-up breath with a great sigh of relief, "Whoofh!" I swan to man, this is the goldarndest pawnd 't ever I see! I be dummed to dumnation 'f 'taint wussen crossin' the 'Tlantic Ocean!" Then turning toward the shanty he saw the array of drying muskrat skins. "Gosh all fishhooks! Where d'ye git sech a snarl o' stockin's?"

"Dat coats, Peltiet," Antoine answered, now approaching and greeting the visitors, "moosrat coats. We'll trow 'way all hees stockin. Haow you do pooty well, seh? Bah gosh! Ah'll glad of it! Haow pooty well all de folkses up Danvis was, hein? Ma waf he pooty well, too, an' all de chillens? Bah gosh! Ah'll glad dat!" he ran on, while Pelatiah nodded the answers that his slow speech was allowed no time to give. "Wal, seh, Ah'll wan' see it pooty bad me. Ah'll tink great many of ma waf an' chillens."

"Well ye may," said Sam, hauling up the canoe, "the's a great many on 'em to think on. Haow many young uns hev ye got, Antwine?"

"Bah gosh, Sam, Ah dunno for sartin. Ah'll ant be home for mos' four week 'go! You'll have askit Peltiet!"

"I wan't there more'n half 'n haour, 'n' I didn't hev time to count 'em, so I can't tell ye," said Pelatiah, forestalling the question.

"Wal, never mind naow, we'll take 'count o' stock some other time. Le's ha' some supper 'n' then go a-shootin'. I wanter be borin' holes in some o' them mushrats' heads with ol' Ore Bed. Antwine, cook some o' them mash rabbits so 's 't Peltier c'n try 'em," Sam said, winking hard and covertly at the Canadian.

"Maash rrrabbeet?" he said with staring eyes. "Ooh! yas!" as he slowly comprehended, "Ah 'll got some dat all save up," and slipping behind the shanty he soon reappeared with three pairs of small, nicely dressed hindquarters of dark-colored meat.

Presently they were sizzling in the frying pan, and their savory odor was pleasant to Pelatiah's nostrils, as to his ears were the bubbling of the potato kettle swung on its pole over the fire and the simmer of the teapot on the outskirts of the coals. Then when the repast was spread on and about the slab that served, as far as it went, as a table, and the three seated themselves on blocks around it, Sam said as a sort of grace before meat. "The man 'at finds fault wi' this meal o' victuals is like Uncle Lisher's customer, too dum p'tic'lar. A feller," he explained, as he helped himself to a potato and began to peel it with his jackknife—for now that they could be kept in the shanty without freezing they had potatoes—"A feller come to Uncle Lisher onct for a pair o' right an' left boots. He wa'n't useter makin' nothin' but straight boots, an' when the feller come to try 'em on, lo an' behol'! they was both made for one foot! The feller begin to objeck some to takin' 'on 'em, an' Uncle Lisher he hollered so 's 't you c'ld a heard him half a mile, 'Good airth an' seas, man, you're too dum p'tic'lar!"

"Hounh!" Pelatiah snorted, "I haint a findin' no fault wi' your roas' beef an' turkey, by a jug full. This 'ere mash rabbit is complete eatin'. I never hearn tell on 'em afore. It's darker meated and kinder juicier 'n whaot aour rabbits be. Turn white in winter, du they?"

"No," Sam said, soberly, while Antoine was choking with suppressed laughter, and cursing "dat sacré bone rabbit Ah'll swalla in ma troat." "No, they're diff'ent f'm aour rabbits in c'nsid'able many ways. They're pussier 'n' clumsier, an' some longer tailed n' shorter eared 'n' what aourn be, 'n' they hant turrible wet places so 's 't ye can't hunt 'em wi' dawgs, and to my notion they be better eatin', as you say," and Sam began on another quarter. "We'll show you haow we git 'em 'fore you go hum. An' speakin' o' hum, what's the news? Everybody toll'able well?"

"The' wa'n't nobody sick as Pelatiah knowed on. 'Hial Hamner hed a caow die, though, best one 't he hed. 'N' ol' Gran'sir Hill, he's kinder peaked this spring, though not to say sick. Braggin' wuss 'n ever 'baout what him 'n' Eth'n Allen done to Ti. 'n' crosser 'n a bear with a sore head, M'ri Hill says."

"All hands busy a sugarin', I s'pose? Putty middlin' good sugar year, judgin' f'm the weather here, frosty nights 'n' warm days for quite a spell naow."

"Yes, sir, hed two three o' the gol darndest runs 't ever ye see. Couldn't scasely git away, hed to most run away, sap run so, but the' was father, 'n' Jethro, 'n' 'Niram 'n 'mongst 'em to tend to 't, 'n' so I come. Sugar an' surrup—Gol! I mos' forgot!" and he scrambled over to his carpet bag and unlocking it, drew forth from its depths two quart bottles and a cylindrical package wrapped in a newspaper. "Them's for you, Samwill," and diving again into the recesses of the bag he came up with a larger package that diffused a garlicky odor as he tossed it to Antoine, "Here's sutthin' your womern sent ye."

"Onion!" Antoine shouted, tearing open the paper and biting one of the hot little shallots as a boy would an apple. "Dey can' be no better in dis worl'."

"Why," said Sam, uncorking one of the bottles, "this 'ere 's maple sweet!" and then as he unrolled the package a dozen little scalloped cakes of sugar tumbled out on to the slab. "Much obleeged to ye, Peltier, for rememb'rin on us this way."

"Hoh! Ye need n't thank me for 't. Them 'ere 'lasses an' sugar did n't come aouten no trees o' aourn. The fact o' the business is, you're beholden to trees, an' things, 'at growed on the Pur'n't'n place, Samwill," and Pelatiah leered and winked, while Sam's sunburned face grew redder with blushes.

"Wal, 'f we 've go done eatin' le's git ready 'n' go shootin' mushrat," he said, ,'I'm spilin' to pint the ol' Ore Bed at 'em. Haow 'd ye come to bring it, Peltier? Did n't hear me a wishin' for it, did ye?"

"I wish to gracious I hedn't thought on't ner ondertook! My arms 'n' shoulders aches wuss 'n rheumatiz a-luggin' the pleggid ol' ton o' iron clearn f'm V'gennes daown here! But, ye see, I couldn't get no gun nowheres—tried to borrer more 'n twenty-five; but they was all agoin' to use 'em, er they was aout o' kilter, er suthin'! Then your folks said haow 't I might take the Ore Bed; thought I wouldn't, I s'pose. They didn't know what a dum fool I was, 'n' I didn't nuther; but I do naow," and he rubbed his bruised shoulders and perhaps wondered as he stroked his aching arms if the weight of the gun had drawn them a little further beyond the protection of the short coat sleeves."

"Wal, I'm sorry ye hed such a job a-gettin' it here," Sam said, "but naow, Peltier, every mushrat I shoot with it you shall hev, an' every one 't you shoot with my shotgun, tu. Come, le's be off!"

So they went to the other side of the Slang where Pelatiah, armed with Sam's shotgun, was set ashore at a likely place, the others stationing themselves in the canoes near him. It was the young man's luck to have the first shot. A muskrat broke the surface not far from him and swam steadily past, while Pelatiah, with a thumping of the heart that made his gun muzzle wobble, after a long aim fired. When he craned his neck, expecting to see the dead or struggling animal, there was only a boil of water encompassed with widening rings of little waves.

"You shot over him," said Sam in a low voice, "you wanter sight an inch below the waterline, an' a leetle speck ahead when they're swimmin' acrost ye."

Just then the uninjured rat came up fifteen rods to his right, swimming straight away. The ponderous barrel was slowly raised and cracked out its sharp report at the very instant the small mark was covered, and the muskrat floated dead, gently tossed on the wavelets of his own wake. Sam soon had an opportunity to practice his newly acquired art. A rat struck out from a point above with the evident intention of crossing to the west side, where perhaps he had an appointment with some furry beauty of his race. If so, he was a faithless fellow, for Sam had hardly begun to sound the call before he turned and swam toward the siren voice, till the Ore Bed spat out at him its thin streak of fire, and he rolled over, feebly kicking his last with a bullet in his silly little brain.

"There 's tew for ye, Peltier," Sam said, as he got his gun on end and began to reload it. "Let 'em lay where they be till we git through; they're deader 'n hay."

Antoine had a couple of successful shots and a miss that set him to cursing his gun, powder and shot in turn,

*NOTE—I have no idea how this word, Canuck for Yankee, is spelled. The Abtenakis of St. Francis call a Yankee "Pastoniak." Probably both words mean a Bostonian.

and the muskrat who had been so impolite as not to receive his charge. Then Sam called one within short range of Pelatiah who, carefully following the instructions given him, blazed away. The water boiled again when the muskrat had disappeared, and after watching the spot with mingled hope and disappointment till the troubled waters became quiet, and the last ripple washed the bank at his feet, the latter expression took full possession of his chop-fallen visage. "I can't hit nothin'!" he said, in a tone so melancholy that it was almost a wail. "I can't hit nothin', an' I won't try agin—be dummed if I du!" Just then a dark object popped suddenly to the surface and lay motionless in the center of the circling ripples. The boy could scarcely believe his eyes when he saw that it was the muskrat, "dead as a hommer," as he presently proclaimed. When they picked up the rat half an hour later, they found his jaws full of bottom weeds that he had grasped in his death struggle, and that had held him down till the buoyancy of his dead body loosened them.

It was now grown so dark, that looking toward the other shore, one could not make out where trees and banks left off and their reflections began, save when the ripples of a wake, breaking on the shore, caught a glint of the dying daylight, and divided the upper gloom and its mirrowed double with a crinkled line of silver. Then they went to the "pallis," as Sam had named it, and reviving the feeble fire with an armful of wood, sat chatting of home, trapping and hunting, till Sam remarked, "Wal, 's Uncle Lisher uster say, it's high time all honest folks was abed."

THE FUTURE FOR AMERICAN ORNITHOLOGY.

BY R. W. SHUFELDT, M.A.O.U., ETC.

[Read before the Ridgway Ornithological Club, of Chicago, Aug. 12, 1886.]

THERE are a number of quite significant admissions in Professor Elliott Coues's second edition of the "Key to North American Birds," admissions that are pregnant with truth, and point with incontrovertible accuracy to those fields which lie in the immediate future and beyond, wherein the majority and far the most important of ornithological labors of the coming generation of workers in this country are to be found.

The excellent volume to which I refer is the first one of the kind, I believe, published in America, that fully appreciates these foreshadowings cast on the path of the future of our science, and plainly says to those who have given the subject a moment's thought, that the day is close upon us, the sign of which is that avian taxonomy has well nigh received the finishing touches at the hands of those who rely chiefly upon the characters presented by the exterior of birds, and that now we must resort to their entire structure to settle disputed points.

As I say, Professor Coues, appreciating this fact, has set before his students a series of admirable chapters elucidating in a general way the morphology of the class.

But these are not the admissions to which I have alluded in my first paragraph, though these chapters may be considered as the fingers to so many guide-posts indicating the road, the choice of which leads to the solution of the problems contained in the admissions that are to be found in the body of the work.

In speaking of the classification of the *Icteridæ*, Professor Coues says: "In fact, I know of no character that will relegate the bobolink and cowbird to the *Icteridæ* rather than to the *Fringillidæ* in the current acceptation of these terms." (Key, 2d ed., p. 399.) And, again, in referring to the order *Picariæ*, our author says: "This is a miscellaneous assortment (in scientific language, 'a polymorphic group') of birds of highly diversified forms, grouped together more because they differ from other birds in one way or another than on account of their resemblance to one another. As commonly received, this order includes all the non-passerine land birds down to those with a cered bill (parrots and birds of prey). Excluding the parrots, which constitute a strongly-marked natural group of equal value with those called orders in this work, the *Picariæ* correspond to the *Strisores* and *Scansores* of authors; including, however, some that are often referred to *Clamatores*. (This 'order' *Scansores*, or *Zygodactyli*, containing all the birds that have the toes arranged in pairs, two in front and two behind (and some that have not), is one of the most unmitigated inflictions that ornithology has suffered; it is as thoroughly unnatural as the divisions of my artificial Key to one genera.) I have no faith whatever in the integrity of any such grouping as *Picariæ* implies; but if I should break up this conventional assemblage I should not know what to do with the fragments, not being prepared to follow Garrod to the length of a classification of birds based primarily upon the condition of certain muscles of the leg, and knowing of no available alternative." (*Loc. cit.*, pp. 444–45.)

Of the alternative we will speak later, but the two examples quoted are fair specimens of the dilemma in which Dr. Coues found himself when this "Key" appeared in 1884, and he expresses himself in similar language, when he comes to deal with the taxonomy of the sub-family *Aphrizinæ*, the family *Ampelidæ*, many of the "water birds," and indeed the state of affairs to which I allude crops out here and there throughout the whole work.

No doubt the Check List of the American Ornithologists' Union represents in its classification of our avifauna the acme of refinement to which this subject and the nomenclature can be brought through the means of long and careful study of the external topography of birds, and the exhaustive sifting of synonymy. But we are not to rest here, for the researches of anatomists and paleontologists during the past twenty-five years have abundantly demonstrated for us the fact that birds have a clear history in geologic times, and that our American representatives of this now isolated group are linked on every hand with forms that are found all over the world. It is rarely the case that an ornithotomist makes an investigation of the entire structure of some bird, holding a questionable position in which it has provisionally been placed by systematists, that an unexpected and helpful ray of light is not let in upon the subject, and our eyes opened to its affinities. The labors of Huxley, Nitzsch, Garrod and Forbes, all are telling examples of this. For years past we have almost universally regarded the swifts and humming birds as nearly related groups, but quite recently my anatomical studies have convinced me that this surmise has being resting exclusively upon the fact that both of these types happen to have short humeri, and a sternum which is unfenestrated and with an entire posterior margin, *i. e.*, not notched, as we find it in the *Passeres*. But as I say in a paper upon this subject in the Proceedings of the Zoological Society of London, such classification might be applied with equal justice to a mole and the duckbill of the East Indies. Essentially, they are widely different in all other points of structure, as are our humming birds and swifts. I have by me at the present writing a large number of unpublished drawings and MSS. of our birds, showing how nicely some of these little differences in structure can be brought into play in our classification of the class.

In other words then, and I offer it as the alternative required by Dr. Coues in his classification of the *Macrochires* and elsewhere, the day is now with us when we must more fully recognize the pregnancy of the remark of a wise British ornithologist, Alfred Newton, who has said there is more to the pursuit of ornithology than the mere "shooting and skinning of birds, and then throwing away their characters."

It must not be thought from this that I in any way undervalue the important labors of the ornithologist, but I do fully believe with Professor W. K. Parker, that "modern zoologists, when at fault with their taxonomy, not knowing where to place some perplexing specimen or type, begin to look to the working morphologist for counsel and help in their difficulties.

"These workers are merely separated for conscience' sake; a thorough zoologist finds no time for embryology; an embryologist is most grateful to the skilled and accomplished classifier who arranges the various members of each faunal group ready to his hand.

"Each kind of laborer has the greatest need of the results brought out by the other: the patient dissector waits for the treasures supplied him by the more mercurial taxonomist; whilst he, in turn, profits by the work of one to whom a single type may serve for the labor of a year or more, yet both are learning to look beneath the surface of things, a growing knowledge of the types showing both that close kinship is often marked by great difference in outward form, and that it is easy to be beguiled by the external likeness of forms—*isomorphic*, indeed, but far apart zoologically. Nevertheless, on the whole, the keen eye of the zoological expert seldom errs in the grouping of forms, even by their outward characters alone; but there are types that will baffle all their skill; and then other counsel has to be called in.

"Embryology, however, does not exist as a hand maid to zoology; its aims are higher by far than that; and as for the zoologists proper, they exist for the morphologists and not the morphologists for them. The familiar term 'zygodactyle' for birds with a certain form of foot, has been very useful, and yet how much ignorance it may be made to hide! It seems to be something when one knows that a certain bird belongs to that group; and yet a cuckoo, a parrot and a woodpecker come none the nearer to each other zoologically by the possession of that kind of foot."*

Now advocating as I do that the most extensive work ahead of ornithologists in this country at the present time and in the future lies in the direction of exhaustive studies of the structure of our birds, how do I expect that such researches can best be furthered, and substantial progress be made? In the first place, even those among us who have the time and are making careful collections of the skins of American birds can accomplish a great deal. Before the bodies of their specimens are thrown away it takes but little additional labor to accurately record in the field notebook of the collector certain points noticed about it, such as accurately counting the vertebræ and the ribs, noting the form of the sternum or in the last instance, better still preserving it entire. Then very often we kill a lot of birds which by some unforeseen circumstance we are prevented from skinning. Now instead of allowing these to become partially spoiled and then throwing them away it is a very easy matter to throw them at once into a jar of strong alcohol, and properly tag them at our convenience. Such specimens are of the highest value to the morphologist and could be sent to people engaged continually in that line or to some large museum for distribution. Most museums would be very glad to exchange them for some of their duplicate skins. It is absolutely astounding sometimes the terrible paucity that exists of such material even in the larger institutions of this country. Not long ago when standing in need of certain alcoholic specimens of birds, I made efforts in the most promising direction to secure such common forms as our own whip-poor-wills, a trogan, and indeed many of our most abundant types, but utterly failed in nearly all cases. They were not in the collections.

At the founding of the American Ornithologists' Union, I was appointed to write an exhaustive memoir upon *Chamæa fasciata*, and if possible throw some light upon its probable position in the system, and notwithstanding I accepted that task and have tried a number of times to secure a full series of specimens for the purpose, up to the present writing I have not a single alcoholic specimen of that form in my possession. So far as I know, ornithologists are at this moment absolutely ignorant of the true affinities of this bird, and many others of our avifauna stand in the same case.

Ornithologists might with very little care add in still other directions to this all important study of morphology —for studies and observations upon the pteryloses of birds, for example, are easily made, and when systematically done are of the highest value.

As time rolls by there certainly will arise among us recruits to this all-important line of research in the science of ornithology of the future. To these I have but one word to say, and that is, if your studies are undertaken with a view of being of any permanent assistance to correct taxonomy, do not commit a far too common error of placing too much reliance upon any single set of characters. The skeleton, of course, has always taken a very prominent position as furnishing valuable characters to taxonomists, but in many instances it can be shown that to properly interpret it the aid of the other parts must be invoked.

Indeed, when the material admits of it, we should rest at nothing short of a complete description of the economy of the form under our consideration. Then, it almost goes without the saying, to render these observations of the greatest use they should be made, as far as possible, comparative. By this I mean we should compare, detail by detail, the structure of our subject, with the corresponding parts of all the forms within our reach that are known to be more or less nearly related to it.

Then again there is much to be done in the future in our larger universities and scientific institutions in the way of placing on exhibition full collections of our birds for the entire extent of our territories. Such exhibitions —and I know of no complete one in this country at the present time—should contain none but the very choicest specimens, and these mounted by the most approved methods and in attitudes most commonly assumed by the birds themselves.

A collection of this sort should be arranged in some appropriate way by means of which the bird's structure, its geographical distribution, and its position in the system, as far as known, could be taken in at a glance by the student. One such complete exhibition, at least, in this country would be a great boon to ornithologists, and surely it presents a field for future work, as the day is not far distant when more than one of our large universities can afford such an addition to their museums.

*Woodpeckers. Read April 2, 1874.

TWO BIRD LISTS.

A Revised List of the Birds of Massachusetts.—In 1864, Mr. J. A. Allen published in the Proceedings of the Essex Institute a "Catalogue of the Birds found at Springfield, Mass., with Notes on their Migration, Habits, etc., together with a List of those Birds found in the State not yet observed at Springfield." In 1870 he published in the *American Naturalist* "Notes on some of the Rarer Birds of Massachusetts," and in 1878, in the Bulletin of the Essex Institute "A List of the Birds of Massachusetts with Annotations." In the Bulletin of the American Museum of Natural History, July, 1886, Mr. Allen brings down to date our knowledge of this subject in a "Revised List of the Birds of Massachusetts." As we should expect from Mr. Allen's knowledge on the subject, and the thoroughness with which all his work is done, the present list is a model of its kind. The notes on the species are in many instances very full, and in all cases of unusual occurrences references are given.

The number of species fully authenticated as birds of the State is 340. Four species, the great auk, the whooping and sandhill cranes and wild turkey are given as extirpated, and to these may, perhaps, be added the prairie hen and Labrador duck. There are 19 species which may be considered as of probable occurrence. About 142 species are known to breed within the State. The extremely rare or accidental visitors number 79, and there are four introduced species, one of which, the European quail, has probably not survived.

Birds of Chatauqua County.—This is a reprint of a paper, by Mr. John M. Edson, read before the Chatauqua Society of Natural History and Natural Science at its semi-annual meeting held in Jamestown, Jan. 29, 1885. It purports to be no more than a list of the birds which have actually come under the observation of the author in his rambles through the fields and forests of the county during several years past. One hundred and fifty species are enumerated, including, no doubt, most of the commoner birds of the region. The annotations of the list are very meager, and often consist of little more than the words "rare," "common" and "not uncommon."

The quail is given as now extinct, though formerly found in the county, and the wild turkey is said to have been met with occasionally by the early inhabitants, but was never, in Mr. Edson's opinion, very common. The proofs of this publication do not appear to have been read at all, and the whole publication is very slovenly, amateurish, and from an ornithological point of view unsatisfactory.

To Get Rid of Moles.—All dwellers in the country who have lawns which they try to keep in good order, are familiar with the damage done to such smoothly shaven turf by moles. Their runways and hillocks do perhaps no actual damage, but are very unsightly, and for that reason the gardener pursues the mole very energetically, if also unsuccessfully. Traps may catch a few of the moles but will not wholly abate the nuisance. A simple plan, and one which has recently been tried by a correspondent with entire success, is to drive away the animals by the use of the castor bean. A hole is made in the burrow or runway at either end and in the middle, and half a dozen of the beans dropped into it. The moles disappear. This, at least, has been the case in several instances which have recently come under our observation. Why they go, or whither, we do not know, but the experiment is so simple and so inexpensive that each person who desires to try it, can do so for himself. We should be glad to hear with what results.

A Striking Meteor.—About 9 o'clock on the evening of last Friday, August 20, a remarkable meteor was seen in the vicinity of this city. It is described by one observer as being as large as the full moon, and by another as the size of a bushel basket. When first observed it was nearly in the zenith and its course seemed southeast. Its motion was not so rapid but that there was time to remark upon its brilliancy and size before it disappeared. After passing over perhaps 55 degrees of the sky from northwest to southeast, the meteor burst, throwing out fiery particles and then disappeared, but a very perceptible train of light marked the course which it had pursued through the heavens. The light which the meteor gave was very brilliant, so much so that some of those who saw it remarked that one could read a newspaper by it. The meteor was seen in the upper part of New York city and also on Long Island near Sayville.

Imported Game Birds on the Pacific Coast.—Smithsonian Institution, Aug. 18.—*Editor Forest and Stream:* I am desirous of obtaining full information respecting the introduction and naturalization of Japanese or Chinese pheasants (or any other foreign game birds) in California, Oregon and Washington Territory. I wish particularly to ascertain the particular species which have become naturalized and the localities where they are found.—Robert Ridgway.

A CLIMB FOR SHEEP.

MARQUETT'S RANCH, Wyoming, July 14.—We have been up in this neighborhood five days, like it very much, and expect to find game very plentiful this fall. Marquett's Ranch is about sixty miles east of the National Park, on a beautiful little trout stream. This will be our headquarters until we go to the Park, which will be in about two weeks. Then the flies will not bother the horses to amount to anything. After we come from the Park we expect to move up the South Fork of the Stinking Water River about twenty-five miles, to a beautiful camping ground. We have been up there on horseback, and saw plenty of bear, elk, deer, antelope and beaver signs. When I say plenty I don't mean that we can kill any amount of game, but with hard work we can get what few I care for as specimens. The cattle have driven all the game out of the country, or into the heart of the mountains where one cannot find them. But in the fall the heavy snows drive the game down into the valleys below, and they are said to winter in the valley we are about to move into, so I think before long I will write you we are being paid for our hard, long trip.

The spot we have decided upon for our camping ground on the banks of the Stinking Water is in a lovely grove of cottonwood trees, with meadow over a mile long, the grass knee high for our horses.

There are plenty of large trout in all the streams. On Rock Creek I caught seventeen fine fish in about one hour. We are trying to dry fish, the same as we would meat of any kind; had some dried trout for breakfast; but I prefer mine fresh from the creek. They are fine, and every meal I eat of them I think how dearly I would love to be able to send some to the folks at home and have them remain as fresh and nice as when first taken.

I went out after supper last night to get some meat and succeeded in killing another antelope. Mr. Frost killed two deer and Jessie killed two nice antelope. During the five days we have been here he has killed three antelope and I have got the same number, so considering how little I have hunted that game, I think I have done well, for they are the hardest game to get of any kind.

I think I will take a trip up in the mountains to-morrow or next day and try my luck on mountain sheep. A nice sheep head will bother me more than anything else to get, for the sheep are high up in the mountains, among rocks and cliffs, where it is very difficult to get at them.

But it is now a quarter to 9 o'clock, and as I am burning another man's oil, I had better stop.

July 15.—Well, I have light now that costs me nothing, save a blistered nose now and then. Jessie and Mr. Frost have just come in from a hunt and have brought three antelope with them. We get plenty of meat. This noon we had for dinner trout, pork, venison, potatoes, graham gems, white bread, blackberries and cream, coffee, milk and pure spring water. What do you think of that for a bill of fare out here in the wilds? And everything tastes so good that I eat four times as much as I would at home.

July 18.—On the 16th I started early up the mountains, the tops of which are about twelve miles from our camp, to see what signs of game I could find. I had six or seven hours of hard work, for it is terrible toil climbing the mountains; the air is so light that it makes it very difficult to breathe. After toiling a half day to the summit I was rewarded for the exertion by seeing a band of mountain sheep, five in number. After scrambling about over rocks I succeeded in getting a shot at them, but only broke a hindleg of a very large ram; he disappeared around a sharp curve in the mountains. I was about to get up from behind the rock I had hidden behind, and was mourning over my bad luck, when I saw the old fellow's head peaking around the edge of the cliff he had just disappeared behind. My gun was ready in an instant and at the crack of the gun the whole band came running out in full view of me. I saw that one was hit in the leg, so I opened fire on him and hit my mark twice, as he went scrambling over the rocks, he soon had to give up and I knew he was my meat; and what was more I was sure of a very fine specimen to mount, for I could see that his horns were very large. But when I got to him what was my disappointment to find a large piece broken out of his left horn. He would weigh about 200lbs., a very large sheep. After I had dressed and quartered him I happend to look over to where I had shot at the one which had showed its head, and I was delightfully surprised to see another sheep lying dead with a bullet through his neck. After I had dressed this one too, I shouldered his head, which was a very fine one, and started for camp.

A tramp of twelve miles to make in a mountainous country from sunset to dark was not a very pleasant thing to think of; but I was in a happy state of mind, for I had done good shooting and killed a sheep, and had the long-desired trophy. I started down the mountain with the head hanging over my shoulder, and every step stuck the sharp points into my back about a foot, more or less. That would not do. I wrapped the hide around my gun, tied it there, and by slinging it over my shoulder found I could carry the whole thing very easily. I had gone two or three miles in that way, with no accident save the usual falls a person gets in this country, and was going along with my head bent down to help me in carrying my load, thinking of how proud I would be when I had the head mounted and wondering what you would think to see me as I was then, covered from head to foot with blood and hair. Thus revolving in my mind nothing but pleasant things, as I came around a little bunch of pines I looked to see what direction to take for camp, for it was fast growing dark and I wanted to be sure and get my bearing exactly. As I raised my eyes from the ground I was a little startled to see a bear of formidable aspect standing in my path not more than fifteen paces off. With my gun tied up in the hide, I was in a nice fix for him to tackle me, and he had a notion to do it, for he rose on his hindlegs and stood waiting to see what I was going to do. It took about one slash of my knife to cut the string that bound the gun and hide together; and then recollecting I had emptied my gun at the sheep I threw more cartridges into the magazine and was ready for bruin; but he had concluded to move camp. Just as I got my knife back in my belt and my gun cocked, he disappeared in the thick brush and I saw him no more. The encounter had caused no little alarm; I had the fresh meat with me and he had perhaps some intention of securing it. I don't know how it would have ended; whether I should have retreated and given up the meat, or moved forward with another feather in my cap. It suited me well enough just as it turned out; but if he had remained a moment longer I should have shot at him. I reached camp long after dark and was about as tired as I ever care to get again.

Yesterday Mr. Frost and I worked all day long going after the meat of the sheep. To-day I have worked as hard trying to get rid of it. It tastes very much like tame mutton, but is much better if anything.

July 21.—Mr. Frost killed two bears last Monday; and yesterday I shot another nice buck antelope. The head I intend to save for mounting. ELLIOTT.

MAINE DEER.

THERE is rare sport for the still-hunter in the Maine woods this fall. Deer are plenty, is heard in every direction; but how really plenty has not yet been fully told. Seeing a deer is an item, and the Maine newspapers get hold of such items. From not very careful scanning of such papers I have picked up a record of nearly 100 deer, already seen since the spring opened. This is probably not one half the number that has actually been seen, and when it comes to be considered that but a few of the deer in the forests are ever seen at all, it begins to appear how numerous these animals have actually become in the Pine Tree State. A gentleman recently returned from a fishing trip to the Diamonds, in the Magalloway section, says that one of the first and most agreeable sights which greeted his eyes was that of a deer feeding in the edge of the lake in broad daylight. After that they were seen almost every day. It was the rule to point out the deer feeding to every new comer. The *Industrial Journal*, published at Bangor, Me., says that reports from different sections agree that deer are more plenty in that State than for many years past. This is true in the recollection of all the residents of that State who have given the subject any attention. Twenty years ago the seeing of a deer in Maine was a rare occurrence; to-day hundreds are seen in a single season. What has caused the change? That question has been answered many times in the FOREST AND STREAM; it does not need repetition just here. The deer are seen nearer the settlements than ever before, and what is the reason? The dreaded enemy, the hound, is no longer allowed to pursue him to destruction or drive him into the depths of the forest. Is this an argument in favor of hounding?

But while the deer are thus notably plenty near the settlements, they are also just as abundant in the deep forests. Their signs were never so numerous before. So say those who have been there on fishing trips and otherwise. Another Maine paper speaks of a most noted deer range in the vicinity of Nicatous Lake. It says that recently James West and wife, while canoeing from Nicatous Lake into Gasabeus stream and up the stream, saw twelve deer in one forenoon. The celebrated J. Darling, of Lowell, in that State, is reported to have seen eighteen deer on a trip to Gasabeus stream. Again, a Mr. Merrick, a somewhat noted bear hunter, is said to have seen seven deer at one time in Nicatous Lake. From the region of Tim and Seven ponds come reports of deer just as plenty. Now the full size of all these reports may be too strong, but at least deer are wonderfully plenty in Maine. Even the vacation scribblers have made this subject a part of their theme, and if they had stopped with the simple announcement that the deer were plenty, they would have done no harm. But when they recommend the changing of the game laws of that State so that the deer may again be destroyed, then it is time to protest.

But would that the simple statement that there is an abundance of deer in Maine were all there is to be told. Would that the law, the strong arm of which is the very bone and sinew that has laid a wall around the deer during the breeding season till they have begun to be plenty, was respected as it should be! Positive evidence is not at hand that the sons of the rich, spending vacations in the Maine woods, have broken the law and been guilty of jack-shooting in June and July this year. Were such evidence in the possession of the writer, the guilty parties, if this reach their eyes, may rest assured it would be used for all it is worth. But the fresh blood on the stones lining the shores of a pond and the hairs of a deer on the log over which it was drawn tell a good deal of a story. A party of young men in a camp not far away were about the only persons who could have reached that pond at the time. Were they paddled up to a deer and did they shoot it? The guide who was with them knows, but he will not divulge. But there was one tongue, innocent as nature made it, that money could not stop. And I wonder those young men don't hear its pitiful tones even to-day. The little fawn bleating at night—each night fainter and fainter—told that the mother doe had fallen and that the fount from which it had drank since its birth was forever stopped. Stopped for what? Stopped because the sons of some rich men desired to kill a deer. A noble deed surely! They have come back to the city and bragged of it. A ferocious buck, with branching horns! And the little fools—smaller in true manliness and kindliness than in bodily stature—did not know that the bucks have no horns in the summer time.

The above is only a single case. I fear that there are more than one of them. The circumstances are actual, the deer was shot. It was a doe, for its remains were found in the pond. The bleating of the fawn at nightfall is also actual. Yet Mr. Leander Richardson, of New York, in a letter to the Boston *Herald*, advocates the shooting of deer in the summer season, and asks that the laws of Maine be so modified as to permit of that practice. Is he a reasonable man? Is he a sportsman of a true heart? Then he has made one grand mistake. But this is not all that is going on in the Pine Tree State. The shooting of deer in close season, when it is so clear that the establishment of a close season has worked such wonders in their increase, is not the only peculiar feature regarding the enforcement of the admirable game laws of that State. There is an attempt being made to create sympathy for those noted "Shackers." Tried and convicted, not only of killing deer out of season, but of arson as well; the burning of the buildings of one of the game wardens. A most graphic account was published in the FOREST AND STREAM, from the pen of Dr. S. B. Hunter, last winter. The crime was confessed by one of the criminals implicating the rest. But yet there is an influence which is anxious that these criminals go free. The Lewiston, Me., *Journal* publishes a senseless article from the pen of a correspondent, written evidently for the purpose of making the notorious "Shackers" martyrs.

There is a reckless element in Maine which desires to see her game laws stripped from her statute books, and this element has for its foster the Boston and New York vacationist, and the blood-and-thunder-story-reading boy, whose father happens to have money sufficient to indulge his hopeful in a trip to the Maine woods. The Maine hotel keeper is also in the scheme, at heart, though he is less open in his avowal. Why, only the other day a couple of mere boys got off the train at Winthrop, Me., armed to the very teeth. They had rifles and pistols, and their belts were stuck full of cartridges, and each ornamented with a hunting knife. They were going to hunt in the vicinity of the town, a town for many years settled and affording about as good an opportunity for hunting, supposing it to have been in the open season for any sort of game, as would the city of Saratoga. A couple of young men left Orange, N. J., the other day for the Maine woods, and I am told that they carried all the firearms that a trip to the Rocky Mountains would require. They also announced before they started that they intended to shoot every thing they saw, and "d—n the game laws." Well, some watch will be kept on those fellows. They may go to Maine in the open season, hereafter, that is if they do not fear an arrest for what they have already done. There is a good deal of brag and bluster, but a single dose of game warden, with a chance of going to a Maine jail till Dad arrives with the money to help them out, generally brings the greatest shootist to terms.

X. Y. Z.

A BUNDLE OF BEAR YARNS.

I HAVE often heard old lumbermen who had been brought up in the wilds of New Brunswick, and had not been free from the odor of pine gum six years of their three score and ten, say that they never saw a live, free, wild bear in their lives. I have yet, before reaching half that age, time to accomplish much good or evil, and I am as familiar with the form of bruin in his native woods as I am with the appearance of the cows in my father's pasture. Some men, apparently not endowed by nature with any peculiar gifts, harvest ten-dollar bills at every turning, while others, none the more favored naturally, seem to be blessed by frequent sights of bears. And yet hundreds argue that there is no such a thing as "luck."

When about six years of age, I was on an old wood road a hundred yards from my father, and concealed from his view by a turning in the road, when a large black animal crossed the road in front of me, simply deigning to cast in my direction a sneaking sidelong glance. I thought it was a big dog of bad repute owned by one of our neighbors, and it was several years after before I knew that on that day I had seen my first bear. As I grew in years and stature, if not in wisdom, it became a cherished ambition to kill one; and a story recently published in this paper reminds me of my only experience in that line. I put an ounce spherical ball into the head of a trapped bear just below the inner corner of the left eye, and it came out of the back of his neck on one side of the spine. He dropped but came to his feet with the quickness of lightning. "Across his brow his hand he drew, from blood and mist to clear his sight," and then he came for us literally "with blood in his eye." His vigor was in no way diminished by the time we had reloaded our single muzzleloader, and had he been free he could have chewed up the entire audience. Robinson Gardiner put a bullet in about an inch above the other and he sank dead without a struggle. The second touched the brain, the first didn't.

The unscientific ease with which some healthy specimens have lately been secured, has considerably diminished the longing to slaughter one free and untrammelled, on his native heath or huckleberry barren; and I have concluded that the mere killing of a bear is no great feat after all.

In the summer of '83 the residents of the eastern side of Salmon River, turned out en masse to give a sort of matinee "benefit" to an old sheep-pen depopulator. He was in a block of woods adjacent to the river, and as a lumberman would say, "they quickly ran a boom around him." But bruin knew a trick worth two of that. Like Horatius Cocles, he saw the foe blocking all the avenues of escape behind, the river in front, and probable safety on the other side. He had the advantage of the Roman hero, in not being encumbered with any harness; and he showed slightly better judgment, though perhaps less valour, in not fooling away any time in making speeches. So he plunged in to swim over amid a shower of lead like that among which the patriotic artist depicts Commodore Perry during his progress towards another vessel after the sinking of his flagship in the celebrated Put-in-Bay conflict. But there was one factor in the result which the bear hadn't considered. In midstream the schooner Watchman, Capt. Humphries, bore down upon him. In the bow chains stood the captain with determination plainly visible in his countenance and a pickaroon in his hand. The vessel was laid alongside, the sharp steel went deep into bruin's brain, a fall was run down, he was hoisted on board, taken to the warf at Chipman, where G. G. King, M. P., took the deposition of the master; the captain pocketed $3.00 bounty and shipped the carcass home by steamer next morning.

All the bears I ever saw, save one, seemed to be possessed of a modest, retiring disposition, as if they would object to notoriety being suddenly thrust on them, and had a decided repugnance to forming any close acquaintance with a man, without some knowledge of his past character and present intentions; in short, they seemed to have adopted the maxim, "Live and let live." So sublime was the impudence of that exception, that perhaps the story is worth repeating: One Sunday in October, 1871, with a companion, I left a house on Grand Lake to go to a point on the Washadunoak, about eight miles distant. Five miles of the road led through an almost unbroken forest. Two miles from Grand Lake is a little hollow, the drainage of which is very imperfect; and as a consequence, the turnpike portion of the road (about 12ft. wide) ran through a pond, about 9ft. wide on either side of the road. The night, to use the words of my companion, "was dark as the inside of a nigger's pocket." We were walking briskly along near the middle of the road at the place described, talking and laughing, when a great black mass arose within three feet of us, giving vent to a snarl that chilled the blood to my

toes. We cleared the right hand pond at one standing jump, and stood there quietly, and saw bruin pick his way gingerly through the other, as if ignorant of its depth and averse to wetting his feet, his form showing quite plainly against the water. Upon examination by daylight his track showed him to have been a "whopper."

Lest some athlete dispute the correctness of the figures in the above jump, I wish to leave on record the following challenge: Give me a bear—a good, savage, wild one to stimulate me—and I will back myself for one single standing jump against any unstimulated man in the world. Stake to be a year's subscription to FOREST AND STREAM. Match to take place here. The acceptor of the challenge to find the bear.

The companion mentioned above is now a grocery clerk on Summer street, Lynn, Mass., and I will wager that he never got over the counter with so much agility as he displayed in leaping that pond.

About seven years ago a large bear operated about five miles from where I write, and one evening killed a sheep in a lane 150yds. from the house of the owner. But one house in the neighborhood boasted an arsenal (a handy double 14 and a single 16), and the "shootists" of this ranch were two boys, Tony and Fred, aged sixteen and fourteen. Tony was a large, active fellow, somewhat given to blow; the younger was undersized and unassuming. Jake, a son of the losing sheep owner, laid his trouble before this household, and it was agreed that the three boys should waylay and shoot the depredator when he should come back to the bait next evening, as he was sure to do. Tony, in his generosity, fitted Jake out with the 16, and Fred had to be content with a neighbor's old converted musket, having a bore like a mortar. It had been restocked when an axe and jack-knife were the only available tools, and could have been worshipped without violating the first commandment, inasmuch as it was not in the shape of anything "in the heavens above or on the earth beneath or in the waters under the earth." On their way to the scene of the coming tragedy the elder boys were pointing their guns at every rock and wishing it were the bear; the younger, burdened by his Revolutionary relic, walked meekly along with never a word. About midnight the country was aroused by a deafening uproar, consisting of the amalgamated four reports of guns and the snarl of a badly wounded bear. The sheep owner rushed to the spot with a lantern, but discreetly avoided going too near before the guns were reloaded, ere which time the bear got away to the bush. He left a broad trail of blood, and had charged toward the spot where the boys lay, knocking down the panel of fence next the one behind which they were concealed.

Tony and Jake were jubilant—they were the heroes of the hour, and could tell you to an inch where they placed their bullets. The next day two 14 balls and a 16 were cut out of the cedar rail next to the "rider" of the fence, too high to hurt a bear, unless he were on the wing. Some one asked Fred where he thought he aimed. "Don't know—somewhere about his provision sack."

Speaking of watching for a bear reminds me of an experience of my own, dating 1870. There was a bear abroad in the land. He was a bold and bare-faced bear, who would bear off sheep when barely out of sight of their owners. Charley McKennelly and I were the only persons in the vicinity who owned or tampered with firearms. One evening upon my return from a very successful pigeon shoot (from nature's trap—the buckwheat fields) I found that a neighbor's son had caught the bear in the act of killing one of our sheep, and Charley was awaiting my return that we might watch for him. I was armed with a double 20, Charley with a single 16 and a bowie, and to quote John Marshall, "all of 'em darn well loaded with single ball." There was a stump heap thirty feet from the carcass, and we tunnelled it out for a blind. A bear usually visits a bait about dark, midnight, or daybreak, but on the first evening we had no manifestations of the near presence of the one we were after. Yet, I will never forget how I mistook my heart beats for footfalls, how I strained my eyes to see out into the starlit night, and the bracing and stringing of nerves at the slightest crackling in the brush. We took turns watching the bait, a grasp of the arm signifying a desire to be relieved, and a tap on the shoulder to mean "bear's here." Just after dark on the second evening I got the expected tap, but with it came the snap of the cap on Mac's gun as she missed fire. A hare could not have exceeded that bear in the speed of his getting away.

Mac acknowledged that he had deadly aim on the bear before giving me the signal, and I was chagrined to say the least. We watched all the next night and no bear. Neither of us having slept for three nights, we were nearly used up, and Mac said he would watch no longer. But those who know me will cheerfully testify to the fact that a prominent feature in my character is a dogged perseverance—a half brother to obstinacy. I was bound to have an interview with that bear. John Keast, a lad two years older than myself, fitted out with Mac's gun, consented to bear me company, and I tried it again. One o'clock A. M. and no bear. I felt that I must soon yield to the influence of the drowsy god. So I said, "Jack, I can't keep awake; should the bear come during the next two hours you can't miss him at 30ft., and I'll come in at the finish; at the end of that time wake me." When I awoke the sun had been up fifteen minutes, Jack lay snoring by my side, and the sheep, where was it? I rubbed my eyes and looked again, but saw nothing save a few "fragmentary scraps" of bones and wool. Bruin had eaten the sheep and crunched the bones within a biscuit's throw of us. I did not give vent to any particular "feelings"—I would have needed a throat the size of a barrel. My vocabulary was painfully meager, too, for my lips had never been contaminated with anything akin to a "cuss word." I had a choking sensation that has appeared in a lesser degree a few times since, and a longing to get out from there as soon as possible.

I am not afraid of a bear, perhaps because familiarity breeds contempt—a snake startles me far more. I once heard of a boy who, as evidence that he was not afraid of work, introduced the fact that he had "lain down and slept by it;" and if this testimony be voted good, I can fairly bring forward the last story to show that fear of a bear has no place in my being. L. I. FLOWER.

JEMSEG, N. B.

LINCOLN, Del., Aug. 16.—The propect for quail here in Sussex county is good, also for rabbits and wood ducks.—W. R.

Forest and Stream Fables.

TARGET TESTS.

Editor Forest and Stream:

The target record as published in FOREST AND STREAM of Aug. 19 is truly remarkable. The gun mentioned makes patterns as follows, using 4¼drs. King's quick-shot powder, and 1¼oz. Tatham's chilled No. 8 shot. Three successive targets in 30in. arch at 40yds., count 539, 498 and 490, an average of 509. With No. 7 (Tatham's, I suppose) this phenomenal gun puts 401 in the target. Now as Tatham's chilled 8s, measured in Dixon's standard measure, should count 500 pellets to the 1¼ozs. struck measure, an average of 509 is certainly wonderful; likewise the pattern of 401 made with No. 7, inasmuch as Tatham's chilled 7s count 385 to the 1¼oz. by Dixon's. I do not doubt the statement of the president of the Marion Gun Club as to making the patterns recorded, but I am quite sure that the size of the shot was incorrectly marked. If the gentleman will take the trouble to count the number of pellets in the loads he used, taking the shot from the same bags used when making the targets, I think he will find he has been using a size or two smaller than he supposed.

I have probably targeted as much if not more than any one in New England, excepting, perhaps, men in the gun trade. At least I have shot at targets 1,500 or more cartridges loaded in every conceivable manner, and I know the only correct way is to count the pellets in the charges of shot used. It is not necessary to count each load, one from each bag used will answer. Not long since I made some targets with a 12-gauge Scott, using shot from a bag marked Tatham's trap 7s and to contain 345 pellets to the ounce. Three consecutive targets gave patterns of 400, 415 and 434 in 30in. target at 40yds. I knew at once that there was something wrong, and by counting 1¼oz. from this bag I found 615 pellets, when there should have been 431. I took a sample from a second bag marked the same, and found over 620. I then sent to Tatham's factory for a sample of their trap 7s, and they were sent to me by mail. Comparing them with the two bags I had I found a great difference; in fact mine should have been marked trap 8s or 9s. Now, these bags were bought of Kirkwood, of Boston, and came straight from Tatham's and were not opened until I got them. Such a mistake is liable to occur at any time. Therefore, I say the only safe way is to count a sample when you wish to make targets.

Let the owner of the Lefever gun send it to Mr. Crittenden. I am sure it will be tried fairly, and should it average 400 pellets of Tatham's 8s, according to Mr. Crittenden's proposal, it will be returned with the $25 which Mr. C. has offered, and its owner can congratulate himself on the possession of the closest shooting gun in the country. C. M. STARK.

DUNBARTON, N. H., Aug. 21.

Editor Forest and Stream:

It was very kind of Mr. Brown to give to all shooters the result of the trial of his new gun. Now, if he will explain how he gets more pellets on the target than the charge contains, he will confer a greater obligation on one at least, and doubtless on many who read his "target record." Tatham's table for soft shot gives 399 pellets No. 8 shot to the ounce. This makes 499 pellets in a 1¼oz. charge, which is what Mr. Brown used. His first shot put 539 pellets on target. He used chilled shot, however. I have not at hand a table for that kind, and perhaps they are more numerous than the soft shot in equal weights. Assuming the contrary, the worst target given received all but 10 of 499 pellets forming the charge. This is indeed wonderful shooting, and it is not difficult to believe that the six members of the gun club who were present acknowledged that they had never seen it equalled. The last shot given is 401 pellets No. 7 shot. One ounce of that kind contains 291 pellets, 1¼oz., 364 pellets. Where did the other 37 come from? ANALYTICAL.

NEW YORK, Aug. 20.

GAME PRESERVING IN BRITAIN.

III.—THE FEATHERED GAME OF THE FIELDS.

AS I said before, partridges, quails and landrails are, strictly speaking, the only feathered game of our fields. Of partridges we boast two varieties, the common or gray partridge (*Perdix cinerea*), and the red-legged, French or Guernsey partridge (*Perdix rubra*). Besides these we include, by courtesy rather than by right, the Barbary partridge (*P. petrosa*), and the Virginian quail, which is here called the Virginian partridge. The former of these two latter birds has been found here in a wild state once or twice, is not fostered and has never been successfully introduced in numbers sufficiently large to warrant its inclusion among British game birds. The Virginian partridge has been successfully introduced and established here, but not by any means generally, and it is still rather a fancy bird than one reserved for sporting purposes.

Of the two partridges which are in the true spirit of the term game birds, the common variety is immensely superior, and in outside considerations is far ahead of its gallic congener. Indigenous to the country, it finds in the British isles a habitat more congenial, apparently, than any other portion of Europe, perhaps of the globe. It is not a bird which goes down before the leveling influences of a progressive agriculture; on the contrary, it is to the carefully and extensively cultivated districts that one must go to discover our partridge in its beau ideal of a haunt. With other game birds it is different, civilizing influences scatter them far afield; with the partridge the reverse is the case, since it is as accommodating in its preferences and dislikes as we could wish; it will thrive and multiply as well in the highly-cultivated as in the semi-wild districts, it is as much at home in the meadows as the moorland; but if we want to see the common partridge of Britain in greatest numbers and in finest flight, we must go to the best-farmed localities of the country.

I must not attempt to describe in detail the many differing districts wherein *Perdix* finds a congenial haunt. The bird is altogether too ubiquitous to admit of that, but while certifying to its more or less pronounced plentifulness throughout the British Isles, I may point out that if it be reasonably aided, that if a modicum of assistance in the way of protection from vermin and poaching be lent to it, the partridge will establish itself almost anywhere. Any district where there is a fair proportion of arable land, and where the ground is of somewhat broken character, suits it. Our fields here rarely reach fifty acres, probably average about ten; more or less regular hedgerows, hedges and dykes divide them from one another; trees everywhere dot the landscape; occasionally a stretch of woodland, an expanse of low brake or of common serves to make the cultivated land more apparent. Here, then, where cornfields alternate with meadows, and there again with root-fields, anon to be broken in upon by uncultivated land, the English partridge finds its most general haunt. Such as I try to sketch to you is typical partridge land. Where stiff stone walls, closely cropped hedges and an almost distressing succession of meadows are features of the landscape, the partridge finds the locality less suited to its taste and does not attain such numerical strength. The coveys are fewer and further between, the birds usually less robust and the broods frequently small in number. Still despite all these disadvantages they will usually maintain themselves in fair stock and afford plenty of sport if the sheltering arm of the preserver and sportsman be judicially extended to them.

Upon all our rough uncultivated or semi-cultivated lands we find the partridge fairly plentiful, increasing always as the farmer extends the scope and style of his operations. In the bleak portions of Wales and Scotland, on the rough outlying inhospitable islands surrounding the mainland of the latter province, upon our more southern moorlands and in Ireland, the partridge is everywhere comparatively plentiful, so that its generally accommodating tastes as to habitat and haunt are sufficiently obvious. The common partridge is of decidedly interesting habits, more so than almost any British game bird. In early spring time pasture fields and fallows are mostly frequented, and it rarely leaves these except for the spinnies and low brakes. Sometimes severe weather will drive it to the shelter afforded by these, at other times and far more frequently it resorts to them to sun and dust itself. The first week in February usually witnesses the commencement of the mating time, and if the season proves reasonably favorable, pairing will be progressing apace by the middle of the same month. It is during this period that the pugnacious instincts of the bird come to the fore. The males always outnumber the females, consequently frequent set-to's for the acquisition of a mate result, and as the *Perdix* is a determined little fellow, plucky, almost fierce, the contests are pretty severe. Those cockbirds failing to acquire mates have to hie them to bachelordom, and the pairing of the hen with their victorious competitors in Cupid's arena is completed. According to the district so the earliness or lateness of the mating season, and sometimes when cold weather supervenes in March—as it often does here—the matings will be dissolved and the birds form back into their original coveys to separate and re-pair afresh at a more propitious moment.

The common partridge is monogamous, and instances in which it has failed to be so are not recorded. The site of the nest is chosen with great deliberation and sometimes after many weeks searching for a site suitable to the exigencies of the case. In point of situation it varies very much, but there will always be one or two little characteristics common to all partridge nests. The nest itself is a very poor affair considering all the time taken up in selecting its site. It is a plain, small hollow, of natural formation or scraped out by the bird, beneath some more or less pronounced sheltering. The most common sites for partridge nests are beneath some particularly pronounced tufts of growth in clover, corn or grass fields. As a rule, the nest will under these circumstances be found to be situated upon a slightly elevated spot calculated to run off any water resulting from heavy rain. It may, moreover, be at the foot of some bush, post or tree, beneath a hedgerow, sometimes in a spinney or low covert or broken ground near a field; sometimes at the foot of a post or railing; just upon the borders of a moor or within a plantation; if the bird be a moor partridge, then beneath some tuft of heather, where you might find a hare form, or under a sheltering, overhanging ledge near a river. In all or any of these spots will the hen partridge place her nest and pursue the process of incubation under the care and close attention of her consort. The eggs, large-sized for the bird, rather round than oval, of a deep olive yellow, vary in number from a half dozen to a score, and average, according to my reckoning, about fourteen per pair of birds. Three weeks is the period necessary for incubation, during which the male bird keeps assiduous watch, although never assisting in the hatching, while willing to protect his mate with his life. Truly, dumb nature teaches a paradoxical lesson. The partridge will risk all for his unborn progeny and the rat will make a meal off his own at the earliest moment possible! Within a few hours of their being hatched the young commence to move out and look around for themselves. The early protection and feeding of the youngsters is shared by both parent birds. They lead them forth, forage for them, and give the chickens such instruction in the way they should go as is to be expected from them. At this tender age young partridges have many vermin enemies to contend with, crows and magpies and stoats being of these the chief, in addition to inclemencies of weather, which at this particular point of their existence often plays sad havoc with them. During the first few weeks of their existence the nightly roost of parent and offspring is made upon the ground in some spot similar to that where the nest was made, the hen bird covering the chicks with her body, while her consort sometimes assists. Later on, when the young become too large the covey passes the night in a compact bunch, heads pointing outward. This habit of nesting closely together lends considerable assistance to those poachers who practice night-netting of partridges.

Hatching time with these birds varies wonderfully, and any time from the middle of March—although this is a most exceptionally early time—to the commencement of July will witness their hatching out. A great deal in this respect depends upon the season and the locality, so that a hard and fast line cannot be laid down, although it may be mentioned that the stricter the system of preservation the more irregular the hatching season.

The daily life of the common partridge is decidedly interesting, more so than most birds. As the sun rises and sends its rays slanting across the estate, the partridges commence to move about and search for food. This is of many kinds, and varies according to the season of the year and the locality. In spring and the larger portion of summer, the tender shoots of herbage of countless description and their seeds. To the agriculturist it is useful, for chief among its many foods are the weeds of the farm,

In addition to this vegetable diet, insects in their multifarious nature provide it with a large proportion of its food, notable in this category being ants, spiders, aphides of many kinds, that destructive little pest the cuckoo-spit in particular, wireworms and slugs. The young partridges, in fact, until fully matured, consume nothing but insect food.

It is not until late in the summer and during the autumn months that partridges draw a share of their supplies from the cornfield, and I am right, I think, in maintaining that it is only the few ears of corn within its reach that are emptied of their grain. The bird does not pull down the corn and feed on it as do such birds as the wood-pigeon. I doubt, too, moreover, if it be the grain which is the primary end in view; may it not be, is it not, in fact, the countless swarm of insects in the fields, and the almost as numerous seeds of cornfield weeds? After the corn is cut, however, the partridge eats grain freely, for it is well within reach, and the cornfield is no longer the seething mass of insect life it was before the reaping machine was put to it.

Directly partridges have fed; they adjourn to some particular spot, there to pass the day. This may be a root, clover or even cornfield, some low brake or covert, perhaps a moor-edge, and in the reaping season, last, but not least, the stubbles. In winter time scarcity of provender will modify this routine considerably. As evening approaches, or to speak more correctly, toward sundown the broods "squat" for the night, when they "juck," jucking being their evening calling to one another. The covey is inseparable until next mating time, but sometimes several broods will pack or occasionally one or two coveys only will unite their forces.

Sometimes, in fact frequently, hen partridges will use the same nest and hatch conjointly, but when the youngsters tumble into the world a division of the progeny is made and two broods formed. No birds are neater or more careful of themselves than partridges; they pursue their toilet daily with almost religious regularity. They are in many ways grand game birds, and the common variety provides us in Britain with sport of unsurpassed excellence.

THE FRENCH PARTRIDGE.

Red-legs—the French partridge—owes its introduction into the British Isles it is said, to our erstwhile merry monarch Charles II. Be this so or not he gets the credit of it, but his endeavors to establish red-legs in Britain was an ultimate failure and their successful installation is due to the action of some "noble lords" who some seventy years ago managed to establish a head of this game bird in Suffolk, from which county they have spread throughout Britain and become thoroughly a denizen of our preserves.

The Guernsey partridge offers so little divergence in habits, though of decidedly different coloring from the ordinary one, that no useful ends would be gained were I to detail all its various idiosyncracies of habit and character. As far as the choice of locality goes, it prefers rougher, more hilly parts than the common partridge, landscape of semi-cultivated nature, interspersed with low uneven copse appearing to find most favor. Unlike the *Perdix cinerea* it perches on trees, gates and hedgerows, and affects rather the habits of the pheasant in this respect than those of the partridge kind in general. They do not suffer domestication, and you cannot hand rear them as you can the common partridge. As a bird of sport I hold them inferior; they are decided runners and difficult to get up. To move them well a quick, bustling spaniel or driving is necessary; when frequent among their more favored congeners they are decided spoil-sports. They are obtrusive, domineering birds, always seeking to "lord it" over the others, and if they reach any numerical importance upon a partridge preserve will contribute largely to a decrease in the stock of common partridges. As a *Perdix* I dislike the Guernsey partridge; *per se* it is a fair game bird and not to be despised by any means.

QUAILS.

We have but one British quail—strictly speaking—and that is *Coturnix vulgaris*. Taken altogether the bird is not a permanent resident here, as the large majority of them pursue an annual migration to and from more southern climes. A small percentage of them, however, remain here, permanently nesting and breeding. Our stock of quail is on the increase and with increased assistance from preservers would soon be important as it is at present scattered. It is during the months between May and October that we get our chief supply of quails in several parts of the country, the birds in others being practically absent.

In habits the bird as we have it much resembles the partridge, choosing as its favorite localities what we would call typical partridge land. Unless flushed by dog or man it rarely rises to wing and spends practically the whole of its life upon the ground finding its food and nesting in the same way. Generally dubbed polygamous, I am of opinion that as a very general rule it is monagamous, besides being unsociable and pugnacious. According to whether the birds have wintered here or not, so the time of nesting, three or four weeks difference in period serving to denote this fact. The eggs vary from eight to twenty, the female alone incubating, the male remaining irregularly in attendance. The period of incubation extends over twenty days; a poor percentage of the young reach maturity, the latter running and feeding within an hour or two of birth which, with unmigrated birds will be toward the middle of July.

The quail has a varied diet, finding its chief sustenance in the seeds of the chickweed, plantain, orache, persicaria, dock, wild vetches, rushes and spret; besides the tender shoots of all these, small quantities of grain slugs and many kinds of ground insects.

In constitution it is a decidedly hardy bird and fairly free from diseases. The winter time, however, causes it to lose condition, particularly is this the case when we have much snow.

As birds of sport they are held in least estimation by those who know them least; they certainly have a tendency toward creeping, but that is a difficulty easily remedied, and I think we should preserve and foster the quail much more than we do.

LANDRAILS—(*Crex pratensis*).

The landrail, corncrake, daker hen or what not else is also indirectly to be included among the game birds of the fields, although really not such, speaking strictly. A migratory bird with an occasional disposition to winter and nest here; it arrives early in May, sometimes before then, the northern parts of our island usually witnessing the first arrivals. As a bird of sport its qualities are poor; a confirmed runner and one of the worst description, it is a spoil-sport, and unless on preserves where rough shooting is practiced, I do not recommend its encouragement for reason of the bad influence its exercises upon the working of setters and pointers. Being of but little interest, I need not enlarge upon its habits and the like, but merely mention it as likely to get up when you are brushing for partridges or rabbits. MOORMAN.

DEVON, England.

[TO BE CONTINUED IN ISSUE OF SEPT. 9.]

HINTS ON CAMPING.—Mechanicsville, N. Y., Aug. 6.—*Editor Forest and Stream:* For twelve years I have been a reader of the FOREST AND STREAM. First it was borrowed from a friend, then bought at a news stand, and lastly subscribed for. Many are the useful hints obtained and interesting stories read of the events of others. "Nessmuk" says "hunters are born and not made." I was born a hunter. Contrary to the warnings of parents who pointed to certain shiftless fellows as patterns of hunters, I would go hunting until my father took the hammers off my gun (or his gun). I then traded my watch for a gun of my own, and until this day have never been without one. Many are the hours I have spent in the woods with no other companion than my dog and nature, and I shall never consider it time lost. Such time is never lost to the true sportsman, but will bring to his memory in old age such pleasant thoughts that he will bless his Creator for the gifts of the woods and streams. My first setter was trained according to the suggestion of an old woodsman, and the system was very similar to that laid down in "Training vs. Breaking." Ike Clark was noted in our town as a first-class shot and trainer. Not long ago I brought "Woodcraft" and I never got so much usefulness for a dollar. It should be read by every one who camps out. I think "Nessmuk" could add one more piece of camp furniture to his list, and I send you a circular of a covered roaster. The top can be nested in the bottom or the roaster can be packed with the coffee, sugar and other small packages, which are forever breaking in the pack and mixing with everything else. For roasting everything, from potatoes to bread, it is just the thing. When you put your potatoes in it and place them under the ashes you are sure to find them again and clean. I send this in return for many hints of like nature I have received, and hope some camper who has been bothered like myself by dirt and dust may be benefited thereby.—SPORTSMAN. [The circular is of "Daggett's patent roaster and baker," which is a deep baking pan with a cover of equal depth fitting tightly over it, resembling two pans shut together edges to.]

CLUB CONSTITUTION.—The Waterbury, Conn., Game and Fishing Club's constitution is short and yet comprehensive, as follows: Art. 1. We the undersigned hereby associate ourselves under the name of the Waterbury Game and Fishing Club. Art. 2. The object of this association is to protect, preserve and replenish the game and fish of this locality. Art. 3. The officers shall consist of a president, a secretary and a treasurer, and such other officers and committees as the association may deem necessary from time to time. Art. 4. The president, secretary and treasurer shall perform the duties usually assigned to such officers; and shall be elected annually by ballot, or by vote of the majority of the members present, voting "viva voce." Art. 5. The annual meeting for the election of officers shall be held on Monday in August in each year. Special meetings may be called by the president at any time or upon the request of five members of the club. Art. 6. Each member of this club shall be required to sign the agreement hereinafter written, and upon signing pay the sum of two dollars initiation fee. Honorary members may however be admitted by vote of the club without payment of the fee. Art. 7. No member of this association shall be allowed to shoot game or catch fish for the market. Art. 8. Members of this club shall use their utmost caution against injuring fences, crops, or other property upon lands over which they hunt or fish. And to guard against fires being set in the woods, the members shall use the manufactured wads and no others. Art. 9. We do not deem it necessary to prescribe it as a rule that no member of this club shall shoot or fish on Sunday, but any member guilty of such practice shall be liable to expulsion. Art. 10. We the undersigned agree to abide by the above rules and regulations and will use our influence to sustain them as long as we are members of this association; and any member wilfully violating this agreement shall be expelled from the club.

A GREENHORN ON A RUNWAY.—Staunton, Va.—There came an Englishman to this city visiting friends, and while here a party of gentlemen went on a deer hunt at a place known as Duryfield. Mr. P. had the task of putting each man on his respective stand, always leaving him with the admonition, "If he comes this way kill him, for if he goes through he will go to the river;" but not once telling them not to shoot at anything but a deer or something larger. After putting all the men on their stands, he rode off to the road leading to the river intending to follow the deer to water should he get through. Not long after Mr. P. left the Englishman he heard two reports in quick succession. He rode to the stand as fast as possible expecting to see a fine buck; but judge of his disgust when the Englishman exhibited a crow, exclaiming, "Why, Mr. P., I did not know you had such fine ravens in the States!" "Ravens, the devil," exclaimed Mr. P., "that is nothing but a crow. You must not shoot at anything on a stand but deer." So once more P. left to watch the road leading to water. After some time a loud shouting was heard at the Englishman's stand, and all hands made for this point. When asked what was the matter, the Englishman told how he had set his gun down at a tree and gone off about twenty yards to walk the cold out of his feet, when down the hill came the deer, and he rushed for his gun, when "the blasted thing turned and went the other way." This broke up the hunt. After getting to the hotel, court was held to try all of the party who had broken the rules of a deer hunter on the stand. The penalty of each offender is usually the loss of the extreme end of his shirt; but when they got to the Englishman all hands voted to let him off, which we did.—B.

THE MICHIGAN STATE FAIR will be held at Jackson, Sept. 13-17.

DENVER, Colo., Aug. 17.—A meeting of the Standart Shooting Club was held last evening at the Chamber of Commerce. There were twenty-eight members present. The president made a report on the condition of the club. The proposition made to the club by Governor Grant and Mr. J. M. Patrick to give shooting privileges over their lake was explained by the president and treasurer. On motion the board of directors was increased from three to five, and the directors were requested to prepare and present to the coming Legislature a bill to prevent spring duck shooting. The directors were authorized to build a house near Johnson Lake. It was decided that the honorary members of the club shall not exceed five. The following officers were elected for the ensuing year: President, S. H. Standart; First Vice-President, J. S. Sedam; Second Vice-President, L. L. Higgins; Secretary, J. H. P. Voorhees; Treasurer, W. D. Todd. The Rev. Myron Reed then arose and in the name of the society presented to Colonel Todd a handsome double-barreled Baly shotgun. On the butt was a silver plate with the inscription, "Presented to Colonel W. D. Todd from the members of the Shooting Club." Mr. Todd responded in a short and wittily turned speech, expressing his gratitude to the club. After partaking of refreshments the club adjourned until the first Monday in February.

TENNESSEE ASSOCIATION.—Nashville, Tenn., Aug. 21. *Editor Forest and Stream:* The sportsmen of Tennessee have for some time thought of organizing a club for the better protection of game and fish and the improvement of the dog. A large and enthusiastic meeting of sportsmen was held at the Maxwell House in Nashville, Tenn., on the night of Aug. 20, for the purpose of organization. The following officers were elected: Col. H. E. Jones, President; A. M. Young, First Vice-President; D. A. Bradley, Second Vice-President; R. M. Dudley, Secretary and Treasurer. The executive committee will be composed of men from all sections of the country. It is the intention of the association to hold a field trial somewhere in Middle or West Tennessee, commencing Dec. 20 next. There will be a Derby and an All-Age Stake open to the world. Fuller information can be had on application to the secretary, whose address is Nashville, Tenn. Resolutions were passed indorsing the course of the FOREST AND STREAM in its opposition to spring shooting and its fight in favor of game protection. Our next meeting will be at our club room, evening of Sept. 10, to which all sportsmen are invited.—R. M. DUDLEY, Sec. and Treas.

SHOOTING AND FISHING RESORTS on the line of the Hastings & Dakota division of the Chicago, Milwaukee & St. Paul Railway are thus detailed in a handbill prepared by General Passenger and Ticket Agent A. V. H. Carpenter, of Chicago. In Minnesota: For hunting—Bird Island, Montevideo, Appleton, Ortonville, Austin, Blooming Prairie, Faribault, Northfield, Cannon Falls, Fairmont, Sherburn, Jackson, Lakefield, Fulda, Edgerton. For fishing—Big Stone Lake (on the boundary line), White Bear Lake, Minnesota River, Vermillion River, Cannon Lake, Lakes Sisseton, Budd, Buffalo, George and Hall (these last five all near Fairmont). In Dakota: For hunting—Webster, Groton, Aberdeen, Ellendale, Ashton, Wolsey, Woonsocket, Wahpeton, Canton, Lennox, Parker, Flandreau, Egan, Madison, Howard, Diana, Mitchell, Sioux Falls, Yankton. For fishing—Big Stone Lake, Lake Madison, Big Sioux River, Lake Traverse, Waubay Lake, Rice Lake. In Iowa: For hunting—Le Roy, Plymouth, Carpenter, Algona, Emmetsburg, Ruthven, Okoboji, Sanborn, Rock Valley, Calliope. For fishing—Lakes Okoboji, Spirit Lake, Clear Lake, Des Moines River, Pelican Lake, Trumbull Lake, Swan Lake.

WEST VIRGINIA GAME.—Grand Haven, Mich., Aug. 16.—I have just returned from an extended trip through the mountains of West Virginia. My trip was made for the purpose of looking up timber and minerals, but I never forget to keep one eye open for game, that the place may be marked down for future reference. During several days spent in the mountains I failed to find anything in the shape of game. I asked some of the natives what had become of all the game, and especially the partridge, and got for reply the old story of shooting at all seasons, everybody seemingly waging a war of extermination on all kinds of game, until now, even in these heavily-timbered mountain gorges, the ruffed grouse are things of the past. Near Raleigh Court House I heard a few Bob Whites, but was told they also are rapidly disappearing, as they are hunted during the summer and fall and trapped during the winter. I would that FOREST AND STREAM might be read by all these so-called hunters and that its able articles on this subject might be heeded.—S. C. G.

A GROUND SHOOTER'S DOG TRAINING.—One fall S. and myself went ducking on a well-known stream in old Butler county, Pa. At the house where we stopped was Mr. J., who owned a pointer dog, and of course the conversation drifted toward dogs. Mr. J. said, "My dog was very easy to break, except in backing. I never could teach him to back. But one day, out after quail, he found a bevy at an old hay stack; and when I came up there he stood with the quail all bunched nicely, and his nose too close to them for a shot. I told him to back, but he would not move an inch. I did not know what to do, and did not like to lose such a nice shot; I could not move him back; he stood there like a rock. Well, says I to myself, I guess I may as well teach you to back now as any time. So I pulled up the old gun and let fly at the quail, and about a dozen of the shot hit the dog in the nose; and, sir, I never had any trouble about his backing after that."—CABLE. [It was a pity to spoil a good dog by making him serve the ends of a ground shooter.]

GAME IN THE MISSISSIPPI BOTTOMS.—Memphis, Tenn., Aug. 20.—The outlook for game in the river counties of Mississippi was never better. The disastrous overflows of 1882-'83-'84 greatly depleted the game in this country, having driven out or drowned it. But the protection afforded by the levees during the last few high-water seasons has restored confidence in the minds of the game as well as of the inhabitants. Complaints are now frequent of the depredations of bears on the cornfields, and deer signs are plenty, as I can testify. Wild turkeys are very abundant, and even the partridges (little Bob White) are growing quite numerous. The woods were all overrun by squirrels last fall, and the prospect is equally favorable for this season.—COAHOMA.

"The Bicycle in a Deer Hunt" is the caption of an account of a deer hunt in Mexico, by Mr. James Purvis Bruce, printed in the *L. A. W. Bulletin*. Mr. Bruce and his Mexican guide killed two does and a buck. Mr. Bruce explains: "'Blassey's' quarry is badly shot—the 550gr. bullet having plowed a raggety hole from the deer's breast to her hip. My two are not perceptibly marked, as they are both shot in the foreshoulder. 'Blassey' and I then 'turned in,' and took the foreshoulders of the doe that fell to my rifle and left the rest to the wolf or the panther." Of course it's all right for Mr. Bruce to trumpet his achievements, but by and by there will come a time when a man who goes out and kills three deer and leaves two of them and a part of the third to rot will not brag about it.

Massachusetts.—Boston, Aug. 23.—Last Saturday I imagined I was sick, so I took the gun and a bag of shells and started for Dighton at 8:30 via O. C. & N. R. R. I found more shore birds there than have been seen for the past ten years in this vicinity. I got all I wanted and a good wetting besides from a thunder shower. I don't think any were shot there in the spring. There were none to shoot. I rested Sunday, and came into town Monday feeling that I had taken the right medicine. A friend hunted the east side of Taunton River from Taunton to Somerset without starting a single woodcock. No signs of them in the usual places. Quail must be plenty this fall. They have been whistling from every rock and fence all summer.—A. A. D. (Boston, Mass.).

Were They Brant?—*Editor Forest and Stream:* While on the Hackensack River on Sunday, Aug. 22, about 10:30 A. M., a short distance above Hackensack, I saw a large flock of what, at a later date, I would have called brant, flying due north and apparently wanting to light in the river. There were too many boats for them to do this. They were too far off for me to be certain what they were, but they looked too black for geese. They flew V-shaped and seemed to change their leader often. The sight was so unusual at this time of year that I would like to know if they were seen elsewhere and if their character was determined.—Z.

Weight of Repeating Rifles.—*Editor Forest and Stream:* The way these repeaters balance is anything but what it should be, as the stock is light and the barrel unnecessarily heavy. I speak of the .40 and .45-cal. rifles, which, even with the half length magazine, weigh 10lbs. and upward, which is more than an ordinary man can comfortably carry all day. The action of these rifles seem about perfect, and I believe that an 8lb. or 8½lb. rifle (.40 or .45-cal.) would soon be the popular repeater. I gave up carrying useless weight years ago, and probably many of your readers think the same way.—T. E. Y.

Pinnated Grouse.—I am informed that the Chicago, Milwaukee & St. Paul R. R. Co. are about extending a branch of their road from Bismarck southeasterly, passing through Faulk and Hand counties. If this is done it will open up some of the finest hunting grounds in the Territory, as well as the richest agricultural lands. I have never had better grouse and chicken shooting than that found in Hand county, Dakota, and letters from there tell me that "the crop is very abundant this season." Hope to send you my own report from the prairies next month. —S. C. G. (Michigan).

Delaware.—The general State law for the protection of pheasants permits shooting from Aug. 15. The following counties have local laws: Washington, whose limit expires Aug. 12; Allegany, Hartford, Baltimore and Montgomery, whose limit expires Sept. 1, and Frederick and Anne Arundel, whose limit expires Oct. 15. The local laws take precedence over the State law in the counties where they are in force. The law for the protection of woodcock allows shooting now in all the counties of Maryland with the exception of Wicomico, which begins Sept. 1.

The Printer is Blamed for his occasional typographical errors. He does not begin to get credit for his eagle-eyed detection and correction of inaccuracies in the copy. For instance, last week the copy of Messrs. Schoverling, Daly & Gales's advertisement of the rapid loader gravely stated in capitals, that "after using one no one will ever use another." That was not what the agents meant, by a long shot; and that the types were made to say something very different was due to the vigilance of the printing office.

Grass Plover in New Jersey.—A well-known New Jersey sportsman on Wednesday, last week, killed twenty-three grass plover back of Absecom. The birds were wild and were killed at long distances, one bird falling dead eight-five yards—measured by tape line—from the muzzle of the gun.

Charles V. Ramsdell, aged 64, a well-known Bangor (Me.) gunsmith and dealer in sporting goods, died last week.

A Plant to Suppress Malaria.—Dr. Brandes, a physician at Hitzackes, Hanover, has written an article in a German medical paper in which he demonstrates the valuable properties of the *Anacharis alsinastrum*, a water plant which has hitherto been considered as an unmitigated plague, choking up rivers and altogether useless. Dr. Brandes has remarked that in the district where he lives, and where malaria and diarrhea yearly appear in a sporadic or epidemic form, these diseases have gradually decreased since the *Anacharis alsinastrum* began to infest the neighboring rivers and marshes, and since four years have totally disappeared. The above named water plant nourishes itself on decayed vegetable matter, and grows with incredible rapidity. It thus destroys the germs which produce malaria and diarrhea, and besides, its presence oblige the frequent cleansing of standing waters—a measure beneficial to health. Dr. Brandes therefore proposes that the experiment should be tried of planting the *Anacharis alsinastrum* in marshy districts. It is also useful in protecting the young of fish, and affords an excellent dung. The plant came originally from Canada, whence it was brought to England, and thence to Germany about 1840. In North Germany it rapidly spread far and wide, and this year appears in all parts in unusual luxuriance.—*London News.*

The cartridges and paper shot shells used by Hon. W. F. Cody and Miss Annie Oakley for the last three years and in the Wild West Exhibition now at Staten Island, are made by the United States Cartridge Co., of Lowell, Mass., manufacturers of the celebrated Lowell waterproof paper shot shells and metallic ammunition of all kinds. Wallace & Sons, Agents, 89 Chambers street, New York City. Ask your nearest dealer to keep them.—*Adv.*

Sea and River Fishing.

TROUT FISHING IN ALASKA.

Some weeks ago I thought I had scored a point on the golden iridescence of the Alaskan trout, but a little more experience convinced me that I was mistaken and the mark was wiped out.

The bulk of my fishing this year has been in lakes whose waters are more or less deeply tinted with dissolved vegetable matter. These waters are what are technically known as sphagnum waters. Wherever the land is level and not too high the ground is covered with a growth of moss to what seems to be a considerable depth. There is a good illustration of this opposite our present anchorage, off the southern extremity of Etolin Island, just above where Point Onslow juts out into salt water at the junction of Duke of Clarence Strait and Prince Ernest Sound. I am particular in the description of the locality because, like many other places in Alaska, it cannot as yet be located to the public by name; and furthermore, because all the excursionists who come up here go away with the impression that there is no level land in Alaska. A prominent newspaper man of San Francisco lately said in his paper that it is all placed on edge. Here the high land is several miles from the coast, and the intervening country is low and level. I walked over this flat ground one day not long ago hunting for a lake to fish in, and the tramp could not have been more fatiguing had I waded all the afternoon through a snow drift two or three feet deep. The day was intensely hot, too. There is only one country, in my experience, which can surpass this in the depth of its mossy deposits, and that is the west side of Patagonia, or Chili, as it now is. There the mosses and low forms of vegetable life cover the ground as high as the limbs of the trees, so that walking in the woods there means climbing over the tops and through the branches of the trees.

What I started out to tell is this: I noticed that the trout in the lake on Wrangell Island, and in another on Etolin Island, north of us here, which I shall mention later, were deeply tinted with the golden, as were also the waters. I connected these two conditions together—the fish were dyed by the waters—*Post hoc ergo propter hoc;* and it looked reasonable. This idea grew stronger after I had fished a stream on Etolin Island, where the water was as clear as a crystal, coming down directly from the snows upon the high peaks overhead. There the little water ouzel was my constant companion, and so limpid was the water that I could follow its every movement at the bottom of the still pools. The trout I captured there had not a trace of the yellow, but were silvery below and on the sides, steel-gray above, with small spots, and with the purple streak plainly marked. That the trout took the dye from the water I firmly believed until we moved down here. Here there is a lake lower lying than any of the others I have mentioned, and surrounded by a greater extent of sphagnum country; consequently its waters are deeper dyed brown, but the trout are lighter colored. In fact they scarcely have the golden iridescence at all. I have in my mind one in particular taken in this lake which was silvery-gray all over. But no lake trout I have yet taken has had the purple streak. There is as great variation in the coloring of the trout up here as elsewhere, and they are as full of the tricks that beguile the angler as those of the more civilized countries.

Since my last communication to this journal describing how I found Wrangell Lake, we have visited it twice. On both occasions the fish behaved just as they did on the trial trip. They rose eagerly to the flies for an hour or so and then sulked in their holes, from which one could only be lured spasmotically. The first day my score was 18, weighing 6lbs. 4oz; my companion's 12, weighing 4lbs. 12oz. My string held the largest trout so far captured this season. It weighed 1lb. 2oz. and measured 17in. in length. Last year I took two somewhat larger than this from a stream on Prince of Wales Island, emptying into Karta Bay. They weighed respectively 1lb. 10oz. and 1lb. 8½oz. The largest of that year, I am sorry to say, was ignominiously captured by another person using a piece of salmon meat for bait. It weighed 2lbs. 2oz., and was caught in a stream emptying into Ward's Cove on Revillagigedo Island. These two places, the first named in preference, are the best for stream fishing we have found in southeastern Alaska. Our strings were larger, but they did not average as many ounces to the fish as those taken this year from the lakes.

The last visit to Wrangell Lake was made June 12. Two of us went there this time with the determination to stay and try the fish at a later hour. We arrived early in the afternoon, and began fishing in the outlet about 2:30 o'clock. To our surprise the fish began rising to the fly at once, showing a marked preference for the gray-palmer. The day was bright and warm, too. We had one hour of fine sport, as usual, when they ceased rising, but I did not stop fishing. I whipped that water at intervals until after 6 o'clock, till my arms ached with the exercise, and tried every fly in my book, but I don't believe that I added more than three fish to my string. My total score that day was 18. To go to the opposite extreme I will again allude to that catch of 30 from one pool on Revillagigedo Island. These fish rose so greedily that I was astonished to find them literally gorged with salmon spawn, which seemed only to whet their appetites. When I held some of them up by the tail the roe actually ran out of their mouths.

From Wrangell our vessel's anchorage was moved to Steamer Bay, which opens out into Stikine Strait at the northwest angle of Etolin Island. The bay lies between two parallel ridges, which have one foot in the water of Stikine Strait and the other into that of the Duke of Clarence. The depression between the ridges at the head of the bay is occupied by the low foothills of the mountains. My first business was to find a lake or a stream to fish in. I attempted to follow up the little stream at the head of the bay, but its bed was so choked up with tangled undergrowth and fallen timber that I had to give it up. Then, like the great lawgiver, Moses, I ascended a high mountain to see what the land promised. I saw a lake, a large body of water with two arms, but flowing in an opposite direction from Steamer Bay. Returning to the vessel I found the dainty and beautiful maiden hair fern growing luxuriantly about half way down the steep mountain side. I jumped two deer during the climb, but got a shot at neither.

The next thing was to get to the lake. This was first accomplished by some of the crew who were hunting in that direction. They reported the difficulties which beset the way not too arduous to be overcome even by those who love their ease. A few days thereafter I made the journey, accompanied by three of the men, to construct a raft on the lake. I will tell about this trip. I found pretty steep climbing in places, thick underbrush to push our way through in others, and a mossy bog to wade across on the level land after we get out the bottoms. Altogether it was a two hours' walk to make about two miles of distance. Just before the float was finished, at 2 o'clock in the afternoon, it began to rain. I don't think any tropical rain came down harder than that did for the rest of the day. There was nothing for us to do but wade homeward through it. To say that we were wet does not express our condition; we were water-logged. The rain ran down my trouser's legs and filled my boots, so that I had to stop every now and then and pour it out. Finally my legs got cramps in them, the same as they did when I was a boy and stayed in swimming too long. We counted a dozen or more rushing, leaping waterfalls upon the mountain sides, where before we had seen none, and the roar of the leaping waters could be heard above all other sounds. It is gratifying to add that the exposure did not produce an ache or a sneeze.

It was a kind of damper, however, on the two who were to go back with me some day to make use of the raft. But they mustered up courage enough to go, and it makes me smile yet to think how they were fooled over the difficulties in the way. Just before reaching the lake we came upon the warm bed of a brown bear, which was shedding its hair very freely. We weren't angling for bears and so did not attempt to follow it. The carpenter and I had a falling apart about here; he thought we should go more to the left, while I, who was following compass bearings, thought our course lay more to the right. One of the party followed the carpenter, and the other me. We had the satisfaction of striking the arm where the raft lay in about a half an hour, or at 11 o'clock, the other party joined us about two hours later. The float was constructed of three logs, a green one in the middle, and two others of dead wood which we had picked up on the beach. The latter were water soaked, and the combined weight of the party sunk the raft about six inches under water. Our design was to paddle and pole down the two miles of water to the lake outlet; our progress was so slow that when the end of the arm we were in was reached—about half the distance—we had to decide whether to go on and be beset by darkness on our way back, or to return at once. The latter was carried unanimously. We had fished coming down and had captured thirty trout along the edge of the lily pads. My score was 19, weighing 4lbs. 6oz. But taken all in all we voted that the fishing from Steamer Bay was not a success. I predict some good fishing in this lake for any one who approaches it from the opposite direction, that of its outlet.

A few words in regard to the healthfulness of this climate. We are a party of fifty people, and this is our second season in Alaska, embracing a period of about six months each. There has been absolutely no sickness in the party except such as is the result of injuries. Those who come from the south with troubles of the air passages get rid of them after they have been here but a short time. Yet the Indians are dying off rapidly with consumption and scrofula. I could give some statistics of births and deaths at Wrangell that might astonish the reader, and lead him to believe that this was an unhealthy country.

Last year the season was exceptionally good. We had fair weather and sunshine more or less continuously from June 1 till the last of August. This year the sun did not show itself much until after the middle of July. We had but six days of sunshine in June. Since July 15, however, the weather has been good. T. H. S.

Alaska, August 1, 1886.

SHEEPSHEAD IN A NOR'EASTER.

Atlantic City, N. J., Aug. 16.—I never wondered that Keats and Swinburne and Shelley loved the sea, or that the perfume of immortality hallows some of Shelley's sweetest lines. If the graceful and elegant author of "Zastrozzi" was not a follower of the gentle and well-beloved Izaak Walton, he ought to have been. He was an eminent instance of both an impulsive character while at the same time possessing an abstract intellect; and DeQuincey describes him as "looking like an elegant and slender flower, whose head drooped from being surcharged with summer rain." That Percy Bysshe Shelley was an infinite good fellow is shown by his early love affair with Miss Gore, his cousin, with whom he wrote "Zastrozzi," and with the impulse of a youthful and victorious author he at once gave a magnificent banquet to his friends. Daniel Webster or Matt Quay, both pre-eminent fishermen, could not have done better. The deep blue sea seemed to be Shelley's native home, and here he drew inspiration, like "the wine divine of Zanzovine," for some of the most subtle and precious of his immortal poems.

There was a deep touch of romantic interest in the hour and manner of his death. He dwelt in his yacht for months on the beautiful Mediterranean, and loved the breath of the sea, as his intimate, Lord Byron, did, and lived much in the "society where none intrudes," loving all "waste and solitary places." On a beautiful summer day, on the Mediterranean, Shelley, in a boat of peculiar build, with his devoted friend Williams, endeavored to sail from Leghorn to Levici, as he had fearlessly sailed before a hundred days over the ocean blue. In a sudden squall the little boat disappeared, and the sad sea waves on the next day cast ashore all that was mortal of the poet Shelley, and a volume of Keats's poetry was found open in one of his coat pockets. In accord with a strange custom prevailing in Tuscany, that all the flotsam and jetsam found floating in from the ocean should be burned on the shore of the sea, the remains of the "poet of poets" were reduced to ashes after the manner of the ancients, amid the tender tears of Lord Byron, Leigh Hunt and Melawney.

When a boy (and I came from the West and then had never seen the sea) I was fascinated with one of Geo. Wm. Curtis's early stories, before his poetic salt had lost its savor and G. W. C. became an Eatonian civil service reformer. I reveled in the description of a callow youth,

as Curtis described him, who went down to one of the great wharves of New York and watched an East India ship come in, and when no one was near the boy put his hand on the warm sides of the big ship, which seemed to bear some typical tale to the tender heart and oriental imagination of the youth.

This much by way of prologue, for there was nothing the least poetical in the matter or manner of our catching the first sheepshead in July at Atlantic City, at the wreck of the Cassandra. James B. Roney, a Philadelphia lawyer, and Charles Folwell, a retired hatter, had heard J. M. S. descant on the joys of deep-sea fishing, and we had all packed our fishing suits and cuttyhunk rig in an hour ready for a Saturday's sport. An enthusiastic piscator always finds more hope than anything else in the Pandora's box of daily life. What the fisherman wishes he certainly thinks will come to pass, and "Kingfisher," he of the charming Sterne-like sketches of the charms of taking bass in Michigan lakes, never felt more certain of a "big catch" with old "Hyperboler" than we did on the eventful Saturday I shall attempt briefly to describe.

Atlantic City, be it known to the *habitué* of Newport and Long Branch, covers much space, and to avoid lying and lazy hackmen, who promise to call us "early, mother dear," who come at 7 A. M. when they promise to call at 5, we three in Atlantic agreed to sleep on cots on the piazza of the Pavilion, the house nearest the waters of the inlet, whence Ben Sooy's Tillie Covert was to set sail for the home of the toothsome sheepshead and the sulky sea bass. It was moonlight and Roney was talkative and bright, as only a Philadelphia lawyer can be, and it was long past the witching hour of 1 A. M. when tired nature assumed her sway in balmy sleep, and Roney and Folwell began to snore as hard as a quarter horse is wont to trot on Point Breeze track. Little we feared the cold when we went to sleep, for the light rain had disappeared; but a cold wind had sprung up about 4 A. M. which caused all of us to yawn and stretch ourselves painfully when Skipper Sooy aroused us at 5 A. M.

There was an ominous look in the north sky which made Sooy look serious, but we made light of the heavy weather and insisted on going to the wreck, rain or no rain, and there was not an umbrella on that end of the island; and your true fisherman would be as much ashamed of carrying an umbrella after sheepshead as Saint Beuve's friends and seconds were ashamed of that distinguished French *savant*, who coolly insisted on fighting a duel with a brother editor on the Boulevard St. Martin, on a rainy day, under the shelter of his umbrella! Saint Beuve, when remonstrated with for his *gaucherie*, replied, "They might kill him, but he didn't mean to get wet;" and he didn't die nor become what Mantalini called "a demmed moist body."

The Tillie Covert soon had her mainsail furled by the help of "Mickydoo" the boy of all work on the yacht. Much to our surprise, for our start was an early one, we found the market fishermen ahead of us at the wreck with fifteen splendid sheepshead in their two boats.

And I might here be permitted to state, without in any way vouching for its essential truth, "and tell the tale as 'twas told to me" by an Anglesea fisherman, that the Atlantic City fishermen sometimes use dynamite cartridges to blow up the sheepshead, when the demand is too eager and *exigeant* for the supply. This fish, the sheepshead, brings in summer or winter twelve cents a pound in the fisherman's boat, and they are "plentiful 'scace at that," as the Barnegat fishermen say.

While the sky looked lowering, the dangerous cloud seemed no bigger than a man's hand; but Skipper Sooy, one of the best-tempered disciples of Izaak Walton I ever met, had looked preternaturallly stolid and solemn all morning. But Roney reasoned that this was because the Captain—and a very good captain, too—of the Tillie Covert had come off without any matutinal or pre-prandial cocktail or even a cup of coffee.

Charley F. threw over his line, only to be rewarded with a bladderfish on the upper hook and a flying fish on the lower Chestertown. Roney looked disgusted; and his countenance only elongated as he pulled up a small and quite transparent flounder. "This is your great sheepshead ground, where the great Matt Quay caught fifty-four sheepshead of a morning, is it?" complainingly muttered Roney.

"But," said J. M. S. "the sheepshead is a game fish, feeds somewhat precariously, and like all well-bred denizens of the deep, biteth not when the wind is from the east."

"Oh yes!" replied Roney, "that is all very well by way of explanation, but you go catch a bladderfish." This is a small fish, as large as the palm of your hand, which utters a disagreeable gutteral sound when scratched on the belly.

By this time Sooy, madder than ever, began to batter the brains out of an unoffending or offending dogfish 3in. long, which "willy nilly" had frozen on to Capt. Sooy's surf-clam bait.

"Gently now, gently, Skipper Sooy," exclaimed J. M. S., "I've got a whopper," and sure enough I began to feel that down pressure and sulky back-action which certainly heralded the first advent of a sheepshead in a "nor'easter," for by this time it was blowing like blue blazes and not even the 10lbs. sheepshead, as Sooy bounced him in the landing net, could bring a smile on the grim visage of the usually amiable, but now saturnine Sooy.

Suddenly the Captain looked out and saw the Tillie Covert dragging anchor. Be it remembered the Tillie Covert (the gift of Statesman Quay to Skipper Sooy) is dearer to our festive captain than apples of silver set in filagree of gold. He looked unutterable things, for "Mickydoo" had gone sound asleep in the yacht's cabin, a stone's throw distant, while we four "redeemed the time" trying to fish in a bad northeast storm, for it had been pouring rain for fifteen minutes and by preconcerted arrangement not a word was to be said by the fishermen three to Sooy about the rain.

Sooy yelled, "You blankety blank Irish spalpeen, don't you see your anchor will catch in the wreck?" Still Mickydoo slept the sleep of a tired bay boy.

"Dash my eyes," shouted Sooy, "I'll murder that Irishman," and *eo instanti* he threw a hard-shell clam at the sleeping Micky, which made such a racket as it struck the cabin door that Mickydoo jumped out with each red hair on his red head standing up straight, looking generally and particularly as if the devil was after him. Micky slept no more during that storm.

"Captain," said I, softly, "suppose you up killick and let's drift for flounders?"

"Flounders! Drift! We'd better drift home," said the angry skipper.

I quietly remonstrated, and suggested that, as we had come out for a $10 fish, I found the weather almost pleasant.

I think that was the first lie I ever told.

Folwell had hauled in his lines, looking the pictured image of despair as the water ran off his felt hat down his back. Roney gazed sadly at the four empty bottles of Tannahauser in the bottom of the dory and sighed as he scanned the bottom of the quite empty lunch basket.

Folwell began to shake as if quinine could not save him. He tried to hum softly:

"O! give me a cot in the valley I love
And a trout fly on my summer hook."

He shook like an aspen; but Skipper Sooy smiled not. He too was wet to the skin and wanted to go home, but didn't dare say so. The wind howled as it does on an Illinois prairie on a November night.

Not a bite did we get. A trifle vexed at our bad luck, and amused at the pictured despair of Roney and Folwell, I finally said, "Skipper, I've got enough for to-day."

"Micky, bring her around," shouted Sooy; and like unto four drowned rats we were soon whizzing homeward with the blizzard in our teeth.

A more thoroughly wearied or water-logged party never struck the pavilion as we did in less than an hour, more dead than alive, not boasting in the least of our transparent flounder and single sheepshead. Roney struck for the Ocean House, to get on a dry suit; Folwell, who weighs 140lbs., got into a fat man's bathing suit, intended, doubtless, for Jim Cassady, a 340-pounder, who orates and exordiates and perorates at Pittman's Grove, and on week days is a "commissioner for all the States and nearly all the Territories." Even Sooy's good nature came back, and he "roared throughout the fevered air" to see little Folwell rattle around in the fat man's bathing suit. As I gazed at my solitary sheepshead I thought it might be better to stray over the cornfields of Sussex county, and pull out the bronze-backed bass with a lancewood rod in Carpenter's Lake, but the sun came out before train time, and ere another day I was ready to take another shy at the sheepshead in the summer sea. J. M. S.

OUR SALMON RIVERS.

A FISHING CHRONICLE.

[From the French of J. M. Le Moine, in *Le Journal des Campagnes*, Quebec.]

HOW much progress has been made in the development of our fisheries, how many instructive and entertaining books have been written on our salmon streams, on pisciculture and so on, since the time long ago when a learned physician, Dr. Wm. Henry, Superintendent of Military Hospitals in this Province, stationed at Quebec and Montreal in 1828, described in detail in 1839, the fruitful trout and salmon fisheries of the rivers Murray and Jacques-Cartier, in the county of Charlesvoix. Indeed his work in two volumes, "Trifles from my Portfolio," stands in the eyes of the faithful disciples of Ausone and of Columelle as a prized record of our early fishing days.

The sketches gathered together in the learned doctor's portfolio show not only the skilled, angler, but also the charming conversationalist, the writer, elegant and even classical, the careful observer of nature, the great traveler, the man of society and also the skillful practitioner of his art; since one of the sketches exhibits him as one of the anatomists appointed by the English Government to take part in the official autopsy on the body of Napoleon I., at St. Helena.

The sketches of Dr. Henry, delightful volumes which amateurs now dispute over, have carried the fame of the Jacques-Cartier as a fishing river to every quarter of the globe. We should not be surprised to learn that the renown of its rocky falls, of its rapids, the reputation of the Remous St. Jean of the Grands Rets, were, thanks to him, known to the savage tribes of Central Africa.

The names of Henry and of his lamented successor at Jacques-Cartier, the late Charles Langevin, have been associated for half a century with this raging stream and with the neighborhood of the bridge of Louis Déry upon this river. Mr. R. Nettle has even taken the trouble to furnish a comparative table of the salmon catches of our excellent fellow citizen from 1850 to 1856. Mr. Langevin has given his name to an artificial fly of wonderful efficacy in making salmon rise, the Langevin salmon fly, and the name of Henry is still borne by one of the descendants of the former proprietors of the old Déry bridge. I made this discovery in the following way:

In August, 1884, with a friend I was descending in a bark canoe one of the treacherous rapids of the great outlet of Lake St. John. Mr. Wm. Griffith, the owner of the celebrated fishing station on this rapid, had kindly granted a permit to fish to my companion, who, in less than an hour, had filled the canoe with superb winninish, weighing on an average 5lbs. each. The winninish, called by the English landlocked salmon, is extremely voracious at this season and takes any fly. I had the curiosity to ask of the old canoeman who managed our craft his name and the place of his birth. "I am called Henry Déry and was born at Déry's Bridge on the Jacques-Cartier," he said, pushing up his red cap and turning his quid. "Honoré or Henri" said I, "which is your name?" "Neither one nor the other, sir," he replied, "but Henry Déry. My name is that of a benefactor of my family, Dr. Henry, whom you might have known in Quebec, perhaps sixty years ago. He used to come salmon fishing every summer to the Jacques-Cartier River." "I did not know him," I replied, "but I know of whom you speak."

I shall have many other things to say with regard to this facile writer, who, I believe, was the first to describe our salmon streams. I shall confine myself for the present to notice as I go along the interesting account found in his book of a fishing trip which he made from Montreal to Mal Bay in June, 1830, with a friend, Major Wingfield, of the Sixty-sixth Regiment. They seem both to have partaken very heartily of the hospitality offered there by the roof of Mr. Chaperon, which if I remember right, lies a little to the east of the Nairne Manor. Their guide was named Jean Gros; and Jean Gros having lost his paddle in a rapid at the head of the fall in the Mal Bay River, they were nigh taking a cold bath in the river. Some energetic oaths from the Doctor attracted the attention of some neighboring people, who threw planks and poles to the distressed mariners. The canoe made the bank before t was caught by the rapid. The epic of the sufferings, which the black flies, midges and mosquitoes inflicted upon them is very amusing; but a ray of good fortune soon came to brighten the gloom of their adversity. This was the taking of five salmon, weighing 105lbs., and forty-eight trout, which averaged 3lbs. each. Dr. Henry and his companion passed next on to Duck River and Black River, twenty miles lower down. * * * * *

Except a few articles in the newspapers and magazines, we meet with no long treatises on our salmon rivers between 1839 and 1858, except a useful work on pisciculture and the protection of our rivers, entitled "Salmon Fisheries of the St. Lawrence," by a respected teacher of this city [Quebec], Mr. Richard Nettle, now employed at Ottawa in the Inland Revenue Department. Mr. Nettle, convinced that his tastes and his special knowledge might be utilized to the profit of his adopted country, put forth a volume which did so much to call public attention to a hitherto ignored source of revenue that the Government of the day, at the special solicitation, we are told, of His Excellency, Sir Edmund Walker Head, created the post of Superintendent of Fisheries, of which Mr. Nettle became the first incumbent. Here his work, his love for angling, and his literary aptitude were of real service in the organization which Parliament later adopted. Mr. Nettle was one of the first among us to call attention to the success in pisciculture attained in France by the pioneers in the discovery, two poor fishermen of the Vosges, Gehin and Rémy, which success Mr. Coste later developed in so clear a manner. Mr. Nettle enumerated our salmon streams, insisted on the importance of protecting fish and game in the spawning and breeding season, gave plans of fishways to be erected in mill sluices, furnished comparative tables of the yield of the most fruitful rivers of the Old World, protected and unprotected; dilated at length on fishculture, which Mr. Seth Green has so well carried on at his establishment at Mumford, in the State of New York. In short, the writings of Mr. Nettle were very acceptable to all friends of progress. Some obstructionists, it is true—by the men of the *nigogue**—in a word, the advocates of destruction of fish at every season, even that of spawning and reproduction, endeavored, but in vain, to trip him up. Nettle was destined to triumph and did.

Later, his name was enrolled by the side of that of Fortin, Couchon, Sicotte, Mitchell, the patrons and promoters of our actual fishery organization.

Aside from the excellent annual reports submitted to the Legislature by the Hon. P. Fortin during seventeen years, commander of the Canadienne, in the coast service, aside from Judge Routhier's little work "En Canot," aside from some well-written pages in which the elegant style of our friend A. M. Montpetit is revealed, Canadian literature contains no lengthy work in the French language upon the subject of our fisheries. It is to English writers of Canada and the United States that we owe a series of instructive and amusing works—elaborately illustrated—upon our salmon rivers, which we propose to pass rapidly in review.

In 1860, the celebrated English house, Longman, Green, Longman & Roberts, printed at London, *edition de luxe*, the volume "Salmon Fishing in Canada, by a resident, with illustrations," for Sir James Edward Alexander, Colonel of the 14th Regiment. This officer, known to the literary world by his explorations in America, in Africa and elsewhere, a great lover of angling, had during his sojourn in Canada made the acquaintance of the Rev. Dr. William Agar Adamson, D. C. L., Almoner or Chaplain of the Legislative Assembly. Sir Alexander took charge of the publication of the journal, or notes on his fishing, which had been prepared by Dr. Adamson. It is a work of nearly 400 pages, illustrated by numerous drawings, beautified by vignettes representing sporting adventures, sometimes burlesque; it comprises twenty-four chapters, descriptive of jolly fishing excursions after salmon and salmon trout, on the eddies, in the rapids of the Saguenay and its tributaries, on the Escoumains, in the Petite Romaine, on the Sault au Mouton, at Portneuf and Bersimi, on the Sheldrake, Godbout, Matane, Metis, Trinité, Pentecoste, Marguerite and Moisie rivers, not omitting a voyage to Labrador with the whalers of Gaspé in search of whales, the whole seasoned with scraps of poetry, with little poems improvised for the occasion, with anecdotes merry with keen repartees as with Attic salt. In this salmagundi of salmon we find a little of everything, even of music. Two annotated Canadian songs precede the appendix, Moore's Boat Song of 1804, translated into French and set to music, and the touching *complainte* of the regretted Gerin Lajoie:

"Un Canadien errant
Loin de ses foyers."

The appendix contains documents, reports, and the following pieces, several of them of great importance:

I. The memoir read by Dr. Adamson before the Canadian Institute of Toronto, in 1858, and on which, later, was founded in great measure our legislation for the protection and artificial propagation of salmon, "On the Decrease, Restoration and Preservation of Salmon in Canada."

II. "Observations on the Habits of the Salmon Family." By William Henry, Esq., M.D., Inspector-General of Hospitals.

III. "Fishing in New Brunswick and Canada." By Colonel Sir Alexander, F. R. G. S. and R. A. S., 14th Regiment.

IV. Extract of the "Report of Commissioner of Crown Lands, Canada, 1860."

V. "Salmon and Sea Trout Fisheries of Lower Canada."

VI. "Report of Crown Lands Department, Fisheries, 1858." Hon. P. M. Vankoughnet.

Dr. Adamson's book, after a quarter of a century, continues to delight amateurs, and sends us each season its quota of tourists.

In the spring of 1863 I gave to the public, under the title "Les Pêcheries du Canada," the summary of certain studies, the work of my leisure hours during the long winter evenings. The treatise was divided into two parts. In the first of these I described the results obtained in the Old World by the method of fishculture already known in the Province of Goldstein since 1858, but of which Gehin and Remy, the fishermen of the Vosges, became, without knowing it, the most illustrious apostles in France, and which a learned member of the Institute who is at the same time professor in the College of France, Mr. Coste, had accepted by the French and several other

*The *nigogue* is the Indian name of the spear used to kill salmon by torchlight.

governments since 1855, in a treatise* translated into almost all languages. This new method of propagating, restoring and protecting the fish in ponds and rivers was followed by several sketches of trout lakes and of salmon rivers, which I described in detail to the amateur anglers of Canada and the United States, inviting them to share our riches.

The second part presented an historical review of our deep-water fisheries, and suggested a number of amendments and changes in the organization of our coast service, and in the legislation affecting the Canadian fisheries. Such as bounties, fishways for the salmon, compulsory inspection of the herring and fish oil, the fitting out of gunboats to protect our coast against the encroachments of our neighbors, when ever the provisions of the treaty of 1818 should come up, etc.

I am happy to have seen several of my suggestions incorporated in our statutes, and the cruisers at the moment at which I write are the order of the day. My modest work procured for me the encouragement of the Prime Minister of the day, Hon. Mr. Sicotte, later known from the legislation which he procured to be enacted as "the Father of Fisheries." The Hon. Mr. Cauchon, then at the zenith of his fame, dedicated to me an extremely eulogistic article in the *Journal de Quebec*. But let us pass on.

In 1862, a member of the New York Bar, Robert B. Roosevelt, son of Judge Roosevelt and author, among other works, of "Game Birds of the North," published at New York, under the *nom de plume* of "Barnwell," a useful treatise of 324 pages, under the title "Game Fish of the North." Mr. Roosevelt, while describing in detail his favorite amusement, has made serious researches as to the different species of sea and river fish which he considers game fish. He discusses their specific characteristics, their habits, classification, the time of spawning and the methods of taking them, the material for and the manner of preparing the artificial fly; the whole accompanied by agreeable reminiscences of his fishing in the New England States, in New Brunswick and in the Province of Quebec. His book is a useful and charming *vade mecum* for the anglers for trout and salmon. Mr. Roosevelt is a civilized man on his vacation, sighing for the solitude of the thickets of our lakes and of our salmon reaches. Happy Mr. Roosevelt!

*Instructions Pratiques sur la Pisciculture. Seconde edition. Paris: Librairie de Victor Masson, 1856.

[TO BE CONTINUED.]

THE MENHADEN QUESTION.

Editor Forest and Stream:

In your issue of Aug. 19 a correspondent says it is a fact that bluefish are largely dependent on menhaden for food, which is not true. Last year and this large quantities of small herrings made their appearance on our coast (a sample of which in alcohol we send to the office of FOREST AND STREAM by express to-day), which has been the food of bluefish last season and this. The fact is that there is not a single fish known to our markets that depends on menhaden for food. At present there are menhaden in Narragansett Bay, Long Island Sound, from Montauk to Fire Island and from Barnegat to the Delaware, and there is not a single food fish feeding on either school, and to prove our assertion we challenge your correspondent to put one or more experts on our steamers for one week or ten at our expense for board, and test the truth of our assertion by actual observation.

Last month the steamer George W. Humphrey caught 10,000lbs. of bluefish just in sight of Squam, N. J., which they sold for 12½c. per pound. If they had been rendered at factory they would have been worth less than one-half of one cent per pound, showing the absurdity of the statement that menhaden steamers use food fish to render into oil and guano. Not a menhaden was found in the stomach of a single bluefish, but they were gorged with herrings (like sample sent you) and small butterfish. When they set their seine it was for bluefish and not menhaden, and it took fourteen men two days to repair seine.

Bluefish are plenty on our coast, and if our bluefishermen would only change their mode of fishing to meet the changed appetite of the bluefish, our markets would be filled with that fish within one week, at a reasonable price.

Our eel fishermen in this vicinity have found that even eels won't eat fresh menhaden and won't enter pots unless they are baited with the small herrings (like sample), which seems to be the prevailing food on our coast at present, for eels, bluefish and squiteague.

What we claim is if there was any food fish feeding on menhaden that the menhaden fishermen in taking large quantities of said fish would find them mixed with the menhaden, which is not the fact, and we can prove it to the satisfaction of our sharpest-eyed adversary, providing he will take the trouble to learn the actual facts of the case by observation.

Less than five years ago large quantities of small menhaden about the size of the herrings (which we have sent you) were in Buzzard's and Narragansett bays, and in Long Island Sound, and with and feeding on them were quantities of bluefish and squiteague, and from several daily observations it was found the fish had over ten fresh menhaden in their stomachs, from which calculations were made, showing more menhaden were being devoured daily than the combined catch of all the menhaden fishermen for fifty years.

A few years since the government of the United States appointed a Fishery Commission to investigate the fishery question, and as a result they published during 1884 a book entitled "The Fisheries and Fishery Industries of the United States." On page 574 of said book is an estimate of the amount of menhaden destroyed by predaceous animals each year, which is put at a million million of millions, which by comparison shows we destroy yearly one menhaden where predaccous animals destroy over fifteen hundred millions.

It is a significant fact that disinterested scientific men like Baird, Buffon, Huxley and Goode, all give their testimony one way after investigating this subject.

DANIEL T. CHURCH.

TIVERTON, R. I., Aug. 21.

A SHOCKING CREATURE—The electric eel now on exhibition at Blackford's in Fulton Market.

BIRCH LODGE, Rangeley Lakes, is for sale. See advt.

THE MIRAMICHI.—Fredericton, N. B. Mr. A. H. Wood, of Boston, who has recently returned from his fishing grounds on the Miramichi, writes to Mr. Rainsford of this city: "The trouble with the Miramichi fishing is at the mouth of the river. If all netting could be stopped above tide-water, the salmon would become more plentiful, and the Miramichi would rank among the first salmon rivers in the world, and sportsmen from all quarters would flock its banks, and leave many thousands of dollars with the inhabitants. Even to allow nets say three days in the week to be set would be a great improvement on the present wholesale slaughter and destruction of what ought otherwise to be a source of revenue to the province. I now talk in general and for all the rivers, yet I think the Southwest Miramichi is the most poorly protected and worse poached of them all. Why just think of it; the State of Maine with her splendid game and fishery laws realized last year from sportsmen and tourists over five millions of dollars, while you, with equal or better facilities, get comparatively nothing. Not only that, but in the near future your people will require to do what the United States Government has already been compelled to do, viz., to spend hundreds of thousands of dollars to restock rivers which once teemed with salmon, but become entirely barren from the same cause that is gradually, but surely, overtaking yours. Every year seems to produce more salmon fly-fishers and less salmon. Therefore I say a little careful legislation in time will draw many dollars to your province, besides saving many in the future, and should you be able to do anything toward bringing about a change for the better every sportsman will help you."

THE OTSEGO WHITEFISH.—Utica, N. Y.—*Editor Forest and Stream:* While trolling for pickerel on Otsego Lake recently in company with a friend we noticed a large dead fish floating on the surface of the water. We took it into the boat, and upon examination found it to be a large Otsego bass (so-called) which had been choked while trying to swallow a minnow. A portion of the little fish still protruded from the mouth of the bass, and the latter had evidently been dead but a few hours. We estimated the weight of the bass to be 3lbs. The Otsego bass, which is said to be indigenous to this lake, resembles the whitefish, but is much finer flavored, and is considered superior even to the black bass. Its mouth is exceedingly small, and, owing to this fact, it rarely takes a bait. I have never before known of an instance of its preying on smaller fish. I am unable to say whether or not the fish referred to is rightly termed a bass, but am inclined to think it belongs to another family. Can you give me any light on the subject?—PORTSA. [The so-called "Otsego bass" is a soft-finned fish, and, therefore, is not a true bass or perch. It is a local variety of the genus *Coregonus*, and by some authors it is separated from the whitefish of the Great Lakes (*C. clupeiformis*) by the title *C. clupeiformis*, var. *otsego;* but in the late "Synopsis of the Fishes of North America," Prof. Jordan classes it as the common whitefish.]

BULLHEADS ON TROLLING SPOONS.—Mansfield Valley, Pa., Aug. 17.—Your correspondent, Cocker, in last week's issue, says he never heard of a bullhead taking a trolling spoon. I have taken a number of them while trolling for pickerel, and have seen many more taken by others in the same way. On Stink Pond, in Luzerne county, Pa., it was a frequent occurrence, that little lake being full of them, and their manner of taking the spoon was not unlike that of the pike, though not so vicious. They will do it occasionally, especially when the spoon is trolling deep. I do not forget the first one I caught on a spoon hook. I was trolling quite deep and felt a heavy tug. Supposing I had fastened to a good-sized pickerel, I was careful to keep a taut line, but it came out too easy for a pickerel, and as I dropped it into the boat I was not only surprised but actually startled, for I did not immediately recognize the "varmint." It was 14in. long, and considered a large one for the place.—BO.

WETTING A LINE IN SWITZERLAND.—Vienna, Aug. 9. —*Editor Forest and Stream:* On Thursday, July 29, I took eight pretty trout at Maunebach, on the Unter See, Switzerland. This is the outlet of the Rhine as it leaves Lake Constance. On the hill above my fishing ground is the chateau of Arensberg, once the home of Queen Hortense, the mother of Napoleon III. It is a lovely spot and is now the property of Eugenie. I took my fish with a fly and my little 5oz. rod, which, by the way, was a source of great astonishment to my boatman, a professional felchen fisherman. He had never seen such light tackle in those "diggins." The Boden See (Lake Constance) produces a good table fish called felchen, which very much resemble our lake herring, but are minus all game qualities. My eight quarter-pounders were the first taken there with a fly in ever so long.—KIT CLARKE.

BLACK BASS IN MAINE.—The Augusta (Me.) *Journal* says that "fishermen in many parts of the State are forming petitions in regard to ending the close season on black bass and white perch at May 20. Every wielder of the rod and line is strongly in favor of the movement." This is all right if Maine anglers wish to catch all the bass now in their waters; but if they want fishing in years to come, let the bass rest until June 1 to 15, for they spawn in May in New York and many may delay this necessary duty in Maine until the middle of June. Give them a chance to furnish bass fishing after the older fish are fried and there will be sport in years to come.

AN ALLEGED NEW CARP.

Editor Forest and Stream:

A recent article in some New York paper, I think it was the *Times*, calls attention to the omission by the U. S. Fish Commission to procure, for propagation in the United States, a variety of carp which the writer calls the Brittany carp, and which, in his opinion, is very much superior to the leather, the mirror, or the scale carp, as introduced into this country a few years ago by the Commission.

Somewhat astonished at this oversight on the part of the Commission, which I supposed had exercised a proper judgment in its selection of carp for America, I have caused some inquiry to be made in regard to this fish, and am advised by a competent authority that there is what is known as the brehaigne carp, or carpeau, in the Rhone and in the Saone; as also carpe de Lyon, or carpeau de Lyon. It is called in Germany the Laimer, Gelte, Roller, etc. The fish, although highly prized, does not constitute a species, representing simply a sexual condition, occurring either incidentally or brought about artificially by castration or spaying, an act said to be as easy of accomplishment in the fish as in the chicken or other domestic animal.

In order to settle definitely the question in regard to this variety of carp, an inquiry was addressed to Mr. Raveret Wattel, the well-known secretary of the Société d'Acclimatation, of Paris, an association which takes special note of everything connected with the domestication, in France, of native animals and foreign plants. From his letter, which is herewith printed, it will be seen that the Société is entirely ignorant of such a species or even variety:

SOCIÉTÉ NATIONALE D'ACCLIMATATION DE FRANCE.—Paris, July 8, 1886.—Dear Sir: I have duly received your letter of 20th May, and it is with great pleasure that our Society would send to Mr. Blackford a lot of Bretaigne carp, but we do not know this variety of carp; and the various fishculturists that we have consulted (as well as at the Museum d'Histoire Naturelle) have not been able to tell us what it may be. There is the reason of the delay of the present letter. So it would be necessary that you have the kindness to forward to us some information about the real habitat of this carp, and especially the indication of the papers introducing this variety. Perhaps this information will furnish to us the possibility to know what is the Bretaigne carp and where we can find it. Yours respectfully—RAVERET WATTEL, Secretary.

This letter caused a surmise that the carping critic who had claimed that the Fish Commission was remiss in overlooking a very excellent and famous fish of Europe might not know as much as he pretended, and I sent the newspaper slip to Washington, where it was referred to Dr. Rudolph Hessel, Superintendent of the National carp ponds, who has had a wide experience in carp culture in Europe. He replies:

WASHINGTON, D. C., July 28, '86.—Dear Sir: The writer of a recent newspaper article which mentioned a French carp by the name of brehaigne or brihaigne, as being a new variety, is in error, as no carp of this name exists either in France or in the adjacent countries. It is possible that he means the so-called brehaigne carp or carpeau, which are occasionally found in the Rhone and Saone rivers, from whence they are taken to the fish markets of Lyons and Paris. This fish is also called carpe de Lyon and carpeau de Lyon, and if it is this fish which the writer urges the U. S. Fish Commission to introduce, he is greatly in error, because the fish will not breed, being sexless.

The flesh of this fish is highly esteemed by connoisseurs in France, as the fish improves after the manner of the capon or poularde. This carpeau, or brehaigne carp, is sometimes found in other rivers, as the Rhine, Weser, Elbe, etc., in Germany; in the Danube and tributaries in Austria, and in the Po in Italy, where the people are aware of its culinary value as well as they are in France. The fishermen call it Laimer, Gelte, Roller, etc., in Germany. The Italian, Hungarian or Sclavonian name I have forgotten. They are occasionally found in ponds, but their occurrence there is rare.

I cannot see what benefit it would be to introduce this carpeau which this enthusiastic writer speaks of, in this country, as it will never spawn, and no young fish could by any possibility be bred from this stock. The writer of that famous article, whoever he may be, would have done much better to have informed himself about this fish of which he may have heard in France, before trying to instruct others regarding it; he might just as well suggest to our poultry men to introduce live poulardes and capons from France for the purpose of hatching young ones from them.

The history of this sexless carp is quite an old one. Aristotle in his "De Animalibus Historiæ," Lib. X., Lib IV., Cap. IX., makes mention of it, calling them *Επιτραγιοι*. Later European works on Ichthyology pay no attention to this freak of nature, and we only find them classed as species in the last half of the last century, ("Duhovusel, Traite Generale de Pêche," Vol. II., Sec. 3). Vallot in his "Ichthyologie Française," 1837, was the last French scientist who made mention of these abnormal specimens as species.

Some years ago I took a little interest in these undeveloped specimens and visited the Rhone and Saone River and the tributaries, to investigate this matter, but think I have given you enough at present and will therefore stop, unless you think the subject of further interest. Respectfully yours, RUDOLPH HESSEL.

Having obtained this evidence I have let the matter drop and cannot see that any valuable species of carp in Europe has been overlooked by Prof. Baird, his assistants in this country or his fishcultural friends on the other side.

FRED MATHER.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. R.—See our issue of July 8.

M. T., Boston, Mass.—Please tell me where I can find books that will give me some idea about the catamaran? Ans. We know of nothing treating of the subject.

J. H. M.—You will find some shooting in the locality named, but we cannot refer you to any quiet farm house there. Go to the village hotel and from there look around for yourself.

J. B. E., Niantic, Conn.—What are the prospects for hiring out a 25ft. sloop yacht for fishing, pleasure parties, etc., in Florida during the winter? Am thinking of going there if the prospects are good. Ans. In winter many parties go on cruises in Florida, and we should judge that a good boat would be in demand. Many Florida ports are already well supplied, but we have had frequent inquiries for suitable craft on the Gulf coast.

M. L. L., Newmarket, N. H.—The book "Woods and Lakes of Maine," by Mr. L. L. Hubbard, contains an account of a trip from Moosehead Lake to New Brunswick, in a birch bark canoe, giving the hunting, fishing and camping experiences of the author, a friend and two Indian guides. The book aims to give "a true and circumstantial delineation of the camper's life in the Maine forests, especially as seen by one who goes into them with an Indian guide." It is illustrated.

D., Augusta, Ga.—In your edition of July 15 you publish a letter from "R.," of this place, and your answer has been held up by him to govern an entirely different question. I was the one designated as A, and went to the score and said "ready" and "pull," and did fire one barrel, not at the broken bird but at the one from trap No. 2, which was the good bird; then turned to the right and saw the other bird in small pieces and claimed two more birds under the rules. While we were talking Mr. R. came up and said "He shot at the broken bird." I told him I did not, and was sustained by at least a dozen members of our club, including the president and captain. I did not see the broken bird until I had shot at the good one. Had I a right to 2 more birds or not? All I wish is to know the rules positive and govern myself by them. Ans. The fundamental principle in all the various rules is that when a shooter fires at a bird in good faith he must accept the result of that shot. The birds were sprung simultaneously and A accepted them both by firing at the first one. There is no question as to his missing that one; and to allow the chance of another bird in its place is manifestly unfair to the other shooters. The rules all assume that the protest precedes the shot, when the whole matter is within the control of the shooter.

THE U. S. CARTRIDGE CO., of Lowell, Mass., have patented a powder for cal. .22 bullet breech cap that contains no glass, makes little noise and light smoke. This overcomes the objection made by owners of fine .22 rifles to using BB, as heretofore made, as the glass fulminating powder destroyed the rifling. They use a lubricant in place of glass, thus preventing fouling and not injuring the rifle.—*Adv.*

FIXTURES.

DOG SHOWS.

Aug. 24 to 27.—First Annual Dog Show of the Latonia Agricultural Association, Covington, Ky. Geo. H. Hill, Manager, P. O. Box 76, Cincinnati, O. Entries close Aug. 14.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Fred Hoey, Secretary, Box 2017 New York. Entries close Aug. 21.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville. Entries close Sept. 1.

Sept. 14 to 16.—Bench Show of Attleboro Farmers' and Mechanics' Association. A. H. Wakeman, Secretary. P. O. Box 1483, Providence, R. I.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley, N. J. P. Vredenburg, Secretary, 14 Murray street, New York. Entries close Sept. 1.

Sept. 27 to Oct. 2.—Bench Show of Indiana State Fair Association. J. M. Freeman, Secretary, Bicknell, Ind.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel. H. W. Wilson, Secretary, St. John, N. B.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4006.**

SAN FRANCISCO BENCH SHOW.

THE bench show given by the California Bench Show and Field Trials Club was held at San Francisco July 27-31. The number of dogs represented was not large, and the competition was therefore not spirited. The judging was done by Mr. John Davidson. The special report for which we had arranged has not come to hand. Below is a list of the awards:

AWARDS.

MASTIFFS.—*Dogs:* 1st, S. R. Prentiss's Yub; 2d, J. M. Donahue's Dick. *Bitches:* 1st, W. L. B. Mills's Lady.

ULMER DOGGE OR GERMAN MASTIFFS.—1st, A. B. Spreckles's Diana; 2d, C. A. Hug's Gracie. Very high com., H. W. Wieland's Romeo.

ST. BERNARDS.—*Dogs:* 1st, A. W. Manning's Ben; 2d, F. Katz's Hector. Very high com., G. Knief's Tiger.

NEWFOUNDLANDS.—*Dogs:* 1st, J. J. Jamison's Don; 2d, E. W. Linsley's Rover. *Bitches:* 1st, W. Cawley's Flora.

GREYHOUNDS.—*Dogs:* 1st, C. J. Murphy's Tullamore. *Bitches:* 1st, G. Bird's Lady Bird; 2d, C. Mooney's Kittie Clover. PUPPIES—*Dogs:* 1st, F. S. French's Vite.

FOXHOUNDS.—*Dogs:* 1st, A. L. Thompson's Jim; 2d, J. Chicou's Tayo. *Bitches:* C. Ross's Kate. High com., F. Laboste's Fannie.

BEAGLES.—*Dogs:* 1st, G. W. Bassford's Bannerman, Jr.; 2d, H. W. M. Sandbach's Wassic. *Bitches:* 1st, H. W. M. Sandbach's Bessie.

POINTERS.—LARGE—*Dogs:* 1st, J. M. Barney's Tom Pinch; 2d, C. A. Haight's Dick. Very high com. reserve, R. T. Vandevort's Don. Very high com., G. W. Bassford's Victor II. High com., E. S. Greble's Faust and J. H. Hardy's Bruce II. Com., W. Payne's Ranger and H. A. Bassford's Butte Bow. *Bitches:* 1st, W. Schrieber's Lassie; 2d, R. T. Vandevort's Drab. Very high com., H. Wessenden's Judy.—SMALL—*Dogs:* 1st, E. W. Brigg's Climax; 2d, W. J. Fox's Matchless. Very high com., S. Allen's Dude. *Bitches:* 1st, P. J. Powers's Beauty.—PUPPIES—*Dogs:* 1st, H. Kahn's Ben Cotton; 2d, A. B. Truman's Rush T. *Bitches:* H. R. Brown's Donna Sensation; 2d, T. J. Pinder's Romp P. Very high com., R. M. Wyman's Blossom.

ENGLISH SETTERS.—*Dogs:* 1st, T. J. Watson's Hamlet; 2d, C. Kaeding's Shot. Very high com. reserve, G. A. Watson's Belmont. Very high com., Dr. Gilroy's Rock, W. Hederman's Sport and G. Muller's Carlo. High com., D. E. Goodman's Klinker, D. J. W. Lyngreen's Shot and S. Allen's Fritz. Com., T. Hicks' Dash, A. L. Piper's Dick, E. H. Palmer's Colonel, E. H. Farmer's Mark and E. C. Hisgen's King. *Bitches:* 1st, D. Gilroy's Daisy; 2d, C. Kaeding's Fannie. Very high com. reserve, D. Gilroy's Di Vernon. Very high com., P. G. Anzar's Ola, E. H. Farmer's Queen and Mrs. T. J. Pinder's Queen. High com., D. E. Goodman's Nora C. and J. B. Barber's Topsy. Com., J. M. Donohue's Pet and J. Kerrigan's Wild Flower.—PUPPIES—*Dogs:* 1st, E. Leavesly's Marc Antony; 2d, H. C. Morey's Dons. *Bitches:* 1st, C. H. Hatch's Countess Mollie; 2d, D. Gilroy's Lulu Montez.

BLACK AND TAN SETTERS.—*Dogs:* 1st, J. H. Ryan's Sport; 2d, J. Rosenzweig's Sam. Very high com. reserve, C. H. Shaw's Carpe Diem. High com., H. C. Davis's Duke. *Bitches:* 1st, J. M. Donahue's Maud; 2d, G. Mahr's Queen.—PUPPIES—*Dogs:* H. Dubrow's Johnny. *Bitches:* 1st, E. H. Wakeman's Hazel Kirke.

IRISH SETTERS.—*Dogs:* 1st, A. B. Truman's Mike T.; 2d, J. C. Scott's Pat O'More. Very high com. reserve, J. Scott's Jerry. Very high com., C. Kaeding's Duke. High com., E. Kennedy's Jerry. *Bitches:* 1st, A. B. Truman's Lady Elcho; 2d, J. C. Scott's Lena. Very high com. reserve, H. Blendell's Nellie.—PUPPIES—*Dogs:* 1st, E. T. Dooley's Tom.

RETRIEVERS.—*Dogs:* 1st, C. H. Jouett's Smut.

IRISH WATER SPANIELS.—*Dogs:* 1st, T. J. Pinder's Jerry P.; 2d, A. B. Elford's Conn. Very high com. reserve, W. S. Kittle's Brian Boru. *Bitches:* 1st, A. B. Elford's Irish Girl; 2d, W. S. Kittle's Broona. Very high com., T. J. Pinder's Nora P. Com., C. A. Lalande's Fanny.

FIELD SPANIELS.—*Dogs:* 1st, W. G. O'Hara's Snipe. *Bitches:* 1st, M. Vogel's You Know.

COCKER SPANIELS.—*Dogs:* 1st, F. McPherson's Sport; 2d, L. Loupe's Sport. Very high com. reserve, E. St. Léger's Jeff. Very high com., G. H. Thompson's Romp. *Bitches:* 1st, Mrs. E. Leavesley's Julie; 2d, P. G. Anzar's Bonita. Very high com. reserve, Mrs. E. Leavesley's Cute. Very high com., Mrs. E. Leavesley's Bonita. High com., L. Loupe's Daisy.

BULL-TERRIERS.—*Dogs:* 1st, C. H. Jouett's Spring; 2d, F. Rose's Paddy. *Bitches:* 1st, J. F. McNamara's Jennie; 2d, C. H. Jouett's Bess. Very high com., F. Rose's Nellie. *Puppies:* 1st, J. Martenet's Belle; 2d, D. F. Crowley's Judy. Very high com. reserve, J. Crowley's Gubby.

FOX-TERRIERS.—*Dogs:* 1st, J. W. Wese's Schneider; 2d, P. E. Wendoza's Fido. *Bitches:* 1st, J. H. McGovern's Susie. *Puppies:* 1st and 2d, J. B. Martin's Lotta and Betty.

BLACK AND TAN TERRIERS.—1st, J. I. Sparrow's Beauty; 2d, Mrs. A. B. Truman's Guess.

YORKSHIRE TERRIERS.—1st, F. W. Sierp's Mash; 2d, Miss L. Sierp's Silver. Very high com., R. D. Callan's Beauty.

BULLDOGS.—1st, C. Cox's Sport.

COLLIES.—*Dogs:* No entries. *Bitches:* 1st, D. Patton's Fair Maid of Perth.

DALMATIANS.—1st, H. B. Slocum's Ruby; 2d, V. Nelson's Spot.

PUGS.—1st, Baron Von Schroeder's Chips; 2d, Mrs. T. Fair's Pud. Very high com, reserve, Miss M. Winon's Jack. Very high com., S. J. Smith's Snoozer.—PUPPIES—1st and 2d, Mrs. R. P. Ashe's Cri Cri and Ko Ko.

SPITZ.—1st, G. D. Shearer's Spitzy.

ITALIAN GREYHOUNDS.—1st, Miss B. Schleicher's Gipsey.

MISCELLANEOUS.—1st, Mrs. J. Robinson's Rob; 2d, J. Zammitt's Wolf. Very high com. reserve, G. A. Schultz's Dandy.

SPECIAL PRIZES.

Best mastiff, S. R. Prentiss's Yub; St. Bernard, A. W. Manning's Ben; Newfoundland, J. J. Jamison's Don; greyhound, C. J. Murphy's Tullamore; foxhound, C. Ross's Kate; beagle, G. W. Bassford's Bannerman, Jr.; large pointer, J. M. Barney's Tom Pinch; small, E. W. Briggs's Climax; puppy, H. R. Brown's Donna Sensation; English setter, DeVaull & Moore's Regent (not for competition in regular class); English setter dog, T. J. Watson's Hamlet; bitch, D. Gilroy's Daisy; puppy, C. H. Hatch's Countess Mollie; black and tan setter, J. M. Donahue's Maud; kennel Irish setters (3), A. B. Truman; Irish setter, A. B. Truman's Mike T.; Irish water spaniel, A. B. Elford's Irish Girl; second best, T. J. Pinder's Jerry P.; field spaniel dog, W. G. O'Hara's Snipe; bitch, M. Vogel's You Know; very high com. cocker spaniel, Mrs. E. Leavesley's Cute; high com., L. Loupe's Daisy; bull-terrier, J. F. McNamara's Jennie; very high com. puppy, J. Crowley's Gubby; fox-terrier, J. H. Wise's Schneider; puppy, J. B. Martin's Lotta; Yorkshire terrier, F. W. Sierp's Mash; kennel King Charles spaniels, Mrs. J. Robinson; pug, Baron von Schroeder's Chip; Italian greyhound, Miss B. Schleicher's Fawn; best dog in the show, J. M. Barney's Tom Pinch; best kennel, E. Leavesley; best setter bitch with litter, C. Kaeding's Fannie; best dog owned by a lady, Mrs. J. Sparrow's Beauty; second best, Mrs. E. Leavesley's Julie; best dog owned by non-resident, E. H. Palmer's Colonel; bitch, C. H. Hatch's Countess Mollie; best dog from Gilroy, D. Gilroy's Daisy; second best, Mrs. E. Leavesley's Julie; smallest dog, Mrs. A. B. Truman's Guess. In the miscellaneous class prizes were awarded to Geo. A. Schultz's Dandy, J. W. Orndorff's Gypsy, P. McCann's Oscar, Mrs. J. Robinson's Mouse and Minnie, and J. Daly's Sport.

MASTIFF CHARACTER.

(Continued from page 72).

YET you must not put Vera down for a dull, soft, apathetic disposition, that ever rejoiced over new friends. She was as active as a terrier and for a couple of hundred yards as swift as a greyhound. She never missed following me in my rides and drives and rarely failed to keep pace.

As to her readiness for action you will judge for yourself. I was on my way home from a long walk, and was passing the "Half Moon Hotel," Dulwich, when seven or eight young fellows, who were apparently on a holiday trip, rushed out of the bar, romping and pushing each other. They were just sufficiently exhilarated to feel inclined to poke a bit of fun at a passer-by. It fell to my lot, and the first move was to push me against the fencing of the adjacent hotel tea gardens, Vera noticed it and came up. My assailant was about to push his jest a little further, when two heavy paws stood on his chest, and with a brilliant set of snow-white dentals, framed in by the tight-wrinkled fold of a drawn muzzle, a pair of flaming eyes with accompaniment of a tune not unlike the distant rolling of a brewing storm, my companion did more to check the rough game in the twinkling of an eye than half a brigade of Metropolitan Blues could have achieved in half an hour's eloquent persuasion to "move on." And yet she had never been trained to this; it was the upshot of nature. The mastiff's instinct leads it to protect and to guard, as it compels the collie to drive sheep, the terrier to catch rats, the Newfoundland to jump into the water to save life, and as the pointers and setters are thrown into their state of cataleptic immovability at the scent of game. Instances of this are recorded in that excellent work "The Dog," by "Idstone," when he says: "Their great quality—and what greater or so valuable in a dumb animal—of fidelity to their master is historical. Such was the defense of her dead master by a bitch of the old race at the battle of Agincourt (where she had fought with him and stuck to him after his death, and guarded him from being plundered and stripped by marauders); or of Sir Henry Lee at his seat, now belonging to the Earl of Lichfield; or of the nobleman of the Scotch borders from the attack of assassins at a suspicious Italian inn.

Let him be your friend, and treat him as such, and you may depend on his acting his part most honestly and most generously. Although I am attached to all my dogs, I always fix on one to be my special mate. A female I generally deem the more faithful, "it seems to run in the female persuasion," as Artemus Ward would put it. My favorite sleeps in my room, comes to my meals, is now and again admitted to my study, and invariably follows me in my walks. I have, without an exception, always taken my pet with me in my travels at home and abroad, and have had occasion to be thankful for it.

No dog equals the mastiff in cleanliness. One I took with me abroad last summer, and she was twelve hours on the boat, six hours in the train and two hours in a cloak room, without as much a leaving any unpleasant tidying up after her departure. I have never yet had occasion to call up my man to do my room in the middle of the night, because in some pressing need my room mate had failed to give me notice. They all and every one would put a foot on my bed, whine and go to the door, clearly indicating that they wished to "leave the room." I have an instance of a mastiff bitch pining away and ultimately dying because, being chained up after a life of comparative freedom, she could not retire from her bench when forced by nature.

A very striking, and to us a most important page of Vera's biography remains to be recorded. I say us, for on this occasion she proved the means of saving two lives. You must remember that fearful and almost unprecedented snow storm of 1881. Business matters had called me over to Belgium. It had snowed there for some days. I was staying at a friend's house in the country between Bruges and Ghent; we had plenty of sledging. On Jan. 16 we arranged to start on a sledging expedition to some friends at a distance, fixing dinner hour on the following, 18th, for our return home. We arrived at Deynze on the morning of the 18th and were to proceed homeward in the afternoon. As the frost was so intense and the wind so high with a thick unceasing fall of drifting snow, my friend's kindest of partners had considerately and thoughtfully despatched a covered wagonette to meet us. We took our seat in the trap and moved on. It was then about 4 o'clock P. M. At a small village called Vynckt about four miles from home and quite in sight of our village steeple, friends ran up and begged of us not to attempt crossing the stream and lowlands down the hollow, which separated us from our home. But we persevered in our obstinate resolve, and full of foolish bravado we proceeded on our way. It did not take long before we found out our mistake. A mile or so further the road began to hollow between two banks, and we stood blocked. The horse had no firm hold under him and the carriage had for several yards simply been dragged snow-ploughlike through the snow. We quietly jumped out, sent our man for help and rescue, dug horse and traps out of their imbedded position, landed them safely at a neighboring farm, and, leaving baggage behind with the coachman to look after it all, my friend, I and Vera set out to reach home on foot. We were perfectly acquainted with the ground, it was my friend's shooting preserve, and though most perilous to a stranger, we had no hesitation in undertaking the task. We left the road altogether and took to the crest of the fields. It, however, soon became patent that knowing a country in spring, summer and autumn is not exactly knowing it in a winter like this, when exceptionally covered in by some eighteen inches of snow. The fields looked as level as a sheet. It was utterly impossible to discover any trace of holes, drains or ditches anywhere. We knew that the land was crossed and recrossed by deep ditches about five to six feet wide, but we could discover no sign of them. We must come to them—a wonder we had not passed any yet. The frost had only set in since and with the snow, so that the ice could not be more than a quarter of an inch thick, and if we trod on it it must give way and swallow us. One chance was left open to us, viz.: retrace our steps. Now that we came to realize our position we stood to deliberate. Vera was a couple of yards ahead, making her way as best she could. Studying the ground we thought we might try an old bridge which could not be far off; but just as we set out, changing our direction, Vera stood still in front of us, a little sharp bark of uneasiness alarmed us; she would not advance, and yet we saw no obstacle. It struck my friend that we had better push our sticks down to feel. It was fortunate we did. Had we moved one single step more forward, we must have met certain death. We stood on the very brink of the descent, the border of the largest drain in the whole place. How we had got here we could not say, for to have reached it we must have crossed at least half a dozen minor ditches. We altered our course and Vera preceded, and providentially, for on two other occasions her instinct made her leap without any apparent reason, and thus pointed to us where the hidden peril awaited us. We did at last get on solid bottom, and though considerably late for dinner, famished, tired and exhausted, we did not forget to appreciate our life-saving guide, wondering how she could have detected and understood the danger, and publishing near and far how we owed our lives to that untrained and inexperienced brute. Here, then, we meet with a mastiff naturally and instinctively gifted with the traditional and legendary life-saving qualities of the St. Bernard dog. HENDRIK VAN DOORNE.

ENGLAND.

THE EASTERN FIELD TRIAL JUDGES.—Jersey City, N. J., Aug. 23.—*Editor Forest and Stream:* I notice that it is announced in the papers that the Eastern Field Trials Club have elected Messrs. Smith, Orth and Bergundthal for the judges. I am confident that no sportsman can offer any objection to either of these gentlemen. They are in every way competent for the position. Yet the election has and will be a great disappointment to all breeders and lovers of the pointer, as we all expected to see that grand little pointer Naso of Kippen at work in the trials. As this dog is owned by the Westminster Kennel Club, and as Mr. Smith is a member of that club, he, I know, would not consent to judge the working and merit of dogs that he is interested in. I do hope the Westminster Kennel Club will insist upon running Naso of Kippen and Bang Bang, and request the Eastern Field Trials Club to select another judge.—C. J. PESHALL.

AMERICAN KENNEL CLUB.—New York, Aug. 21, 1886.—*To the Members of the American Kennel Club:* You are hereby notified to attend a meeting of the A. K. C., to be held at the rooms of the Down Town Club, No. 50 Pine street, New York city, on Wednesday, September 15, at 2 o'clock P. M. As matters of importance will be brought before the delegates at this meeting, you are earnestly requested to send a representative. This meeting is called on the second day of the New Jersey Kennel Club's fall show at Waverly, N. J., and delegates attending that show will find it very convenient to New York, as it is but a short distance and trains via P. R. R. are frequent. By order of the President.—A. P. VREDENBURGH, Secretary A. K. C.

NEW JERSEY SHOW.—New York, Aug. 23.—*Editor Forest and Stream:* Mr. Chas. J. Peshall, President of the N. J. Kennel Club, offers the following special prizes at the Waverly show: $50 for the best pointer or setter in the show, and $50 for the best brace of pointers or setters in the show, each brace shown to be owned by one exhibitor.—A. P. VREDENBURGH, Secretary.

ATTLEBORO SHOW.—A bench show will be held in connection with the Attleboro Farmers' and Mechanics' Association fair, Sept. 14-16. The premiums are for most breeds $3 and $2, dog class and bitch class, and $2 and $1 puppy class. Samuel Scranton, of Providence, will judge. For entry blanks address A. H. Wakefield, P. O. Box 1483, Providence, R. I.

HORNELLSVILLE SHOW.—Hornellsville, N. Y.—The Hornellsville Dog Show will receive all prize winners for exhibition only, entrance and feed free. Puppies for exhibition or for sale may be exhibited in tent adjoining main tent. Entrance fee $1.

IRISH SETTER CLUB.—*Editor Forest and Stream:* A meeting of the Irish Setter Club is called for the first day of the Waverly show. The committee have finished their work and the rules and standard are in print.—MAX WENZEL (Hoboken, N. J.).

THE INDIANA STATE FAIR ASSOCIATION will give a bench show in connection with the fair this fall from Sept. 27 to Oct. 2 inclusive. Entries close Sept. 25.—J. M. FREEMAN, Supt. Dog Department, Bicknell, Indiana.

THE CLUMBER SPANIEL.—*Editor Forest and Stream:* In my article on the Clumber spaniel in Aug. 5th issue for "white and taurie" read "white and tawne," and for "jougle" read "jough."—CLUMBER.

A GOOD TIME COMING.—When the fifteen hundered big and little fairs annually held in this country shall have each its own big and little dog show.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

GARDNER, Mass., Aug. 18.—Members of the Heywood Guards, Company F, Second Regiment, M. V. M., were out to Hackmatack Range to-day for their regular practice. The distance was 200yds., Creedmoor count, with the following results:

S T Chamberlain	20	21—41	E B Taylor 17 19—36
C N Edgell	20	20—40	F White 15 18—33
C A Hinds	20	20—40	B F Thrasher 15 16—31
S W Bishop	19	21—40	C H Hartshorn 14 14—28
H J Black	18	21—39	C H Saurn 11 15—26

SPORTING RIFLES AT CREEDMOOR.—*Editor Forest and Stream:* I see that your last issue contains a growl by "A Crank," of Brattleboro, Vt., directed against the N. R. A. for not permitting sporting rifles to be cleaned between shots in the off-hand short-range matches in the fall meeting. In order to correct the very natural mistake that he has made, and that others may have made also, I will state that, as is customary, a supplementary programme of the fall meeting will be issued in a few days. This programme will contain a clause specifically permitting sporting rifles to be cleaned between shots in matches Nos. 6, 10 and 12.—JAMES DUANE.

THE NATIONAL RIFLE ASSOCIATION OF AMERICA.—Temple Court, Cor. Beekman and Nassau streets. New York, Aug. 23.—*Editor Forest and Stream:* I notice a communication in your last issue complaining of the terms of matches Nos. 6 and 10 in the fall meeting programme of this Association. It was not the intention of the committee that drafted the programme to disallow cleaning between shots of the sporting rifle, but by an oversight the words "cleaning allowed for non-military rifles" were omitted. This will be rectified in the supplementary programme, which will be issued in a few days.—JOHN S. SHEPHERD, Sec'y N. R. A.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP-SHOOTING REFORM.

Editor Forest and Stream:

It seems to me that some rule might be adopted whereby any amateur shooter contesting at the trap with a known professional should lose his amateur standing. Perhaps the professionals ought to be handicapped, but I think the class of men who attend tournaments for the money to be made there through their skill, as "Reformer" says, "cease to be sportsmen and become sporting men," and ought to be relegated to a class by themselves. They have enjoyed a prolonged picnic at the expense of good-natured amateurs who have been played for all they are worth and who should now (to use a vulgarism) "take a tumble." MILLARD.

CHEYENNE, Wyoming.

Editor Forest and Stream:

I have noticed in your valuable paper some articles in regard to "a much-needed reform in trap-shooting." I would like to see a tournament gotten up and bar every good shot in the country from shooting, and see how many shooters would attend, and have it so fixed that every man who was in attendance would win a "large prize." It would look a little flat. It is the "good shots" that keep up the interest in trap-shooting. This talk about "professional shots" taking all the money is all bosh. They do not do it. When we have a tournament here, we want all to come and all to shoot, and if one shoots better than another, let him have the prize and welcome. These shooters that are always kicking about "professionals" do but very little work and put very little money into tournaments. If I have got to win prizes by "poor shooting," trap-shooting would be but little pleasure to me. J. G. SMITH.

ALGONA, Iowa.

Editor Forest and Stream:

It is proposed to hold a tournament of the National Gun Association on the grounds of the Boston Gun Club at Wellington, Mass., during June, 1887, and in order to make this tournament a success (with regard to the number of entries) the entrance fees to the sweepstakes will be much lower than heretofore. The question of barring certain men and handicapping others has been suggested, and I have endeavored to ascertain the opinions of some of our shooters on the subject. At the recent two days tournament in Worcester, Mass., there were between thirty and forty entries in the sweepstakes and other events each day (notwithstanding "Nor'east's" statement that our tournaments "cannot now command but a meagre attendance"). I read the letters which I had received on the subject of barring to those present, and the prevailing (I may almost say unanimous) opinion was to bar no one and to handicap no one, that the men from it was proposed to bar were the very ones they wanted to come. They would be the attraction, these great shots from the west and south, men who can score 100 blue rocks straight and 99 out of 100 clay-pigeons, double and single rises; these are the men who will draw a crowd. Possibly they may down New England, but New England wants to give them a chance.

It may be said that the men who have expressed themselves in this manner are but a small number of the trap-shooters of New England. If so, I say they were men of all grades of skill; some could shoot well, some could not. They are the men who attend our New England tournaments and stay and shoot through the programme, win or lose. They can be counted on, and, furthermore, they constitute the backbone of the New England Trap-Shooters' Association.

As to handicapping, I think it is well known that a man may shoot well for a time and suddenly fall off for no apparent cause. I give the following instances: Some three years ago W. S. Perry was considered the best trap-shot in New England, making high scores at all tournaments he attended; but during the last two years I do not believe he has won fifty cents on every dollar he has put in as entrance to sweepstakes. When Perry let go, O. R. Dickey came to the front, and for nearly a year none of us could beat him. When Dickey got tired, I had my turn, and for six months I did the best shooting on record in New England. Some four or five months ago I lost my grip entirely, and now Eager, Davis and Stanton are at the top. Now, to handicap a man on his record of last year does not seem just. Should a tournament be held where the handicap rule is to be enforced, let the shooters be handicapped according to their record for the three months preceding the tournament.

As far as I am concerned, I do not care whether I am handicapped or not shooting as I am doing at present. At the recent tournament at Worcester, Mass., I shot for two days at the regular distance and did not win anything. Had I stood back a few yards I could not have done worse.

Now as to trapping artificial targets. Do away with the screens behind the traps; if not entirely, modify them; make them as they are on the grounds of the Exeter, N. H., Club (where better trapping is done than on any ground in New England). It does not look well to see a wooden screen anywhere from four to six feet high staring the shooter in the face, with the trapper poking his head around the end to see who is at the score. He may wish to favor some one, it is in his power to do so. At Exeter a trench is dug long enough to allow of five traps being used at the regular distance apart. A plank of about a foot in width is fastened along the edge of the trench toward the shooter. The dirt and gravel from the trench is banked against this plank, making a screen of

a foot or so in height. The traps are placed on the opposite edge of the trench securely fastened. The trappers have plenty of room to move about and the objectionable board fence is done away with. Should the ground be in a locality where the trench is liable to fill with water, the plan adopted at the Springfield, Ohio, tournament would perhaps answer better. At this tournament the traps were fastened to the ground in plain sight of all. A hole was dug behind each trap large enough to hold a dry goods box. Each box contained a trapper who could refill his trap without exposing anything but his hands. In warm weather the trench would be preferable, as it is easier for the trappers.

Some men may think it easier to shoot from unscreened traps. If so try it from five traps properly handled and pulled from behind the shooter. The rules of the National Gun Association prohibit all screens, and all clubs should do likewise. C. M. STARK.

DUNBARTON, N. H., Aug. 21.

SPRINGFIELD GUN CLUB.—New York, Aug. 17.—Aug. 12 was appointed for the gun club's contest for a very handsome silver cup, presented to the club by Dr. Bernhard Aug. Mylius, their honorary member, before his departure for Berlin. Owing, however, to the absence of many of the members in Europe and elsewhere the match was postponed. Those who took part in shooting off the pigeons (especially selected for the cup contest) and result of same is as follows; use of two barrels to count ½:

James T Davis	1	1	1	1	0	1	1	1	1	1—9
John A Dinkel	0	0	1	0	1	0	1	1	1	1—6
M Englert	1	1	1	0	½	1	1	1	0	0—6½
A Steminger	0	0	1	1	½	1	0	½	1	0—5
A Schwint	1	1	0	1	0	1	0	½	1	1—6½
H Englert	0	0	1	0	1	0	0	1	1	0—4

The meeting took place on the grounds of Mr. Samuel Burbank, New Dorp, Staten Island. The club takes its name from Springfield, L. I., where it was first organized some nine years ago. It is made up of some of our best-known citizens, among whom may be mentioned Judge Clancy, ex-Judge John A Dinkel; President, Mr. James T. Davis, Major Geo. Ayre, and Messrs. H. C. Miner, A. H. Davis, M. Englert, John Wood, A. Streminger, Mr. Schwint, Geo. Beniers and others. The silver cup above mentioned to be shot for is beautiful in workmanship and design, being manufactured specially from instructions given br Dr. Bernhard A. Mylius, and conditions under which it is to be shot for are: To own the cup a member must win it five times, and be handicapped lyd. at each successive shoot until he has done so. Distance 25yds, 5 traps, 1 barrel to count 1 bird, 2 barrels, ½ a bird. The contest is expected to be a lively one, as most of the crack shots of the club have signified their intention of being present on the occasion.

NEWTOWN, N. Y., Aug. 10.—The Northside Gun Club, of Long Island shot a match at 7 live pigeons, 5 ground traps, handicap rise, 80yds. boundary, shot under club rules, club badge and money prizes:

Dr. Franz	1110000—3	Manning	1111111—7
Terrett	1110101—5	Barlow	0111100—4
Duryea	1101101—5	Biglow	0111111—6
Lyon	1111111—7	Gran	1110003—3
Siems	1111110—6		

Ties on 7 for first: Lyon 101—2, Manning 100—1.

GREENVILLE, S. C., Aug. 16.—*Editor Forest and Stream:* We have organized here the Greenville Gun Club with the following officers: W. J. Crosswell, President; W. E. Beattie, First Vice-President; Jas. H. Maxwell, Second Vice-President; F. F. Capers, Secretary and Treasurer. We have one glass ball trap and two Ligowsky clay-pigeon traps and are practicing hard to put a winning team in a tournament to be held here shortly—MOSE.

WORCESTER, Mass, Aug. 20.—The Worcester Sportsmen's Club have had a very successful two-days' tournament. First Day.—6 clay-pigeons, 12 entries—W. S. Perry, J. Bodish and L. R. Hudson; P. T. Smith; C. Doane and B. Franklin. 6 bats, 12 entries—M. D. Gilman and Smith; Bowdish; Doane. Knoxville blackbird badge contest. The badge was tied some time ago by M. D. Gilman, H. W. Webber, Geo. Gray, W. L. Davis, R. Schaefer and C. M. Stark, each having won it once. When the shoot was called up, Gray and Schaefer were not present, and no one being there to represent them the contest was ordered to go on. It was for 6 singles and 3 pairs, a possible of 15. The result was as follows:

Davis	111110110—7	01 11 11—5—12	
Gilman	101111101—7	10 11 10—4—11	
Stark	011100001—5	withdrew.	
Webber	110000010—5	withdrew.	

The badge being won by Davis is now his personal property, this being the second time he has won it.

Six clay-pigeons, 20 entries—Davis and C. Sampson; Kirkwood and Tidsbury; Dickey; Doane and Rugg. 6 bats, 2 angles, 23 entries—Whittaker and Tidsbury; Stanton and Webber; Eager; Bowdish. 7 bats, straightaway, 24 entries—Eager and Swift; Stark, Holden and Bowdish; Davis and Sampson; Rugg, Wardwell and Doane. 6 bats, 13 entries—Holden, Gilman and Bowdish, Davis and Dickey; Stanton; Franklin and Wardwell. 7 clay-pigeons, 22 entries—Eager; Stanton, Gilman and Doane; Sampson; Stark. 4 pair bats, 20 entries—Smith; Perry; Webber; Kirkwood and Jordan. 6 bats, 20 entries—Perry; Stanton; Jordan and Wardwell.

Match for the Climax diamond badge, held by C. M. Stark, 10 clay-pigeons and 10 bats:

	Bats.	Clay Pigeons.
H W Eager	1111111111—10	1111110111—9—19

M D Gilman	0101111110111111—12	E S Knowles	0010001110101110—12

In shoot off, Hudson broke 2 birds and won. The sweepstakes were won by Smith; Davis, Whittaker, Holden, Gilman; Rugg.

Match for the State individual glass ball badge, held by H. W. Eager, and was for 7 bats and 8 clay-pigeons. There were 24 contestants, and it was won by J. Stanton, of Boston, who made a clean score. Tinker, of Providence, also made a clean score, but was only eligible for the sweepstakes. The score was as follows:

J Stanton	1111111111111—15	H W Webber	0011111011111—12
E W Tinker	1111111111111—15	B Franklin	1011111100111—12

G J Rugg	1101111101111011—12	E Snow	0110111001000011—8
H Rice	0110111110111101—12	Wadwell	0100111001110111—8
C B Holden	1010111111011111—12	L G White	0111010000011110—8
H W Eager	1111110111101101—12		

The sweepstakes were won by Tinker, Stanton; Rugg, Gilman; Webber, Snow, Holden; Wadwell, Swift. Also by Stanton, Dickey; Smith; Perry; Swift.

In the procession race, $5 entrance, there were 7 contestants, and the shoot was 10 singles and 5 pairs. It resulted as follows:

H W Webber	1101111111— 9	11 10 11 11 11—9—18	
W L Davis	1111111111—10	11 10 00 11 11—7—17	
W S Perry	1101111111— 9	10 10 10 11 11—7—16	
H W Eager	1111010010— 6	11 11 11 10 10—8—14	
E W Tinker	1011110001— 7	10 11 10 10 11—7—14	
O A Dickey	0110111110— 7	10 10 10 00 10—4—11	
C M Stark	0110111110— 6	00 00 10 10 10—3— 9	

The regular sweepstakes follow in their order: 6 clay-pigeons, 22 entries—Webber and Eager; Stanton; Davis, Sawyer and Waters; H. Jourdan. 6 bats, 21 entries—Stanton and Tinker; Eager; Welsh, Doane and Graham. Two-men teams, 7 clay-pigeons per man—Smith and Bowdish; Howe and Jourdan; Webber and Davis; Gilman and Holden; Tinker and Rugg. 6 bats, 27 entries—Tinker, Stanton and Davis; Stark, Smith and Jourdan; Snow, Perry. 6 clay-pigeons—Smith, Bowdish and Davis; Stanton and Walters; Stark, Tinker and Holden. 3 pair doubles, 18 entries—Stark; Eager and Stanton, Perry and Wadwell; Franklin. 10 bats, 24 entries—Howe; Tinker, Cummings, Stanton; Gilman, Whittaker, Jourdan; Rugg and Bowdish. 6 bats, 28 entries—Webber, Stanton, Dickey; Eager, Wadwell; Davis, Snow, Doane; Weymouth, Perry. 7 straightaway blue rocks, 27 entries—Stark, Whittaker, Bowdish; Webber, Cummings; Gilman, Dickey; Doane. 6 blue rocks, 31 entries—Stanton, Webber and Dickey; Cummings, Swan, Weymouth; Baker, Jourdan, Gilman, Swift, Powers. 6 clay-pigeons, 34 entries—Webber, Swan, Stanton, Hudson; Eager, Doane, Cummings; Bowdish; Weymouth. 7 straightaway clay-pigeons, 34 entries—Stanton, Webber; Waters; Stark, Eager; Hudson, Howe. 6 blue rocks, 29 entries—Stanton, Howe; Dickey; Doane; Stark, Bowdish; Powers, Whittaker. 6 clay-pigeons, 28 entries—Swan, Doane, Eager; Dickey, Gilman; Bowdish; Perry. 6 blue rocks, 21 entries—Davis, Eager; Stark; Rugg, Wilkinson; Jourdan. 6 clay-pigeons, 7 entries—Smith; Dickey.

HARTFORD, Conn., Aug. 20.—Colt Hammerless Gun Club tournament. First sweepstake, 5 clay-pigeons, 18yds., 3 angles.

E A Folsom	11101—4	Toucy	11000—2
L B Cary	10111—4	Penn	01010—2
Whitlock	11011—4	Woodford	01010—2
Hubbard	11101—4	Tyler	00100—1
Hanson	01110—3	Miner	00010—1
Sterry	11100—3	Merrick	00010—1
Treat	11001—3	Miller	00100—1
McCook	01011—3	Ives	01000—1
Bristol	00111—3	Pixley	10000—1
Bailey	10110—3	N Folsom	00001—1
Earl	10110—3	Ames	01000—1
Johnson	00011—2	Alcott	00001—1
Higby	10100—2	Holmes	00001—1
Melrose	00110—2	Bushnell	00010—1
Goodyear	01010—2		

Folsom won ties for first, Hanson second, Johnson and Higby divided third, Miller fourth.

Match at 7 clays, 3 angles:

Miner	0111111—6	Woodford	0101101—4
Whitlock	1111110—6	N Folsom	1100110—4
Widman	0111101—5	Miller	1101000—3
Ives	1110010—5	L Cary	0001101—3
Hanson	1101101—5	Sterry	1001010—3
Bristol	0011101—4	Treat	0010101—3
Melrose	0010111—4	Goodyear	1010100—3

Ties for first divided, second divided, shoot off for third won by Melrose, fourth divided.

Match at 6 clays, 3 angles: Twelve men tied for first on 4 each; Miner won tie breaking 3 straight. Eleven men tied for second. Shoot off at 21yds.:

Miller	000111	111 101 111—3	N Folsom...100110 111 101 111—3

Miller and Folsom divided. Ten tied for third on 2 each. Final shoot off.

Ives and Bristol divided. Five tied on 1 for fourth, and L. Cary, Robeson and Georgia divided. Match at 3 pair double clays, 15yds. rise:

Ives	011000 111—3	Bristol	100001 111—3
L Cary	11 11 11—6	M Cook	10 11 01—4
Toucy	11 11 11—6	Miller	10 10 11—4
Sterry	11 01 11—5	Goodyear	11 11 00—4
Whitlock	11 10 11—5	Ives	11 00 10—3
N Folsom	01 11 11—5	Woodford	11 00 10—3
Robeson	01 11 11—5	Bristol	00 10 11—3
E A Folsom	11 11 01—5		

Ties on 6 divided, second won by Whitlock, Miller third, fourth divided.

Match at 6 straightaway clays, 41 entries—Alcott first with 6; 8 tied on 5, Johnson winning shoot-off; 10 on 4, Carey, Hawley and Folsom divided; 10 on 3, won by Sterry. Match at 5 straightaway clays, 31 entries—8 tied on 5, shoot-off divided by Miller and Folsom; 7 on 4, Huntoon and Bliss divided; 8 on 3, won by L. Carey; fourth divided by J. Carey and Toucy. Miss and out, 25 entries—Bristol and E. A. Folsom divided on 4. Match at 7 clays, 28 entries—Melrose took first with 7, Miller and Bristol divided second, Toucy won third on shoot-off. Match at 3 pair doubles, 18 entries—E. A. and N. Folsom divided first, Sterry second, Cary and Cook divided third, Melrose fourth. Match at 5 singles, 3 angles, 18yds., 21 entries—Harrison, Miller and Melrose divided first, Bristol, N. and E. A. Folsom second, Merrick third, Collins fourth.

Team shoot, 7 clays, 18yds.:

Hubbard	0010001 } — 6	J Melrose	1110111 } —11

	1001100011000010010001001—10

HUDSON, Wis.—The Hudson, Wis., Rod and Gun Club will give a three days' tournament, commencing Sept. 21; live birds and Peoria blackbirds; a good time guaranteed.—J. P. BALSON, Sec'y.

WINCHENDON, Mass., August 18.—The members of the Winchendon Gun Club went out to their range to-day to break clay-pigeons. Out of a possible 10 the totals were as follows: H. Lawrence 3, J. Sutherland, Jr., 8, A. Lawrence 7, P. S. Davis 6, A. H. Felch 6, W. L. Knight 5, L. Earle 5, E. M. Whitney 4, and C. Houghton 3.

GARDNER, Mass., August 19.—Some of the members of the recently organized Gardner Sportsmen's Association were out to Hackmatack Range to-day breaking clay-pigeons. Out of a possible 10 the totals were as follows: J. N. Dodge, Alexander Priest, each 8; C. S. Knight, S. Henry, G. Brown, each 6; L. Webber, J. A. Stiles, each 5.

NEWARK, N. J., Aug. 21.—Second match of the series of three, shot on the grounds of the East Orange Gun Club between the Nimrod Club, of Newark, and the East Orange Club, resulted in a tie. The third match will take place some time in September.

SIOUX CITY a.—Of the shooting tournament which has been held here during the last three days, under the auspices of the Sioux City Gun Club, the principal feature was a special match between C. W. Budd, of Des Moines, champion wing shot of America, and G. E. Hughes, of Fonda, at 75 live pigeons, 30yds. rise, use of both barrels. Budd missed his 4, 7, 15, 31, 44, 53, 66. Hughes missed his 1, 10, 11, 15, 19, 23, 25, 44, 46, 49, 60, 66, 70, 72, giving Budd the race by a score of 68 to 61. The birds were all selected and were good strong flyers and not one got out of bounds but was hard hit.—C. L. E. G.

A SOFT, VELVET TEXTURE is imparted to the skin by the use of Glenn's Sulphur Soap. For skin diseases it should be used freely. Never take a bath without it. It is also especially useful as a means of bleaching and purifying woolens, cotton, etc. Hill's Hair and Whisker Dye, black and brown, 50 cents.—*Adv.*

Canoeing.

THE MEET OF 1886.

CAMP GRINDSTONE, St. Lawrence River.—Again for the seventh time the members of the American Canoe Association have gathered together under the red and white flag, and for the third time their white tents shine on the sunny hillside, the white sails glisten on the blue waters, the fires burn brightly on the hilltop, and the silence that reigns unbroken for fifty weeks each year departs before the shrill signal calls of canoes and steamers, the uproarious shanty song and the merry glees.

This is the last year, for a time at least, that the meet will be held at Grindstone Island, but one thing is certain, search as far as they may, through the length and breadth of this great country, the canoeists will find no more beautiful spot, and very few that can equal it. To appreciate and enjoy it is one thing, to convey an idea of its beauty to one who has not seen it is a task for only a master painter in words to attempt. The bluest of deep blue skies, waters clear and pure and of the same color, in which are dropped green islets of all shapes and sizes, while far away the wooded spires merge into a softer mistier green, broken here or there by a pretty cottage, a solitary spire, or an odd little lighthouse, none so new as to destroy the sense of seclusion and isolation from the busy world, which makes the time spent here so restful in spite of the bustle and fun that goes on constantly. The day begins with a glorious sunrise over the eastern islands, and ends at night with a blaze of fire to be seen from the hilltop for half an hour, then a clear, starry sky, while all the time the air is of the purest and clearest. The dry, sandy soil, the shady hillside, and the many beautiful points for a cruise, make the site a desirable one in every way for a camp, while the courses are probably as good as will be found. A meet on salt water is now proposed as a novelty and may be held next year, but no such location as this can be found for it.

From New York, Pittsburgh, Boston or Cincinnati to Grindstone is a long journey, and happy is the man whose simple wants compel him to carry besides his canoe only a modest kit and a small tent. What with many charges and recalcitrant baggage men, his cares are great, but they are nothing to those of a man who in an unlucky hour promises to convey a party to Squaw Point. Tents, stoves, boxes, trunks, handbags, wraps, parasols and such impedimenta seem to go astray with a persistency which is nearly maddening, and if he ever does reach home safely it is with the resolve to go in the future as a true canoeist—with as little as possible besides his canoe. The railroad and steamship lines are now fairly reasonable in their rates, as far as the leading officials are concerned, and porters and baggage masters can generally be "squared," but there are a number of petty officials whose importance is generally in inverse ratio to the positions which they occupy and who can give a great deal of trouble. With them tears, threats, entreaties avail nothing, they possess a little brief authority and they exercise it while the time is too short to appeal to the distant head office.

It must be admitted that there are two sides to the transportation question, and a little forethought on the part of the canoeist may save him and others much trouble. He travels generally by a trunk line, and often on Saturdays, or when the travel to or from the city is greatest, and when an avalanche of trunks pours down on the poor baggage smasher. Stand for half an hour near any large depot and see the trunks come, or watch the quick transfers that must be made at the many junctions, and the necessity for compact, easily handled baggage will at once be apparent. The canoe, of course, is the most important item. Size counts in traveling, and a boat over 15×30 will give its owner an amount of trouble and will sustain so much damage that he will sigh for a smaller and lighter craft. To go quickly and easily into an ordinary baggage car already half filled with trunks, the boat should be as light as possible, and its chances, unless it goes through by freight, are much better if well wrapped up, if rated or boxed. Here is a plan that may be worth trying where a man carries his canoe every year. A cover may be made of stout canvas, an old sail, for instance, enveloping the canoe entirely, the opening, down the center on top, being fitted with grommets or hooks along both edges for a lacing line. Under the canoe there should be a double thickness of canvas, packed under the bilges with straw or excelsior, making a bed for the canoe. As she will often be slid out of cars and over sharp edges a strip of ⅜in. oak may be placed outside and the canvas nailed to it, protecting the covering from wear. At bow and stern grommets should be worked, and one or two rope handles should be placed on each side along the well. When once properly made this cover will last for many years. The canoe is placed in it, the rudder, hatches and light stuff goes into the well, the sails and spars will usually lie along the deck and the top is laced in. It can be lifted by the handles by one or two men, the varnish cannot be injured and no ordinary knocks or bumps will do any damage. Ballast bags should be packed in a strong box as small as possible, with rope handles, the top screwing down. The centerboards may be packed in another box made to fit. Tent poles and cooking traps will make a bundle to be sewn up in burlaps, and a trunk completes the outfit. The latter articles can be checked as personal baggage, while the canoe is in a shape to be easily handled in making transfers or to pack in an ordinary express car. It is no unusual thing to make six or eight trasfers on the way to camp, some at night, and the lighter the load the easier.

The pilgrims to Grindstone are landed by rail at Clayton or Gananoque, and then take the small steamer for Grindstone. The arrival of the little boat is the signal for a grand turnout of the camp, all hands hurry to the dock and the new comers are hauled ashore before the lines are fast by an eager group who are waiting to greet them. Boxes and baggage are shouldered and the procession moves off to escort the new comers to a camp site. All hands turn to, the tent is pitched, a flag pole planted and colors run up, and then the "shore togs" are shifted and stowed away for two weeks, the canoeist emerging from his tent a perfect symphony of color.

The camp this year promises to be the largest yet, and certainly will be the most important meet of the A. C. A. The club representation is hardly as large as in 1884, some of the large clubs sending but few members, but a large number of clubs are represented, and from more from distant points, so that the meet is less local and more of a national affair. Florida, Wyoming Territory and parts of the West are represented, while canoeists are here from Boston, Lynn and Lowell, Mass., Buffalo, N. Y., Cincinnati and Springfield, Ohio, and many other new places.

On the extreme west of the camp is the Toronto C. C. Then along the shore are the tents of the Oswego, Brooklyn, Newburgh, Shattemuc, Peterboro, Crescent, Vesper of Lowell, and Rome, N. Y. clubs. Rev. Dr. Neidé is also here, with two canoeists from Boston near him. On the ridge are the large tents of the St. Lawrence C. C., while the officers occupy their usual quarters on the hill. The store and Mr. Rushton's repair tent are still on the point. Near them is a photographic tent and dark room. Along the east side are camped Buffalo, Lynn, Springfield, Hartford, Mohicans, New York, with Messrs. Powell and Stewart, Kingston Royal Military College, Rochester, Philadelphia, Pittsburgh, Pequot, Knickerbocker, Brockville and Ottawa. Many of the tents this year are large and comfortable, with board floors, cots and chairs. A very neat one is the Clyde tent brought by Mr. Powell, of oiled muslin, with windows and ventilators. Many clubs bring a cook and an old stove, to be left when camp is over, and have a regular mess. Some canoeists cook for themselves, while a number depend on Delaney's.

There have never been so many boats in proportion to canoeists, never so many good canoes, and never such a variety of odd craft of all kinds. One of the latter is a scow with paddlewheels worked by two horses, which carries passengers among the islands. Another new boat is a steam launch built by Mr. Rushton, 24ft. over all and 8⅔in. beam. She has a Shipman engine fed by a tank in the bow. She steams about all day and seems to make very good speed. This boat is the first of the kind Mr. Rushton has built, but if successful, he proposes to make a specialty of them. There are a number of sneakboxes present of various models, including the Barnegat cruiser. Mr. Clapham has this year visited the meet for the first time and brought his new cruiser, the Red Jacket. She is a double-ended boat, 15ft. long and 47in. beam, the bottom being slightly convex, about 4in. curve in the floor timbers, the sides are

vertical or nearly so. The boat is decked with a cockpit and carries a single leg of mutton sail with a batten. In the peak is a red tomahawk. The most peculiar feature is the new weather grip, lately described in the FOREST AND STREAM. The grip is made of yellow pine 1¾in. thick, about 5ft. long and 18in. deep, weighted to float vertically. Two rods of ¼in. brass hold the grip parallel to the boat with the aid of two guy ropes, the whole affair rising and falling as the boat heels. It holds the boat to windward, and is equally effective whether to windward or leeward. Mr. Clapham spends all his time on board, sailing all day and sleeping at anchor under a tent at night. In her brushes with the canoes she has thus far done very well. Anchored off the camp is the sloop yacht Gracie, of Kingston, her owner, Mr. Carruthers, being with the canoeists. A Mackinaw boat and some rowing and sailing craft, with the inevitable St. Lawrence skiffs, make up the fleet.

Of course the chief interest this year is in the visiting boats, the Pearl and Nautilus. The former arrived on Monday in a huge packing case and has been doing some excellent sailing ever since. She is very full and bulky compared with the American canoes and far less graceful. The workmanship is very fine and the fittings very ingenious, but the build is entirely too light so that the canoe is entirely unfitted for cruising and yet not strong enough for much racing. The keel is of pine with stem and stern of oak. The bottom is of oak veneer 1-12in. only in thickness, the topsides of Spanish cedar and the deck, ⅛in. thick with fittings, is of the same material. The ribs are of oak and the inner ribbands of Spanish cedar, the boat being of ribband carvel build. Though a new boat and hardly used, the bottom has swelled badly and the light deck has cracked. The board of gun metal weights 56lbs., and is very neatly made and ingeniously fitted with a powerful hoisting gear. On each side of the well are fitted deck flaps closed with a rubber spring. A deck tiller is fitted for use if needed. The rudder is of wood, extending some distance below the keel, and on top it is fitted with a brass wheel about 6in. diameter, around which the lines run. The finish of the boat is very fine, a gold stripe setting off the cedar, while on each bow is a circular piece of mother of pearl 3in. diameter set in brass rings, and above is the R. C. C. symbol in gold. The rig is of two balance lugs.

The Nautilus is built in a similar manner by the same builder, R. J. Turk, of Kingston-on-Thomas, but is much stronger apparently. The bottom is of Spanish cedar, ⅛in. thick, and the upper streak, which is 6in. wide at middle and proportionately greater at the ends, is of mahogany stained very dark. The deck is of Spanish cedar ¼in. thick, that part about the well being of ⅛in. mahogany. The middle body of the boat is full with a long floor, and the lines of the bow and stern are all convex. The chief peculiarity is the draft, which is greatest at a point 5ft. from the bow, the keel raking up to a draft of 1½in. aft. The frame is of oak sawn to shape, with Spanish cedar battens. The stem and stern are of mahogany and keel of white pine. All the fittings display the greatest ingenuity and the rigging is far beyond any ever seen here for neatness. The well is circular aft and nearly square forward with an elm coaming. Two square mast tubes are fitted, not in the center, but on one side, so that the sails and spars are exactly in the center of the boat. The centerboard is similar to the Pearl's, but a neat strap of copper wire rope for the double block of the purchase must be noticed. Besides a wooden rudder there is a very strong drop rudder of brass, the yoke, of wood, being a half wheel with a brass chain, working in a score in it. Sister hooks join the chain to the rudder lines of copper wire rope. Below on the after end of the trunk is the footyoke, while a steering gear is added on deck. There is a single centerboard of 56lbs. weight, with a powerful lifting tackle. The trunk is of Spanish cedar. In the forward deck are two hatches, one on each side of the trunk, while a watertight bulkhead makes a collision compartment in the bow. In working forward the hatches are opened and the crew puts a foot in each, in which positions they can stand and work comfortably. The rig consists of two balance rigs with the well-known Nautilus reefing gear. The sails are of fine linen with double rows of stitches from head to foot instead of the usual bights. The spars are all of spruce worked from small poles instead of from large planks as is common here. The main sheet block works on a wire rope traveller which is made fast to a hook on each side of deck at after end of well. On each hook is a rubber ring so arranged as to hold the traveller in sailing but to allow it to pull away quickly in a capsize or other emergency. Both the English canoes have several features in common. The floor boards are replaced by neat gratings of hard wood, on each side of the grating a batten is so hinged as to turn up and make a ballast shelf. At the fore end of well a flat hatch is fitted for a row of cleats, and under it is a wooden tray for the halliards and reef lines. Under the side decks are canvas shelves held by rubber cords, for the same purpose. In the Pearl the keel inside is cut away entirely for two feet aft of the trunk, to make a ballast well. Over this place an inner skin of oak is laid and riveted to the outer skin. The Nautilus has her name very handsomely painted on a golden scroll on the bow.

Of the American boats Lassie, Venture and Vesper are already well known to canoeists. Another fast boat is the Pecowsic, built by Joyner for Mr. E. H. Barney, Springfield C. C. She is smooth built, after Joyner's method, with a sharp V floor, fine ends, rather full on deck. The board is a small plate of thin brass set well amidships and pivoted at the fore end. Since racing at New York Mr. Barney has discarded the fishtail rudder as impracticable, and is using a heavier brass rudder. The yoke is a solid semicircle of thin brass fitted very low, so that from its shape and position the mizzen sheet is not likely to catch. The rig consists of three sails, one stepped far forward, one just forward of the well, and one aft. In shape they are like the leg-of-mutton, but with three radiating battens like a fan, and from the lower batten to the boom the leech is vertical. Their greatest spread is 105ft. There are five sails of different sizes, so that sail may easily be reduced. The canoe is 15ft. 10in. by 28¾.

From Lowell, Mass., there comes a very handsome canoe of Spanish cedar, the Blanche, built by Stevens for Mr. Paul Butler, of the Vesper B. C. She has a dagger board and two boom and gaff sails. Mr. Butler has rigged a very ingenious deck seat, two boards as wide as the boat, the lower fixed to the coaming, the upper sliding in grooves on top of the lower and locked by a spring catch. The upper piece is slid far out to windward and locked there, making an outrigged seat on which the canoeist sits. By means of the spring catch it may be quickly shifted and locked in going about.

Mr. Whitlock brings his 15×28 canoe Wraith, in which he will race for the N. Y. C. C. cup next month. She was built by Rushton from Mr. John Hyslop's designs. The amateur builders are coming to the front this year, and one of the handsomest canoes present, both in model and workmanship, is the Curlew, built of Spanish cedar by Mr. Bellatty, of Lynn, Mass.

The camp fairly opened on Monday of last week, a very unpleasant day owing to heavy rain. Com. Rathbun was present, but was obliged to leave on Tuesday morning. On Tuesday a number of new arrivals filled out the row of tents and made the camp more lively. Among them were Messrs. Powell and Stewart, of the Royal C. C., both of whom came in during the morning. With Mr. Powell were Messrs. Stephens and Burchard, N. Y. C. C. During the day Mr. J. O. Shiras, Secretary of the W. C. A. and a member of the A. C. A., arrived from Cincinnati. There was a light breeze at times and many canoes were out. In the evening the first camp-fire was lit in front of the K. M. C. camp. With songs, stories and pipes the evening was passed very pleasantly. Toward the end a tall figure came up out of the darkness, and for a moment was not recognized until introduced as Dr. Heighway, of Cincinnati. Since last at a meet he has grown taller and more like an athlete than ever. His arrival was the signal for a grand uproar that lasted until the fire died out.

On Wednesday morning thirty canoes started on a cruise down the river, returning late in the evening. The day was calm and paddling was in order, but in spite of some hard work the cruise was a pleasant one. In the evening a camp-fire was lighted on Capitol Hill. Mr. Powell was called upon and responded with a sea-song in true sailor lingo. As the meeting dispersed all rose and sang "God Save the Queen," out of compliment to the visitors.

On Thursday the canoes were out nearly all day in light breezes. The Pearl had several brushes with the other canoes, coming off very well generally. Great disappointment was felt at the non-arrival of the Nautilus, shipped by freight, and it was feared she would arrive too late for the races. Mr. Powell tried some American canoes during the day, sitting on deck. In the evening the Peterboro camp lit a camp-fire.

Friday and Saturday were the pleasantest days of the camp, as new men arrived and were eagerly greeted. Every boat brought some one and the little dock was crowded with noisy party to receive them. Com. Jones and Mr. Barney, of Hartford and Springfield, the Mohicans, with Oliver, Gibson, Fernow, Thomas and others; Vaux and Nadal, of New York; Weller for Peterboro, Andrews and the Rochester C. C., Keyser, of the K. C. C., and many others as well-known. On Saturday night Johnson and Dr. Douglas also arrived. On Friday the word arrived that the Nautilus would be in Clayton by 8:30 P. M., and Mr. Powell arranged to go over early in the morning and bring her back. In the morning all hands, including Squaw Point, met at the camp-fire of the Brooklyn C. C. Dr. Neidé, with Messrs. Kipp and Stephens, went away quietly in the tug to Clayton, waited for the train and unpacked the Nautilus, bringing her into camp as the crowd dispersed. When Mr. Powell arrived at his tent the canoe was in front with masts stepped and decorated with a string of Chinese lanterns, to his great surprise. Saturday evening was spent very quietly.

On Sunday morning service was held on the hill, Rev. Dr. Neidé officiating, assisted by Rev. C. H. Larom. As the congregation dispersed the little steamer appeared, and a rush to the wharf followed to greet Mr. Shedd and his white hat. The news of Mayflower's victory came by the same boat, and was hailed by all with great satisfaction.

The sloop Ethel, J. B. McMurrich, Oswego Y. C., is anchored off Squaw Point, and the Gracie, of Kingston, Laura and another, of Oswego, are off the main camp. On Saturday evening a meeting of the executive committee was held to consider informally the organization of branches, and at 2 P. M. on Sunday a meeting of the commanding officer of each club outside the Eastern States was held at headquarters, Vice-Com. Wilkin presiding. The action of the canoeists of the Eastern States was discussed, and on motion of ex-Com. Oliver it was resolved that the clubs outside of the Eastern States should apply for the Association for recognition as a second branch. The clubs were also requested to name one man each to act with three members at large as a nominating committee, to meet on Monday night and elect a vice-commodore, rear-commodore, and purser for the new branch. At 4 P. M. all the camp gathered at Squaw Point in response to an invitation to afternoon tea by the ladies. Forty canoes from the main camp were on the beach and a hundred visitors. Coffee, tea, sandwiches and cake were served, and the afternoon was spent very pleasantly.

Early on Monday Mr. Robert Tyson, of Toronto, and Mr. C. J. Bousfield, of Bay City, Mich., arrived at camp, besides some visitors to see the races. A round of the camp showed 90 tents, some of them large enough for half a dozen, and 125 canoes, besides a dozen yachts, boats and sneakboats. In Squaw Point are about 25 tents and 15 canoes.

The first race was started at 9:47, a paddling race for Class II. canoes, 1 mile, with 5 starters, as follows:

Regina	14.6×27	C. J. Bousfield	Bay City, Mich.	12 27
Irene	15 ×28	R. W. Baldwin	Ottawa C. C.	12 39
Venture	14.6×30	L. Q. Jones	Hartford C. C.	12 55
Siren	15 ×28	R. B. Burchard	New York	—
Lalage	14 ×26	T. S. Westcott	Philadelphia C. C.	—

As the boats started Mr. Burchard broke his paddle, but continued to the wharf, where he procured a new one and continued the race. He took first place and held it to the finish, though pushed by Irene.

The second race started at 10:10, Class IV., paddling, 1 mile, with 14 starters. The leaders were:

Nellie	15.6×30½	W. F. Kipp	St. Lawrence	11 56
Lena	15 ×30⅜	H. F. McKendrick	Galt	11 58
Olive	15.6×30⅜	F. M. Turner	Brockville	12 15
Mac	15 ×31	W. G. McKendrick	Toronto	—

The leaders were Nellie and Lena, and the finish was very close and exciting, Nellie finally winning by half a length.

The third race was for novices, sailing classes A and B, no limits of rig or ballast. Sixteen canoes started and thirteen sailed the course. The wind was N. E. moderate at the start, dropping shortly after. The course was the regular triangular one, 1½ miles. The leaders were:

Wanda	16 ×30	W. B. Lesslie	R. M. C.	30 15
Guenn	15 ×30	H. F. Sinclaire	Brooklyn	34 51
Vixen	14.8×30	C. F. Walters	Rochester	35 57
Edith Adele	14.6×31	W. N. Murray	Pittsburgh	—
Alouette	15 ×30	W. A. Leys	Toronto	—

Regina led at the first buoy, but was passed on the weather leg of the course. Wanda was very well sailed by a young canoeist and won easily.

The next race, Class I., paddling, brought out few entries, as there are very few who care to bring a special racing boat. Dr. Heighway had intended to enter, but his boat was not at the camp. Mr. Johnston paddled a light silk-decked canoe, the old Maggie. Dr. Douglas, of Lakefield, paddled a curious old Thames-built canoe, the Harmony, while Mr. Leys had an open Peterboro. The times and entries were:

Maggie	18×24	M. F. Johnston	Toronto	10 25
Harmony	20×24	Dr. C. M. Douglas	Lakefield	10 38
Wraith	20×21	W. A. Leys		—

Wraith soon dropped astern, while Harmony hung on closely to Maggie, but could not overtake her.

The last race of the morning was the Class III. paddling, 1 mile:

Rapid	16×28	M. F. Johnston	Toronto	10 44
Tsigana	16×28	E. Pitt	Brockville	10 50
Merle	16×28¼	G. B. Wilkinson	Brockville	10 59

There were 9 starters altogether. Tsigana led at the start, but was overtaken later by Rapid. The race was hotly contested on the home run, Pitt and Johnston fighting hard for first place but Johnston came in leader.

IANTHE C. C.—Newark, N. J., Aug. 24.—*Editor Forest and Stream:* Second annual regatta on the Passaic River: Single paddling race for canoes 24in. beam and over, C. V. Schuyler, W. R. Burling and H. D. Wilde entering; won by Schuyler; prize, a silver match box. Sailing race for all classes of canoes, Messrs. W. H. Hillin and Thorn, of Essex C. C., Mr. I. V. Dorland, of the Arlington C. C., and C. V. Schuyler, of the I. C. C., entering; won by Dorland, Hillin second; prize, a silk banner. Third race, any canoe, paddling, Cox, of the Essex C. C., W. R. Burling and H. S. Farmer, of the I. C. C., entering; won by Burling; prize, the Commodore's silver cup. Fourth race, hand paddling, C. V. Schuyler, W. R. Burling and H. D. Wilde; won by Schuyler; prize, a jointed fishing rod. Tandem race, Schuyler and Dorland, A. C. and R. G. Molloy, of the Arlington C. C., and W. R. Burling and W. E. Marvin, of the I. C. C.; won by Schuyler and Dorland; prize, two silver medals. Upset race, I. V. Dorland, of the Arlington C. C., Schuyler, Marvin, Burling and Farmer entered; won by H. S. Farmer; prize, a French briarwood pipe, in case.—C. V. SCHUYLER, Sec. I. C. C.

THE AURORA.—Among the interesting features of the canoe meet at Grindstone Island is the famous canoe Aurora, in which Dr. Neidé made his celebrated cruise from the Adirondacks to the Gulf of Mexico, which is fully detailed in his charming book, "The Cruise of the Aurora," published a year or two since by the Forest and Stream Publishing Company.

OVER ELEVEN MILLION DOLLARS has been paid to its policyholders by the Travelers, of Hartford, Conn., since its organization. Present payments are over a million a year.—*Adv.*

Yachting.

THE TRIAL OF THE SLOOPS.

FIRST MATCH, SATURDAY, AUG. 21.

It is fortunate that public opinion is elastic enough not to suffer a series of sudden rebounds upon itself. Like the clown with his "lightning changes" of costume, public opinion is ever ready to shift its clothes to suit the new occasion. The public is always in a hurry and likewise brim-full of sympathy, but correspondingly empty of sound logic and cool judgment. The over-hasty critics, who presume to pass an irrevocable fiat—and their name is legion—upon the outcome of a single race which they have not even conscientiously followed in its details, have been sorely taxed this year with the repeated collapse of their proclaimed wisdom and the constant swallowing of their own words. The first match of the series ordained for supplying precise conclusions as to the relative performance of the four big *quasi* sloops, afforded still one more chance for the critics to back stern first from their most recent position and quickly spring a new luff with "opinions," "faiths," and "conclusive proof" tearfully and wonderfully evolved to meet the exigencies of the fresh developments. Some great lights, it is true, tired out with their own sommersaulting leading to no particular goal, just give it up for a bad job, and seek balm for previous errors of judgement in the amusing confession: "Of course it will always be a matter of surprise that the Priscilla was beaten by the Atlantic, while the fact that the Puaitan was also vanquished by the New York yacht will ever remain a mystery in the annals of American yachting. Boats are like women, sometimes they will do just as you ask them, while at other times they will be as contrary as the deuce!"

Now in truth there was not an atom of mystery about Saturday's match at all, nor need the result, so astounding to superficial observers, be sustained by a base calumny upon the fair sex. The match wound up in strict accordance with the happenings of the day and it does not require special shrewdness to account for the order at the finish or the changes of fortune over the course.

Luckily there was breeze enough to enable tolerably fair competition over a course poorly adapted to the purpose.

Luckily the wind was from a quarter out of which it seldom blows, and some genuine work climbing a-weather became a feature of the race.

Luckily the fleet of accompanying vessels was not great and once outside the Hook the flyers had free play.

Unluckily the day appointed was "steamer day" with a long string of ocean liners screwing down the Ship channel in procession, their huge hulls cutting the wind into fragmentary installments and churning up the course into an uncongenial chop.

Unluckily a trifling accident to one famous vessel hailing from Boston gave second place to a less worthy craft, let alone the fact that Mr. Burgess's brilliant success of last year threw away her chances half a dozen times into the bargain during the day through the most wretched skippering ever witnessed in so important a contest.

Unluckily the most faultless skippering and superior pilotage of the unapproachable "Joe" Elsworth tooled the Atlantic into a poor second, thereby sugar-coating a failure with a thin veneer of partial success, at least in the eyes of the above-mentioned public in a hurry and only too ready to ground its judgment upon sympathy for the home boat.

With the exception of the reversal of true position between Atlantic and Puritan, the travail wound up as that very scarce article, the competent and unprejudiced critic, had always expected. To him there was no "mystery," no "woman's contrariness" in the splendid exhibition of Saturday last, an oxhibition, by the way, which, in its attendant circumstances of wind and water, there is little hope of equalling often over a course usually very poorly suited for equitable tests of merit.

Reviewing the first race as a whole, there is good cause for congratulation. The best boat won. The poorest of the quartet closed up the rear. Mayflower had long ago been condemned by the hasty because, a brand new and untried vessel, she suffered a preliminary eclipse or two. To the superficial would-be authorities it mattered nothing that Mayflower was too close a copy of the well-tried Puritan to be condemned out of hand after one or two more or less unconclusive attempts, undertaken intentionally with the object of experimenting upon her best trim. It was no concern to the would-be critic that Puritan had been designed by a gentleman of international experience, and that the Mayflower sprung from the same board with Puritan's lines as a safe beacon for a fresh but very trifling departure. Neither did the rash critic appreciate the value of extra length above and beyond the penalty of time allowance when sailing in a working breeze or with sheet lifted in any sort of wind. Furthermore, when Mayflower failed to look up within less than an eighth of a point as well as other yachts in perfect condition, the hasty critic declined to allow for bagging and unstretched canvas, but hurried to hurl all manner of anathemas at the brand new clipper.

The Mayflower, being in the hands of competent gentlemen, suffered not from the superabundance of left-handed advice vouchsafed, but was put through her preliminary paces with such keen perception that one alteration to her ballast and rig was enough to bring her up to the designer's intentions. Then like a comet, she burst upon the horizon and set the rate to her big sisters, exceedingly to the disgust of the stultified critics, who, while vehemently proclaiming that they "knew it all," were discovered to know nothing. Mayflower, in her perfected trim, came out in true colors for the Goolet cup in the recent Newport events. This coveted prize she lifted with ease. Then she led the class down wind during the runs of the N. Y. Y. C., settling any doubts as to her speed with sheets lifted, and topped her boom for New York waters. In the meantime she here recorded the weather ahead which was just the opportunity wanted to put her to test in the matter of turning. This record will show how successful she was and the grand qualities she can boast in weather work and footing. Of course it remains an open question whether she can duplicate her big margin of win in a deadeye smoker and short twisting. There are those who think Puritan would give her a hard rub under such conditions. These are, however, exceptional, and it may be some time ere that point can be definitely settled. For mild to moderate weather, as an "all round the course" boat, Mayflower stands at the head of the big quartette. That much has been ascertained beyond controversy.

She has certainly her laurels by no piece of luck, and certainly not through smart handling, for, after a leisurely start, she was nipped too high under Owl's Head, head sheets often lifting. She lost the strength of the wind, picked up no lucky puffs like Atlantic and Priscilla through the Narrows, and was rapidly dropped by the rest in consequence. When she got down abreast the West Bank, the wind lightened, the leaders carrying the best of it along with them down to the Spit. Here Mayflower suffered again. A trifle only but still something. On the long lay down the Bank she was steered too fine for best footing, and like Puritan, made a great mistake in keeping far too high for the spindle buoy. Both she and Puritan were badly put out of their succession of swells from tugs and steamers rushing to the fore regardless of the wash they gave the two Boston ships struggling to pull up. Now that they "know how it is themselves," it is to be hoped that the Bostonians will use their influence to abolish the New York Y. C. course as one leg in the coming international races. The fleet of steamboats going out with the yachts Saturday was not one-tenth of what it will number when Galatea is announced to start. Naturally the fleet seeks to keep up with the leader, in whom "the interest is centered." The channel down the West Bank being narrow, the steamboats must pass close aboard to the raining yachts, and it is inevitable that the craft getting away last will suffer immensely from the chopped state in which the water is left, the steamboat swells transmitting themselves in full force a great way. Either all steamers should be notified, and that in a most effectual way, to keep astern of both competitors as far as the Hook, or the inside course should be given up if such concession cannot be relied upon. The general public, including steamboat captains, do not understand fully the great detriment to a yacht's travel when she has to jump or even strike a chop from which her competitor is exempt. As races are now often decided by seconds, the slightest disturbance with the starters should be avoided. This plea has just as much force for the home yachts as for the cutter friends abroad. Once outside of Sandy Hook there is room enough for the spectators to spread and the evil is not so potent, though by no means wholly absent.

When Mayflower got round the Spit she was still a bad fourth, but buckling down to business, with no jibtopsail to worry the skipper at the wheel, she pulled up her lost water, and by dint of footing and pointing, worked out ahead of the crowd strictly on her intrinsic merits. She left Atlantic hand over fist in the long roll at sea and soaked away to weather in a style that demonstrated how mediocre Atlantic really is when the talent of Joe Elsworth is no longer of special avail.

After rounding the Lightship, Mayflower was exceedingly dilatory with her spinnaker and light muslin, twelve minutes elapsing before she got kites on for the run in the beach, and running home on the wrong jibe into the bargain. She had to shift over, and wasted a precious long time in the maneuver. She handed spinnaker long before reaching the Hook and drove home all the rest of the way with nothing but balloon jibtopsail, whereas Atlantic and Puritan drew spinnakers to advantage down to the Spit on the same voyage. Mayflower won with any amount to spare, true enough, but she might have got the judges' whistle ten minutes sooner had the crew been as smart as the decks they trod. It is not intended to hold all hands responsible for the apparent negligence, because the crew have really not had the time to shake down to their berths and pull together. When they do, Lieut. Henn's conservative and just remark that our crews do not seem as smart as the English racing gangs may no longer apply.

As to Puritan, though obliged to succumb to the greater length of Mayflower, she could and should have won for herself a fair second, with Atlantic well in her wake, had she not been badly butchered from first to last. As it was, she only missed her appropriate berth by twenty seconds. The boat was in excellent form and could have accomplished wonders had she been given half a chance. We do not know who was at the wheel nor who had charge of the deck during the race. It is not very material, for the public is concerned about the boat and the causes which led to the apparent collapse of such a reliable and popular champion vessel. Many a time during the match did the Puritan display the good stuff there is in her, but no sooner did her prospects brighten than a fresh blunder sent cold water over many anxious friends watching her closely. She got away in fine shape under Atlantic's quarter and speedily drove up under the latter's lee. Not relishing the position, Puritan had two roads from which to select. One was to ease away a bit to escape the blanketing from the Atlantic and then force her lee, which she was quite able to do, as the relative pace of the two made plain at the time. The other was to try for Atlantic's weather. Puritan chose the latter and more doubtful experiment. In the act of squeezing to the utmost and edging out gradually, she luffed far too smartly across Atlantic's wake, stood further and then filled away again. At the rate the yachts were then logging, Puritan was left many lengths astern by the time she once more gathered full way. She then had nothing better than a stern chase in view, and that is proverbially a long one. This was the very mistake made by Genesta last year in the outside race, and which enabled Puritan to score by more than two minutes when it would otherwise have been only a matter of seconds between the pair. From Owl's Head to Lafayette, Puritan was abominably sailed with head sheets lifting, and she sprung her luff to such an extent as to lose the wind under the lee of the Hamilton bluffs, while Atlantic and Priscilla, with big jibtopsails romped away as they liked further off shore. Half way down to the Spit, Puritan, apparently mistaking the true course for Buoy No. 10, was pinched out so high that she had to be kept broad off for the mark, losing a great deal of water meanwhile through sacrificing her footing. All hands aboard, accustomed so long to coaching the flyer in the van, seemed to have lost

THE NEW YORK YACHT CLUB COURSE.

their heads, for she never received justice the rest of the day. Various pointless maneuvers were essayed and as speedily dropped, any one of which was enough to account for the twenty seconds wanting at the finish. But to crown all, she hove about to starboard, plump for Priscilla's broadside for the first tack off Sandy Hook, the iron sloop having right of way. Puritan being unable to look across her opponent's bow, had to be brought into the wind again with steerage nigh gone, and await the passing of Priscilla before she could be paid away on her course. Five minutes were sacrificed by this unaccountable blunder. Nothing but a state of desparation on board can explain such reckless tactics. Upon rounding the Lightship she was slow enough with her ballooners, though nothing like as demure as the Mayflower. Both Boston boats sailed in on the wrong jibe. This error again was enough of itself to relegate Puritan into third place. It is well-known that an easterly wind has more southings in it as you approach the Hook and that the starboard jibe is the proper one to try if it is at all possible. So Puritan had to shift over spinnaker, as she found herself running by the lee when half way in, and in doing this no great hurry was manifested, though it was still an open question between herself and Atlantic. Everything went well till the Spit was again rounded. Then the balloon jib halliards parted and the clipper had to content herself with jogging home under plain headsail. Fifteen minutes later she managed to show a small jibtopsail with which she struggled up to the finish against a strong ebb, only 20s. short of putting Atlantic in her right place. This is the story in short which accounts for the disappointment of her many faithful adherents who were looking for better things from last year's champion. The boat did herself proud, but the boat was "murdered" by her skipper and crew.

Atlantic came to the line with her last trump to play. Ballast had been promiscuously hove into her hold off and on to make her stand up and hold a better wind, until all reckoning as to what she had in her was lost. Failing to show any improvement, a turn the other way was inaugurated. She was drifting back to the beginning with no more hope of succeeding than in the earlier days when she was also in light trim. But her failures then having been forgotten with the lapse of time, the same old faith to which the Bay Ridge amateur still clings was revamped to prophesy great things for this wonder of the "both wide and deep" school. Ballast was hoisted from below and hove ashore this time, the avowed object being to make the Atlantic lighter for a race in light winds. Strange, unaccountable as it may seem, with the victorious careers of Bedouin, Clara and other heavy displacement boats in light winds right before their eyes, there still exists a small school of irreconcilables whose creed is summed up in the oft disproven fallacy that light weight and speed must need go hand in hand without regard to form. In deference to this ancient kiln-dried dogma, tons of lead were hove over Atlantic's side till the crew got tired hoisting it out, whereupon it was surmised her right trim had been struck. Just how much was passed ashore nobody knows. Just how much remains below the cabin floor is a matter for conjecture.

Atlantic came to the line in all her ungainliness and lubberly adaptation of the cutter rig. Three things about her deserved notice. She had been slicked up smooth outside and shone in burnished potlead. If any difference could be detected in the smart-fitting sails of the big quartette, the Atlantic would be chosen as having the smartest fit. This thanks to the splendid workmanship of the famous Sawyer loft. In regard to rig and sparring, Atlantic's sponsors have yet much to learn, as a glance at the head-booms of the Galatea and the Boston clippers in comparison with Atlantic's clumsy contrivances will show without more comment. Finally, Atlantic had the skipper of the day. Needless here to give Joe Elsworth a patent of indorsement. Up and down the coast "Joe" is known as the first among pilots and fore-and-aft skippers. Needless, too, to add that a good skipper is half the battle won, and almost needless to remark that but for Joe at the wheel Atlantic has at no time a ghost of a show with Puritan, far less any chance against the superb beauty now famous as the Mayflower. And this was clearly enough proven in last Saturday's race. After driving across the start to windward of all her competitors, Atlantic, free from blanketing by others, had the choice of her own water. Magnificently she was handled from go to wind up. Not an error of judgment ever so trifling, not a flaw in the management of her sails can be charged against her in this race. What little luck there was going fell to her share. She got the best of the breeze out through the Narrows and once again below the Hospital Ship. This, with the bee line Skipper Joe prescribed from Lafayette down to the Spit, sent her flying ahead and enabled her to show a good quarter of a mile between herself and the iron sloop at the Spit elbow in the course. In her case it was not the boat but the crew. With Puritan it was the boat despite the crew. Now shift all hands over. Put Elsworth or his equal at Puritan's wheel and the relative position of the two yachts would have been reversed at the first turn.

No sooner had the Boston twins paid the penalty for bad sailing by a long stern chase and overcome the gap created through their own negligence, than both had Atlantic an easily beaten victim. Mayflower did not throw away her chances and Puritan did. Mayflower turned up altogether too much for the Bay Ridge notion, and Puritan—well, Puritan's case has already been fully considered. The lead of Atlantic down to the Spit may turn the heads of the superficial or sympathetic critic, but to the unprejudiced spectator, Atlantic has no business in company with either of the Burgess emanations. The performance of Atlantic in the moderate roll over Sandy Hook Bar was anything but inspiring. She fell to leeward like a crab. She failed to point. She failed to foot. Every sea picked her up and deposited her sideways in the trough. Mayflower weathered on her and left her like a shot out of a gun. Puritan was rapidly coming up and soaking out on Atlantic when she took it into her head to ram Priscilla, changed her mind and was left well astern for having lost her head. Atlantic pitched heavily in comparison with the other so-called sloops. But cutters pitch likewise. Galatea pitched almost as much as the Atlantic. But Galatea has the form to pitch without detriment to her speed and Atlantic with her bulging hips has not. Therein lies an important difference.

Down to the Spit it was noticeable that Atlantic heeled to a greater angle than Galatea in the same wind, and of course the Bay Ridge idea heeled much more than the other three contestants. When all the sloops had scuppers awash, the stately Galatea came along with several feet of lee side out of water. Atlantic was not improved by lightening her ballast in deference to the amateurs pulling the strings behind the scene. She has been held in reserve as a sort of terror of terrors in heavy weather with a hollow sea. Just what she is likely to do in a sea can be judged from her behavior last Saturday. When she piled into the long and comfortable swell on Sandy Hook Bar, she lost her grip at once and appeared at her worst. Given a blow and steep jump, and Atlantic would suffer in footing by the reduction of her can vas more than the other sloops of easier body. She would plunge and heel, and it may even be questioned whether she could be counted on to stay without backing herself round. Besides, the sponsors of this craft have all along been singing a different tune. We have been told that Americans do not want to go to sea. That only "idiots" want to go to sea. That we have no business building boats for heavy weather. That "our waters" and "our winds" demand a light weather boat. How is this to be reconciled with the hollow pretense that Atlantic was intended to forfeit all claims in "our weather" in order to excel in the kind of weather we are never supposed to have, and ought to shirk when we do get it?

The fourth of the big sisters now claims attention. Of the whole lot, Priscilla, bar cutter rig, is the only one which can claim pretty close resemblance to the genuine American sloop. She carries her ballast inside, and sails without any "newfangled notion" appropriated from the English racing cutter. It is with considerable reservation that we speak of this sloop. "Sympathy" had built up an artificial reputation for Mr. Canfield's vessel, upon the strength of some cups landed by fluke pure and simple and a liberal stretch of kind imagination. Hard facts are ruthlessly knocking the card houses of fancy to the four winds. Priscilla's evanescent fame has vanished. Priscilla is the slowest of the four. She always was. While pitted against Puritan her extra length sent her down hill smartly enough by comparison. Now that she has to deal with others of her own loadline, Priscilla is never in the hunt. Why should she be? It is not right to expect it. She has her ballast inside and a rig to correspond. With the center of her lead dropped 15 to 20in. and rig increased in proportion, who, in the light of modern experience, can say that her possibilities have been exhausted? The old school which drew a distinction between "inside" and "outside" ballast, because the first was "carried" and the latter "dragged" through the water, is dead. Even the general public has learned that the value and effect of ballast is governed by its quantity and depth, and that the mere structural attribute of it's being inside or outside the hull has nothing whatever to do with speed or performance. The man who still prates about the "drag" of outside ballast has no longer any standing in court. Inside ballast is out of date. Priscilla being out of date in this respect, one of primary importance, cannot in equity be compared with yachts having their weight in the lowest place possible. Of course she fails to turn up with the rest, and fails also in doing herself justice in footing for want of rig enough to foot. Priscilla, with her present sail plan, is the stiffest of the four. She is too stiff for her own good in light to moderate weather. She is stiff enough when it blows. Lower her weight and clap on rig to correspond. Then it will be time enough to reach positive convictions concerning the form of her hull. Meanwhile, giving her owner credit for his enterprise and liberality in the efforts to improve and for his manliness in sailing so many losing races against a foregone conclusion, the repeated defeat of the Priscilla by all the outside ballast boats is rather a matter for congratulation. The day of fallacies has passed and Priscilla serves to enforce the new lessons in a way so conspicuous that she may be hailed as negative evidence in behalf of the new school. With her defeat before the public, all first-class yachts will henceforth have the bulk of their ballast incorporated with the boat's body or keel, a measure of safety which ought to be welcomed with delight, in view of scores of people drowned every year out of old-fashioned traps. While no one can foretell the extent to which Priscilla can be bettered, the experiment suggested cannot fail to have beneficial effect if carried out by a person who understands his business, and the designer of the Priscilla is quite equal to the task. He is not responsible for the type Priscilla represents, but schemed her out to meet the order of other people. That she has been well planned and is a very fast boat of her kind requires no further assertion.

The match was started on time, the committee, Vice-Com. Haight, Rear-Com. Barron, Mr. Smith and Mr. Krebs, aboard the tug Luther C. Ward, taking up position east of Buoy No. 18 off Bay Ridge. Course through Narrows down to Spindle Buoy No. 8½, around Black Can No. 5 off the Hook, and around Sandy Hook Lightship, returning same way. Flynn's Knoll and False Hook Shoals barred, and black buoys on West Bank to be left to the westward, red channel buoys to the eastward. Ten minutes were allowed to cross the starting line. Blanketing and luffing matches were to be avoided, as the test was to be one of speed and not of maneuvering for place. The wind had been light all morning, but picked up to fair working strength as the hour of start approached. The usual number of yachts and a dozen small excursion tugs were in attendance. Notable in this gathering were Galatea and the English-built schooner Miranda, purchased and sailed over recently by Mr. Hill, of the Varuna, N. Y. Y. C. Both came in for highly flattering indorsement, and whether fast or not, were generally conceded to be the boldest and most ship-shape yachts in the harbor. Miranda gave an unintentional demonstration of her speed with boom over the quarter, for when running home under plain lower sail and small gafftopsail over the main, she held the long schooner Dauntless with spinnaker and all kites set to best advantage. Galatea boxed about all day under her short cruising rig, and estimates of her comparative speed are only wild guesses not worth serious attention. She never approached the racing yachts near enough, knowing the amenities of common courtesy too well to seek a brush with vessels engaged in racing. Miranda is certainly a model of exceeding beauty in every respect. She excels in appearance every schooner in American waters, not even excepting the new Sachem, of Providence, R. I., and that is saying a good deal.

The four semi-sloops got their canvas sweated up by degrees and big clubtopsails, more or less square-headed in style, over the gaffs, with jibtopsails hoisted in stops. With foresails lowered they leisurely collected above the line, hauled their wind and came down to the start tolerably well bunched, Mayflower lagging a few lengths in the rear. Atlantic, or rather Joe Elsworth, had the weather berth, as might have been expected. Joe also led off the dance, which was equally as much to be expected. The flood was making, and Joe knows what "weather-bowing" the tide through the Narrows imports with the wind in the east. With balloon foresail sheeted inside the rigging, still one more innovation "servilely copied" from J. Bull, and jibtopsail, Atlantic filled away for the line, crossing with a rush on the port tack and the committee close aboard. Puritan speedily followed, almost abreast and three length to leeward, this being one of the very few occasions upon which the plump white clipper failed to inaugurate the ball highest up of the lot. Third over was Priscilla, four lengths under Puritan's lee, and going away with a rush under large jibtopsail. She was pinched for a moment or two, but then wisely kept away rap full to clear her wind from the other two. By so doing she burst Puritan's lee and fetched into second place. Mayflower kept a good luff over the line several lengths astern of all hands. The following details and times are applicable in this connection:

PARTS OF THE VESSEL.	Mayflower.	Puritan.	Priscilla	Atlantic.	Galatea.
Length over all	100	93	95	95.1	100

The times of crossing:

Atlantic	10 12 07	Priscilla	10 13 30
Puritan	10 12 50	Mayflower	10 14 26

Without serious attempt at running Atlantic's lee, which could have been successfully accomplished, Puritan tried for the weather gauge by a losing move. Luffing sharp across Atlantic's wake she lost her way, and when full again found herself left by a good many lengths in Joe Elsworth's wake, no doubt just the move that wily yachting "sharp" had foreseen from his hot-headed adversary. Priscilla, keeping about her own business, unmindful of the rest, romped along meanwhile into a good second, but without holding anything like Atlantic's weather. All the leaders had gone away with balloon foresails, Mayflower strangely enough contenting herself with working staysail only. She found out her mistake off the old Murphy mansion and shifted for ballooner, wasting a good deal of precious time in so doing, and losing some water in consequence. She was then starved of her wind, and headsheets kept lifting in an exasperating way, the big beauty failing to foot and dropping steadily into a poor fourth. Smart puffs off the Hamilton bluffs sent Atlantic ahead flying, and both Boston boats suffered from springing their luffs too much and hugging the shore. After getting scuppers well soaked the wind lightened for the two sternmost racers and they were dropped still more by

the New Yorkers. Boston took an alarming tumble. Approaching Lafayette, Puritan was first to lower jibtopsail for a close shave of the old brick fort, and again ran out of the best wind. The Flower was blundering again with her foresails, once more changing to working sail with the usual delay. All this time Atlantic was steered straight as an arrow and not a sheet was touched, and Priscilla was making good company for the Bay Ridge boat, though sagging to leeward under big jibtopsail. Before Lafayette was reached Puritan got her jibtopsail on afresh and then lifting headsheets until jibs failed to draw, as though heads had been lost in the futile effort to look out as high as Atlantic was doing far ahead in another vein of wind. So wretchedly was Puritan tooled that casual spectators proclaimed her out of form and insisted that she did not move off in customary shape. Well clear of the Narrows Atlantic, lucky and grandly put through from the very go, got a sniff of more breeze, which knocked her well over so that jibtopsail was lowered and smothered on the nose pole, a "monkey" jibtopsail with a long tack being sent up instead. This shift was made in a jiffy in strong contrast with the vacillation and leisurely tactics of the two Boston boats. The piloting and seamanship aboard Atlantic were simply superb. In passing Lafayette, Mayflower lowered jibtopsail and bothered no more with light sails, which seemed to relieve the skipper somewhat, as she was kept a better full from that time on. Aboard the Puritan everything was sacrificed to high pointing, at which she was eminently successful without rhyme or reason, though it did not help her footing a bit. Abreast of the Hospital Islands the big ocean liner Ems, of the Breman mail, screwed by to windward of the Flower and Puritan, but considerately held the East Bank as much as she dared, so that the two sloops suffered mainly from her swell and wash which provoked them to a mild pitch and toss. The Ems was closely followed by a string of outward bound vessels which administered a similar dose. Their swells in connection with others from the tugs chopped up the course into a perturbed condition. To make matters worse, the Commodore's Electra, in all her ungainliness, drove through the yachts' lee without showing them the slightest consideration. Abreast of Hoffman's Island Puritan got a pull on foresheet and roused the clew down till "Madge-like," it nearly chafed the mast up and down. All four were now trailed out Indian file. Atlantic with a quarter mile lead, Priscilla, Puritan and Mayflower about the same distance apart. The leader got more breeze and bent to its force, so that the spectators exclaimed: "Why she heels more than a cutter." The truth of this was apparent enough, for Galatea was standing up to it like the proverbial steeple; at the same time a tiny English cutter about 20ft. long, with pole mast, coppered bottom and all the style of her big sisters, was here passed. The red ensign was flying from her peak. She is the smallest imported cutter in American waters, and rates about 2 tons. From Dix's Island to the Illinois Ship, Priscilla pinched up into Atlantic's wake, and Puritan was squeezed without mercy till she had edged almost across channel, Mayflower taking her cue from her sister. What the object was in so starving these two vessels is difficult to divine, unless want of familiarity with the bearing of the Spit be plead in extenuation. To accomplish this questionable climb, Puritan got rid of her jibtopsail. Both New Yorkers, however, held to theirs, Atlantic all the time steering a bee line for the destination. When Puritan at last spied the mark, helm was put up and she started on a romp and more than a rap full for the red spindle, sliding down, of course, into Atlantic's wake, from which she should never have emerged. Priscilla did the same thing and Mayflower followed suit. So far it had been play for the Atlantic, and if similar blundering could be counted on for the remainder of the day, Atlantic, or rather Joe Elsworth, looked like a sure winner of this first leg of the series. He got his charge round No. 10 with a full quarter mile lead. Priscilla hauled up next, with Puritan hunting her close and the Flower a bad fourth. Times at buoy No. 10:

Atlantic	11 29 26	Puritan	11 33 05
Priscilla	11 32 40	Mayflower	11 35 10

This makes the elapsed time from the starting: Atlantic 1.17.19, Priscilla 1.19.20, Puritan 1.20.15, Mayflower 1.20.44. It was a tight pinch henceforth around the Spit and out to the Hook. All four held to port tack inshore to escape the flood as much as possible. Atlantic flung round to starboard at 11:39, Priscilla 11:42, Puritan 5s. later, and Mayflower at 11:44. They all headed pretty well up inside along the Hook beach on starboard tack till sure of weathering on can No. 5 upon going round again on port tack, which would take them out to sea. Coming up the Hook inside there was some lively shifting to the spectacle, for it was no longer a rap full as when coming down to the Spit, but a jam on the wind in a light head sea which found its way round the Hook from off the bar. Puritan quickly soaked up to the iron boat, and Mayflower appeared as if endowed with fresh life. The way the skipper she shook herself together and stalked along with everything roused in two blocks was a sight the like of which is seldom seen. Mayflower, the poor "failure," bringing up the rear, upon whom much commiseration had been lavished; Mayflower, whose only chance was with sheets well lifted; Mayflower, who could not turn to windward with such good company; this much criticised Mayflower took it into her head to choke off the critics once for all, right there and then. She closed up in a jiffy and made a bid for Priscilla's weather while the critics were still engrossed with Atlantic's "great lead." Priscilla objected in a fainthearted way, but Mayflower disposed of inside ballast without any ado, and then started to mete out a like infliction upon Atlantic's bow, as Puritan. Without the least trouble, without apparent effort, she winded and footed on Puritan, and in a moment more was after the galliot stern of Atlantic ahead. She held a much better wind than Atlantic and closed the gap rapidly.

The sea had now been opened and a long swell poured in over the bar. This proved to Mayflower's liking just as it was poison to the Atlantic. Bay Ridge saw its doom impending. Skipper Elsworth through his superior skill, had staved off the fatal hour, but now that his skill was of no particular avail, the sloop in his charge was speedily stripped of her false laurels. Atlantic hove around on port tack and looked out to sea as high as she could. This was at 12:07. Mayflower did the same thing under Atlantic's lee beam. She then launched ahead and soaked across Atlantic's bows, as though the latter's hands were triced up. Stately, with steady swing, the queen of the American fleet was claiming her due. With long, measured rise and fall Burgess's best clipped the seas under plain head sail in a style that proclaimed her unapproachable by aught native to our waters. In a few minutes she had spun out a lead. This she constantly increased and maugre all bungling with her sails, flew in home a winner by long odds, with Atlantic a badly beaten boat in the windward work out to the Lightship and on the run home with boom squared away. Puritan and Priscilla were playing out a game to themselves, and made pretty nice racing until they flung out to sea. It was then that Puritan put round with the iron ship so close that she had to be brought into the wind again to let Com. Canfield pass with the right of way. Priscilla's tactics were not exactly in accord with the committee's instructions, but the move of Puritan was so sudden that she cannot be blamed for holding her course. After a blanketing and the loss of five minutes Boston tried the port tack again and was soon followed round by the Priscilla. The latter was disposed of ere long, for Puritan came to the outer turn with a long lead over the representative of inside ballast.

All hands stood down and off the beach, both New Yorkers having clung to their jibtopsails all through, Puritan resetting hers inside the Hook, but Mayflower continuing under plain headsail. Atlantic had also shifted to working foresail for the beat out. After a long leg to the southward Mayflower came about on starboard tack at 12:57, but Atlantic failing to follow suit, the big white one again went round with the object of not "quitting a beaten boat," the first display of good judgment aboard the Boston boats this day. At 12:55 she again came round to the eastward, being about able to weather the Lightship. Seven minutes later the Atlantic followed nearly a mile in her wake. A long board brought the leader up to the ship, but she overstood and came round for the mark on a rush. No preparations of any sort had been made for the run home. No ballooner had been sent up the stay in stops. After boom had been jibed over to starboard it dawned upon some one that spinnaker might be a useful adjunct. Hands were sent aloft to clear away and in no less than ten long minutes the toppingliff lowered, the sail ran out and the stops broke. Still later the balloon jibtopsail was got on the vessel. Atlantic just hit the Lightship to a nicety, rounded, left main boom to port and smartly got out spinnaker to starboard. Puritan got round a good third, but picked out the wrong jibe. Priscilla closed up the rear and wisely followed Elsworth's selection for the run in. Times around the Lightship:

Mayflower	1 36 25	Puritan	1 46 05
Atlantic	1 44 40	Priscilla	1 50 11

The run home was devoid of critical situations, except as noted above in the case of Puritan, who lost second berth through sheer indifference. Mayflower and Puritan split spinnakers near the foot. The latter took an Irish reef in the sail and reset it. Mayflower and Puritan had to jibe over half way into the Hook, after which Mayflower came home on a leisurely jog without any spinnaker at all. From the Ship into the Hook the speed is shown by the following figures: Mayflower, 1.30.58; Atlantic, 1.31.45; Puritan, 1.33.20, and Priscilla, 1.34.19. At the Spit all hands jibed over to port and came up for the finish under balloon jibtopsails, Puritan excepted, as already noted. Amid a din of whistling and firing of guns Mayflower was hailed as the winner of the day. Summary as under:

	Start.	Finish.	Elapsed.	Corrected.
Mayflower	10 14 26	3 51 10	5 36 44	5 36 44
Atlantic	10 12 07	4 00 42	5 48 35	5 47 35
Puritan	10 12 50	4 03 11	5 50 21	5 47 55
Priscilla	10 13 20	4 09 45	5 56 25	5 55 13

In the beat out from Buoy No. 10 to the Lightship, about 10 miles, Mayflower beat Puritan 11m. 45s., Atlantic 13m. 57s. and Priscilla 16m. 15s.

On the home stretch with booms off, distance 20 miles, Mayflower beat Atlantic 1m. 17s., Puritan 2m. 21s. and Priscilla 4m. 49s.

Over the whole course Mayflower beats Atlantic 10m. 51s., Puritan 11m. 11s. and Priscilla 18m. 29s.

Mayflower allowed Atlantic 1m. 4s., Priscilla 1m. 32s. and Puritan 2m. 34s

SECOND MATCH, MONDAY, AUG. 22.

Although a failure so far as finishing within the seven hour limit goes, the second trial of the four big Americans was full of interest and by no means devoid of decisive results. To those who thought the previous trial a thorough test, there was fresh surprise in store. But, after studying the record in FOREST AND STREAM, no one will wonder how Puritan once more worked into her accustomed place at the head of the procession. This day the Boston boats were sailed with something like skill and quick wits. The outcome substantiates previous observation, that in light and paltry winds Puritan still has the call of the crowd in forcing out to windward enough to make up for Mayflower's extra length in footing and also that Priscilla is destined to close the procession upon every occasion, no matter what the state of wind and water may be. It was another triumph for outside ballast and another failure for pig stowed in the hold and correspondingly reduced rig. Atlantic was early laid aside as she lost her topmast on the first leg down shore, 34m. after the start. Quite enough was seen during this time to measure Atlantic's capacity to windward in light weather. Though better than Priscilla she was again nowhere alongside the two Boston vessels. After an excellent start high up on the line, she began at once settling away to leeward and kept up her footing only by resorting to balloon jibtopsail, the one yacht adopting such tactics. Having in vain tried to point with Puritan and Mayflower, and finding them both overhauling her as certain as death, Skipper Joe in desperate straight, lowered working jib and small jibtopsail, hoisting a big balloon jibtopsail, and set out to sea on the port tack. Mayflower and Puritan stood on the starboard tack, the latter footing to the best advantage. Priscilla, after a short leg to the southward, followed suit. Atlantic was now hull down to the eastward, and Priscilla was not long in losing sight of her. Mayflower and Puritan were in sight of each other for a long time, but the latter was soon hull down to the former. Mayflower was the last to be seen of the three, and she was not visible from the deck of the Priscilla for more than an hour. Mayflower and Puritan were in sight of each other for a long time, but the latter was soon hull down to the former. Mayflower was the last to be seen of the three, and she was not visible from the deck of the Priscilla for more than an hour.

The third race yesterday was to have been fifteen miles to windward and return. In the morning the wind was reported N.N.E., 18 miles an hour. At the time of going to press (1 P. M.) we had received no news of the yachts.

SATISFACTION every time or no pay with Lake's steerer. See second page.—*Adv.*

A CHANCE FOR THE ATLANTIC.

LIEUT. HENN, of the English cutter Galatea, has addressed the following challenge to all American "sloops" through the Commodore of the New York Y. C. As the Atlantic is, by the statements of her sponsors, specially designed for open water work and all that a voyage at sea implies, she cannot plead lack of opportunity to demonstrate her powers in the premises. It has also been universally insisted that the modern English racing cutter is incapable of keeping the sea and only comes up occasionally to breathe. Manifestly, according to the silly views which have been so strenuously maintained on this side of the ocean, a match around Bermuda in tumbling waters ought to be the veriest picnic for our sloops. But will they dare to show up in fact as they so often do in printer's ink?

OFF BAY RIDGE, Aug. 21.—*To the Commodore of the New York Y. C.:* My Dear Sir—Inasmuch as an English yacht, challenging for the America's Cup, has to cross the Atlantic, and therefore must be a seagoing vessel, I, for this reason, consider it would be advisable to test the seagoing qualities of the American and English type of yachts over an ocean going course. Hence I now challenge any single-masted American yacht to race the Galatea from Sandy Hook to and around the Island of Bermuda and back to the starting point, the race to take place ten days after the contest for the America's Cup has been concluded; the prize to be a cup of a value exceeding $1 and not exceeding $500, the management of the race to be vested in the hands of the New York Y. C.; the difference of tonnage for time allowance to be based upon the tonnage rule of the United States. Trusting that you may be able to bring about a contest, I am, my dear sir, yours faithfully, WILLIAM HENN.

ON BOARD FLAGSHIP ELECTRA—Off Bay Ridge, Aug. 21.—*To Lieut. Henn, R. N.*—Dear Sir: I am in receipt of your communication of this date and shall take the pleasure in presenting it to the club for consideration at the earliest possible moment. I have the honor, meanwhile, to remain with great respect, ELBRIDGE T. GERRY, Commodore.

LARCHMONT REGATTA FOR OYSTER BOATS.

THE race instituted by the Larchmont Y. C. for oyster boats was successfully sailed last Saturday in a fine southeasterly breeze. Thirty-eight boats were sent away without fouling during the first of the flood. Course, around Execution Light, Matinnicock buoy and a stakeboat off Captain's Island, finishing between Execution Light and Sands's Point buoy.

Lizzie D. Bell showed the way to Matinnicock buoy, where Grace Mackey went to the fore and held the lead over the rest of the course. Raymond R., Florence May and Henrietta Scott fouled at the turn, otherwise the excellent handling by the expert skippers averted all accidents. The finish was as under:

Jannie M.	12 02 10	Did not finish.		
Mamie	12 04 47	4 30 29	4 25 32	4 09 05

Protests against Mamie and Coldenia, on the ground that they were not working boats, were entertained. First prize was awarded to the Grace Mackey, Watson second, Stella third and Lizzie D. Bell fourth. In open sloop class, Sybil took first money, Jennie A. Willis second, Sneak third and Gracie fourth. In catboat class, Mamie first, Joke second and Coldenia third, subject to the protests made.

BEVERLY Y. C., AUG. 21.—Third championship and 113th regatta was sailed last Friday off Nahant. Wind fresh from S. E. and choppy sea. Courses, ten miles for the first class and seven for the rest. Cricket put in an appearance too late for the start, and the famous little cutter Witch had a sailover, the fresh breeze scaring away other entries. Bessie and Atlanta tie for the pennant, each having scored one leg in the series. Judges, P. S. Sears and Geo. B. Inches, aboard the schooner Foam:

THE SCHOOLBOYS ARE EVIDENTLY LEARNING.—There was a little flutter at the New York Yacht Club house yesterday, caused by the receipt of the challenge from Lieut. Henn. "Sail round Bermuda! Whew!" exclaimed an old yachtsman, "Why, a race across the Atlantic would be mill pond sailing to doubling Bermuda at the time Lieut. Henn proposes. It is very neatly put, though—any singlemasted American yacht. Of course Lieut. Henn in his deli aims at any one of the four big sloops, and the Priscilla is the only one of them that could possibly live through a race. And what kind of a chance would she have to outsail such a craft as the Galatea in troubled waters off shore? The owner of the Galatea would test the seagoing qualities of the American and the English type of yachts. As for my part, I am willing to concede, what every schoolboy knows, that in the feature of 'seagoing qualities,' the English type of racing yacht is superior to the modern American single-masted racing craft, a bastard type of vessel. Lieut. Henn is a thorough seaman and prince of jolly good fellows, but in view of their peculiar construction, there seems to be a spice of cruelty in his inviting any American single-masted yacht to take soundings in the Gulf Stream."—*Herald, Aug. 23.*

COOPER'S POINT.—The Corinthian Y. C., Cooper's Point, regatta came off on 17th inst. four classes, 12 entries. Humes, first class, won a club flag; Wilkins, second class, won champion flag; Anderson, third class, won club pennant; Lizzie S., fourth class, won a purse. Wind northwest and fresh, distance sailed, 18 miles in 3h. 53m. 30s., the best time in a repeat race over the course. The club may be said to be a training school, and the boys know the rules of the road. Another race will take place over the regular club course Aug. 31. (The boats turned the home stake in the order named.)—R. G. W.

FOREST AND STREAM, always fresh and lively, is especially so in the opening number for August on the "Vacationists," especially the class who go out as the metropolitan daily newspaper men to puff indiscriminately. The lakes and streams and forests and fields which afford genuine enjoyment to the tutored sportsman should be spared the garrulous words that fill the columns of their journals, to the disgust of the true angler and sportsman. It has kept up an incessant fire on the members of Congress willing to despoil the National Park and curtail the Government reservations of public domain, already too few in number. It saved our birds of song from the havoc which was sweeping them from existence.—*Staunton (Va.) Spectator.*

The "Mayer" Minnow Casting and Trolling Rod.

This rod is made from specifications furnished by Professor Alfred M. Mayer, who with this rod and an Imbrie Black Bass Reel won first prize for black bass casting at the tournament of the National Rod and Reel Association, Oct. 23, 1884.

Its proportions were reached after a long series of experiments, the object of which was to obtain a round section bamboo rod of about 9 ounces that would feel light in the hand, be well balanced, not throw off a delicately mouthed minnow in making long casts, and finally, after striking the bass, would have enough spring and flexibility to afford the angler the same pleasure as that given him when playing a bass on a fly rod.

The rod has two tips, one 6 inches shorter than the other; the shorter tip is used for trolling and in casting when wading.

This rod has been thoroughly tested in both lakes and quick water, and anglers who have used it are unqualified in praises of its staunchness and the delicacy of its action.

Our rods have taken the highest prize at every tournament in which they have been used.

THE MARLIN FIRE ARMS CO., New Haven, Conn.

Why Sportsmen & Dealers Prefer CHAMBERLIN CARTRIDGES.

BECAUSE THEY ARE BETTER than can be loaded by hand.
CHEAPER THAN HAND LOADED when same quality material is used.

ALL DANGER FROM HANDLING POWDER IS AVOIDED.

SORA.

These cartridges are so safe that insurance rates are not increased by keeping them in stock. When burning they exhibit no force of explosion. The thin paper shells offer no resistance, but tend to separate the bulk of powder into such minute proportions as to make them perfectly harmless. A package of these goods burned in an open fire does not make as much noise or exhibit greater force than so many fire-crackers. Powder requires confinement to produce force. This is therefore the safest form in which powder can be kept in stock or transported.

The convenience of FIXED AMMUNITION FOR SHOTGUNS is readily appreciated.

Dealers get rid of a great amount of fault-finding and worry by selling Chamberlin Cartridges, and sportsmen, knowing that the reputation and success of a large enterprise depends upon honest manufacture, feel perfectly safe in buying them.

TATHAM & BROS., Agents, 82 Beekman Street, New York.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

The Forest and Stream Publishing Company takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability. Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

R. H. POOLER'S Improved Patent Boss Cartridge Holder and Belts.

This Holder is for carrying brass or paper shells, being crimped. Has side cut away, showing wad supporter.

This Belt, as now made, is the handsomest and best shot cartridge belt in the world. Has 3-inch woven canvas belt, 1¼ inch double shoulder straps and large plated buckle. Will wear any sportsman a lifetime. The only practical Cartridge Holder in use. Will carry brass cartridges and positively prevent wads from starting on shot. Suitable for either paper or brass shells. Satisfaction guaranteed or money refunded. **Manufactured by R. H. POOLER, Serena, La Salle Co., Ill.**

Send ten cents in silver or currency for catalogue and sample cartridge holder, also a colored lithograph card of grouse shooting on the prairies.

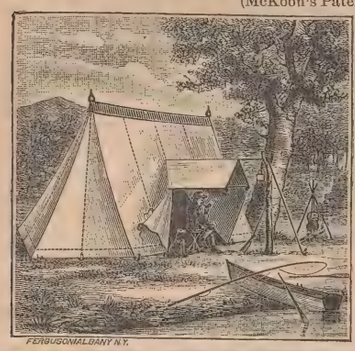
CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

KIMBALL'S SATIN

STRAIGHT CUT CIGARETTES.



People of refined taste who desire exceptionally fine cigarettes should use only our Straight Cut, put up in satin packets and boxes of 10s, 20s, 50s and 100s.

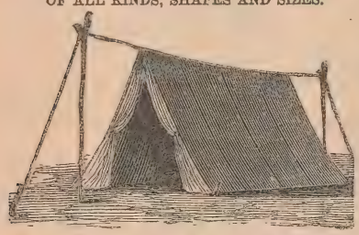
Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May



Sent securely packed, postpaid, on receipt of price, $1.00 each.

ANSWERS TO CORRESPONDENTS.

THE BRAHMIN AND THE SCRIBE.

THE great summer camp ground of the Methodists at Ocean Grove, N. J., was invaded the other day by S. Govinda Row Sattay, a peregrinating Hindoo, who, wherever he could collect a crowd, inveighed against the Christian missions in India, and passed his hat. He finally made his way into a hotel parlor and addressed the ladies there, and, according to the *Sun*, "denounced Christianity in terms of unaffected candor. He said that he was unfamiliar with the forms of English speech, and if what he might say should offend the sensibilities of his hearers he begged them to believe that the fault was entirely due to his lack of understanding of our language and customs. He then launched into the most indecent and obscene tirade against the practices of American missionaries in India, causing consternation among his little congregation. Many ladies left the room in great embarrassment, and others remained only because they were ashamed to rise up and go out in the presence of a room full of people. The Brahmin's speech created a great scandal, and then he went out along the board walk and harangued. He declared that American missionaries lied in their accounts of the good they had accomplished in India. Their efforts were, in fact, he said, without such results as were sought, and they made no conversions," and much more in the same strain, which all in good time landed Mr. Sattay in the nearest convenient jail.

Now, had Mr. Leander Richardson, who is, we believe, a New York newspaper scribe, gulped down the Hindoo's clownish vaporing as a competent statement of the condition of the Indian missions and sent it to the Boston *Herald*, its publication would have been a piece of gross impertinence to the hundred thousand intelligent readers of that great journal. Mr. Richardson did not send the Brahmin's orations to the *Herald*, for one reason, perhaps, because he was up in Maine sending down to the Boston newspaper office rubbish of an equally foolish nature relating to game and fish protection in Maine. Certain guides and cupidinous landlords who want summer deer killing and spawning bed trout killing poured their denunciations of Maine's righteous laws into the willing ear of the visiting scribe, and the plaints flowed from his pen, and for some inscrutable reason were given light in the *Herald* columns. They represented only the views and interests of men who would overthrow game and fish protection for the sake of immediate individual profit. To judge of the success or failure, wisdom or folly of the Maine law by these letters written by a vacationist scribe and signed Leander Richardson in the Boston *Herald*, would be equally as silly as to determine the failure or success of Christian missionary effort in India by the declamations of the Hindoo Sattay. Something of this same view of the subject appears to have been entertained by the *Herald* itself, for in its editorial columns of Aug. 29 we find the following, which is just such an indorsement of the Maine protective system as we should expect from that journal:

It is a fact that the State of Maine has the most rigid and the best enforced code of laws for the protection of game and game fish of any State in the Union. This is as it should be, for there is no Eastern State, at least, which contains so vast an extent of forest, the natural home of the larger game, and so great an area of inland waters. It is also a curious fact that a large percentage of this woodland is valueless for any other purpose than the growing of timber and the furnishing of a sporting ground for the hunter and a breathing place for the lover of nature. That the larger game, moose, deer and caribou, were in danger of finding the fate of the bison, once abundant on the plains, now reduced to a few straggling herds, till the strong arm of the law took hold to stop the ravages of the hunter for the mere hides and the market hunter, there is no doubt. That this larger game has wonderfully increased in Maine under the enforcement of its more stringent game laws, enacted by the Legislature of 1883, is admitted by even those who would now ask for their repeal. One of the strongest proofs of the value of these later enactments is to be found in the Boston market, where, in the winter season before the enactment forbidding the transportation of game, there were received by actual count nearly 1,000 Maine deer, which were sold for a very small price or permitted to rot; but since the existence of that law scarcely a dozen deer find this market from that State in a season. That a correspondent of the *Herald* should find objectors to such a law in the person of guides, hotel keepers and stage owners is not at all strange or unnatural. They prefer the nimble penny to the dollar that is longer coming. It is perfectly natural for the people whom the law is framed to regulate to desire more license, but the bare fact of the great success of the present code of game and fish laws in Maine, in the way of a wonderful increase in the very game and fish which they are presumed to protect, is one of the strongest reasons in the world for letting those laws remain just as they are till such time as when the Commissioners and those who have the perpetuation of the game and fish in question the nearest at heart shall think it prudent to grant a longer open season and greater license to kill. That such greater license will, at the proper time, be granted, we have the best of assurance, and until that time every honest citizen of Maine, and every visitor, should accord a cheerful obedience to a code of laws which permits all to share alike to the fullest extent of open season and privileges of transportation that can be granted with safety to the future existence of the fish and game in question.

What the wandering scribes think of Maine game and fish is of little moment; what the Boston *Herald* thinks is worth while considering.

THE INTERNATIONAL MATCHES.

WITHIN the next ten days two very important series of races will be held in American waters between the leading boats of America and England; races which cannot fail to attract the attention of all interested in water sports and sailing. Naturally size tells in this as in all other matters, and in the excitement over the two huge white cutters, the tiny canoes are apt to be overlooked. Though small they are, however, no less important than the larger craft, nor is less of skill and science involved in their construction and handling. In this pigmy contest too the question of type is involved even more fully than in that of the large keel cutters and centerboard cutters; for the American canoes, though derived originally from the English, are smaller, finer in lines, much lighter in ballast and displacement and sailed in a different manner. Of course the majority of spectators who follow both these races are animated by purely patriotic sentiments, but among American yachtsmen there are hundreds of intelligent men who are looking to the result to guide them a step nearer to perfection; while the doings of the musquito fleet are studied no less attentively by young men in all parts of the country who are intent on an improvement of the models and rigging of their boats. Within the past five years the spread of the elementary principles of naval designing has been wonderfully rapid among American small-boat and canoe men, and it would surprise a person not familiar with canoeing to learn how many there are who can turn out a creditable design for these complicated little craft, or who can intelligently pass judgment upon existing boats. In yachting the same advance has taken place, and for one person who understood anything of the principles involved in the Cambria or Livonia races there are a hundred to-day who are looking, beyond the popular hurrah over a victory of either nation, for results that will lead them further in their work. It is in this phase of the contests that is found the greatest promise for the future of our supremacy afloat. A defeat or victory for either side is only a matter of to-day; but the lessons which many will draw from these two series of races, whatever the results may be, will have their influence on naval design in America for many years.

BLUEFISH AND MENHADEN.

A FEW bluefish have been taken on the south side of Long Island during the past week. The menhaden nets have been hung up because there are no menhaden worth trying for, and the steamers have left the vicinity of Fire Island and South Beach. On the north shore of Long Island some bluefish have been taken in Cold Spring Harbor and Oyster Bay, and in the bays toward the eastern end of the island. There is very little chumming because of the lack of menhaden, and no other fish possesses such an attraction to the bluefish as that afforded by the menhaden. The menhaden is so oily that the scent of the bait is carried a great distance by the currents.

Most of the bluefish taken by anglers have been captured by trolling the artificial squid or by playing a "silverside," *menidia*, or other small fish, but a few anglers have been fortunate enough to obtain a limited supply of menhaden, and have used them in chumming. The fish taken by the latter method have been small, running from half a pound to a pound; but the trollers have taken some larger ones of two and three pounds. No large bluefish are reported, and the same condition of affairs exists all along the northern Atlantic coast as is found about Long Island.

There are all sorts of theories to account for the absence of the bluefish, and rumor has it that they are plentiful far out at sea where they are feeding on some fish found out there; but there is a lack of evidence on this point. The majority of anglers lay the absence of the bluefish to the disappearance of the menhaden, and charge it all to the menhaden steamers. Should the bluefish come in good numbers later in the season, or come next year in force, there would be need of some new theory we must wait and see.

SIGNATURES should be plainly written. No matter how illegible the text of a business or other letter, most folks can get along with it if only the name of the writer be plain. Many people who happen to be perfectly familiar with their own names in their peculiar chirography, appear to think that others know them too. Correspondents who favor us with trap and rifle scores, kennel notes, reports of club meetings, yacht and canoe races, etc., will greatly oblige by writing proper names plainly.

TRAP-SHOOTING HANDICAPPING is a subject of much interest to shooters in all parts of the country, if we may judge from the number of communications which have come to us from widely different sources. The question is one which will bear agitation. Free discussion of the points at issue is the surest way to bring about needed changes.

AN ILLUSTRATED YACHT RACE SUPPLEMENT of sixteen pages has been prepared by the FOREST AND STREAM and will be on the news stands next Saturday. It contains an historical review of past international yachting contests, and a fund of information which will be found extremely useful in connection with the coming matches.

"OUR NEW ALASKA."—The publication of Mr. Chas. Hallock's forthcoming book "Our New Alaska" has been delayed by causes beyond the control of the Forest and Stream Publishing Co. It is hoped that the volume will within a very short time be ready for delivery.

RURAL GROVE, a little village in Montgomery county, N. Y., boasts that for a year no dog has been owned or sheltered within its limits. That must be a poor place to bring up children in.

The Sportsman Tourist.

TRAVELS IN BOON GAH ARRAHBIGGEE.

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

* * * AFTER a mid-day siesta we again sallied forth in an opposite direction to that in which we had found the rolling ball, which, for the sake of having some name to distinguish it, I shall call the *Pila-volutatio*, or perhaps Pila for short. In the direction we now took we found the landscape much more broken, and after walking nearly five miles we came to a long line of limestone cliffs, whose appearance at once struck me as remarkable. The whole façade was bored with innumerable holes varying in size from 3ft. to ½in. in diameter, while near the ground were some that must have been at least 5ft. in height. Opposite all the upper larger ones swung long tendrils of vines, roots or ropes, I could not tell from the distance below which. The thing, however, that struck me most, was the signs of animation at each and every aperture. From every one something was protruded every few seconds and then withdrawn in a way that made me think of the inside working of a piano or some other machine.

After watching this strange spectacle for some time I determined to see if I could solve the mystery, so taking a rifle from one of my men I selected one of the larger holes where there seemed to me the greatest activity, and taking careful aim, fired. A piercing howl followed the shot, and then came a scene of confusion for which I was little prepared. In the first place from the opening at which I had shot issued a number of gray balls (I began to think that animal life was given to taking the shape of balls in this strange country), considerably larger than a bushel basket, which began to climb with rapidity up the pendulous tendrils I had previously noticed, till they reached the top of the cliff where they moved about backward and forward with apparently great agitation. The same thing occurred at every one of the other large holes until the top of the cliff seemed alive with these objects. At the same time from every one of the other orifices flew some specimen of animated nature, from big birds, as large as geese, to insects the size of a bumble bee. The former with wide outstretched wings circled screaming round our heads, sometimes skimming close to the surface of the earth and at other soaring as high as the top of the cliffs. Innumerable smaller birds shot hither and thither, while the whole air seemed filled with humming insects. My shot appeared to have disturbed the mid-day repose of a whole colony of the most conglomorate description.

THE PLANTIGRADE.

While I was yet looking with astonishment at the scene of confusion I had evoked, my attention was attracted by a loud crackling and crashing among some tall shrubs and bushes that grew at the foot of the rocks, and casting my eyes in that direction I saw the snout of some animal pushing its way between the branches, to be quickly followed by the body of one of the most appalling creatures I ever beheld in my life. It was a plantigrade, covered with short black fur, and as high as the tallest elephant, with the back, forehead and nose cased in armor like that of an armadillo. Its large white teeth glittered in its huge red mouth, and its small, deep-set eyes blazed with ferocity. It moved with great velocity and was on me in an instant, and I verily thought my last hour had come. I knew that my light-bore rifle would be of no avail unless I could strike him in some peculiarly vulnerable spot. I raised my piece quickly, and aiming at his eye, fired. The animal threw up his head and gave a snort like the escape of steam from a locomotive, but did not check his speed in the least. My men and even the dogs had all run away. I had no second gun at hand, and even had there been one ready there was not a moment to make a change. I dropped my rifle and ran, never before nor since have I run so fast. I heard the beast's soft heavy tread close behind me like the thumping of feather pillows. I thought to dodge behind a tree, but I did not dare to check my speed to make the experiment. I put my whole soul into my legs and ran, I seemed to be unconscious of every part of my anatomy, save my legs. Everything grew misty before my eyes, then black, and I seemed to run in a dream. I struck my foot against a stump or a stone, I do not know which; all I remember is that I was hurled headlong forward to the ground in a confused heap. I was a dead man—at least that was my firm conviction as I went down. I must have fainted, for I know that the next emotion was one of intense surprise at finding that I was not a mangled mass of flesh and bone. I arose slowly to my feet and looking around espied the body of my plantigrade friend lying on the sward nearly a quarter of a mile back. If "the wicked flee when no man pursueth," so also do the frightened. I had been tearing away like mad from a dead beast. I did not venture just then to go back and satisfy myself as to his condition, I was quite willing to accept the situation as it stood and let my curiosity take care of itself for a while while I walked slowly back to the camp and restored my nerves with a good big dram of brandy. Some hours later, taking my four ounce rifle and my whole staff of attendants with me, I returned to the spot, where I found that my shot had fortunately penetrated the monster's eye, killing him almost instantly.

I approached the cliffs with great caution, however, fearing the possible appearance of an avenging mate; but whether Madam was in the country or whether divorce proceedings had been instituted, or whether Monsieur was a widower or a bachelor, I know not; but at all events, no Nemesis made its appearance. The excitement had almost entirely subsided on the cliffs, though one or two of the ball-like figures still moved slowly up and down, and many of the large birds still circled noiselessly about. Not wishing to create a fresh disturbance just then, I did not venture to discharge my piece at the flying birds, one of which I was anxious to possess. I, however, attained my object in a much easier way. Poptie, who was very skillful in throwing the bingie, a species of heavy stick, soon brought one of them down without noise or confusion. I then found that the creature had no mandibles, but in place of them a long rigid tube lined with fibrous tentacles, that indicated that the bird lived (as I afterward learned to be the case) by suction, sometimes sucking in insects while on the wing, and at other times out of the water. We cooked this particular specimen for supper, but found it not very good eating, being rather tough and rank. When quite young, however, or in the squab stage, they are very delicious.

A DAY IN SUMMER.

BY "THE OLD MAN OF THE HILL."

A SUMMER afternoon. King Sol has summoned all his wandering rays from a thousand distant planets, and, having brushed every obstructing cloud from his vision, adjusts his strongest magnifying glasses and brings his gaze to focus on poor old Mother Earth, till the dear creature is so overcome she can scarcely keep her orbit, but lies drooping, sweltering and steaming at every pore, while we miserable beings can only sweat and mop in sympathy, and long for the wings of a dove that we might fly away and not return until she has cooled to a more habitable temperature.

Down the hill, in the Town, the pedestrian drags his feet of lead over pavements that might have been quarried in Tophet, while the Barefoot Boy, finding no mischief befitting such a day as this, can only toast his feet on the hot cobbles while he fashions peach-stone baskets against the curbstone.

In front of the Grocery a few vegetables are shriveling in the sun, while a swarm of bees are investigating the recesses of an empty hogshead and having an uproarious little time reveling in the fumes.

Coming through the Square we meet a voluminous Cloud of Dust that has been lurking about the Town these several days; now careering down the street until he overtakes his fleeing victim and envelops him in whirling, blinding clouds; now sweeping along swiftly and low, or rising slowly and soaring among the trees and over the housetops; now racing down the turnpike with a couple of fast drivers and returning later to town in the wake of a slow, jogging farmer. His chief delight has been to lie here in the Square in wait for the arrival of the Four-Horse Stage and then roll out in ascending clouds from underneath the wheels to settle down upon the steaming horses and sift a miller's coat on every tired, impatient passenger. But to-day he, too, is utterly overcome, and now lies prostrate in the Square. His strongest effort only raises him a little on his wings; he straggles and stumbles a little way and then flops down exhausted.

The Town Pump alone preserves its equilibrium, and acts the Good Samaritan to the thirsty quadrupeds thrusting their expectant noses into the cooling trough and expressing their delight by splashing the ducks that paddle in the green mud below.

Over here in the corner by the warehouse, we discover our dark-complexioned old friend, Honest John, fast asleep, with his whitewash-brush, carpet-sticks and other emblems of his profession artistically disposed about him. His hands are clasped in front, his mouth ajar, his head thrown back, while a sonorous snore is issuing from his nostrils. A while ago he was in the shade, but Old Sol has come round the corner and is gazing down upon him with a scrutinizing glare. Little springs start into life on his forehead, expand into miniature pools, then become rivulets and meander over the wide expanse of countenance, while a myriad of flies, trailing their wet legs through the watercourse, are investigating the topography of his features.

Arrived at last at our destination on the hill it is almost evening, so let us perch a while on the wall and watch the transition. Far below, the Town is still enveloped in a suffocating haze, but up here we are in another atmosphere. A cool breeze is fluttering about, whispering reviving secrets among the foliage till every drooping stalk is taking heart and elbowing up among its fellows. The last rays of sunlight are disappearing in the West, and now vast flights of shadows come flocking up from the blackening East, alighting noiselessly and thick among the bushes and retired corners. Every leaf and blade of grass conceals a little one. High up in the last lingering strata of twilight the bats are wheeling about the chimney in erratic circles, encompassing their evening meal, and already through the deepening gloom are gathering from far and near those Will o' the Wisps, the fireflies. Down the green lane and over the meadow, by their swaying lanterns you may trace their undulating flight, all tending to the Intervale where they hold their nightly levee. Their orchestra, the crickets, are essaying their preliminary fiddles, while the tree toads, their impatient audience, are piping an ill-bred conversation, until the latest comers all arrived the warm night air is illumined with a myriad torches in a scene of fairy revelry. Now they are promenading in chosen couples; now pausing in a graceful balance; now in the midst of a dizzy whirl or a mad career down the length of the field, while the crickets keep time with perspiration, and the tree toads shriek in such wild delight that a pair of carping katydids pause in their mutual recriminations and a whole glee club of ponderous-voiced bullfrogs in the marsh cease from very envy.

JEFFERSON SCRIBB.

SAM LOVEL'S CAMPS.—IV.

WHEN Sam, the earliest riser of the three tenants of the camp, crept abroad next morning the daylight pervaded a misty landscape. Close by the camp the silvery gray surface of the Slang was visible, then faded off into a dull white lake of fog that had for its further shore the dun upland fields and jutting capes of wooded hills. Out of it scattered trees arose with apparently unstable rootage, and roofs of barns like stranded hulks. The hemlocks dripped a slow patter of condensed mist, and the bottoms of the overturned canoes were beaded so thick with it that they looked as if sheathed with a coating of pearls. The light air from the south, so faint that it scarcely bent the columns of rising vapor, was soft with the breath of spring, and the voices of many birds uprose to welcome the beautiful day—the gurgle of blackbirds, the flicker's cackle, the robin's clear but jerky notes, the long-drawn whistle of the meadow lark away in the foggy fields, the trill of the song sparrow and the joyous warble of the purple finch. A crow on a treetop began to call his friends to breakfast with him on the heap of skinned muskrats that the trappers had left at proper distance from camp, and reminded Sam that it was time to make preparations for his own and his companions' breakfast. He raked a few live coals out of the heart of the ashes, and, placing them beside the back-log, laid some "fat" pine shavings and slivers upon them, and after some lusty blowing got a blaze started. When he began to cut the wood to feed the fire the noise of the axe aroused Antoine, who came out on all fours from his lair in such a half-asleep and blinking condition that Sam was reminded of some hibernating animal taking its first look at awakening nature. He said nothing till Sam hung the potato kettle over the fire, and clawing a dozen potatoes out of the grimy bag they were stored in, began to peel them. "What you goin' call dat dinny you mek it wen you git him do, suppy or breakfis, Ah dunno, me?"

"Supper, I guess, 'f you don't flax raound a leetle mite 'n' help. Wake up 'n' get some ma'sh rabbits ready 'fore Peltier gits his eyes open 'nough to see what kind of a critter the hindquarters growed on. 'T 'ould spile his appetite t' eat if he knowed they was mushrats when they was livin'."

"Bah gosh!" Antoine grumbled as he shuffled away to prepare the meat. "Ah'll rudder sleep as git up in a naght for heat! Ah'll jes' beegin have it some funs dreamin', you'll wek it me all up wid you hole axe—pluck! pluck!"

"High time to be a stirrin', Antwine," Sam said, cheerfully. "Traps to go raound to, an' then the fish shootin' you've ben a tellin' on. It's goin' to be the neatest day 'at ever was!"

"Wal, Ah don' care for me," Antoine said, becoming reconciled to the loss of his matutinal nap as he realized what promise the morning gave. "Guess he be pooty good 'nough day—w'en he come."

Pelatiah was called when the water was drained out of the potatoe kettle and the frying pan was taken off the coals and set upon the slab beside it. Kneeling on the shore to wash his face and hands as the others had done already, he asked, turning his dripping visage toward them with an expression of disgust upon it, "Wha' d'ye du for suthin to drink? This 'ere water haint fit! I haint hed a decent drink o' water sen I come off 'm the hills. This 'ere stuff raound here don't hit nowheres!"

"Julluk me," Sam answered, "when I fust com' daown here. The well water an' sech didn't squench my thirst no more 'n it 'ould to open my maouth an' let the moon shine in to 't. It's hard, all on 't; you can't suds a pint on 't with a barrel o' soap! But I'm a gittin' use to 't, an' the 's a brook back here 'at dreens the snow aoutin the woods that you find toll'able satisfyin' 'f you drink tew three pailfuls on 't. Me 'n' Antwine goes over once a day reg'lar an' fills up. Draw up!" he continued, seating himself beside the slab, "draw up, Peltier, an' make yerself to hum an' help yerself. The' might be better, an' tho' is wus. You 've got to wait an' eat to the secont table, Drive, 'f you *be* comp'ny," and the hound who had been wistfully regarding the setting of the table, crept into the shanty and curled down on a buffalo skin, and watched the progress of the meal out of the corners of his eyes.

When they were ready to start, Sam down stream, Antoine up stream, leaving Pelatiah to wander at his will along the safe and stable shore, the sun was rising above the mist and glorifying it, transmuting the gray vapor into a long sun-glade of floating gold that stretched from the hills to them. The night had been such a mild and dark one as the muskrats delight to go abroad in upon their affairs, and Sam found in his traps many a poor fellow whose wooings and nightly wandering had been ended forever since the last sunset. He was pushing his canoe among the trees and water brush that stood ankle deep in the shallow water, when he heard another boat scraping the bushes along its course, the rubbing of the setting pole on its side, and presently the form of a man appeared gliding over the water, upheld by some invisible buoyant agency which was revealed when a light skiff emerged from a thicket of button bushes. Sam at once recognized the occupant of the little craft as the one who had made such a vigorous protest against their trapping here, and the salutation that he received left him in no doubt that this was Antoine's reviler.

"Hello, Gum-chawer! Praowlin 'raound on my trappin' graound yit, be ye?" the man shouted as if Sam had been a mile away. "Say, haint ye got a chaw o' gum to give a feller this mornin'?"

"Yes," Sam answered very quietly, turning the canoe toward the skiff, "tew on 'em 't ye want."

When the gunwales of the two boats touched, the stout man regarded the tall mountaineer with a puzzled half grin, for there was a queer look in Sam's eyes, not quite in keeping with his apparently friendly movements. They came abreast and Sam arose to his feet, let go his hold of the paddle with his right hand, fronted the quarrelsome pre-emptor of the marshes, and quick as thought dealt him a sounding fisticuff full in the face, knocking him sprawling overboard and nearly capsizing his skiff. The fallen foeman floundered to his feet in the hip-deep water, and sputtering out mixed oaths and water, splashed toward his antagonist, who was balancing himself in the canoe, that rocked violently from the recoil of his blow.

"If you come anigh me," Sam said, raising his paddle for a two-handed stroke, "I'll knock ye gally west!" and the man halted, doubting whether it was better to incur the execution of so dire a threat, or to retreat. "Naow," Sam continued, seeing that his enemy showed little disposition to renew his hostilities, "'f you've got what gum you wanter chaw to-day, wade ashore an' I'll shove yer boat tu ye."

The cold water had well nigh quenched his valor, if not his anger, and after a moment's hesitation and one more look at the still upraised paddle, the man turned sullenly and swashed his way slowly to the nearest land. The victor in this little naval encounter, seeing the vanquished crew safely landed, set about getting the water-logged craft into port, and with no little trouble accomplished it.

"Naow," he said, as if advising an unfortunate and misguided friend, "if I was you, I'd empty the water outen my boat an' my boots an' my gun, an' wring aout my close, an' go up to aour shanty an' build up a good fire 'n' dry aout. 'N' then, 'f I was you, I kinder 'tend tu my own consarns, an' not be *tu* sassy to folks 'ats a 'tendin' to theirn."

To this hospitable offer and wholesome advice the soaked trapper made no reply, but sat down on a log and attempted to pull off his boots. They were as perverse as wet boots ever were, and yielded no more to the owner's desperate tugs than to the accompanying contortions of his visage, his grunts and explosive curses.

"Gi' me a holt on 'em," Sam said, stepping ashore, and without waiting for one of them to be held forth, seized the nearest stubborn boot and began pulling at it. The unhappy wearer slid off his seat, his back bone grated over the log, and he grasped wildly for some anchorage on sedges, brush and saplings while his body plowed a broad black furrow in the mat of last year's leaves, and yet he said not a word.

"Wal!" Sam puffed, stopping while both took breath, "it does stick onaccountable! If ye won't kick, I'll give ye a bootjack?"

The man shook his head, and Sam turning his back to him took the boot between his legs, grasping it at heel and toe while the other set the free foot against him, and after a short struggle the boot came off, and in the same way its mate soon followed it.

"There, I guess you c'n git the rest o' your duds off alone, an' 's mebby you're kinder modest, I'll clear aout." Sam stepped into his canoe and pushed off. His recently aggressive acquaintance, still sitting on the ground and beginning to fumble at his buttons, looked after him and said at last: "Wal, I swear! you're the curiest cuss ever *I* see; but I guess you're white. I do' know as I can say that I'm much 'bleeged tu ye—but you can trap an' be damned for all I care."

"I'm a goin' to trap," Sam said and went his way. He made the round of his traps and at noon was at camp, where he found Antoine returned and getting dinner. Pelatiah soon came in triumphantly bearing by the gills a huge uncouth fish with a wide mouth, eyes like a pig's, coarse yellowish-brown scales and a rounded caudal fin that looked as if it had been trimmed to match the contour of the thick clumsy tail. Holding up his prize at arm's length for them to admire, he said, "Wha' d' ye think o' that for a mornin's work?" then laying it down tenderly and kneeling before it, "Supper 'n' breafus'! wish I 'd a brung it hum time er nough for dinner. My maouth is a waterin' for a taste on 't. O, 'f I hain't hed fun alive! I was a pokin' 'long the bank over yunder, 'n' I seen a big wake scootin' off, 'n' then I seen him 'baout twenty feet off a moggin' 'long kinder easy 's 'f he didn't care a darn for all creation—an' sir, I drawed up 'n' let 'im hev, ker-bim! an' he rolled tother side up 'n lay just as still! 'N' I was a lookin' raound for a pole or suthin' to claw him tow-ward me, an', sir, he begin to wriggle an' flop, 'n' I just dropped my gun 'n' in arter him clean up to my crotch, an' sir, by gosh! I got him, an' aint he an ol' sollaker? I wish to gracious," bending over the fish and carressingly arranging the fins, "I wish to gracious I 'd ha' brung him time enough; would n't we ha' hed a dinner!"

"You ant wan' be sorry for dat, Peltiet," Antoine said, with suppressed laughter twinkling in his eyes and almost bursting out all over his face, "he be jus' good for dinny nex' week as las' week, prob'ly better. Ah dunno 'f he ant he don' be no wusser, sartin."

"What kind of a dummed critter is it, Antwine?" Sam asked, after examining it closely, "I never see no sech a fish!"

"Feesh!" cried the Canadian, "Dat ting don't feesh! Dat *bow-fins*."

"Why, Antwine," Pelatiah asked, the happiness fading out of his face, "haint he good to eat?"

"Heat!" he said with disgust, "Bah gosh! he don't no more good for heat you was! No sah, no more as you boot. Ah dunno what he was be mek for only feel up de water. You was bring heem here for heat? Oh, Peltiet! dat too fun for me!" and he laughed loud and long.

"Wal," Pelatiah said with a sigh of resignation, as the visions of glory and feasts vanished, "I hed fun a gittin' on him, an' he *is* a reg'lar ol' sollaker, anyway."

"Come," said Sam, "le's eat an' be off, an' see 'f we can't git a fish 'at Antwine 'll 'prove on—a mud turkle, f'r instance—he eats them riptiles!"

"Mud turkey!" the Canadian said, stopping half way from the fire to the slab with the smoking frying pan in his left hand and raising his right impressively, "Bah gosh! seh, you give it me mud turkey, Ah show you some soups mek you wish dis worl' was big mud turkey, an' de sky was tip over for one big kittly for bile heem in, an' you was sit on aidge an' heat dem soup wid moon for spoon, more as tousan' year! yes, seh!"

Then they fell to, and contenting themselves with such fare as they had, were soon ready to set forth.

Natural History.

BIRD MIGRATION.

THE past year opened with a grand effort to settle the question of bird migration, if there was one. This, to young ambition, seems an easy matter, and that one or two years is ample time in which to do it; but my own experience has proved, to one person at least, that annual revision and amendments are necessary, and that at the end of, say, half a century the first reliable conclusion is reached, which is, that nothing definite is concluded; the single fact alone remaining that birds go north in the spring and go south in the autumn, hastened or retarded by causes unstable as the weather and unreliable throughout.

If we begin, as we must, to grant latitude of weeks and often months between pioneers and laggards of the same species, the actual scientific character of the work is gone forever, and any particular addition to human knowledge has gone with it. While I would be the last to discourage any laudable research, I cannot forbear "freeing my mind" when measures like this come up in rapid succession, promising all that is necessary to be known on the subject in hand, but less satisfactory as the improvements go on. The reason is too plain to be stumbled over as it is done. When a pair of young eyes (or even old ones, as to that matter) are opened to the beauties of nature, the view is enchanting, bewildering. But ornithology is the most fascinating and unsatisfactory of all, because beautiful forms and brilliant colors flash in the sunlight, and, in contrast with living green, display charms which no pen can describe, no color truly represent.

I well remember how I felt on first sight of the Baltimore oriole, although a small boy at the time. An older brother called to me, "There's a fire bird in the willows close by." I flew across the garden over flower beds and "tater tops" alike, to where the black and the orange flashed through the green. Talk about describing what I felt and what I saw! Don't attempt it. My first sight of the rose-breasted grosbeak was like that, only more so. I was hunting deer in Northern Maine, and so fearful was I that the fairy would vanish that I let drive a charge of buckshot, and the bird came down in fragments with a shower of leaves and cut branches. I gathered and replaced the remains and sat an hour studying the shape and the sharp outlines of color presented. The white gross beak, the jet black head and neck, the full rose and crimson breast, the white belly, and to cap all, the carmine lining of a gauzy wing, a paint not carried by any other living bird.

Now I doubt not that in the hands of high authority the one hundredth of an inch variation in toe nail or in mandible would be duly noticed, while the great object above and beyond, that for which the bird was created, would not be reached at all. What to me was microscopic variation common through the great realm of organic life, when my whole soul was filled with wonder and admiration at a combination of beauties, language and color are both powerless to reproduce.

More times than I can number and too often among my own pupils I have found the student of a month up to the neck in literature, writing out a system of ornithology which should be "right," and of course "fill a void" and be "satisfactory to all," but natural laws are inflexible and merciless "ephemera" continue and will continue to succeed each other, swept by adverse winds into the pool and forgotten, only to be followed by new attempts in the same direction and with the same result.

If the question is asked, who is responsible for this state of things, we must reply, not one author from the highest to the lowest is exempt. The lowest is most excusable, the highest most blamable, for not piercing the painted screen where the word science hides from their sight the beautiful fields beyond. What thinking men not chained to a hobby regret is the advantage compilers seem to take of this growing desire to reach the beauties of nature. They all promise the same things and all reach the same result, seven-eighths rehash of old hash with all its impurities, one-sixteenth perhaps true record of experience, the other sixteenth "probabilities." If we are to be treated to a volume on the migration of birds and one on nomenclature, all we can say is, spare us, good Lord, this repeated infliction, save us from the avalanche in prospect. Look at the yellow-bellied bark-pecker described by every author of the century—a bird whose life, character and habits were unknown till they appeared in the FOREST AND STREAM; also the imperial thrush. Both survived the researches of science, and at this late day appear literally new birds.

Blind classification, too, hands down through successive generations errors which should not exist. Do not forget that muskrats eat meat and "probably" fish; that the woodchuck has abandoned clover fields for cooked food and human society, eating fish like an otter; and lastly, recently I saw from my window a man punching furiously one member of a large "happy family," a squirrel that was eating his canaries.

But I have gone astray, let us return to migration of birds. Take the wild goose, which sweeps across the country with astonishing regularity. The pioneers northward pass Springfield, Mass., early in March. I saw a dozen rise from the river at that place the middle of May and wing their way in the same direction. The return commences in November. I was startled one evening by the long mellow honk of geese going south over the city of Bangor, Me., the last week in December, 1845, the thermometer at zero, as it had been that whole month. Among smaller birds similar facts meet us. I have known the meadow lark and the golden-winged wood drummer to stay in Springfield till February. I have a jack snipe shot here in January. A dozen towhee buntings staid with me till February, feeding on some bundles of hemp in an unoccupied hen house, bright and lively on the coldest mornings, and left only when the food was exhausted. Then again the man who first describes a bird, perhaps from sight, perhaps from heresay, is hardly to be credited with all that may yet be known of it, to stereotype that page for future and all future reference is not safe proceedings.

Last autumn, September 25, at North Thetford, on the upper Connecticut, there was a cold rain, and all the summer residents left with it. (The same was reported in FOREST AND STREAM from northern New York.) The river shores were loaded with cherries, grapes and berries, and not a bird remained to feed on them till exhausted, as is usual.

The warblers left early in September. I obtained a specimen of the black and yellow variety in good condition the last week in October. I went up to the spruce belt on Mount Silicon, 2,500ft. above the surrounding country. The spruce bullfinch was "at home" there, unmistakably the same gentle, unsuspicious character, coming near me when sitting down to rest. They were feeding on the spruce buds and crimson berries of the mountain ash, seemingly never so brilliant or abundant. The fact can be no longer doubted that they will be found wherever the spruce belt caps our mountains, and only in winter, when the spruce is covered with snow, are they driven below that line for food. So that with all science can accomplish, exceptions are in their numbers to science appalling, and often shatter an otherwise fair structure. If birds would all start at a given time and pursue a given route, something definite might be reached; but when, as at present, innumerable apparently trifling causes make the course of migration devious and wild, accelerate or retard the flight so that it covers weeks and months, it is the private opinion of one man at least that science has made little progress, and that the addition to human knowledge is indeed microscopic.

It is in no cynical or unfriendly spirit that I write this. It is only to sustain the position awarded to the FOREST AND STREAM as a most invaluable work on natural history, and every way likely to maintain it. To report from the ends of the earth on the migration of birds is just what the publication has done, is doing and will continue to do unless they "sell out," a contingency not likely to occur at present. Reapers have had their day and are now mostly employed in tangling the grain that remains. It is, therefore, necessary that they give place to gleaners who have at least learned to tell what they know and have seen, and wisdom to stop when that is done. There is one personal grievance I wish to lay before the friends of FOREST AND STREAM, although they may not lay it to heart as I do. I am often gratified and instructed by a communication which is half taken away by a signature not found in the directory or Webster's unabridged. Now friends, if you are ashamed of your name and residence I am heartily sorry for you. If you are ashamed of what you write, stop writing. In any case, for truth's sake let us know who is talking. Facts on record grow as other facts are placed beside them, but dreadfully stunted when the author-ity is hidden under a cheap umbrella.

B. HORSFORD.

SPRINGFIELD, Mass.

THE HAWK WAS AFTER A MEAL.—Amboy, Ill., Aug. 23.—I was duck shooting on Aug. 21, and while wading through a slough, started many coots, or mud-hens as they are called here. One flew high, and a hawk struck him in mid air with such force as to bring him down as if he had received a charge from a gun. The hawk made two attempts to secure his game while falling, but my being so close frightened him from his prize. I cannot find the scientific name of the hawk. Do you think this an accident or an attempt to secure food?—P. S.

TARANTULAS are sometimes imported with bananas. A correspondent, C. L. P., writes from New Bedford: "In a car load of bananas that came to this city recently from the Isthmus, I discovered a tarantula on one of the bunches. He was covered with fine, light-brown hair, and when his legs were spread out he covered over a space as large as a saucer. He was quite savage, trying to bite a stick held near him, and always facing it when moved around him. I captured him and he is now preserved in alcohol."

A CARIBOU IN THE ADIRONDACKS.—The animal killed near Long Lake in the Adirondacks some months ago and reported to have been an elk, was, we are now told, a caribou, one of two which had been kept in confinement. Its mate died and the caribou was turned loose and killed afterward as noted.

TWO INDIAN BIRD STORIES.

THE Indians of course are close students of nature. In their own way they can tell why and how the mountains and prairies, the rivers, lakes and forest were formed, and it is most interesting to listen to their account of the cosmogony. Many and strange are their stories of animal life. I heard yesterday two stories which may interest some of your readers. They were told me by a very old man who is blind and feeble, but whose memory seems to be as active as ever. I give you the stories in his own words as nearly as I can translate them:

I.

"I was a young man, and I sat beneath the trees making arrows. I heard above a Redhead (red-headed woodpecker) much crying. 'Why cry much,' I thought and looking much I saw. I found why cried that little bird. Now! a great branch had split and the end on the ground laid. Near where the split, was hole. H'ya! there Redhead's home. There her children. H'ya! much to be feared was he who was crawling to her home. A snake was crawling there to steal and eat her children. That why Redhead much cry. Then fly away Redhead and tell husband come quick. Then both come back, and flying much, try to hit snake. Soon husband strike snake thro' head and bill stick in wood. Make wings move to stay there all time bill, so bill not come out. Snake make his body go one way, another way. Can't move his head. Soon bird pull out bill, snake to ground fall, soon die. I pick him up, hole thro' head. H'ya! Very strong Redhead. I making arrows under trees, all this I saw and I know this, how strong is Redhead."

II.

"Now, I hunted in the mountains and on a cliff I saw many swallow nests, and many swallows flying about crying. I thought, because afraid of me cry those little birds. No! Close by on shelf, a big rattlesnake crawling to steal those swallow children. Then fly away all swallows, go and tell Black-greasy-wings* about snake. Come quick back and bring Black-greasy-wings. He see snake and fly very high, then fly falling down (swooping down), catch snake. H'ya! Very smart Black-greasy-wings. One claw stick in top of head, one claw under. Not open mouth snake, can't bite. No die Black-greasy-wings. Fly very, very high, then let snake go. Fall on rocks snake, all mashed and dead. Then Black-greasy-wings take snake to feed his children." J. W. SCHULTZ.

PIEGAN, Mont., Aug. 9.

*"Black-greasy-wings" is the Blackfoot name for one of the large varieties of hawks. Just which one I am unable to find out.

PUGET SOUND COUGARS.

Editor Forest and Stream:

Your correspondent writing from Fort Keogh, Montana, refers to what is commonly called in that Territory the mountain lion, and adds that these animals should be more correctly termed pumas, catamounts or American panthers. Presuming upon the description given by your correspondent, their habits, methods of attacks, etc., they are evidently the same animal that in the Puget Sound country we call the cougar (*Felis concolor*), differing from the jaguar (*Felis onca*) not so much in its habits as in its color, the latter being spotted similar to the leopard. Why these animals should be called mountain lions is beyond my "ken." In the forests of Puget Sound they are quite numerous, but are seldom, if ever, met with in the mountains. Neither should they be termed American panther. The latter are more slender and agile than the cougar. The strength of these animals is simply wonderful, and I have often thought that if they could only appreciate the immense strength with which they are endowed, they would indeed assume absolute jurisdiction over the forests. All other animals would be at their mercy, including the black bear, and even the brown cinnamon bear. To illustrate the enormous strength of these animals, I will give an incident that occurred in this county a few weeks ago. On the farm of Mr. John Peterson, one mile north of Nooksack Crossing, two cougars attacked and killed a cow weighing over 700lbs., and dragged the carcass of the animal a distance of 500yds., over fallen trees, logs and underbrush—a task that would have required a considerable effort on the part of a good yoke of cattle. One of the animals was subsequently killed, and measured over 11ft. in length. So much for their strength.

Aside from the warfare waged upon deer, cattle, sheep, colts and hogs, the cougar is not, as a general thing, an aggressive animal; in fact, they are cowardly. Only a very few instances are on record where they have, without provocation, made an attack. One instance occurred in this county last year. A Swede, living in the north part of the county, while engaged spading his garden plot, was attacked in midday. The cougar sprang suddenly from the brush, but missed his victim and fell a few feet beyond. The cougar turned immediately, and while crouching for the second spring the man, with remarkable forethought, suddenly raised the spade above his head and with one powerful and well-directed blow struck the cougar full and fair across the temples with the blunt edge of the descending spade, crushing the head and skull, and fertilizing several square yards of his garden plat with surplus cougar brains. It is reasonable to presume that had the Swede simply inflicted a light wound instead of killing the animal instantly, there would have been at least one case on record where an affirmative reply could have been made to the first and apparently most important inquiry on the part of tenderfeet, "Do cougars ever kill people?" On reflection, however, I will state that this question can be answered in the affirmative. Down in the Chehalis Valley, this Territory, about five years ago, a little schoolgirl, seven years of age, while enjoying an innocent childish romp with her playmates, was suddenly attacked and carried away by a cougar. The animal, with the little child firmly grasped within its powerful jaws, sprang nimbly over a tall stake-and-rider-fence that skirted the woods near the school house. The terrible news was spread from clearing to clearing, and a small army of men were soon in pursuit. Before dark the cougar had been captured and killed, but not until it had devoured its innocent little victim.

Should any of the readers of the FOREST AND STREAM visit Whatcom—and if they knew what grand opportunities were here presented for hunting, fishing, boating, etc., they would all come—I will be pleased to show them a fair specimen of a yearling cougar which I had stuffed and prepared by my taxidermist friend, John Y. Collins, and keep on exhibition in my office. This animal, while less than a year old, measured 8ft. from tip to tip, and had killed a valuable yearling colt the day before it was captured. By the way of parenthesis, I will say that it was not the writer hereof that killed that cougar. Strychnine did the business. I have never yet endeavored to obtain notoriety as an annihilator of cougars, however much I may desire to have them exterminated. They destroy more deer annually than the market-hunters, and this is putting it pretty strong. The pronunciation of cougar is kōō'gar, not cow-ger, as sometimes pronounced by tenderfeet. WILL D. JENKINS.

WHATCOM, Washington Territory, July 30.

[The animal variously called cougar, puma, mountain lion, panther and catamount, is *Felis concolor*. There is but one species known and it ranges over the whole of the Western continent. It is the same whether found in the forests of the Adirondacks or of Washington Territory, in the fastnesses of the Rocky Mountains or of the Patagonian Andes.]

THE HABITAT OF THE QUAIL.

Editor Forest and Stream:

Thanking you for your answer in issue of Aug. 5 to my inquiry, I would say that I believe your answer may be justified by good authorities, still, as American ornithology south of the United States has as yet received but limited attention, and its classification and nomenclature consequently imperfect, I desire to attract more attention to this subject in your columns from competent men, who may have enjoyed opportunities for observation of it. My own acquaintance with ornithology being limited to the elements usually possessed by most Americans of some general culture, I am not to be considered a reliable observer, and with this caution prefixed I am inclined to give the genus *Ortyx* a wider range than that assigned in your answer. In fact, Coues (page 591), while as usual assigning but one species to the genus, admits of four varieties, among which he mentions *O. cubanensis*, and my own observation leads me to suspect than when Central and South American ornithology receives more scientific treatment, the range of *Ortyx* will be found to extend much further southward. In Cuba we have one or more species that might be assigned to the genus *Lophortyx*, although its crest is far more like the grosbeak's or of *Corvus cristatus* than like that of *L. californica* or *L. gambeli*, but the species most numerous in Cuba is nearly identical in its markings, habits, general appearance and deportment with *Ortyx virginiana*, possibly a trifle smaller in size and certainly somewhat darker in coloration, although not nearly so much varied in this respect as is the genus *Homo*, while its markings and general appearance are clearly differentiated from all the other genera of *odontophorinæ*.

Morphological classification may be fairly considered as still in its tentative stage of development, and when it is crystallized into a more permanent state may we not presume to expect the designations of the genus *Ortyx* may be extended and that of the sub-family *odontophorinæ* restricted to such collectivities as these words more nearly describe?

With regard to its etymology, *Ortyx* would better describe the sub-family than does its present designation, and such use of the word would perhaps be more appropriate that is its application to a single genus. This is no doubt the consideration that induced the Ornithological Union to substitute *Colinus* for *Ortyx* as the name of this genus. If I were inclined to hazard a suggestion in this respect it would be the substitution of *Ortyx* for *odontophorinæ* as the name of the sub-family. NEMO.

HABANA, Aug. 15.

THE AUDUBON SOCIETY.

THE membership roll of the AUDUBON SOCIETY is steadily increasing, there being now on the muster roll more than 11,500 names. Each local membership is doing work in its own way, as best suited to its surroundings and special conditions, and the particular evil it has to cope with.

The Natural Science Association of Staten Island, New York, has successfully engaged in AUDUBON SOCIETY work, and the membership is growing. From the July circular issued by the Association we quote:

"As a beginning, in order to carry out, if possible, the spirit of the above resolution, personal letters were sent to a few prominent citizens who it was hoped might be interested in the subject. The answer was in general very encouraging as the following will show: WEST NEW BRIGHTON, STATEN ISLAND, N. Y., May 3, 1886.—My Dear Sir: I am very glad to hear that your Association, which has been already of great benefit to the Island, will join the crusade for the rescue of the birds from the hand of the spoiler. If any community should be resolved to protect the birds it is a rural neighborhood like ours, which the birds fill with constant music and cheer. To kill our bright and melodious little citizens of the air and trees in order to wear their dead bodies for ornaments is an act worthy of barbarians. But it will not be encouraged by American women when they once consider its cruelty, and the carelessness of life which it produces among idle boys. I am sure that this community will gladly support your good work. Very truly yours, GEORGE WILLIAM CURTIS.

"Ignorance of the subject on the part of many, total depravity or cruelty by others, and apathy in regard to the entire matter by the public in general, are undoubtedly the causes that have contributed to the lamentable results which every lover of bird-life has regretted and waxed indignant over for years past. That the ladies of our own community need educating and enlightening is apparent enough when any one interested in the subject cares to observe and note the large number of birds or parts of birds that they use for personal ornamentation, especially on hats. During the present season several have attracted particular attention by reasons of their display of victims. One for instance being composed entirely of a pavement of swamp sparrow heads, some thirty birds having been sacrificed for this one article of head gear. Another shows a mass of dismembered terns, the different parts representing together at least ten birds. A bunch of sandpipers, perhaps half a dozen in number, "ornaments" a third. Swallows have lately become a fashion, and several hats may now be seen in which these are the distinguishing features. Besides the indirect cruelty for which our women are so thoughtlessly responsible, there has been and is now an immense amount of wanton destruction and slaughter by depraved men and boys, to whom everything with feathers is a target at which to shoot, or any nest an object for spoliation. Most of these persons are residents, but a large number are pot-hunters and skin and egg collectors from the neighboring cities. These latter are more numerous than most people think, and at times their tracks can be traced through our woods by the broken bushes, robbed nests and marks of climbing-irons on the trees. The trapping of birds is done openly, without any attempt at concealment, although this and the other methods of destroying our birds are in violation of law. There is no doubt that the indifference of women to the cruelty and suffering occasioned by the fashion of wearing dead birds is a direct encouragement to many who are naturally depraved and desire an excuse for their actions." The AUDUBON SOCIETY branch is in charge of Mr. Arthur Hollick, Corresponding Secretary, New Brighton.

CAN BIRDS COUNT THEIR EGGS?—*Editor Forest and Stream:* I have just read Sir John Lubbock's paper on "The Intelligence of the Dog," in your issue of Aug. 5, and note what he says in regard to birds and their eggs. I would like to give an instance that came under my observation. About the 15th of June I was passing through a piece of woods when I noticed a pair of oven birds (*Sciurus aurocapillus*) and came to the conclusion that they had a brood of young close by, and I began looking about for the nest. On turning around I saw an egg on the ground, which I picked up. My first thought was that it was an egg of the red-eyed vireo, and I commenced looking above my head for the nest, at the same time wondering how it could have dropped from the nest without breaking. I had never seen the eggs of the oven bird, but on taking a second look at the egg in my hand I saw that it was not a vireo egg, and thought possibly it might be that of the oven bird. On looking under a tuft of grass at my feet, and within six inches of where I had found the egg, I discovered an oven bird's nest containing four young birds ready to leave the nest. I saw that one of them was larger than the others and of different color, and I concluded it was the vagabond cowbird (*M. ater*). As I took it out the three other young left the nest. I gave the vagabond a toss in the air, and caught the others and put them back in the nest, which they immediately left again, and again I put them back, and after holding my hand in front of the nest a moment they concluded to remain there. Now the query is, after the cowbird egg was deposited, did the oven birds know that there was more than their complement of eggs and remove one, and that one their own, because they could not distinguish the difference in color and size? Could they count?—J. L. DAVISON (Lockport, Aug. 13).

Game Bag and Gun.

WON AND LOST.

DURING the terrible times of the civil war a kind fortune cast my lot temporarily in Northwest Louisiana, at that time almost a paradise for a sportsman. One could find here, in juxtaposition, what I have never seen or heard of in any other country—the highest development of civilized society, the very *crême de la crême* of the old Southern planter life, with an abundance of game almost in sight of the doors of aristocratic homes. Bossier Point, formed by the angle of land, a part of Bossier Parish, lying between Lake Bisteneau on the east and Red River on the south and west, was far-famed for the beauty and accomplishments of her women and the wealth, culture and intelligence of her men. Here Southern hospitality found its highest expression. Her Hodges, her Bryans, her Hamiltons, her Burnses, her Skannals, her Nottinghams, her Maples, and others, formed here a society that gave to social life and character its noblest and purest models. The forests around these homes were bountifully supplied with deer and wild turkeys; while, in season, Lake Bisteneau fairly swarmed with ducks, geese and brant, with an occasional swan. They were, however, comparatively undisturbed. Breechloaders were unknown, and ammunition was scarce enough to make a pound of powder worth about as much as a bale of cotton. Every white man subject to military duty was in the army, and there was no need of laws for game protection. Being incapacitated for military duty by the loss of an arm, your correspondent, because he could shoot a gun, was nevertheless conscripted by the military authorities at Shreveport; but at the request of the citizens of Bossier Point, and very much to his own gratification, was detailed as a teacher for their children. While performing this singular and comparatively delightful "military service," I occupied my spare time in waging war upon the peaceful denizens of the forest, causing many a proud and antlered buck and gobbling turkey cock to bite the dust. A box of the cheapest grade of caps or a pound of powder was worth the tuition of a boy studying the languages for an entire session, and you can readily understand that I did not indulge, to any great extent, in target practice.

Dr. Patillo, at that time the leading physician of the beautiful little town of Minden, was one of the most genial of men and a devoted lover of dogs and guns. It was his custom about once a week during hunting season, to get together a party of gentlemen and go out a few miles from the town on a drive for deer. These occasions were always greatly enjoyed by those who were fortunate enough to be members of the party. Happening on one occasion to be on a visit to friends in Minden, the doctor pleasantly bantered me for a hunt, saying he had heard I had been "crippling up some deer" down in the country where I was staying, and he wanted me to go along with his party and let them show me how to kill a deer. I replied that it would give me great pleasure to learn the art, and that I would consider myself most fortunate in having an opportunity to learn from one so well qualified to teach me. Accordingly a hunt was arranged for the next day. The doctor kindly borrowed for me a gun and loaded it in the most approved style. Early the next morning the musical notes of the hunters' horns sounded the signal for the meet, and soon five mounted huntsmen responded, and in the midst of the baying hounds, more

eager than their masters for the chase, we set out for the haunts of the game.

There happened to be at this time visiting Dr. P. one of the loveliest of the beautiful daughters of Bossier Point. Lieut. M., a handsome and dashing young officer of the Army, was also making his headquarters there, and was one of the hunting party for the day. I was young myself, then, and the beautiful vision of the fair young girl as she came out upon the balcony to bid us off to the chase, holding aloft in her hand a prize for the successful hunter, sent a thrill through my veins that made me resolve to be no laggard in the hunt, and to make the gay lieutenant look well to his honors if he won them that day.

A wonderful amount of skill can be acquired in deer hunting; either in driving with dogs or in stalking in the still-hunt. To acquire this skill one must study closely the habits of the deer. In deer driving it is customary to place the standers at certain stations known as stands, where the deer, fleeing before the hounds, are supposed to pass. The driver goes through the forest with the hounds to start the deer. It is a little singular that all the deer in a given forest have pretty much the same runs which they follow when pressed, and by observing the runs an old hunter will in a short time discover the best stands. I speak of course of open forests where they are not hemmed in by fences or other obstructions. An experienced hunter, in a forest where he has never been before, will often detect the deer stands by a close observance of the topography of the country and of the forest growth. A careful study of these will give a hunter a very decided advantage in hunting deer.

Arriving at our hunting grounds a few miles from the town, where the unbroken forest stretched away for many miles, the standers were placed and the drive began. Through courtesy, in the first drive, they gave to me choice of stands, the others making the choice for me as I had never hunted there before. In the distance I could occasionally hear the shout of the driver urging on his dogs. Hark! the horn-like, musical note of a hound far away in the forest. There, another joins in the distant cry. They have struck a cold trail, and patiently they work it up. One after another, as the scent grows warmer the other dogs join in the chorus. The blood begins to tingle in my veins. I look at my gun to see that all is right. Nearer and more distinct, and at shorter intervals, come floating on the air distinct notes of the hounds. Listen! there is a crash of sounds. Every dog's throat gives tongue at once. The deer is up and on they come. Nearer and nearer, louder and louder. Carefully both barrels of my gun are cocked, and with eager eyes I scan the forest in the direction of the dogs. But, listen, they have changed their course. Steadily the sounds grow fainter until scarcely audible. Bang! bang! come the reports of two shots from deep in the forest. The driver has intercepted the deer and perhaps killed it. At any rate my chances are gone. The smile of beauty will not be for me on our return. Hist! I hear the distant notes of a hound returning. Nearer and nearer he comes. Now he is joined by another. I may yet get a chance. Alas! they are turning to the right. Lieutenant M. occupies that stand. On, on they come. Now I listen, expecting every moment to hear the lieutenant's gun sound the death knell of the buck. There, they turn. Again they bear off into the depths of the forest and all is still, save the occasional howling of a straggling hound thrown out of the chase. This time the buck has gone to the bayou and taken to the water, where he is safe. No, they have turned again. I hear the distant notes of the pack. There, another gun; but they do not stop. The dogs are badly scattered now, and only two or three are in the chase, but on they come. They are half a mile away, but this time coming straight for my stand. A chilly sensation creeps over me, but the "buck ague" never made me miss a deer. Again I cock my gun. Ah, look—what a beautiful sight. He is a long way ahead of the dogs and makes his leaps most gracefully. See how he waves his plumed tail aloft. Now he stops, and with head and ears erect, listens to the dogs. A few more bounds and he is in range of my gun. My finger is on the trigger. A puff of smoke, a ringing report, and the buck plunges headlong to the ground. In a moment he is up again and bounding away. Another report, and he falls to rise no more. Three clear, distinct blasts from my horn announce the death of the deer and summon the other hunters to my aid.

It is yet not past midday, and another drive is proposed in a different direction. The proposition is eagerly seconded. The sight of the buck has quickened the ambition of the hunters. The dogs are rested for a while and fed lightly on some of the offal of the deer, and are eager for another chase. The doctor knows another good drive a mile away, and off we start through the woods to reach the stand. A jolly crowd we were. Elated with the success of the first drive, we urge our horses forward as fast as the thick undergrowth will permit, each man egar to get to his place.

It had become a habit with me to observe carefully when in the woods the conformation of the ground and the nature of the forest growth as indicating the runs of deer, and I considered myself something of an adept in locating the best deer stands in woods where I had never been before. After riding perhaps half or three-quarters of a mile, we came to a place unnoticed by the others, at which I called a halt. Making some inquiries as to the distance to the stand to which we were going, and the direction from which the drive was to be made, I asked permission to be allowed to take my stand where we then were. The doctor was disposed to ridicule me at first, and said no deer ever came there. Another of the hunters spoke up, however, and told him he was mistaken about that, though it had never been regarded as a stand. I told him I would make it my stand and take my chances at it, with their permission. Leaving me, the others went on to their places. I had, at any rate, relieved them from any obligations of courtesy to give me the best stand the second time. I hitched my horse out of sight in the bushes and selected a position from which I could command the best view, and awaited developments. In half an hour I could hear the dogs trailing in the distance. It was late in the day and the track was cold. By degrees they worked the trail along until they came to where some of the hunters were standing, and I heard the signal given for the close of the hunt and the standers were en-leavoring to stop the dogs. Just then, looking in that direction, I discovered the branching antlers of a cunning old buck, as he raised them above the bushes, coming directly toward me. Slipping out of the drive, in an instant my gun was cocked and ready for action. The old buck stealthily made his way through the thick brush, now and then turning his head to listen, until he emerged into the open place I had selected for my stand, scarcely fifty yards away. I raised my gun to fire. The quick eye of the wary old fellow caught sight of the motion and he fell back on his haunches, preparatory for a bound into the bushes. He was too late. The ringing peal of my gun startled the echoes around, and as the smoke cleared away the old buck lay where he had fallen in his tracks.

That evening, after tea, feeling somewhat elated over my success, and somewhat disposed to triumph over the handsome young lieutenant, I concluded to pay my respects to the beautiful belle of Bossier, who, standing upon the balcony of the Doctor's residence that morning, had bidden us contest for the honors of the hunt.

Alas! I found my rival ahead of me, and on entering the parlor where they were seated in cosy chat, I soon became conscious of such an all-pervading sense of unwelcome interruption that I concluded the wrong man had won the prize in the hunt, and that the shorter my visit the more it would be appreciated just then. It was evident that the young lieutenant had the inside track and a dozen of lengths the lead in that race.

The doctor had taught the wrong man how to kill deer.

NASHVILLE, Tenn. H. E. JONES.

THE QUAILS OF CALIFORNIA.

SACRAMENTO, Cal., Aug. 21.—*Editor Forest and Stream:* Your correspondent, "A.," writing under date of July 6, discourses quite intelligently upon the California quail—more so than most writers that have essayed to picture the merits and demerits of our chief game bird. And yet there are some points in his article that do not quite tally with the experience of those who have had much to do with these birds of late years. The locality in which "A." speaks of having hunted (El Dorado county) adjoins this county of Sacramento, and much of the hunting that we of this place enjoy is among the foothills of El Dorado. "A." says: "The best sport I could get was to find a locality where the chapparal was not more than breast high, and it was generally so thick as to preclude seeing the dog or ground ten feet away, and by working the dog carefully within short range, shoot the birds raised within shooting distance; and they generally got up 25 or 30yds. away. * * * The dog was indispensable as a retriever, so thick was the cover," etc.

Now, while "A." may have enjoyed much experience among California quail in the days of which he writes, it seems to me that he failed to "catch on" to the true method of hunting these birds. For my part, I never knew anybody to enter a chapparal thicket in pursuit of quail, except as a last resort in order to get meat. The proper thing to do is to avoid these thickets altogether, and seek the birds in more open places. It is true that our quail have a great liking for the brush, but it is also true that they are to be found in comparatively open ground, seldom in cornfields or stubblefields, but on sparsely wooded slopes and low ridges where there may be sufficient grass and rocks to afford cover for hiding. And as to their rising 25 to 30yds. away, my experience has been that this occurs rarely after the birds have once been flushed and scattered. Usually they flush rather wild at first, but after a few shots are fired they lie very close. As to hunting these birds (or any other quail) without a dog to find and point them, I am at a loss to understand how anybody can find much sport in it. True, I used to do it myself, long years ago, when I was only too glad to get off the ranch with a shotgun in my hands, and had no idea how much of the true inwardness of sportsmanship depended upon the companionship and assistance of a good setter or pointer. Many and many a mile I might have been saved in a day's hunting had I known the value of a good dog and been able to get hold of one. But, "where ignorance is bliss," etc., and so I went along in those callow days just as a good many others are going along to-day, having my own kind of fun, and learning in a simple manner from year to year something of the arts that so elevate field sports as to enchain the passions of men, even unto the time that life's journey nears its end. We used to have an old ranch dog, whose chief duty was to catch and hold pigs occasionally. There was a little bull in him, but the rest was, I think, just dog, and a very common article at that. He liked the fun of chasing hares, and hence was always ready to follow anybody going out with a gun. Having seen men from town accompanied by dogs while hunting, I soon began to think it the proper thing, for some unexplained reason. So I got to taking our old dog out into the hills with me, and felt as big as the biggest toad in the puddle, albeit neither the dog nor myself, nor anybody else that saw us, ever discovered the utility of the combination. And so, even to to-day, we find men going out in search of game accompanied by dogs of all kinds and conditions, and lots of them have no more idea than their four-footed companions where to look for quail nor how to hunt them if they should find them. I do not mean that "A." is of this class, for in the country he refers to there is much of this chapparal ground, and he may have been compelled to do most of his hunting on it. But, while none of us contend that our quails furnish as agreeable sport as do their Eastern cousins, they often come very near it, and a good dog can be used to excellent advantage in hunting them.

I used to have (ten years ago) a native Irish-Gordon dog that did excellent work on quail. I once had shooting over more than thirty square points on single birds belonging to two coveys within the space of an hour and a half. And it is my recollection that not a bird was flushed during that time by the report of the gun. They lay so close that the dog frequently pointed birds while returning with one in his mouth. Notwithstanding his obscure lineage that dog had more real merit than some of the finest blooded ones of to-day. Had he been trained not to break shot (which was about his only weakness) I believe he could not have been beaten by any of our field trial winners of the present time. I have experimented with many others since then; indeed I have spent all my spare time in trying to develop something in the dog line, but with poor success. The last one had a pedigree; also a blue belton body and stylish tail (I believe it is called "stern" nowadays). I got along with him so nicely in the yard for eleven months that I was sure he would just paralyze the whole of that year's dog crop. He was honored by having his name printed in the list of field trial entries He was to be the Derby winner, sure. While exercising him in the park, and when he would be running like a race horse, I would whistle; he would look and as soon as I raised my arm down he would go like a shot, flat upon the ground. Promenaders would stop and admire him, then compliment his happy handler.

Well, the anxious opening day of the season came. A friend and myself hired a vehicle and team for three days and went to the neighboring foothills. I shot a quail and my canine hopeful came near stepping on it, but shied off so as not to injure it. I picked the bird up, called in the Derby winner, and placed the bird to his nose. He held his breath and turned his head aside. I placed it against his nose again, and he turned his head mournfully to the other side. I became sick and wanted to go home at once, but my companion was having too much pleasure with his excellent pointer, and I thought I'd give the dog another chance. The same thing was repeated again and again, and the next day I made a present of the ignominious failure to a ranchman. I told him I was wealthy, that I had a large kennel of sporting dogs, and seldom shot over the same one twice. He accepted the prize with thanks, and I went into his vineyard and ate thirty cents worth of grapes (I was just twenty-nine cents and nine mills ahead on the transaction). That was nearly a year ago. A few months since the beautiful blue belton came to town and made his headquarters at a brewery. The proprietor of the brewery has (I am told) been kind to him, and proudly exhibits to his friends his thoroughbred "Lew Allen" bird dog. Well, that dog's successor is now a year old, and in six weeks I shall know whether or not this year's labors have also been spent in vain. I have no fear, however. I tried the pup one day on quail—the last of February—when he was six months old, and he pointed, ranged and retrieved like a veteran. I have strong hopes that the blood of old Sancho and Bow will not have been united in vain.

But I have wandered far away from the thread of my subject. "A." spoke of the difficulty of bagging the California quail, and questions the value of a good dog in hunting them. As to the latter, I notice—by again referring to his letter—that he admits having occasionally had brief spells of pleasant shooting, in tolerably open ground, over an old English pointer. He, however, seems to regard with some incredulity reports of persons bagging as high as fifty quail per day. I have known scores of men to bag that many birds in a day's shooting, and I have the record of a part of two months' shooting (November and December) done by three young men of this county a few seasons ago. They are brothers, and hunt together a great deal. Their favorite ground has been along the Cosumnes River, they going to and from the ground (eight miles) each day.

In November the young men hunted on twenty-one days. The highest daily scores, respectively, 97, 67 and 62; the lowest, 31, 31 and 28; averages, 55, 49 and 46; total number of birds bagged, 2,965. In December a fourth brother took a hand, and they hunted sixteen days. The highes individual scores were 81, 66, 64 and 49; the lowest were 35, 22, 15 and 12; averages, 66¼, 49, 40 and 25; total bag of four men in sixteen days, 2,480, or 5,445 birds killed in thirty-seven days.

It is my impression that some of the shooters used dogs, and I am pretty certain that muzzleloaders prevailed. Happening to have these figures, I give them here to show what can be done among our birds by good shots. Such wholesale slaughter is, however, to be deprecated, and I trust that neither the same parties nor any others will hereafter strive to attain notoriety of this kind.

I don't think—as "A." facetiously remarks may be the case—that our quails have been instructed in the art of behaving more decently when gentlemen are afield; nor that they are at all better inclined than they ever were; but I do think that men are getting to better understand their peculiarities, and above all are looking more and more to the intelligence and training of well-bred dogs as a necessary adjunct of successful quail shooting, here as well as elswhere.

We expect to hold our field trials this year among the clover-fields of Fresno county, where it is said birds are plentiful and lie well to the dog. If "A." ever returns to these parts, I believe he will find that—if the birds have not become better educated—the sportsmen have, in some respects at least. N. E. W.

ALBINO BUFFALO.—A press yarn from Chicago reports: From Lander, Wyoming Territory, to-day comes a story which is of curious interest to the sporting community. It is to the effect that John Gaylor, a well-known hunter and trapper of the Wind Mountains, has slain a white buffalo bull or one so gray that it can very easily be called white. Jack secured his game about two weeks ago while on an elk hunt in the recesses of the Wind Mountains. By the merest accident he stumbled upon a small but deep basin, one of the most hidden of haunts. In this he found the gray or white buffalo. When the hunter came to examine his prize he found that it bore all the marks of very old age. The horns were worn down to the skull and presented the appearance of bald, smooth spots on the head rather than the natural projection. The teeth were few and fragmentary, and were almost even with the jawbones. Though living in the midst of the richest and most succulent grasses and herbs, the patriarch hoar and gray was very poor in flesh. The appearance of the basin indicated beyond doubt that the bull had in that one spot seen many a summer's sun and many a winter's storm. In the course of nature his race was about run, and the snow of the coming winter would have covered his age-worn carcass. Many hunters think that the trusty rifle of "Hunter Jack" has slain the famous white buffalo of Shoshone and Arapahoe Indian tradition, and that the tradition has thus been proved a fact.

CAMPING QUERIES AND SUGGESTIONS.—Pittsburgh, Pa.—*Editor Forest and Stream:* In "Woodcraft," "Nessmuk" advises an open fire in front of the shanty tent. How does he manage to keep the fire from being drowned in the frequent rains that occur? How can one cook on such fires in the wet? Why does not some one put on the market a small silk tent and hammock of compact and light texture? It would not be such an incumberance as those now in use. I have slept on a hammock made of barrel staves and covered with awning cloth, by securing between trees. Such a hammock is quite comfortable and effectually safe from reptiles; but the bulkiness is against its use. My outfit with gun, blanket and week's ration weighs 50lbs., allowing 20lbs. for gun, food and ammunition.—D. B. R.

RIFLED CHOKEBORES.

Editor Forest and Stream:

My attention has just been called to a letter from New Orleans, in which your correspondent, misled by a similarity in name, confounds the invention, of which you published a description on the 5th inst., with the choke rifling of M. Henry Pieper, of Liége; and thereupon, offhand, declares the device to be an old one, and one, too, to which I have no right or title. He evidently does not know in what Mr. Pieper's "choke rifling" consists, or has not intelligently read the somewhat brief description I gave of my own.

Mr. Pieper wishing to be able to fire a round ball from barrels which would also act somewhat in the same manner as chokebores, properly so called, and not being aware at the time that a bullet could be fired safely from a barrel contracted in diameter at the muzzle, formed on the interior of a true cylinder-bored barrel a series of straight ribs extending its whole length, between which the spaces were contracted near the muzzle of the gun, thereby diminishing the area of the barrel at that point without decreasing its diameter. Such barrels were then grooved without being, properly speaking, rifled in the ordinary acceptation of the word. They carry small shot very well, and also carry a round bullet with fair accuracy for short distances; but of course impart to it no rotation whatever, and are incapable of firing a conical ball, for which, indeed, they were never intended. I am well acquainted with Mr. Henry Pieper, who makes a very admirable gun, and have frequently handled and shot with the barrels in question, both at Liége and in this country; and was familiar with them before making the invention which, to avoid reference, I will describe shortly once more.

My rifled choke consists in a barrel which, up to within about two inches of the muzzle, is an ordinary cylinder. Next comes a true cone, diminishing the diameter by about $\frac{1}{25}$in., and again a cylinder $\frac{1}{25}$in. less in diameter than the main portion of the bore. In this short cylinder grooves are formed having the requisite degree of twist, and these grooves, being less than $\frac{1}{12}$in. in depth, necessarily die away in the cone before arriving at the larger cylinder of the bore. Thus, as I said before, the shot receive their modified direction before arriving at the grooves at all and are therefore not affected by them. The conical ball, however, is forced to enter them, receives at the last moment the necessary amount of rotation and makes very good shooting.

If your correspondent can see any similarity of principle between these two inventions, I shall be glad to learn what it is.

For the correctness of my definition of the Pieper choke rifling, I will also refer to Messrs. Schoverling, Daly & Gales, of New York, with every assurance that they will indorse my statement regarding it; and when your correspondent has satisfied himself on these points, I shall trust to his fairness to acknowledge that in contesting my right to the honor he speaks of, he has been misled by a mere similarity of name. GEO. V. FOSBERY, Lieut.-Col.
